NEW YORK, THURSDAY, AUGUST 10, 1876.

Volume 7, Number 1.
17 Chatham St. (City Hall Sqr.)

For Forest and Stream.
CUSTER'S LAST CHARGE.

BY STANLEY WOOD.

ROSEBUD River, blush red
As a full-blown rose of sorrow;
For by thy banks were they led,
Along thy banks marched the dead,
Whose yesterday found no morrow.

Into the wildering West
Rode they with sabre to shoulder,
Soldiers they were and the best,
Fearless were they, and the test
Proved of the bold never bolder.

Red shone the sun—blood red,
Blood-like it gleamed in their faces.
Form'd on that field of the dead,
Form'd with their chief at the head,
Like statues they stood in their places.

"Ready, Soldiers! Stand fast!"
"Charge!" Like avalanche crashing,
Fierce as the terrible blast
Of typhoon, forward at last
The troopers are fearlessly dashing.

Rosebud River, blush red
As a passionate rose of sorrow;
For by thy waves were they led,
And on thy banks marched the dead,
Who waken not on the morrow.

Rode they boldly to death,
Sternly they galloped to meet him;
Sabres flashed whitely from sheath,
Crimsoned and fell in a breath,
Vain the attempt to defeat him.

For all, that into the fight
Rode gladly as riding to glory,
Forever descended the night,
Never re-glimmered the light,
None rode back to tell us the story.

When shall their glory go out,
Their story be read by a Stoic?
Never, so long as a shout
Greets bravery. Never, I doubt,
So long as men love the heroic.

For Forest and Stream.
**Moosehead Lake and Vicinity
Twenty-five Years Ago.**

LET no one who may read the following account proceed to Moosehead at the present day expecting to find the virgin forest that yet fringes its shores and covers the neighboring heights tenanted by the grand animals which were formerly so abundant; for I write strictly of things as they were a quarter of a century ago, when the noblest member of the deer tribe, from which the lake derives its name, roamed the forests of Maine in countless numbers, and to meet one on the banks of the streams tributary to the lake was of such common occurrence as hardly to excite a remark. A late visit to Moosehead so forcibly impressed me with the changes that had taken place in the interval that I thought it might be interesting to many to learn what a sportsman's paradise this district once was; and, perhaps, also, they may be incited to renewed activity in making greater efforts for the preservation of the moose before it becomes too late, and the last survivor of these splendid deer lays down his life amid the deep snows of winter, beaten to death by the club of some wandering savage, who, alas! is not always a descendant of an Indian ancestor.

It was at midnight following an August day a quarter of a century ago, that the writer, with two friends, ended a boat journey across Moosehead Lake, and leaped upon the wharf at Kineo. A low, unpretending structure stood upon a portion of the site now covered by the great hotel. After a few sounding knocks Barrows, the landlord, made his appearance, and having been ushered into comfortable

rooms, we soon joined the rest of the inmates in the realm of Somnus.

Next morning bright and early found us up and outside, anxious to take a look at our surroundings by daylight. The view was the same (with perhaps the exception of one or two small clearings) that meets the eye of the traveller at the present day. Forests covered the hills and shores in every direction, while behind the house, towered Mt. Kineo with its precipitous sides, dwarfing all objects in its vicinity. As I strolled down towards the lake I noticed, standing by the water, a man who will take a prominent part in the remainder of this narrative. Rather short in stature, hair well streaked with gray, quick in his movements, with an eye at once restless and piercing, with a complexion bronzed by exposure, and a form sinewy though slight, he was the personification of the toughened, experienced woodsman.

How the time rolls back, until it seems but yesterday as I thus recall the appearance of Uncle Ellis as he stood before me on that morning, and doubtless many of those who have visited Kineo in later years will remember this famous old moose hunter. I at once entered into conversation with him, and our talk soon turned to the great deer that were so numerous about the lake, for I was very desirous of meeting with my first moose.

"Is it a good time now for moose?" I asked. "Well, it's getting on to the right time," he answered. "They still come down to the water at night to feed on the lily-pads and grass, and it's likely enough I can find one. And pretty soon the bulls 'll begin to run and then we can call 'em down to the shore and git a good shot at 'em. But now the moon's full and the nights still warm, and it's a good chance to kill one up Tom Heegan." "Do you think we can get one to-night?" I asked, eager to start. "I think I can show you one, meebby," was the cautious reply. "We can start towards evening, and paddle up Tom Heegan, and look about us there, and like enough see one of the critturs. Have you ever been much in a birch?" I was obliged to confess my utter ignorance of that lively craft, as those lying upon the shore were the first I had seen outside of a museum. "You've got to keep plaguery quiet in them things," he said, with a merry twinkle of his eye "and your tongue right in the middle of your mouth, or you'll get spilled out before you know where you are," and then looking at me all over, he continued, "but I guess you'll manage it; leastwise, we'll try it anyhow." And so it was agreed forthwith that I should make my first attempt that night at moose-hunting, introduced by Uncle Ellis, than whom, as I afterwards learned, I could have had no better sponsor.

How long that day seemed! and as the afternoon wore on my impatience increased to be off. I was new to the woods, and knew nothing of the things requisite to make one comfortable during a night in the forest, and had made no preparations for passing a night in the woods. About sunset the old man said it was about time for us to be off. The birch, as it lay upon the water, seemed only waiting for me to step in in order to throw me into the lake, as the least touch swayed it about in a very ominous manner; but Uncle Ellis drew the stern on shore and sat astride of it, thus holding the frail thing quite steady, while I crawled along to the bow, where I ensconced myself in a doubled-up posture, like a tailor on a bench. The gun was then passed to me, and the birch was shoved off. For a moment while Uncle Ellis was settling himself in his place, I expected to take a header for the bottom, but when I found the thing kept right side up, and, moreover, began to move rapidly and easily over the water, my courage returned, and I gradually shifted myself into a more comfortable position. We soon passed around the rocky point in front of Kineo, and the great lake lay all before us, way up to the carry over the Penobscot. That was so distant however that the shore was merely indicated by a line of forest that seemed to grow out of the water. We were gradually approaching the opposite side of the lake, and in a short time the birch was brought to the shore at the mouth of a small stream. "This here," whispered Uncle Ellis, "is the

Tom Heegan, and after we start up it you mus'nt say nothing. Like enough you'll hear the moose if we git nigh ary a one splashing in the water, but when I hear 'em I'll just shake the birch a little, and then tell you when to shoot. Here we go now," and with that the birch's bow turned away from the shore and the boat glided up the stream, seemingly of its own volition, for no sound of the paddle was heard. The stillness was so profound that the plunge of a musk-rat or the sound made by a trout fairly startled me, and so wierd-like were our surroundings that I felt I must be under the guidance of the dweller in the Dismal Swamp, as

"All night long by the fire-fly lamp
He paddled his light canoe."

Occasionally the boat would stop, and we would listen attentively for the splash of a moose as he walked in the water along shore, but although I heard many curious sounds my inexperienced ears refused to discriminate between the plunge of a muskrat and the walk of a deer. After having gone about half way up the stream the birch halted once more. My heart by this time was thumping like a trip-hammer, and I felt sure if there was a moose anywhere about he must certainly hear it and be off, and as I was projecting how I must shoot to stop him in his wild career, I felt the boat shake, and a low "hist" came from the stern. I won't assert it for a fact, but my impression is my cap rose six inches above my head and remained immovably fixed in that position, as each hair stood rigidly on end, and both my ears curved forward. The boat glided forward, and nearer to the shore, and then I caught for the first time the splashing sound the wild deer makes as he cautiously walks through the water when feeding. Still the boat shot noiselessly forward. "Shoot," hissed Uncle Ellis. Shoot what? I thought to myself, for I saw nothing but the black shadows of the shore. However, I put my gun up to my shoulder, and gazed with all my eyes over the barrel, hoping to see something that I might particularly shoot at, but I could distinguish nothing, for, although the moon was shining brightly, the stream was narrow and the trees stood closely together, so that everything was buried in shadow. But the splashing became more and more distinct, and drew nearer and nearer, and at last, with my heart in my mouth, I distinguished a mass blacker than the surrounding shadows, moving slowly along near the shore. To cover it with my gun and pull the trigger was the act of a second. I bright sheet of flame shot out in front, effectually blinding me for a moment, a report, startling a thousand echoes that seemed to carry the sound all over the world, was followed by a tremendous commotion in the water in front of me. In the midst of it all I felt the birch backing out into the stream. I soon found my voice, and asked Uncle Ellis "Didn't I hit him, where are you going?" "Listen," he said. "Yes you hit him, I want to hear what he does." After the first rush of the moose on receiving my shot, all had been still. We now heard the beast cough and splash about a little way from the bank in a marshy spot. "There," said Uncle Ellis, "do you hear that; he's down. You shot him through the lungs, and he's dying. We'll git him in the morning." "Why wait for the morning," I said. "I guess not," he replied; "you don't catch this child going up to a wounded moose at night. No, we'll just go below and camp, and come back here and get him in the morning," and with that he turned the birch around, and a short distance down we both got out, a fire was made, and we sat down to have a quiet smoke before turning in. I felt very anxious about the wounded moose, fearing he would get away, but Uncle Ellis reassured me, at the same time warning me never to go near a wounded moose. He told me one of his own adventures when he was younger and less cautious, wherein a "bull" moose, which he had wounded and gone near, jumped up, chased him to a tree, and fairly lifted him into it by a toss of its head, the spread of the horns fortunately being so great that their points passed each side of his body. The moose kept him there for two hours, and was lost at last. The fire soon began to burn low and we went to sleep.

As the day was breaking I was roused to go up stream to look for our moose. We got into the birch cautiously, and taking the gun I resumed my place in the bow and we started silently up stream. As we reached the spot where I had shot at the moose, just at a turn of the stream, the bow was headed for the shore, when suddenly the canoe stopped, and Uncle Ellis said, "There's a moose on the other side of the river, close to the bank; I'll paddle you right onto his back." I looked over and saw the great gray mass of a moose standing with its back to us, feeding where the water rose nearly to its belly. The canoe was paddled to within five yards of the animal, and I began to think I really was to be put on its back, when uncle Ellis said, "Shoot!" So, taking a careful aim, I pulled the trigger. To my intense disgust the cap refused to explode; I cocked and pulled again with the same result. The slight noise caused the moose to look around. It had not scented us, and we were so quiet that the animal showed no alarm. "Put on another cap," was hissed out of the stern. I endeavored to get at them, but on the first movement the moose became uneasy and moved towards the forest. It was but a moment gaining the shore, where it stopped for and instant to take a look at us, and then starting at a long swinging trot was soon out of sight among the trees. "Well, that is bad luck enough," I said, "I ought to have put on a fresh cap before we started out this morning." "Yes, it is rough," answered my guide, "but it was only a cow anyway, and we want bulls. I guess we'll go and get the one you shot last night," and so he turned the birch around and paddled across the stream. I felt considerably discouraged, and in a frame of mind not to be surprised on reaching the spot where the moose fell the night before to find that he was not there. "Here's where he was," said Uncle Ellis, "and just see how the grass is all smashed where he struggled, and here's a lot of blood, too; he is desperate hard hit; he's just gone this way," and so he followed up the track. Blood was found at intervals, and several places were seen where the animal had lain down, but the track gradually led off into the forest, and it soon became evident that the moose had been able to take himself off during the night. Here was another disappointment, but there was no use waiting, the moose had evidently gone away, and we were obliged reluctantly to give up the search. "It does happen so sometimes," Uncle Ellis said, as he paddled towards Kineo. "A moose is a mighty powerful critter, and it will happen occasionally, when they've got their death wound, that they'll drag 'emself off into the woods where you can't find 'em and just die there; and sometimes, when des'prate hard hit, they just gits away in spite 'ov yer, and arter a while gits over it and comes out all right agin."

My friends were waiting for us on the wharf, and greeted us with the question, "Where is your game? Didn't you kill a moose; we heard you shoot last night, and felt certain you had killed one." I was obliged to confess my bad luck, but I cheered them with the information that there were plenty of moose; on every side were signs of their presence. So we decided to try again that evening. To my regret, however, I was obliged to give up Uncle Ellis for a few days, as he had engaged to go with Church, the artist, to Mt. Katahdin; so I took as my guide Joe Barrows, the son of our landlord. Without the experience of old man Ellis, Joe was very handy and obliging about camp; a good canoe-man, and understood well the habits of the mighty game. Joe had a tent which he took with us, and as it was decided to remain over night, we went prepared to sleep out and took such things as were required to cook our supper and breakfast. It was decided that Joe and I should go back to Tom Heegan, and George, with his guide, should try a stream farther up the lake. About the middle of the afternoon we started again, and opposite the mouth of Tom Heegan parted company, wishing each other good sport during the coming evening. Joe quickly paddled the canoe across to the entrance of the river, and we landed and made our camp in a grove of white birch. This done, Joe proposed to start up stream, although the sun had not yet set, to see, as he said, what fresh signs there were. We took our respective positions, and the canoe moved silently along for about twenty minutes, when Joe whispered, "Thar's a bar just ahead of us on the left bank, I saw his head in the bushes. The critter's eatin' some offal of a moose I left thar about a week ago. Will you shoot him? He can't see us nor heard us at all." "Shoot him!" I replied; "I rather think I will." "It may spile your chance for a moose," said Joe, "for the noise 'll likely skeer them off if any are around." "Never mind," said I, "we'll take the chances. It isn't every day one gets a shot at a bear. Go ahead." "Well," explained Joe, "the fellow is just the other side of that tall birch yonder; I'll go down to it and then turn towards the shore, when you can shoot." No more was said. I kept my eye fastened on the birch tree, and as the bow passed it I saw the bear's head above the bushes. He was intently occupied with his meal, and was totally unconscious of our presence. Joe turned the boat cautiously around and shoved it within five yards of the shore, when he held it steady, and judging about where the animal's shoulder would be, I fired. A plunge and a grunt, followed by a great scratching, told that the shot had been successful. As Joe still kept the boat stationary, I asked him what we should do now. "Wait a bit, there may be two on 'em; let's listen." Soon sounds began to issue from the woods, low and plaintive at first, but soon rising into screeches and howls that fairly made the forest ring. "What on earth is that horrible noise, Joe?" I asked. "That's the bear dying, we must wait a while, for if there's another about he's just like as not to come and see what's the row for," so we sat and waited, but in a few minutes the howls grew gradually fainter, and then ceased altogether. "You'd better load up now," said Joe, "and step ashore and see what sort of a bar you've killed." I did not altogether fancy this, but as soon as I had loaded the gun Joe pushed the bow to the shore, and said, "Jump out now, I'll wait for you here." Holding on to the gun and keeping it all ready to shoot anything that I met, I advanced gradually into the bushes, peering on every side for the bear, and expecting every instant to feel his claws catch hold of me, I soon came to the spot where the offal lay, and there, to my great satisfaction, saw the bear lying a little farther on sprawled out in an old well worn moose-path quite dead. Calling to Joe to come and help me carry him to the boat, I stood and admired the creature before me. His black shaggy coat was not so thick as it would have been a month or so later, but still in very fair condition, and his arms and paws were massive. It was as much as Joe and I could do to pull the brute to the river, and when we had dumped him into the canoe, he took up all the central part. "I think," said Joe,

"we had better go back to camp with this fellow, he smells so strong we couldn't get within a mile of a moose, and we'll throw him out on the shore and leave him for to-night." So we went down to camp; there we waited for the moon to rise before starting again for moose. But our hunt was useless, for the noise made in killing the bear prevented any moose from coming to the river.

[Concluded next week.]

For Forest and Stream.

MALLARD SHOOTING IN THE SNOW.

IT was near the close of one November morning that Henry Elah, my truest friend and best companion in all shooting trips, called to inquire if I "would like another half-day's hunt before the river froze over?"

"Are the ducks plenty?" I inquired, "I had supposed the freezing of Puckaway Lake would drive them south." "True enough, the lake has frozen, but for this very reason the mallards are actually swarming on the Fox River, the only open water for miles around," answered Henry, and I, nothing loth, hastily gathered my shooting accoutrements and prepared to depart for the best resort, three miles away.

"Had we not better take Neptune?" I ventured to suggest. "Certainly," responded he, and at this moment Neptune, the spaniel, came running gaily forward, his pendant silky ears shaking with his motion, and his bright eyes glistening, evidently as well aware as we of what was forthcoming.

The morning though comparatively warm was cloudy, and a lurking heaviness in the air was suggestive of snow, but this was likely to be the last shoot of the season, and we would not miss the opportunity. Keeping close to the river's edge we set out at a good pace, following the devious windings and ever on the alert for the quick flutter or hasty quack which should announce the flight of mallards. For the first mile no such welcome sound greeted our ears, but in the meantime a few white flakes of snow had fallen and the appearance of things betokened a storm. "Now we had better be cautious," I whispered, "for at this clump of willows I have found ducks," and as we stepped forward carefully toward the river bank. Nep, by some strange freak of excitability, rushed ahead whining with eagerness. Splash, splash! Flip, flap! four mallards rose beyond the fringe of willows separating us from the river, and were away, giving no chance for shooting. Nep received a sound whipping for his blunder, and we resumed our way. Suddenly we beheld a score or more of mallards coming forward on sweeping wings, and as the ducks neared us we fired, I at the nearest on my right, and Henry at a single duck which passed over him. Two fell, one on the icy slough across the river, and the other nearly a half mile away at the edge of a dense woodland bordering the marsh. I fired again at the "rear guard," and had the satisfaction of seeing him fall, though nearly two hundred yards away, across the river. "Nep go fetch!" and at the word the faithful dog swam over and returned, laying the mallard at our feet; and such a one, too, not to be compared to the bird of September, but heavy, strong of wing, and a covering of feathers that would defy the No. 5 or 6 pellets which had proved so deadly early in the season. "It is unlucky," said Henry, "that those two should fall where 'tis useless to search for them."

Just then, our guns reloaded and ready, a black duck came swiftly flying towards us, and he too fell at the report of my companion's gun. Agreeing to take different routes from here and thus cover the ground more fully, Henry taking the dog crossed the river in a canoe and started down on the opposite bank, while I remained several minutes watching the steady snowfall until my reveree was broken and my mind placed upon the alert by espying a single mallard veering toward me. I fired, and the bird flinched, but fearing he might not fall I shot again, at this he "towered" straight upward with swift flight, further and further until he became a mere speck in the falling flakes above. But his race was run, and from mid-air the bird falls, gaining impetus as he drops, and strikes the frozen marsh up the river, but on the opposite shore. Soon after Henry appeared, and to him I gave the task of securing the mallard on his side of the stream. "A little above where you are now standing, is the spot where our second duck fell," said I, after, with Nep's aid he had found the lost mallard shot; "just at the foot of yonder tall tree among the thick underbrush," pointing to a stretch of almost impenetrable woodland and brake. But the snow had probably covered it, destroying the scent, and a search failed to find the mallard, and from thence we proceeded to the next bend in the river where Henry brought down a fine duck, the report of his gun sounding deadened in the heavy air. Almost immediately after I discovered about three hundred yards below six ducks alight on the water. I informed Henry of this new arrival, suggesting that he follow and obtain a shot if possible. But, with the liberality characteristic of his nature, he insisted upon my enjoying the chance. Stealthily I approached the margin of the stream, opened the fringe of willows which lined the bank, and beheld the six ducks peacefully feeding in the shallow water across the stream. It was full fifty yards though, and I stood for a moment debating in my mind the chances for such a shot. Unfortunate delay! the waterfowl, taking alarm, arose at the instant, but closely together, and I fired with the happy result of bringing down two, and at the second shot, fired at a single mallard which crossed to my right; he too fell, but I saw with dismay that none of the three were killed. One was wing tipped, one in the undergrowth on the farthest bank, and the third floating down the current. A charge laid low the last, but the two former were beyond the range of my gun. I called to Henry to send Nep after the one in the thicket, and as he approached the spot among thick alders, Nep flushed the duck which rose apparently unharmed, flying straight past Henry away out upon the marsh, where at length it fell exhausted nearly a mile away.

Soon after my companion joined me, and stepping from the canoe held up a mallard, exclaiming "Here is the fellow that fell near the tall oak tree above the bend!" "How did you find him?" I enquired. "Oh, easily enough, although I had given him up and called the dog away, Nep ran back and surprised me by coming from the thicket with the mallard in his mouth. At first sight I only saw the wings and head of the duck standing straight out from its body, and I thought for the instant it was a monster of some description, which frightened me considerably." At this we both laughed heartily and soon started home-

ward, voting our half-day's sport a fine one, although enjoyed in a snow storm, and the last hunt of the season.

FRED.

Fish Culture.

POLLUTION OF RIVERS.

This subject has been referred to at times in our columns but it does not seem to have received the full attention which it merits, either from legislatures, game protective clubs, or the press. Although there are laws in many States which provide heavy penalties for allowing deleterious substances to be deposited in rivers, yet there is scarcely a river without a factory upon its banks, discharging its hurtful refuse into it. Mr. Fred. Mather, now in the employ of the United States Fishing Commission, has been prominent in his efforts to correct the above abuse, and deserves credit therefor; but the evil remains. It is not an easy matter to convict offenders under the law, not even in England, where the like efforts at protection have been long and increasing. We observe that the bill entitled the "Clean River Bill," has recently been brought into the House of Lords by the Earl of Doncaster, with the object of "making further provision against the pollution of rivers hitherto free from pollution." It is evident that legislation has been defective or imperative in that country; and severe measures, or better improvement of them, are required.

A clean river, or a clean part of a river, is defined to mean any river, lake, pond, stream, canal, or water-course, of every description, or part of a river, lake, pond, stream, canal, or water-course, in which the water is not affected by any extraneous polluting cause to such an extent as to be materially deteriorated in quality. Any person who causes to fall or flow, or knowingly permits to fall or flow, or to be put or carried into any clean river or any clean part of a river any polluting matter, shall be deemed to have committed an offence against the Act; and may be prosecuted in a County Court by any person interested in keeping such river or part of a river free from pollution. The County Court may order the discontinuance of the offence, under a penalty of £50 a day for every day during which such order is ignored. Polluting matter is defined to include "any matter, whether solid or liquid, which introduced into water, alters appreciably for the worse the quality of such water;" and herein says *Land and Water*, lies the principal fault in the bill. The test for polluting matter is to lie in its injuring "water,"—from any source apparently; but the offence created by section 3 is only in the putting of such matter into "clean rivers." It suggests that "polluting water" should be defined to mean "matter, whether solid or liquid, which, introduced into pure spring water, alters appreciably for the worse the quality of such water."

It is worthy of more than a passing notice, that an action and injunction have been obtained in one of the rural judicial districts of Long Island, in a case that was decided to come under the pollution of rivers act. This we announced in our last issue, and we hope due honor will be accorded to Judge Richard Ingraham, the presiding judge in the case. The action was to restrain one Lee from permitting a drain from his premises to corrupt the water of a trout pond belonging to Edward H. Seaman, of Richwood, L. I., the effect of which has been to destroy a large number of trout. Under this ruling, others will be encouraged to undertake similar prosecutions. There are hundreds of streams which are rendered hurtful, not only to the fish in them, but to the neighboring inhabitants who use their waters, by the dye-stuffs, the tar-oil, and refuse allowed to pour into them, the water therefrom actually percolating through the soil and poisoning the wells, as has been ascertained.

CHANGES OF COLOR IN FISH.

This is a subject of much interest, and deserving of close study, inasmuch as fish are often described as different varieties of a family, whereas they owe their supposed difference purely to voluntary or involuntary changes of color. Even the brook trout—known to vary in color, according to waters in which they are found—often present two or three distinct shades or hues in the same stream, phenomena which may be accounted for on the theories given in the letters addressed to the *Land and Water*, London, which we copy below. The same peculiarities we have seen in catfish and pickerel, and other fish. We hope our intelligent correspondents will at once take up this matter for investigation and discussion. We quote as indicated:—

"Regarding the change of color in fish so recently alluded to by Mr. Wesley, it may be interesting to hear Prof. Owen's remarks as stated in the first volume of his great work on the 'Comparative Anatomy and Physiology of the Vertebrates.' 'The varied, and often brilliant colors of fishes, are due to pigment cells at different depths of the skin, but chiefly in the active or differentiating area. Those of silvery and golden lustre are mostly on the surface of the scales. The silvery pigment called 'argentine' is an article of commerce used for the coloring of fictitious pearls, and offers a crystalline character under the microscope. The blue, red, green, or other bright-colored pigment is usually associated with fine oil, and occupies areolæ favoring accumulation at, or retreat from, the superficies, and thus effecting changes in the color of the fish, harmonizing their exterior with the hue of the bottom of their haunts.' Darwin mentions some very interesting particulars. 'The colors of the pike of the United States,

specially of the male, become, during the breeding season, exceedingly intense, brilliant, and iridescent. Another striking instance out of many is afforded by the male stickleback, which is described by Mr. Warrington as being then beautiful beyond description. The back and eyes of the female, on the other hand, are the most splendid green, having a metallic lustre like the green feather of humming birds. The throat and belly are of a bright crimson, the back of an ashy green, and the whole fish appears as though it was somewhat translucent, and glowed with an internal incandescence. After the breeding season these colors all change; the throat and belly become of a paler red, the back more green, and the glowing tints subside. I have a dried specimen of stickleback now before me; during life the throat and mouth were of this pale red color, which is still maintained. I should imagine that owing to the coloration of the pigment cells in *Gasterosteus scivrus* being more developed at certain seasons than at others, according to circumstances, the fish is under the guidance of instinct, or, call it what you wish, some natural law which renders it an involuntary agent. At death the color appears to be like a mordant permanently fixed in dried fishes. How far the laws of light affect the pigment cells in the natural element of the fish I am not prepared to state. Probably the same unerring laws of instinct are in operation guiding the fish to seek that watery station best adapted to its safety.—J. COLEBROOKE."

"With reference to some remarks by a correspondent in your last publication on the change of color in fish, permit me to say that, judging from the following facts, it would seem certain that the power of change is in the fish. I have taken from a clear river minnows black on the back, and putting them into a white basin, with a dinner plate over the same day, next morning found them light brown on the back; again placing the same fish in a bottle, and carrying them all day in a coat pocket, at night they have become black, and if carried in an open fish basket instead of the pocket, retained the light brown color. But, more remarkable—when fishing for some years at the mouth of a river where the estuary contracted into a narrow neck, standing on the top of a steep bank or dyke, I have seen on a bright spring morning the sea-trout rise at the fly brown on the back as the sand on which it lay, and on being hooked, instantly assume the usual blue color. Let me also refer to a letter in your number of November 20th, 1874, in which it is said of a cephalopod, "The membranous cuticle, in the creature's rage and terror, changed in pattern and color as rapidly as the shifts in a kaleidoscope. W. T. H."

CROWDING TROUT PONDS.—Seth Green, Esq., has kindly furnished us with the following interesting correspondence:—

OAKLAND, Bergen County, N. J., July 31st 1876.

SETH GREEN, Esq.:—

Dear Sir—I want to trouble you a little by asking a few questions about my trout, or a portion of them. I have a pond of fine two year olds that I keep in a pond that is from six to three feet deep; is shaded two-thirds of the day; temperature of water, from 56° to 60°, never above or below; has a fine stream of water running into it, as much as would run through a three inch square pipe; and the fish have a chance to run up it, and do, more or less; the water has plenty of fall, and is well aerated. The water runs over a stony, gravelly bottom, and the pond is not foul, but has plenty of watercresses growing in at one side. I feed on lights mostly, sometimes raw and sometimes cooked—mostly cooked. Sometimes I give them thick milk or curd, and once in a while fish cut up, but not often. To all appearances they are healthy and grow finely, but for some time past they have been dying off from two to eight or ten per day. They will start all at once and dart like lightning through the water, and jump out on the bank sometimes, and appear to be as crazy as possible. After swimming about in this way for a while they get into shoal water, or perhaps, lie on the bottom; or swim lazily about until they turn belly up, and in a short time die. To all appearances, inside and out, they are perfectly healthy. I have fed them once a day regularly. Now, can you tell what the cause of this is, and have you experienced the same disorder? What can I do to remedy the matter? Please let me know by return mail, and I will be very much obliged indeed. Very respectfully Yours, &c., B. B. PORTER.

My trout are not crowded, but have plenty of room.

ROCHESTER, August 3d, 1876.

B. B. PORTER, Esq.:—

Dear Sir—You have too many trout in your pond for the amount of water you have flowing into it. Your trout act exactly as all kinds of fish do when they are confined in a can or pond where they need a change. The first sign fish show of wanting a change of water is, they come to the top and swim about with their noses out, and keep opening and shutting their mouths. They do it for a short time, and if they do not get a change they will become crazy and jump out if they can, and will die as soon in the water as they would if they were out. If a man was suffocating he would try the experiment of jumping into the water before he was dead. I wish you to try the experiment, when you see your trout getting sick or crazy, of catching them and putting them into running water above your pond where they have good running water, and I think they will recover. If I am not correct, look for some other cause. Some evilly disposed person may have thrown something poisonous into your water. Their actions would be similar if they were poisoned. If your trout die there is a cause for it, and you should make it your business to find what it is. I have watched days and weeks to find out the causes of fish and spawn dying. SETH GREEN.

SALMO CONFINIS IN CONNECTICUT.—Our State Fish Commissioners will be glad to know that the 10,000 *Salmo sebago* placed in the two brooks that enter Twin lakes on the north are growing finely, some of them last seen in our brook being at least three inches long; and if they will continue the good work by putting in some thousands more each spring, it would be a good thing to do. Of the 3,000 *Salmo corvinus* set free from our hatching-house eighteen months ago, it is two soon to hope to see much—though we expect another year to hatch enough to populate the deep waters of Waushing with this popular fish; and with the aid, promised, of the Salisbury Game Protective Society, enough *Salmo fontinalis* to make our trout streams sparkle with these "gems of the first water," as in the olden times. What is wanted now is a law, and a public opinion to make the catching and keeping of "fingerlings" (under five inches in length) a crime and an offense (that no true angler will be guilty of. "Only this and nothing more." JIP SAY.

SALMON EGGS HATCHED OUT IN NEW ZEALAND.—I have received the following from Mr. Henry Howard: "Salmon Ponds, Wallacetown, Southland, New Zealand, May 1, 1876. I am happy to be able now to say that the hatching of the ova by the Durham has turned out a great success. I think I shall not over-estimate it when I lay it at from eight to ten thousand hatched in all, but I regret to say that many

of your ova did not hatch so well as I had anticipated; so many died after the eyes were visible, and many burst just at hatching. I feared at first that fungus had come in with the moss, but as there was no sign of the ova adhering to the each other, or to the gravel, it must have been from some other cause; but in any case we must not expect, after so long a voyage, that fish will hatch as in their natural way. I believed I had in all about 25,000 after they were laid. The fish are much stronger than I expected, and very few, if any, deformed, as was the case to so large an extent in the Oberon shipment, when nearly one half proved unable to feed when the sac was absorbed. The first fish of both your lot and Mr. Youl's hatched on the 22d, and were, if taken as I believe on the 5th January, 87 days in the ice at about 32 degrees, and 22 days in the hatching-boxes here at 51 degrees, or 109 days altogether. If my estimate is correct, this is I believe by far the best hatching yet at the Anipodes. The Lincolnshire's shipment of 87,000 to Tasmania produced, I believe, 6,000, and I think that by the Norfolk 4,000; but I am not sure of this, or of the quantity sent. One large box and one small one of Mr. Youl's I sent by order to Christchurch, and I see by a press telegram that 127 fish are hatched from the 3,000 ova, but I don't know if that represents the hatching. I have no news from Victoria, but doubtless you will have heard all particulars ere this reaches you. Those at the ice house there should do well, but I have no faith in the rest of the shipment hatching in-water at 67 degrees and 68 degrees. Some of the rivers I tried there were as high as 73 degrees, and what can be the use of hatching, even in ice, as the fish when spawning afterwards must go through this ordeal. Depend upon it, it is a waste of ova, and does harm to the cause in the long run. I trust the Government will not let it rest here, but still go on; for depend upon it, salmon will never be established with one shipment or two, though now people will be convinced that steam vessels are not naturally death to ova we shall yet see fifty per cent. from a shipment hatched. A few such shipments would soon put the matter right.—Land and Water, July 22d.

Natural History.

A KEY TO OUR SHORE BIRDS.—II.

We conclude herewith the Key to the families, genera and species of our bay birds which comprise the order *Limicola*—a Latin word meaning "dwellers alongshore." We have already been thanked for so much of this synopsis as we have printed, and have no doubt that in its complete form it will be widely appreciated by gunners. The local names of all these birds differ widely in different parts of the coast. We should be glad if, at least in writing of these birds, these uncertain local names might be utterly disregarded for a single appropriate term which should be known and used universally. This, perhaps, is too much to hope for yet; but a part of the confusion might be avoided if we knew the various aliases under which each species of shore birds appears between Labrador and Florida. If, therefore, sportsmen from every part of our coast will, after careful identification, send us all the local names by which every species in his neighborhood is known, we will publish a list of these local names, and the birds to which they properly apply as soon as facts enough have accumulated.

The following concludes the Key:—

FAMILY SCOLOPACIDÆ.

SNIFE.

Bill elongated, usually longer than the head; if short not plover-like, being soft-skinned throughout (hard when dry); nasal grooves narrow channels ranging from half to nearly the whole length of the bill; sides of lower mandible usually also grooved; nostrils narrow exposed slits; head feathered. Wings usually thin and pointed; tail short and soft; tibia rarely entirely feathered. Tarsus never entirely reticulate and usually scutellate in front and behind; hind toe present (except in *Calidris*); front toes cleft or slightly webbed; size medium or small. Sexes alike or female slightly larger; seasonal changes in plumage often strongly marked. Eggs usually four, placed with the small ends together in a tight nest or depression in the ground; notes various; mostly migratory or gregarious. Genera fifteen or more, species about ninety; chiefly of northern regions, but some species in most parts of the world.

- *Toes 3.....CALIDRIS, 8
 **Toes 4.
 †Tarsus scutellate in front only; bill slender, decurved, very much longer than the head.....NUMENIUS, 15
 ††Tarsus scutellate in front and behind.
 ‡Feet semipalmate; toes somewhat webbed at base.
 a. Tail barred crosswise, with light and dark colors.
 b. Gape not reaching beyond base of culmen.
 c. Culmen furrowed; length less than 12.....MACROHAMPHUS, 4.
 cc. Culmen unfurrowed; length more than 12.....LIMOSA, 9.
 bb. Gape reaching beyond base of culmen.
 d. Length more than 9.
 e. Bill longer than head.....TOTANUS, 10.
 ee. Bill not longer than head.
 f. Tail more than half the length of wing.....ACTITURUS, 13.
 ff. Tail less than half the length of wing.....PHILOMACHUS, 12.
 dd. Length less than 9; second toe unwebbed.
 g. Bill grooved nearly to tip; back not speckled with white; adult with black spots below.....TRYNGIDÆ, 11.
 gg. Bill grooved about half way to tip; back speckled with white, not spotted below.....TOTANUS, 10.
 aa. Tail not barred.
 h. One minute web; primaries mottled with black.....TRINGIDÆ, 14.
 hh. Feet with two plain webs.
 i. Bill about as long as head.....EREUNETES, 6.
 ii. Bill much longer than head.....MICROPALAMA, 5.
 ‡‡Toes not webbed at all.
 j. First primary attenuate; bill straight, shorter than head; culmen grooved.....SCOLOPAX, 2.
 jj. First three primaries attenuate; bill as in *Scotopax*.....PHILOMACHUS, 1.
 kk. Primaries 10, attenuate.
 k. Bill straight, about twice as long as head.....GALLINAGO, 3.
 kk. Bill straight, much shorter than head; primaries mottled with black.....TRYNGIDÆ, 14.
 lll. All other Sandpipers.....TRINGA, 7.

1. PHILOMACHUS, Gray. AMERICAN WOODCOCK.

1. *P. minor*, (Gm.) Gray. American Woodcock. Variegated, black, brown, gray, and russet; below warm brown; eye high, far back; L. 11; W. 5; B. 3; T. 1½. Eastern U. S., in swamps, etc.

2. SCOLOPAX, Linnaeus. EUROPEAN WOODCOCK.

1. *S. rusticola*, L. European Woodcock. General appearance of *Philomachus*, but a third larger. European; accidental on our Atlantic coast.

3. GALLINAGO, Leach. SNIFE.

1. *G. Wilsoni*, (Temm.) Bon. American Snipe. Wilson's Snipe. Back varied with black and bay; crown black, with a pale median stripe; bill straight, very long; L. 11; W. 5; B. 2½; leg naked, 3; T. 2 1-3. E. U. S., abundant.

4. MACROHAMPHUS, Leach. RED-BREADED SNIFE.

1. *M. griseus*, (Gm.) Leach. Gray Snipe. Brown Back. Blackish and grayish; breast bay in summer; bill long nearly as in *Gallinago*; L. 11; W. 5½; T. 2½. North America; abundant coastwise.

5. MICROPALAMA, Baird. STILT SANDPIPERS.

1. *M. himantopus*, (Bon.) Baird. Stilt Sandpiper. Blackish, marked with chestnut, etc.; ashy gray in winter; bill nearly as in *Gallinago*; L. 9; W. 5; T. 2½. N. Am., not abundant.

6. EREUNETES, Illiger. SAND-PEEPS.

1. *E. pusillus*, (L.) Cass. Semipalmated Sandpiper. Peep. Plumage various, usually pale, white below; small; L. 6½; W. 3½; T. 2. N. Am.; abundant along beaches.

7. TRINGA, Linnaeus. SANDPIPERS.

*Bill, tarsus, and middle toe with claw, of about equal length. (*Actodromas*.)

†Upper tail coverts (except the lateral series) black or dark brown; throat with an ashy or brownish suffusion and dusky streaks.

1. *T. minutilla*, Vieill. Least Sandpiper. Peep. Smallest of the Sandpipers, resembling *Ereunetes*, but the feet different; L. 6; W. 3½; T. 2. N. Am., abundant.

2. *T. Bairdi*, (Coores) Sci. Baird's Sandpiper. Colors of preceding but larger; throat but little streaked; L. 7 to 7½; W. 4 2-3; T. 2½; B. 1. America, rare E. of Mississippi River.

3. *T. maculata*, Vieill. Pectoral Snipe. Jack Snipe. Grass Snipe. Crown unlike neck; throat ashy-shaded and sharply streaked; L. 9; W. 5½; B. 1½. N. Am., abundant.

††Upper tail coverts white, with or without dusky marks; throat sharply streaked, with little if any ashy suffusion.

4. *T. fuscicollis*, Vieill. White Rumped Sandpiper. L. 7½; W. 4½; T. 2½. E. U. S., abundant along the coast.

**Bill, tarsus, and middle toe, obviously not of equal length.

††Tarsus shorter than middle toe; tibiae feathered. (*Arquilella*.)

5. *T. maritima*, Brunnich. Purple Sandpiper. Ashy back with purplish reflections; feathers with pale edgings; lower parts, etc., mostly white; bill nearly straight; L. 9; W. 5; T. 2 2-3; B. 1½. Atlantic Coast.

‡Tarsus not shorter than middle toe; tibiae bare below.

§Bill slightly decurved, much longer than tarsus. (*Pelidna*.)

6. *T. alpina*, (L.) var. *americana*, Cass. Am. Dunlin. Ox-Bird. Black-Bellied Sandpiper. Chestnut brown above; feathers black; centrally; belly, in summer, with a broad black area. L. 9; W. 5; T. 2 1-3; B. 1½. N. Am.

aa. Bill perfectly straight. (*Tringa*.)

7. *T. canutus*, L. Robin Snipe. Red-Breasted Sandpiper. Brownish black, brownish red (robin-like) below; L. 11; W. 6½; T. 2 1-3. Atlantic Coast; abundant.

8. CALIDRIS, Cuvier. SANDERLINGS.

1. *C. arenaria*, (L.) Ill. Sanderling. Ruddy Plover. Variegated; form of *T. canutus*, but the hind toe wanting; L. 8; W. 5; T. 2½; B. 1. N. Am.; abundant coastwise.

9. LIMOSA, Brisson. GODWITS.

1. *L. fedoa*, (L.) Ord. Great Marbled Godwit. Marlin. Cinnamon brown, variegated above, nearly uniform below; tail barred; no pure white; L. 16 to 22; W. 9; T. 3½; B. 4½. U. S., abundant along shores.

2. *L. hudsonica*, (Lath.) Sw. Black-Tailed Godwit. Brownish black and reddish, more or less variegated above and below; some white; tail black, white at base; L. 15; W. 8; T. 2½; B. 3½. N. Am., rather northerly.

10. TOTANUS, Bechstein. TATTLERS.

*Toes with two sub-equal webs; legs dark or bluish. (*Symphentia*.)

1. *T. semipalmatus*, Gmelin. Willet. Semipalmated Tattler. Grayish, variegated; L. 12 to 16; W. 7½; T. 3; B. 2½. U. S., common coastwise.

**Toes with the inner web very small; legs yellow. (*Glottis*, Nilsson.)

2. *T. melanoleucus*, Gm. Greater Tell-Tale. Yellow Shanks. Stone Snipe. Ashy brown, variegated; bill very slender; legs long; L. 12½; W. 7½; T. 3½; B. 2½. N. Am., frequent.

3. *T. flavipes*, Gm. Lesser Tell-tale. Yellow Shanks. Colors as in preceding; smaller; legs longer; L. 11; W. 6½; T. 2½; B. 1½. U. S. abundant.

***Toes with inner web rudimentary; legs blackish. (*Rhyacophilus*, Kaup.)

4. *T. solitarius*, Wilson. Solitary Tattler. Olive brown, streaked and speckled with whitish above; below white, breast with dusky suffusion; bill straight and slender; L. 9; W. 5; T. 2½; B. 1½. U. S., abundant about secluded ponds, etc.

11. TRINGIDÆ, Bonaparte. SPOTTED SANDPIPERS.

1. *T. macularius*, (L.) Gray. Tip-Up. Teeter-Tall. Spotted Sandpiper. Lustrous drab above, varied with black; pure white below, with round black spots in adults; L. 8; W. 4; T. 2; B. 1. U. S., everywhere.

12. PHILOMACHUS, Mohring. RUFFS.

1. *P. pugnax*, (L.) Gray. Ruff. Reeve. Male in breeding season with a great ruff, and the face bare; female without these characters; L. 10; W. 7; T. 2½; B. 1½. European; accidental on our coasts.

13. ACTITURUS, Bonaparte. UPLAND SANDPIPERS.

1. *A. Bartramius*, (Wilson) Bon. Upland Plover. Dark grayish, variegated; L. 13; W. 7; T. 4; B. 1½. U. S., abundant in fields, etc.

14. TRYNGIDÆ, Cabanis. BUFF-BREADED SANDPIPERS.

1. *T. rufescens*, (Vieill.) Cab. Grayish, reddish below; quills with white and finely mottled with black; L. 8; W. 4½; T. 2½. U. S., with the last, but not common.

15. NUMENIUS, Linnaeus. CURLEWS.

1. *N. longirostris*, Wils. Long Billed Curlew. Sickle Bill. Reddish gray, variegated; L. 24; W. 12; T. 4; B. 5 to 9. U. S., frequent.

2. *N. hudsonicus*, Lath. Jack Curlew. Similar, but paler; L. 18; W. 9; T. 3½; B. 3 to 4. U. S., and northward.

3. *N. borealis*, (Forst.) Lath. Esquimaux Curlew. Dough Bird. More reddish; L. 15 or less; W. 8½; T. 3; B. 2½. U. S., northward.

THREE MONTHS OF FIELD NOTES.

The month of April was cool, with frequent rains, and a white frost as late as the 19th; but the temperature did not affect the movements of the birds, as to day (19th) the pioneer brown thrush announced his presence by a glorious song, while perched upon the tallest tree on the hillside. I noted some arrivals earlier than this, as the fish-hawk on the 11th (I have seen them as early as February 26th); and on the same day, a number of small blue herons (*Ardea (Florida) carulea*). The killdeer plovers that come early in March (11th) and remained some time, are now back again in great numbers. The impression obtains among our gunners that the kill-deers and snipe (*Gallinago Wilsoni*) migrate in company; but I am inclined to think that the former reach New Jersey in advance of the snipe; and while they are found later in the same localities, I do not think they are in any way associated; that is, as we find the grackles and red-winged black-birds; or in summer, several small species of sandpipers, in one loose flock. A few snipe were seen in March; but they soon disappeared.

In April they were present in less than usual numbers. Some few escaped the gunners, and for some reason passed no farther north. (I met with one nest this year, but this is a matter concerning next month.) In comparison with the notes for April made in previous years, I find that the warblers and such other species as arrive about May 1st, made their appearance eight to twelve days earlier than usual.

It is interesting now (July 24th) to note in reference to the above, that the vegetation kept pace with this early movement of the birds. The harvesting of wheat and rye began as early as June 27th. The usual date is July 4th. Now, as these migrating birds all come from long distances, varying among the several species, it is simply impossible that they knew that they might safely come so much in advance of usual dates, their safety requiring an abundance of insect life, and vegetation so far advanced as to afford them shelter and concealment. As to the mere matter of temperature, I believe it has but little influence in the movements of our birds; and am convinced that most of our migrants would remain with us much longer if the leaves did not fall from the trees on the one hand; and the insects generally were not killed or driven into winter quarters. Swallows, that depart in August, can withstand a great deal of bitter cold weather if well fed. To return to the migrants, do they come up from the Gulf States in very short, easy stages, and so feel their way, and quickly retire on encountering Jack Frost? If some of your readers in, say, North Carolina and Virginia, would give us data as to the northward movements of our summer birds, it would add much to our knowledge concerning the mystery of migration.

The month of May added but few bird notes to my diary, as I was much from home. I heard and saw the chats (*Icteria virens*) for the first time, the 15th. The old pair of last season took possession of the nest of the foregone summer; while their brood, I should judge them to be, have mated (previously to migrating?) and three nests are in the same dense thicket of blackberry briars, near the older structure, which, this summer, was simply refurnished. These birds sing a good deal during the day; but it is after sunset, and the whole night if there be a moon, that they are merriest; and a more joyous strain never came from bob-o-link, than that they utter; but alas! this melody is so often spoiled by an intermingling of such uncouth, mournful sounds, that one wonders not that the Indians should have called them the "ghost-birds." Possessed too of extraordinary ventriloquial powers, their notes come from every point of the compass; and if an intruder comes too near the nest, the bird will send well mimicked cries of squeaking puppies, mewling kittens, hooting owlets, and mourning doves to greet his ears, and call him away if possible from the nest, to where these suffering creatures are supposed to be. Unlike the mocking-bird, the chat will so commingle these various sounds that it seems a concert of animals in distress; and not merely the distinct utterance of one mimicked cry after another. The longer I study this strange bird the more I note of interest concerning him. Every season he exhibits some new peculiarity of voice or habits; and take him for all in all, he is the most interesting bird of the United States.

Trenton, N. J.

C. C. ABBOTT, M. D.

[To be concluded.]

A NEW CALIFORNIA DEER.—The Hon. J. D. Caton describes in *The American Naturalist* for August, a new variety of the mule deer (*Cervus macrotis*) for which he proposes the varietal name *californicus*. Judge Caton first met with it on the estate of Mr. Frost at Santa Barbara, who is a famous deer-hunter. With him Judge Caton made an excursion into the Coast Range at Gaviota Pass, and secured three bucks. These were evidently a variety of the mule-deer, and not of the black-tailed, having all the distinctive peculiarities of the former. The variety differs from the type in being smaller, of a more decidedly reddish shade, in having a lesser patch of white on the buttocks, and, most prominently, in the markings of the tail. The tail of *C. macrotis* is entirely white except a black tuft at the tip; in the variety a black to reddish-black line extends along the upper side of the tail from the root to the tip. The habitat is not as yet well determined, but Judge Caton thinks it safe to say that this variety predominates in the Coast Range south of San Francisco, which seems to be its northern limit. The Sierras seem to define its eastern limit, east of which it is replaced by the true deer. It ascends to higher altitudes than any other American deer, being frequently found above timber line. Those living in the high mountains are the largest; Mr. Frost killing one which weighed 400 pounds. They are not uncommon, and further information, it is hoped, will soon be obtained of the distribution and peculiarities of this novel variety. A skin and skeleton have been sent to the Smithsonian Institution by Judge Caton.

—In our letter from Philadelphia concerning the Cape of Good Hope, we mentioned a ring-like stone said to be used by Bushmen—we knew not how—for digging roots. Dr. C. C. Abbott now informs us that a wooden handle is inserted in the perforation, and it is then used to dig away the earth from long tubers in order that they may be gathered without fracture. The same kind of a relic occurs frequently in this country, and are known as "chungke-stones" from a supposed use in a game called by that name. Dr. Abbott suggests that their true use also may have been for digging roots.

—The geographical range of the common green snake (*Cyclophis vernalis*) has been extended by the naturalists of recent surveys, to northern and central New Mexico. The species is said not to be uncommon in southern Colorado.

NOTES FROM CALIFORNIA.

Nicasio, California, July 25th.

EDITOR FOREST AND STREAM:—

Notes of bird arrivals were made by me during the past spring, of which I send you the following extracts, with dates:—

Audubon's warbler, arriving March 17th, was very common during the migration, but passed north to breed. On March 19th the common bank swallow appeared, and soon prepared to begin nesting; the equally common purple martin did not reach here until March 23d. On the 28th I first saw the black pewee (*Sayornis nigricans*) which breeds commonly

here. It was closely followed by the western warbling greenlet (*Vireo Swainsoni*), few of which breed. April 2d brought the familiar white-bellied swallows and the western house-wren (variety *Parkmanni*). They are abundant and begin nesting about the middle of April. The next day the green black-capped flycatcher (*Myiodytes pileatus*) appeared, and went to breeding. It is not rare. Cassin's greenlet (*Vireo Cassini*) arrived on April 5th, but was not common; and on the 6th the western yellow-bellied flycatcher (*Empidonax difficilis*) arrived. Only a few of the latter breed here, beginning to nest by May 15th. On April 7th I observed the only specimen seen during the season of the yellow-rumped warbler. The Arkansas flycatcher first came on April 12th. It is common here and breeds, but the eggs are very difficult to get, as many nests are 150 feet from the ground; they nest by May 20th. On April 15th the Carolina dove arrived, and became common, breeding. On the 19th came Bullock's oriole; it is common, and begins nesting here about May 15th. On the 20th McGillivray's warbler (*Geothlypis McGillivrayi*) appeared, but was not plenty; a few breed, nesting about May 10th. On the same day I saw the black-headed grosbeak (*H. melanocephalus*). It is abundant in summer, and nests by May 8th. The lark bunting (*Chondestes grammacus*) appeared on April 22d, but did not get to be plenty, although a few breed. The common lazuli finches (*Cyanospiza amoenus*) came on the 27th, and were nesting May 14th; the same day the common ash-throated flycatcher (*Myiarchus cinerascens*) arrived and went to breeding. On May 8th I shot a yellow breasted chat, which is common in some parts of California, but is only accidental here; and on the 10th I secured one of the rare Lawrence's goldfinches (*Chrys. Lawrencei*). A few, however, breed here.

C. A. ALLEN.

ASYLUMS OF THE COW-BIRD.

AUBURN, N. Y., July 29th.

EDITOR FOREST AND STREAM:—

The readers of the FOREST AND STREAM are well aware that the cow-bird (*Moothus pecoris*) depends on other birds to rear its young, instead of incubating its eggs for itself. Some of the nests in which the cow-bird's eggs have been found have been mentioned by your contributors. Mr. Ragsdale records finding the eggs in the nest of the blue-gray gnatcatcher, and Mr. E. P. Bicknell in the nests of the cat-bird and phoebe-bird. I have found them in the nests of the red-eyed vireo, blue-headed vireo, warbling vireo, chipping sparrow, song sparrow, and grass finch. I am sure it would be a great pleasure to all young naturalists to know how many different species the cow-bird depends on to rear its young. Samuels says the birds most often chosen for this purpose are the vireos, warblers and sparrows; sometimes the small thrushes are thus imposed upon, and rarely the wrens. A call for reports on this subject from your readers would go far toward solving the problem, and might prove a benefit to all interested in the study of our birds.

H. G. FOWLER.

[We once found five in a single red-eyed vireo's nest, and can add to the above list the white-eyed vireo, wood thrush and robin, the last probably being the largest bird with which it leaves its egg. The confiding or pugnacious disposition of birds so near its own size is no doubt carefully considered by the cow-bird.—Ed.]

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS JULY 31 TO AUGUST 6.—One great blue heron (*Ardea herodias*), two spotted covies (*Colaptes paca*), two agoutis (*Dasyprocta aguti*), one ocelot (*Felis pardalis*), two squirrel monkeys (*Saimaris sciureus*), two brown capuchins (*Cebus fufuellus*), five blue-and-yellow macaws (*Arara ararauna*), three red-and-blue macaws (*A. macao*), two red-and-yellow macaws (*A. chloroptera*), one trumpeter (*Psephenus crepitans*), one Cuvier's toucan (*Ramphastos Cuvieri*), one crested curassow (*Crao alector*), one white-crested guan (*Pipile jacutinga*), one Greey's guan (*Penelope Greeyi*), one cinereous tinamou (*Tinamus cinereus*), one Florida gallinule (*Gallinula galeata*), two foxes from South America, thirteen parakeets, one waterhen and one small guan, purchased; one wild rabbit (*Lepus sylvaticus*) and two chequered tortoises (*Emys picta*), presented by E. S. Meader, Hestonville, Pa.; three sparrow hawks (*Fulco sparverius*), presented by James Mellor, Oakdale, Pa.; two young alligators (*A. mississippiensis*), one presented by James H. Keyser, Philadelphia, and the other by Jos. B. Moore Philadelphia; two bitterns (*Botaurus minor*), presented by William and Frank Bowen, Chestnut Hill, Pa.

ARTHUR E. BROWN, General Superintendent.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Sciaenops ocellatus</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Archosargus probatocephalus</i> .
Salmon Trout, <i>Salmo confinis</i> .	Striped Bass, <i>Morone lineatus</i> .
Land-locked Salmon, <i>Salmo Gloveri</i> .	White Perch, <i>Morone americana</i> .
Grayling, <i>Thymallus tricolor</i> .	Weakfish, <i>Cynoscion regalis</i> .
Black Bass, <i>Micropterus salmoides</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
<i>M. nigricans</i> .	Spanish Mackerel, <i>Cybbium maculatum</i> .
Masacaronze, <i>Esoc nobilior</i> .	Cero, <i>Cybbium regale</i> .
Pike or Pickerel, <i>Esoc lucius</i> .	Bonito, <i>Sarda pelamys</i> .
Yellow Perch, <i>Perca flavescens</i> .	Kingfish, <i>Menticirrhus nebulosus</i> .

For list of seasonable trout flies for August see our issue of July 27th.

FISH IN MARKET.—We have to report this week fish of all kinds very scarce, and correspondingly high in price. The scarcity is probably owing to the hot weather, having driven the fish far off shore into deeper and cooler water. At this time we should be having plenty of weakfish, but none are being taken in any of the bays adjacent to this city. We quote: Striped bass, 20 to 25 cents per pound; bluefish, 12 to 15 cents; salmon, frozen, 40 cents; green, 50 cents; mackerel, 15 to 20 cents each, according to size; weakfish, 15 cents per pound; white perch, 15 cents; Spanish mackerel, 50 cents; green turtle, 15 cents; terrapin, \$12 per dozen; halibut, 20 cents per pound; haddock, 8 cents; kingfish, 25 cents; codfish, 10 cents; blackfish, 15 cents; flounders, 12 cents; porgies, 12 cents; sea bass, 20 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 20 cents; brook trout, \$1; pompano, 25 cents; soft clams, 30 to 60 cents per 100; hard shell crabs, \$4 per 100; soft, do., \$1.50 per dozen.

FRESH SALMON.—It is not long ago that fresh salmon were cheap in our markets at 60 cents per pound—a dollar per pound being asked for the Kennebec varieties; this price resting not so much, perhaps, upon any asserted superiority in their flavor over their Canadian congeners, as upon a purely national sentiment, a higher value being set upon them because they were the only fish of the kind to be obtained within the territory of our Eastern domain. With increased propagation and protection prices have gradually fallen, until the present season they touched 18 cents a pound in New York, and 8 cents in Quebec. Indeed, during a journey of several weeks through Canada,

we heard frequent complaint that salmon was too often placed on the table—the same old complaint that was heard in the Connecticut valley at the beginning of the century. Some ideas of the quantities of these fish thrown upon the markets may be obtained from published statistics, showing that during the month of June 2,335 cases, containing 704,000 fresh salmon, were received at St. John, N. B., via the Intercolonial Railway alone, from the Miramichi, Petite Roch, River Charles, Bathurst and Campbelltown. The shipments by way of Quebec, were also very large. The Intercolonial Railway authorities have built a number of splendid refrigerator cars, in which the fish can be kept for any length of time in a perfectly fresh condition.

—If the Croton Water Board will seine out four-fifths of the fish that swarm in the Croton Lake and river, and give them to the poor, we shall not only have better water to drink, but more food to eat. When the water gets low the multitudes of fish in it become too crowded for comfort and kick up such a bobbery among the mud and weeds as to befoul the water and make it unfit for themselves to use, let alone the humans who are taxed for what they drink.

—Last month the schooner Lily Dale encountered a school of herrings six miles north of Yarmouth, Nova Scotia, so dense that the crew scooped up four barrels full of the fish with a bushel basket.

—A Buffalo correspondent sends us some gut leaders for fly lines, showing what he fancies to be a new method of his own for adjusting droppers, removing and changing them, as fancy or occasion requires. The device is certainly very clever, and much preferable to the loop system, we think, but our friend is mistaken in supposing it to be a new invention, although he deserves none the less credit for discovering what others have discovered before him. The method of fastening is known as the "water-knot," a double running knot in the leader through which, when loosened, the knotted end of the dropper is passed. When drawn tightly it holds the dropper firmly. If it be required to change flies, the double knot has only to be drawn apart, which can be done easily, and a substitute inserted for the fly to be removed.

—Six cargoes of pickled herring have been cleared from Gloucester, Mass., this year for Gottenburg, Sweden. Something like coals to Newcastle.

SALMON SCORES.—We are indebted to Mr. Thomas Wilson, agent of the Cunard line of steamers at Montreal, for the following letter and scores of fish taken on one of the rivers of the province:—

MONTREAL, July 26th.

EDITOR FOREST AND STREAM:—

I beg to give you a statement of the rod fishing in the St. Ann's this month, for fourteen days, ending the 18th inst. The average weight of fish, especially those of Col. Lee, I consider very good, and as yet I have not heard of its being exceeded in any of the rivers from which reports have reached me. The river when I left was not as low as in previous years at this season, and in many of the best pools the fish would not rise to the fly at all. I expect the parties whom we left at the river on the 18th are enjoying good sport, and I shall ask them to forward a report of their sports to you when they return to town.

THOMAS WILSON.

ST. ANN'S, DES MONTS RIVER, 14 DAY'S FISHING, ENDING JULY 18, 1876.

Name.	No. Fish.	Lbs.	Average.
Mr. Cuvillier.....	28	498	17 1/2
Colonel Lee, U. S. A.....	29	675	23 1/2
Thomas Wilson.....	35	111	17 1/2
M. Lamontague, 2 days.....	9	150	16 2/3
Total.....	101	1934	over 19

CONNECTICUT.—Bridgeport, August 5th.—The bluefish have just struck in here in large quantities, and fine size; a boat brought in 60 last evening, and to-day every one is after them. Our shores are fairly lined with crabs—there has not been such a run in five years.

NEW JERSEY.—Carman House, Forked River, Barnegat Bay, July 31st.—I notice your correspondent "B" at the Inlet, says that the "fishing of all descriptions the past week had been very poor." The fishing at the mouth of Forked River last week was the best we had this season, and is still good; sheepsheads, weak and kingfish, were caught in quite large quantities. Bluefish not very plenty. Bay snipe are coming in, and a fine string of yellow legs just came in, killed by Capt. Patten. "FORKED RIVER."

PENNSYLVANIA.—Berks County.—The Water Commissioners of the city of Reading, granted the citizens liberty to fish in the Bernhardt dam, which resulted in large hauls of bass, catfish, and other species of the finny tribe. The privilege was granted owing to the overstocked condition of the waters. As usual, the fine will again be imposed on those who attempt to fish in our reservoirs. Along the Schuylkill river some good hauls of bass, etc., are reported. "Fatty" Houck, as he is familiarly known, is the "champion" fisherman of this city. The tributaries of the Schuylkill, have also afforded fine pastime this season. The Tulpebocker, Maiden creek, Ontalannee, and Northkill creeks afford the best fun.

PERRIN NIXON.

VIRGINIA.—Leesburg, August 3rd.—Until to-day the fishing on the river has been good; a fair number of fish have been taken, and of average weight. Most have been taken with live minnows in deep water; some few with the fly in shallows and below rapids. Goose Creek is still muddy, and cannot be fished.

T. W.

FISHING MOVEMENTS.—The number of fishing arrivals reported at this port the past week has been 71, viz., 13 from the Banks, 28 from Georges, and 30 from mackereling trips. Receipts, 1,820,000 pounds Bank cod, 213,000 pounds Georges cod, 27,000 pounds halibut, and 5,250 barrels mackerel. Georges codfish: but few curing, with a fair call. We notice a further advance in price, considerable sales having been effected at \$4 1/2 per qtl., with some curers holding at \$5. Bank codfish sell readily at \$4 1/2 per qtl. for pickled; we quote dry-cured at \$5. Mackerel: in good receipt, with last sales at \$11 1/2 to \$12 per bbl. for 1s, \$6 1/2 for 2s, and \$5 1/2 for 3s. Fresh halibut: last sales at 8 1/2 and 4 1/2 cts. per lb. for white and grey. Shore fish: sales of cod at 2 1/2 cts. per lb. Medicinal oil: \$1.10 per gall.; tanners' oil, 47 to 50 cts.; smoked halibut, 5 1/2 cts. per lb.; halibut heads, \$3.50 per bbl.; halibut fins, \$9 per bbl.; pollock, \$2 1/2 per

qtl.; hake, \$2.75 per qtl.; cusk, \$3 per qtl.; tongues and sounds, \$8 to \$11 per bbl.; prepared cod, 5 to 7 cts. per lb., as to quality; pickled halibut, \$6 per bbl.; pickled cod, \$4.75 per bbl.; round herring, \$3.50 per bbl.—*Cape Ann Advertiser, Aug. 4.*

—A very queer looking fish was found on the sand at Savin Rock, near West Haven, Tuesday, after the tide went out. It was a broad flat fish resembling a turtle cut in twain. It measured eight and one-half by five and one half feet, and had small eyes, and large breathing holes in the centre of its back. Its mouth was on the under side. Its tail, which was five feet long, was covered with prongs, one of which was in the centre, and was two inches in length. The fish came in with the tide, and was secured by some men who gave it to Mr. Allen, the proprietor of the museum at Savin Rock. Of the many people who have seen it, no two seem to agree as to its "tribe" or proper name. Mr. Allen called it a "stingaree."

[This was probably the whip stingray or skate (*Trygon centura*) which is found from Cape Cod to Florida. It is of the family *Raidae*.—Ed.]

—Reports from the Labrador fisheries are conflicting. In some quarters cod are reported scarce. On the whole the prospects of success are fair. The Newfoundland shore fishery has improved of late. In St. Pierre the fishermen have secured plenty of bait, and the fishing prospects are good. In Cape Breton the catch of fish has been below the average, except in a few places.

—The Portsmouth, N. H., fishermen are reaping rich returns in shad fishing off the harbor. About 400 barrels have been seined during the past few days. This is a new business in that part, the shad have not before been found in that vicinity.

—Quite a number of dead shad have been found floating down the Connecticut river near Glastonburg; they were large sized fish, weighing from 3½ to 5 pounds.

—A fourteen pound snapping-turtle was caught in the canal at Windsor locks on Monday last, with a hook and line.

—Eighty barrels of porgies were taken in a single haul, last week off Bangor, Maine.

TWIN LAKES.

TWIN LAKES, Ct., June 26th.

EDITOR FOREST AND STREAM:—

Picnic and camping companies are making glad the shores of our pretty lakes this cool, breezy weather, as boats and anglers make merry the waters, however sorry the fish. Yesterday (June 25th) not less than a dozen boats were out on the big lake, and bass and pickerel had to suffer some. A party from Poughkeepsie have held squatter possession of Roger's Island the last ten days, and have caught some heavy bass and pickerel off the rocky point at the east end. There have also been camping parties in Miles's Woods. Bass and pickerel fishing have been good for some days. On the 25th Wm. Miles, of the Copake Bashbish Iron works, and E. Sherman Pease, our resident fish painter, caught eight pickerel and eighteen bass, not to mention the perch and punkies of no account. Several of the bass put down the scales at the 1½ and two-pound notch, and the "pickers" were of good size. For a week previous to these "good catches" three noted choir singers of Gotham—Messrs. Nilson, Phillips and Finch—had fed out spoon victuals most liberally all about the lake with tolerable success; but don't they wish they had stayed over a day longer and tried their scales on some of the two-pound sort? Several new boats have been launched on the lakes, among them a 35-foot shell, owned by Mr. Fred Plumb Miles, who has just graduated from the Yale Scientific College, and who may be seen on any still day taking a "spurt," with neither Cornell or Harvard to make him afraid. Young Mr. Miles has also a four-oared, centre-board, cat-rigged "sharpie" just finished by E. S. P., which is a model for trolling or still fishing. City visitors are coming in rather less than the usual number, and finding, of course, better than usual accommodation, and at more moderate rates than in former years. Mr. Peck, at the Cyrus Hudson place, has some very agreeable people from New York. Of the Coopers we have not heard, but presume they have rooms for such as apply. Trout fishing is done for the season in this State, but they may still be taken in Massachusetts, "over the line." JIP-SAY.

LAKE FISHING IN CALIFORNIA.

SAN FRANCISCO, July 20th, 1876.

EDITOR FOREST AND STREAM:—

At this season of the year we have our strong westerly trade winds. If these gales catch us anglers out at one of our large lakes, not far from the city and near the ocean, we have a hard time of it to get off in a boat to troll for salmon and trout. I have very lately had an experience of the kind. A number of members of our new Sportsman's Club were at Lake San Andreas last week. We were all ready to push out into the lake to fish with the spoon bait, but one of these severe westers set in and kept most of the anglers ashore. I being an experienced oarsman, however, jumped into one of the plungers, and managed to head out through the high waves that broke quite heavily on the shore. My object was to cross the waters and operate under the lee of the mountains opposite, where the winds had comparatively but little force, being affected only by occasional strong puffs and eddies. As I crossed over with my rod over the boat's quarter with 150 feet of line out, my bait was, as usual, suddenly seized by a salmon, and taking up my rod in double-quick time, I found I had a good-sized fish to handle. He bent the top points of my rod as much as I could allow him, without endangering them; in a moment he made a rush to the right with great strength, and I then had to give him some considerable length of line from my reel. Presently I found myself able, by giving him the butt of my rod pretty strongly, to turn him, and then he came very swiftly back to me, and my ability to reel in rapidly was put to rather strong test. But I was not quick enough for him, and he rushed right under my boat. If I had had another oarsman with me this thing could have been prevented. Then it was that some skill was required to take up an oar and turn the boat so that my line could clear it. This I fortunately was able to accomplish, and then came the task of checking him in the opposite direction to the first run he made. This I did without putting too much strain on my rod and line. Then his fish-ship came to the surface, and commenced a series of somersaults, which, unless I had thrown down to a certain angle the point of my rod, would have probably proved fatal to the strength of my line or hooks, by jerking them too violently at a strain, in his successive leaps. But hook and line held and this danger was overcome. Then another risk had to be avoided, namely: the allowing him to reach the bottom and the weeds, and rub the hook from his jaws or throat, or wherever it had taken hold. By this time he began to show less power of being able to rush where he pleased, and I again, by putting on the strain, to prevent him from accomplishing this not uncommon feat of cunning and maneuvering, turned him from his evident purpose; after rushing hither and thither for a long time, he began, at last, to show unmistakable symptoms of exhaustion. After coming to the top several times, he finally was unable to descend further into his life-giving element. I kept him now permanently on the surface and was enabled to keep his head and gills out of the water, and so "drowned him"; and then drawing him close to the skiff—notwithstanding the

high and rough waves—with my rod in my right hand and landing net in the left, drew him over it, and then by lifting up my net under him, secured my much coveted prize. I then killed him by driving my knife into his brain. I found that he weighed—by the scales I always carry with me—just four pounds and three-quarters.

The fish in these lakes are very game, and they therefore make a lively fight, I assure you, before they knock under to the force and skill exerted against them. I reached safely the opposite shore and began to bait fish till the wind increased so much in violence as to render any sport almost hopeless. And so I found it at last. I then rowed against the storm of wind to a more sheltered point, but where the water was too shallow to hope for any success at all. The next movement was home ward and across the lake again, and although the waves rolled very high with white caps and very threateningly toward the opposite home shore, still, as the gale would be directly aft of the boat, I determined to make the attempt at any rate, and had but little doubt of success in reaching home in safety. I pushed off, and the wind being quite favorable and very powerful, I scudded over at a great pace, my plunger riding the high waves like a duck, and by rowing with all my strength, especially as I neared the bank, I drove my boat nearly high and dry on the shelving landing. My fellow members of the Club greeted me with cheers, and considered the whole thing a pretty good achievement for a man of 74 years; and we had my fish cooked for supper, which, with a plentiful supply of beef steaks, bottled beer, potatoes and bread, and a dish of delicious strawberries and cream, to wind up with, we enjoyed ourselves exceedingly. We all spent a cheerful and chatty evening together, although the persistent gale shook the game house and made it tremble rather badly. This storm lasted all night, and nearly the whole of next day, preventing all of us from fishing, except two adventurous and good anglers, who after breakfast pushed out from the shore amidst the breakers and trolled for about three hours under the lee of the opposite mountains, but only took one small salmon which rose at a black fly above the spoon bait. In the evening we all left, not much discouraged, but resolving to visit the lake soon again, when the weather should be more favorable for piscatorial operations. This lake—San Andreas—is more exposed to high winds than lakes Merced or Pilarcitos—all of which are leased by our Sportsman's Club. E. J. HOOPER.

NINE DAYS ON THE RESTIGOUCHE.

NEW YORK, August 1st.

EDITOR FOREST AND STREAM:—

Reaching the noble Restigouche on July 3d, we proceeded to secure Indians, bark canoes and provisions for ten days, and set out early on the 4th to ascend the rapids, our objective point being some sixteen miles distant, selected as a spot for permanent encampment. It was a hard day's struggle with loaded canoes against the foaming rapids; but our men were experienced, stout, fresh, willing and eager for the sport (no trouble if you give them plenty of pork, flour and tea, for they rarely use spirits in any form), and the run was accomplished by 6 P. M. Here landing our stores, the writer dropped down the current a short distance to secure a fresh salmon for the larder. It is only under such circumstances that you can truly enjoy this noble fish in perfection; city salmon is not to be classed with it. I returned to camp at 7:30 P. M. with my canoe lined with three silvery beauties weighing 22, 23 and 14 pounds, and a grilse four pounds. I found the tent pitched, a fire such as can only be made where fuel is in abundance and costs nothing culinary utensils unpacked, kettle boiling, etc. The result of the half-hour's fishing was soon apparent from the flavor wafted through that pure mountain air, and with appetites to be envied we were not long in satisfying them. Next in order was the brier-wood pipe, Hallock's "Fishing Tourist," and consultation as to the programme of the coming morn. The river, although then too high, was rapidly falling to a good angling mark, and our anticipations were of the most encouraging and pleasant nature. Morning soon came with a fair promise (nights are short in that northern region), but only to cause disappointment. The sky soon became overcast, resulting in a heavy rain, and causing the river, already too high, to increase fully two feet. With depressed countenances we encouraged ourselves by the fact that there were plenty of salmon, and we must search for them in other spots than their accustomed haunts at lower water.

The score stood as follows:—22, 23, 14, 18, 19, 18, 14, 23, 18, 20, 23, 22, 20, 26, 26, 15, 17, 23, 24, 19, 26, 14, 18, 22, 24, 22, 21, 22, 19, 17, 19, 21, 23, 25, 21, 23, 25, 21, 22—aggregating 817 pounds, and averaging 21 pounds. Also one grilse, 4 pounds. With these fish in such high water and strong rapids, we experienced some desperate, and many positively dangerous encounters. Many more fish were hooked and lost after a half to a full hour's struggle from this cause, and none but the most perfect gear and leading tackle could stand them in such water. I returned to the city in improved health and vigor to experience the last day of the heated term which we had, fortunately, escaped.

"NOVICE."

WHAT ARE LUNGE?

WATERLOO, July 20th.

EDITOR FOREST AND STREAM:—

In your issue of the 6th one of your western correspondents "Haviland," inquires "What are lunge?" and says that he knows the woods and waters mentioned in my article that appeared in your paper of May 4th, and the gentlemen whose names appear in that article "did not call a lake trout a lunge in the days when he used to knock around with them." It is a matter of surprise to us that Tom C., under the guise of "Haviland," should pretend that he knows all about those woods and waters, and as for his other statement I will let the following communication from the gentlemen mentioned in my former article speak for itself:—

This is to certify that the lake trout of Memphremagog and Brompton Lakes are known in this vicinity as "lunge," and have been called so since our earliest recollection.

WATERLOO, July 19th.
GEO. H. ALLEN, Mayor.
T. NUTTING, Clerk Circuit Court.
A. K. NUTTING, Dep. do.
W. A. TAYLOR.
P. COWY, Sheriff, Dist. Bedford.

For the benefit of your readers in general I would say that we early settlers in this vicinity adopted the name "lunge" for the lake trout from the St. Francis Indians, who formerly hunted and fished around these lakes. I have had since my letter of May 9th the pleasure of examining some fine specimens of the black and silver lunge, and am fully convinced that they are the *Salmo confluis* and *Salmo namaycush*, and from the description that I have had of the "racer lunge," it answers well to the *Salmo fuscovet* by Gunther. There is also another variety of lake trout found in the Massiwiippi Lake called the black salmon. I expect a specimen of this fish soon, and will send you a description of it when obtained. STANSTEAD.

TRANSPORTING LIVE MINNOWS.

CINCINNATI, August 5th.

EDITOR FOREST AND STREAM:—

In answer to F. W. C., Boston, would say I have had great success in transporting minnows by using a large bucket, holding say four gallons, with inside bucket small enough to have plenty of play and thoroughly perforated. Place a large piece of ice on top of the inside bucket every ten or fifteen minutes; churn the inside bucket up and down to aerate the water. I have transported minnows in this way two hundred miles. If the inside bucket is oval on the bottom it is much better than if it has a flat bottom as the action of car or boat will keep the bucket in motion. W. B. S.

[This double bucket is much used by fish culturist's for transporting live fish for stocking waters.—Ed.]

The Kennel.

THE CENTENNIAL BENCH SHOW.—Intending exhibitors at the Centennial Bench Show will see from the letter which we publish below that in order to have their entries printed in the official catalogue it is necessary to hand them in as early as possible. The letter is intended to apply to live stock generally, hence the paragraph regarding pedigrees, which does not apply, necessarily to dogs:—

EDITOR FOREST AND STREAM:—

The list of entries of live stock for display at the International Exhibition, will go to press August 20th for publication in the official catalogue of the Centennial Commission.

Breeders intending to exhibit will recognize the advantage of having their stock comprehended in this publication, and are invited to forward promptly their entries, with pedigree so made out as to be clearly understood.

Entries of stock will be renewed after the date mentioned and judged on an equality with the others, but it is questionable if the Commission will assume the cost of the publication of an appendix.

Applicants for stalls will receive by the 20th of August an official permit of space, giving exact location in the stock yard of the stalls assigned them. Instructions in relation to the shipping will accompany the permit.

Terms of entry may be obtained upon application to the Bureau of Agriculture. BURNET LANDRETH, Chief of Bureau.

In a subsequent letter relative to the Bench Show, Mr. Landreth says:

"As will be seen in another communication from me the entries for this show will remain open till the 20th inst. Entries will be received up to the 1st September, but entries made after the 20th inst., will not be included in the official catalogue, although they will be entitled to compete, same as dogs previously entered. I need not point out to intending exhibitors, the advantage of having their dogs entered in the catalogue, as a much better chance is afforded to intending purchasers of knowing whose property the dogs are, and getting other information necessary as to the breed, &c., of the dogs. In allowing the entries to remain open till the 20th, it will give parties from a distance a better chance to enter their dogs, as so many applications for forms of entry have been received, that it would have been impossible to have closed on the 10th. This moreover will not give all fanciers who only recently have heard of this show, an opportunity to enter their dogs, as there seems to be a growing desire from all parts of the Union and Canada to be represented at the International Bench Show."

PITTSBURGH BENCH SHOW.—A bench show of dogs will be held this month, in connection with the second exposition of the Tradesmen's Industrial Institute, of Pittsburgh; Pa., commencing on the 16th inst. There are some fifty classes for dogs, with money premiums in each. Mr. James Johnson is Secretary to the Executive Committee, and the person, we presume, to whom entries should be made.

—Mr. R. B. Vining, Superintendent of the Meriden trotting park, has a fine setter dog, which has a curious habit of stopping runaway horses. He seizes them by the bit and stops them at once. Several instances of his remarkable sagacity might be given when he showed his power to stop such excited animals, thus saving their owner's loss, and preventing injury to the horses. Mr. Vining has been offered \$150 for Sam, but refuses to part with him for any amount.

POISONING BY PARIS GREEN.—A correspondent writes us that he has lately lost a valuable setter in Orange County, with strong symptoms of arsenical poison. Many other dogs have also died. He attributes it to Paris green in the fields, and requests us to caution sportsmen and give an antidote, suggesting that perhaps one scruple sulphate of zinc in warm water, for a vomit and then milk and magnesia might do.

—Judging from the number of applications for entry blanks and information which come to us, the Centennial Bench show will be far beyond anything of the kind ever seen in this country. We trust that some arrangements will be made with the Railroad authorities as to the transportation of dogs. A concession in rates or guarantee of careful handling would largely increase the entries.

—Mr. Harry Babcock of San Francisco, Cal., has purchased from our Field Editor a splendid brace of black and tan Gordon setters. One of the brace is Monarch, a prize winner at the last Springfield Bench Show. The other, Rake, is an extra fine young dog. These dogs are now on the route to San Francisco, and will doubtless prove an acquisition to the fine stock of the State.

PEDIGREES AND THEIR VALUE.

NEW YORK, August 6th, 1876.

EDITOR FOREST AND STREAM:—

I have read with great interest the different articles on pedigrees and their value, etc., that have appeared in the different sporting journals, but have not as yet seen any, with perhaps one exception, that sets forth the true and only value in a pedigree. Some go so far as to say they are of no value at all. And really one would imagine by what is written that a dog with a pedigree was to be condemned at once as worthless when compared to another who had none at all. Others, however, go to the other extreme and attach too much importance to a pedigree, and in so doing are likely to lose sight of or undervalue the working abilities of an animal. Now, I believe, (and there are many who will agree with me), that there is a happy medium between these two, and that a pedigree is very valuable, and to some exceedingly so, but only when taken into consideration with field performances of the dog. Take, for instance, a man who only has one dog, who does not intend to breed from him, but when he gives out to get another. Now, if that dog does his work well, what does his owner care about his pedigree; but, on the other hand, suppose this man wishes to breed from the animal, will not a pedigree, or, in other words, a knowledge of his ancestry be all-important to him? There are good dogs with pedigrees as there are also bad ones; the same may be said of those without pedigrees, and, I think, where you compare the number, in this country, of each kind, the larger proportion of poor dogs, both in looks and

performance, will be found in the latter class. We do not hear so much about the failure of the dogs in this class, but should some noted dog, with pedigree, or imported dog fail to come up to the standard, we are sure to hear about it, and why? Because everyone expects good work and good looks from an imported dog, or dog with pedigree. The eyes of the whole sporting world are at present upon them, many being ready to find the slightest flaw in their action or appearance, and hold it as an argument, not against that particular dog, but against the whole class. And think, these very same people are the very ones who would entirely ignore a pedigree at a time when it would be most valuable. And then those who sneer at or despise a dog without a pedigree notwithstanding his excellent working qualities are equally at fault, and will in time find it out to their misfortune.

Now what does a pedigree show, provided always that it is genuine; simply that for a certain number of generations back there has been *no impure blood* in the stock; in other words, no dropper blood intermingled with your setter or pointer, and not, as most people seem to imagine, that the stock is perfect, and this negative proof is all that can not too closely be watched by those intending to breed. In England and abroad where field trials and bench shows have been in vogue for many years, a pedigree often shows that the progenitors of your stock had either distinguished themselves in the field or on the bench. In our country, however, where these trials and shows are a new thing, it simply shows that the blood is pure as far back as it goes, and not that it must perform be good except in rare instances where a particular breed has been preserved and the performances of the different ancestors of that breed have been known to a large community for a number of years. There are many instances of dogs who are fine performers in the field, and whose looks no one would question, yet without pedigree, and all of whose descendants came up to the standard of their ancestor; but these few cases should not lead men to totally disregard pedigrees and believe them worthless, and that as good a dog can be had without them as with them; experience proves to the contrary. In like manner anyone who attempts to breed from a dog with a fine pedigree, but worthless in the field, will find that the majority of his descendants will be also good for nothing for the field, though they be ever so fine in appearance. Some of the progeny, to be sure, will turn out well and inherit the fine qualities of the grandsire or grand dam, as the case may be, but there will still be a bad taint in the blood ready to crop out again in their descendants, and which may occupy years to thoroughly eradicate. A man having a fine bitch with a good pedigree had much better breed her to an ordinary looking dog with a fine field record and limited pedigree of one or two generations, and afterwards breed his stock up again by culling out the poorer looking whelps of the litter, and breeding those taking after the dam back to some fine stock, than breed her to a dog with a fine pedigree but worthless in the field. Pedigrees and working qualities taken together cannot be excelled, but either alone must be inferior, and of the two most men would prefer to breed from, and certainly to use, the dog who was a No. 1 in the field, with his sire's and dam's record also good, than the dog who was inferior in the field, but who was bred with a long pedigree attached to his name. In running a pedigree back we finally can trace no further than a dog who had been imported; now some say this word in a pedigree means nothing, as we have as fine dogs here as they have on the other side; be that as it may, it does to my mind mean something, and a great deal. For as there are good and bad dogs in both countries, would a person here be apt to go to the expense of buying and bringing across the Atlantic a poor dog any more than a foreigner would come over here and buy a poorly bred dog and take it over there. It stands to reason, therefore, that such a word in a pedigree means that the dog was not a poor dog, although he may not have been something wonderful, and it means that the chances are he was a better dog than if he had been some Tom, Dick, etc., in this country where nobody at the present time can tell you about. I don't say that this is always so, but the chances are that nine times out of ten it is. Then the word imported, when it has after it the words "by Mr. —," is still more valuable as indicating the importer. You can better judge what kind of a dog he would be likely to own or import. I had commenced this letter with the intention of laying out before your readers my idea of the true value of a pedigree in that it is valuable as it proves by *exclusion* that stock is pure, and not that the stock are *bound* to be fine field performers; but I have wandered on and unintentionally have touched upon other topics about which there are so many different opinions, and on which I had not intended to write for some time. What I have written, however, are the honest convictions of one who, though he has not had a great deal of experience, has studied the subject carefully and attentively. W. S. WEBB, M. D.

KENNEL PRODUCE.—The pointer bitch Jessie, the property of V. W. L. Brooks, Esq., of Stamford, on July 27th dropped a fine litter of five dogs and two gyps, sired by his imported dog Bingo.

Mr. R. H. Gillespie, of Stamford, Ct., has a fine litter of orange and white setter pups out of Van Derwerken's Fan, by Cuming's Rolia. The pups are all handsomely marked and are strong and healthy. Rolia is entered at the Centennial Bench Show.

At the kennel of Mr. John M. Niall, Killaloe, Co. Clare, on 23d July, Sal whelped ten, all red puppies (four dogs and six gyps). They are very highly bred, being sired by that grand dog Tatt O'Rouney, bred by Llewellyn, out of his Knoving, out of his Carrie, K. C. S. B. No. 1,703. The dam Sal is out of J. H. Saltus's old Sal, K. C. S. B. No. 43,351, sired by Capt. Wynn's Spark, out of Capt. Frith's Nell, by Windham Lewis's Major, out of Capt. Frith's Mus. Spark by Coates's Rap out of Ruby, by Hurchison's Bob, No. 1,700, Vol. I., K. C. S. B., Rap by Ruby's Bake out of Nell.

HOMES AMONG THE ORANGE GROVES.—The winter homes of Florida are already numbered by the thousands, and permanent settlers from all parts of the North are securing pleasant abodes within the borders of that climate-favored peninsula. Among the most attractive portions of the State is that about Palatka on the St. Johns River. At a point about twenty five miles south of Palatka a number of northern gentlemen and ladies have established their residences and flourishing colonies have been started. This new locality has been called Fruitland Peninsula, and among the settlers are Mr. and Mrs. Leggett, Dr. A. S. Baldwin, C. L. Robinson, N. K. Sawyer, Dr. J. J. Griffin, D. G. Ambler, C. B. Benedict, L. McConihe, Dr. C. J. Kenworthy, ("Al Fresco" of FOREST AND STREAM), and others. Fruitland Peninsula is a tract of high and fertile land lying between Lake George on the west, and Dunn's Lake and Dunn's Creek (now called Lake Crescent and Deep River) on the northeast. The village is Crescent City, and every effort is being made to form a beautiful and enterprising town. The purpose is not so much to make it a cheap place as it is to make it a delightful one, where people of wealth will feel like spending money to ornament and beautify their homes. It is expected that most settlers in the town will desire a small tract of land for the cultivation of oranges and other tropical fruits, hence lots containing five acres each have been platted with the town. The situation is upon the new highway from the ocean to the lakes of the interior, overlooking a long range of hills, lakes, and orange groves. A steamer plies regularly between Jacksonville and Crescent City, connecting with a line of hacks running to Halifax River. The character of the gentlemen who have undertaken this enterprise ought to ensure its success, and we give the new town many good wishes. They publish a pamphlet containing full information for such as desire to know more of the plans.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

THE NEWBURGH REGATTA.—On Wednesday of last week the annual Newburgh regatta was sailed over a course starting from the judges' boat, anchored off the city, to and around a stake-boat anchored off the Long Dock at Fish-kill, turning from north to south; thence to and around a stake-boat two and one-half miles south, turning from east to west; thence to and around a stake boat two and one-half miles north of the starting point, turning from west to east; thence to and around a stake at the starting point, going over the course twice, the distance being twenty miles. The W. R. Brown took the first prize in the first class and the Cynthia the second. In the second the Artful Dodger took the first prize and the Coquette the second, and in the third class the Sophia Emma took the first and the Tom W. the second prize. Appended is the time at start and finish:—

FIRST CLASS.			
Name.	H. M. S.	Elapsed Time.	Corrected Time.

THE INTERNATIONAL REGATTA.—The fourth annual amateur regatta of the Saratoga Rowing Association commenced on the lake at that place on Monday last. The same causes which militated so largely against the success of the college regatta were in favor on the present occasion, and not only prevented the programme from being carried out, but also caused the withdrawal of some of the boats during the progress of the racing. Saratoga Lake, when it chooses to keep itself in condition, is a very charming piece of water on which to row, but it appears to require but the slightest inducement to get itself into a state of roughness most disheartening to oarsmen. On Monday when the first race was called, at 11 o'clock, the water was quite smooth, but later in the day it became too rough for rowing. The first event was the junior single-sculls, for which the following gentlemen started:—R. H. Robinson, of the Union Springs (N. Y.) Rowing Club; W. H. Rogers, of the Atalantas, of New York City; J. E. Mann, of the Argonauts, Bergen Point, N. J.; F. Tompkins, of the Wolvenhook Club, Greenbush, N. Y.; M. S. Cummins, of the Saratoga Rowing Club; J. Magin, of the Waverly Yacht and Rowing Club, New York. Robinson, the favorite, took the lead at the start, and kept it to the finish, winning the race handsly. Tompkins was the only one who seemed able to keep anywhere near the winner, whose time was 15:16½. Tompkins was second, Mann third, Cummins fourth, and Magin fifth. Rogers quit after going a mile and a quarter.

The second race was for pair-oared shells, for which there was the following entries: R. Luffman and O. T. Johnson, of the Neptune Club, West Brighton, Staten Island; Capt. Edward Smith and F. C. Eldred, of the Argonauts, W. H. Downs and J. E. Eustis, of the Atalantas; Henry Smith and John Killorin, of the North-westerns; J. T. McCormick and T. J. Gorman, of the Beaverwycks. The word to start was given at 11:55, the Argonauts being first off with a 34 stroke. They had the lead for a quarter of a mile when they were passed by the Atalanta pair. The North-westerns soon pulled into second place and turned the stake boat close behind the Atalantas, with the Beaverwycks third. The Neptunes and Argonauts, owing to their boats being low out-rigged and having shipped considerable water, gave up the race. Shortly after making the turn the Chicago crew spurted and took the lead, holding it to the finish, their time being 21m. 29s. Before reaching the line the Atalantas stopped rowing but were ordered by the referee to cross. The water was so rough that after the double-sculls had been called twice without any response the race was postponed until the following day.

The double scull race was rowed on Tuesday, the water being in capital condition, and the time made by the winning crew unparalleled. The Atalanta couple, Rodgers and Ackerman, took the lead at the start, but were quickly overtaken and passed by both the Neptune and Union Springs crews. The Neptunes rounded the mile stake boat first in 5m. 23s., followed three seconds later by Courtney and Yates, the Atalantas seven seconds behind. At the half mile Courtney spurted and passed the Neptunes, and kept the lead to the finish; The following is a list of the crews and their times for the two miles:

Names.	Time.
Union Springs—C. E. Courtney, F. E. Yates.....	12 16
Neptune—T. R. Keator, James Riley.....	12 20½
Atalanta—H. W. Rogers, P. C. Ackerman.....	12 25
Wolvenhook—J. J. Miles, C. C. Craig.....	4

ROCKAWAY YACHT CLUB.—The fifth annual regatta of this club was sailed over their usual course of ten miles on Wednesday last. The wind was blowing fresh from the northeast, and all the yachts started with reef in their mainsails, and, save the Mignon, with jibs furled. The entries were as follows:

Fannie D., 23 feet 3 inches, owned by C. A. Donnelly.

Mignon, 23 feet, C. A. and J. D. Cheever. Lucille, 21 feet 11 inches, A. Walker. Spinaway, 21 feet 4 inches, E. and R. La Montagne. Gaviota, 19 feet 10 inches, D. Lord, Jr. The time allowance, one minute to the foot, was given at the start, the Gaviota getting away first at 4:33. Before the first round was completed all the yachts set their jibs. The Mignon was evidently the fastest boat in the fleet, and before the second round was made was leading the fleet. The time taken at the finish was:

Name.	H. M. S.	Name.	H. M. S.
Mignon.....	6 26 29	Lucille.....	6 36 03
Fannie D.....	6 26 42	Gaviota.....	6 37 48
Spinaway.....	6 29 53		

The Fannie D. won the Commodore's pennant for making the best actual time over the course, and the Mignon won the plate prize for being the first boat in. The judges were S. P. Strong, Jr., William Ladd, and P. V. Purtsell; and Messrs. C. A. Cheever, William Lummis, and D. Lord, Jr., were the Regatta Committee.

THE "AMERICA" CUP.—A meeting of the Regatta Committee of the New York Yacht Club was held at the office of Commodore Kingsland on Friday for the purpose of perfecting the arrangements for the series of matches to be sailed by the Canadian yacht Countess of Dufferin and the Madeleine. Both Major Gifford, representing the owners of the "Countess" and Commodore Dickinson were present. Major Gifford desired to name the 14th, as the day for the first race, but as that is the date fixed for the assembling of the yachts of the club at Glen Cove preparatory to starting on the annual cruise, it was finally decided that the first race should be sailed tomorrow, the 11th inst. The second race will be sailed on the following day and should there be a tie, each yacht winning one race, a day will there be named for sailing the deciding race. The Madeleine was on the ways last week undergoing a thorough overhauling and her sails were being refitted. The Countess has had a new foresail and her topsails have been altered; she also has been on the ways, and been thoroughly scraped and pot-leaded. What betting there is on the event is long odds in favor of the Madeleine.

—The fourth annual regatta of the Carman Rowing Association, of Washington Heights, will take place at their club house, foot of One Hundred and Fifty-second street, North River, on Saturday afternoon, the 12th inst., commencing at 3 o'clock. The entries will consist of four single sculls, two four-oared gigs, two eight-oared barges, and a tub race.

CANADA.—The annual regatta of the Quebec Rowing Club will be held on the 12th inst., when, besides five four-oared boats from the club, it is expected that crews from Montreal and Halifax will enter. To induce a lively competition of the sort, besides the handsome silver cup given as a special prize by Mr. T. H. Grant, it is proposed to contribute the champion cup of the St. Lawrence, but in addition there will be other valuable prizes, including substantial sums of money.

—The scull race for the championship of Halifax Harbor to-day, in which the competitors were Warren Smith and Obad Smith, of the Fishermen's crew, and John Brown, was won by Warren Smith, making the distance, three miles, in 23 minutes.

CENTENNIAL ROWING NOTES.

PHILADELPHIA, August 8th 1876.

EDITOR FOREST AND STREAM:—Still Cornell shows no disposition to row in any of the International races at Philadelphia. It may be that I am not, nor even FOREST AND STREAM, nor the college rowing men, nor the rowing world at large are right in saying that Cornell has any duty to perform, but they all do so. One thing is certain and that is that rowing men of all classes have looked to them, the proved and acknowledged champion college crew of America, to uphold the honor of American college rowing against all comers. That they will not attempt to do so is now certain, that the fault, if fault it is, lies with Capt. Ostrom is possible. The captain's reasons, which I declared last week as trivial, have been since denounced by the best authorities in this country as preposterous. In Ostrom's letter to Mr. Beebe he advances one reason which I fail to detect in his letter to the Secretary of the Schuylkill Navy. He does not think that the English crew now here, meaning First Trinity, of Cambridge, is a representative university crew. What right has Cornell, Columbia, Yale, Harvard, or any other American college to ask that Cambridge shall select from her twenty-two rowing associations a crew to compete with one selected from a constituency equalling neither in numbers or experience any one of these twenty-two? Our American universities are in rowing matters only the peers of what at Oxford, Cambridge, or Dublin are called and are—colleges. No one can impeach my allegiance to America, or to anything that to her appertains, but I ask why should we exact unfair odds and those odds against ourselves? One thing might be asked of the Cornell crew, and of their captain—were they prepared to row the Englishmen at Saratoga on the 11th inst., in accordance with the challenge received by First Trinity on their arrival? If they were, why should they advance the reasons already given? Why not say at once, "We have little to gain and much to lose; we are afraid to risk it." That is certainly the inference to be drawn from their action.

The list of entries as far as received, have already been published in number of papers, but the official list is not yet issued. To-morrow night the Regatta Committee again meets, and with it rests the acceptance or rejection of such entries as from the oversight, ignorance or neglect of Secretaries, have been received after August 1st, the time fixed for the closing of entries. As it at present stands, the only *bona fide* entry for the graduates race is the Dublin crew. A crew of New York graduates have telegraphed an entry to-day, and Yale may present another. The Dublin men have come out for a race, and not a walk over, so there is no probability that these late entries for this race will be objected to. The London Rowing Club are on the way, having sailed by Wyoming on Wednesday. The Dublin are now on the Scythia, and the two crews will be here before the next issue of FOREST AND STREAM.

The practice of the first Trinity has been somewhat interrupted by the sickness of Mr. Jameson, their bow. The whole crew went to Cape May on Saturday, and will stay until Tuesday or Wednesday. Mr. Jameson is better to-day, and it is to be hoped he will be able to take his place in the boat (bow) before the week is out. By this time next week, several of the crews will be at practice on the river.

SCULLS.

AMERICAN HORSES IN INDIA.

THE prospect of the future supply of horses for the cavalry in India is attracting much attention among the military of that empire and England. It is said that the management of the army stud hitherto has been bad. As a great military power, open to attack from within and without, India should be independent of all outside aid, and in possession of an ample and suitable supply of horses of her own. That she at one time, under native rule, did possess a breed of active, terse horses is a matter of history. Whence this supply shall be obtained is the question. Several schemes for breeding systematically from native, strong, but low-bred mares, and thoroughbred, imported stallions, have been devised, but do not meet with favor. The importation of horses from the Cape of Good Hope does not seem practicable to any great extent, nor from Australia, although the extensive grazing plains of Queensland will no doubt hereafter be utilized to raise a stock of fine horses for exportation; at present there is no good breed of Australian horses in existence there, unless it is the immediate descendants of imported English thoroughbreds, and all are expensive. Mares are now the great want of India—strong, blooded mares. It is a tropical country, and it is said that countries of the sun must have horses of the sun. It was from the clear, sunny climate of Arabia that the founders of the race came which have given the Eastern cavalry their best coursers; and they naturally look to Arabia for a renewal of the stock. One favorite suggestion, then, is, to purchase large numbers of brood mares from the Bedouins, who, in the spring and summer, are generally roaming in the pastures of Aleppo, Palmyra, Hama, and Hama, in the fertile plain of the swift Orontes, in the plain of Esdralon, or in the vicinity of Damascus. One of these tribes, the Sebaa Anezi, can muster ten or twelve thousand horsemen at any time, and their mares bear the repute of having in their veins the purest blood to be found in the desert. They trade largely. These horses can be got up to fifteen hands two inches high. The mares thus being secured, it is proposed not to ship them all to India, but to establish a stud, or sort of supply station in Syria, whence they can be taken by the Dead Sea to Bombay, or marched overland in case of emergency. There are strong arguments in favor of some such plan, but the expense is against it. Another plan is to obtain brood mares from Hungary. No troops in the world are better mounted than the Austrians. Their horses are very large, handsome, and shapely animals, with great power. The parent stock of this breed came originally from Arabia through Turkey, and it has grown and flourished under the careful and intelligent cultivation bestowed on it. Within the Tropics there cannot be a superfluity of blood, but for the hard, enduring service of the cavalry, bone must go with it. By bone is meant that dense, ivory-grained, osseous material appertaining to the thoroughbred. It was this combination of blood and bone that enabled Goldsmith Maid to trot a mile in 2:14, and sends along the Texas horse day after day his sixty miles on no other keep than the natural grasses of the prairie. Now it seems to be reduced to this, that the horses which Indian must take for her future must be derived from the Western United States. A company has been started in India called the Horse Supply Association, which proposes establishing a line of large, powerful and speedy steamers to run between Milford Haven and Norfolk, Va., and Galveston, Texas, the passages being calculated to and back from either port, respectively, at twelve and twenty-two days. These vessels will be fitted especially for the horse trade, and are very stiff and steady in sea way. Each will be able to carry about four hundred horses. It is proposed to import two classes:

1st—The horses of the Western States, which are to be found in great numbers, especially in the blue-grass country of Kentucky. They are large, powerful, symmetrical, upstanding animals, possessing ample bone and substance with, as a rule, superb natural trotting action. Such horses well broken, and fresh from the dealer's hands, can be purchased on the spot for from \$75 to \$150 each, and in the English market would readily realize prices from 60 guineas to even 200 guineas and upwards. It is estimated that allowing \$25 per head by rail and water to the port of Norfolk they would be landed in Milford Haven for \$75 more. If purchased as three-year olds, their original cost would be much less. These mares could go on to India via the Canal, and be landed, safely, and in fact, in good heart, for prices averaging \$300, and would be worth at least double the money.

2d—Texas horses, also procurable in vast numbers—some of the ranches carrying from 15,000 to 20,000 head—and for which there is so limited a demand at present that the breeders actually contemplate slaughtering them for the sake of their hides and tallow. These horses are well suited for light draft and saddle purposes. Inheriting the Barbary blood introduced from Morocco, they show much of the characteristics of that breed, having the small, blood-like head, dished face, broad square forehead, full eye, small pricked ear, thin open nostril, arched crest, and well-set on tail of the desert horse. Their legs are sinewy and clean, and feet excellent, while their shoulders are better placed than those generally seen in Barbs. Like the Indian country-bred and the South American mustang, their chief fault lies in the drooping quarters which, though indicative of speed and activity, are unsightly. This fault, if fault it can be called, when it does not amount to meanness, has on several of the large runs been remedied by careful crossing with some of the best blood

from the Eastern States, and the produce is a powerful horse, with no great height, possessing undoubted stamina. Picked, but unbroken, horses can be bought off the best run for from \$25 to \$50 each, and an English writer tells us that many of a desperately ill-used batch landed at Liverpool the other day, after a voyage of forty-eight days in a small steamer, would have passed for large sized brothers to Ali Shah and Gray Leg in a Bombay dealer's stable. At the price these really excellent animals could be landed at, the Government of India could well and wisely afford to mount several regiments on picked mares which, eventually, after some years' service, would pass out of the ranks into private hands as brood mares.

Or even a nearer supply could be found in Southern California. On many of the large ranches great care has been taken with the *manadas*, in keeping the mares in good condition and up to a fair standard of height, although, as a rule, a most reckless course is pursued in allowing mares and foals to run with almost unstinted liberty, the result of which is seen in the club-footed and weedy colts to be seen with most *caviadas* or bands. The transportation from our western coast to India would be even more direct than from Texas, and the quality of the stock quite as good. We have seen the produce of the common mustang of California when crossed with a trotting horse of average quality turn out remarkably well, even for track purposes, and Occident, although of course an exceptional horse, is said to have been gotten from a mustang mare. However, whether it be Texas or California, the opening of a market in India for our surplus horses is a "consumation devoutly to be wished." In the words of the immortal Sellers, "There's millions in it."

MAORI RELICS.—The Smithsonian Institution has lately received some ethnological collections from the Chatham Islands, among which were several skulls and bones of Maori-oris. It is said that this race never buried their dead, but carried them out and deposited them in heaps, where they were left to decay, so that the bones are easily found in many different parts of the island. They were cannibals; the remnants of the race now found in the island having been known to practice cannibalism as late as about ten years ago. They now number only about twenty-five souls, are limited to a reservation, and sustained by the colonial government. The name Maori-ori is said to mean "before the Maoris," and indicates that these people, the aborigines of Chatham Island, had been subdued and, in great measure, displaced by the Maoris. It seems not improbable that this race represents also the aboriginal inhabitants of New Zealand, which had quite disappeared before the discovery of the islands by Europeans. Chatham Island lies six hundred miles east of New Zealand, in latitude 48° south.

New Publications.

MAGAZINES.

The American Naturalist opens with an account of the ancient pottery of Colorado, Utah, Arizona and New Mexico by Edwin A. Barber, who accompanied the party of Dr. Hayden's survey which explored the cliff ruins of the Southwest in 1875. Several descriptions of these remains have already appeared in our columns. It is illustrated by two lithographic plates and three full-page illustrations on wood. Judge Caton's article on a new California deer is condensed in our Natural History department. C. S. Rafinesque finds a champion in H. E. Copeland under the heading of "A Neglected Naturalist." The writer thinks we forget too readily the labors of the older American zoologists, and contends that Rafinesque, who was an erratic genius, never received the credit due him especially in regard to his investigation of fishes. Dr. C. C. Abbott tells the story of a remarkable visit of white egrets to the flooded flats of the Delaware River at Trenton, N. J., in August, 1875. The article gives opportunity for some very good ornithological philosophy. Dr. Packard contributes a brief history of the house-fly, and the reviews and departments are extended and valuable. The improvement in this excellent periodical is very marked.

Lippincott's has, as was to be expected, a flavor of Philadelphia about it, for its opening article is an illustrated review of household and finer art as set forth in the Main Building at the Exhibition. An exceedingly timely and graphic account of Montenegro and its people follows, also illustrated. It arouses our sympathy for the hardy mountaineers. The first chapters of "Love in Idleness," an essay on "The Age of Knick-knacks" (the present), a sketch of George Sand, and minor papers fill the number, which, as a whole, is unusually entertaining.

The articles extracted for the August *Eclectic* are "The Courses of Religious Thought" by the Right. Hon. W. E. Gladstone; a review of the German poet Walter Von der Vogelweide; a description of autumn on the Lower Yang-tze; "Leigh Hunt and Lord Brougham;" "Remarks on Modern Warfare;" a practical article from the *Cornhill* on "Walking Tours;" chapters of "Her Dearest Foe," and various other selections of poetry, criticism and travel. Opposite the title page appears a steel portrait of Mr. A. R. Spofford, Librarian of Congress, accompanied by a biographical sketch.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

R. T. M., New Haven.—We cannot determine the fish from your description.

S. B. B., Hudson, N. Y.—When can quail be shot in this State? Ans. October 1st.

D. D. W., West Barre, N. Y.—Will you be so kind as to tell me how to organize a sportsman's club? Ans. Have sent you form of constitution and by-laws for a sportsman's club.

E. S., New York.—Please inform me where I can find a good Newfoundland or St. Bernard slut for my Newfoundland dog. He is one of the finest ones I ever saw. Ans. We do not know of one in private hands, but some of our readers may have such a dog.

READER, Manchester, Vt.—Is first class shooting to be had in Kentucky in the fall? If so what kind of game can be shot and in what counties to be found best? Ans. Good quail shooting can be had in Mason and adjoining counties and deer farther north.

VARNISH, Bath.—Will you please give me in your next issue the recipe for a varnish to prevent guns rusting on the sea shore, and how to apply it? Ans. We have found Belmont oil to answer the purpose better than any other preparation.

J. S. D., North Attleboro.—Please give me the address of a few of the leading game dealers of St. Louis? Ans. We do not know the names of any St. Louis game dealers, but if you will address J. W. Munson, Esq., he may be kind enough to give you the information.

F. O. S., Ithaca, N. Y.—1. At what price can one of the pointer pups mentioned in last issue, as being for sale by Westminster Breeding Kennel be purchased and what is their age? 2. Also prices of two broken dogs advertised by J. W. from your office? Ans. 1. \$10; whelped about July 1st. 2. \$150 each we believe. Address the party advertising.

F. A. B., Boston.—Please inform a subscriber to your paper, through your columns, how much a book published by Chas. Suydam costs, called "Shooting on the Wing," by an old Game Keeper? Ans. The book is published by the Industrial Publishing Co., No. 176 Broadway, and costs 75 cents.

J. C. E.—Will you let me know through your valuable paper in what part of the Adirondacks Piseco Lake is situated? also how to get there from Plattsburgh on Lake Champlain? Ans. You will find the route to Lake Piseco in an article headed "Adirondacks Itinerary," in our issue of 27th ulto. Send for a copy of Wallace's guide with map, etc.

A. J. D. C., Philadelphia.—Can you inform me if there is any chicken and snipe shooting near Joliet, Ill.; if so, what month is the best, after August? Ans. Within striking distance of Joliet, Ill., you will find prairie grouse and snipe shooting, and the best time is about October 1st.

ARTHUR, Lockport, N. Y.—Please inform me through your paper where, and how far from Toronto, Canada, good deer, duck, and partridge shooting can be found, as small party wish to go hunting in that section this fall from our city? Ans. Mt. Julien on Bighen or Duck Lakes, one day's ride northwest, where the party can find the best shooting anywhere in Canada within reasonable distance.

T. O., New York.—My intentions are to go to Manchester, Vermont, for a week or two the first part of September. What kind of game would I be likely to find near that place at this time? Do you think it is a good game country, and that it would pay me to take my dogs with me? Ans. It is a good country for ruffed grouse and you would do well to take your dogs.

R. B. R., Hazleton, Pa.—My pointer dog's eyes are very sore with a thick white discharge running, nose dry, and coat very rough. What is the matter? Do you think he has worms, if so, what shall I do for him? He has a very good appetite and is very active. Do you think a wash would be good for his eyes? Ans. Arcua nut will cure your dog and we would have sent you some had you observed the lime at the head of this column.

QUERIES, Leesburg, Va.—Ought a gut leader to be immediately soaked before using? I have lost six flies lately just at the first or second cast by the leader breaking when I struck the fish (ever so gently). Ans. It should be soaked immediately before using. Defective gut was probably the cause of your snoods breaking. When the gut breaks at the hook it is often the result of imperfect casting; sometimes from being coiled carelessly in the fly-book.

H. D. M., Indianapolis.—Do you think flies could be used to good advantage for bass in the small rivers and streams of Indiana and Ohio? What amount shall I send you for a fair line of samples for a trial? Ans. Bass will not take flies at all times—and neither will trout, for that matter—but we believe that bass will rise to a fly in any and all waters, they being in great part surface feeders. As to Ohio and Indiana we can answer positively that they do. Bass flies sell from \$3 to \$4 per dozen at the tackle shops.

C. F. B., Worcester, Mass.—I have a heavy canvass tent without fly, which during a heavy shower leaks. Can you tell me of some paint or oil that will prevent it? Ans. Send it to Chas. Tappan, Greenwood, Mass., and have it waterproofed by his paraffine process. Painting will make it too heavy. Or you can waterproof it yourself by taking sugar of lead and powdered alum in the proportions of half a pound of each to a bucket of rain water; dissolve and pour of the dissolved ingredients into another vessel. Steep the canvass thoroughly in the solution, letting it stay for a considerable time. Hang it up to dry but do not wring it.

ZATTUMAN, Baltimore.—Can you give me any information about the region of the Red River of the north and Pembina? What is the best way to get there from St. Paul, Minn., and what sport, fishing especially, is to be obtained? Ans. The book entitled "The Prairie Province," published by Belford Brothers, Toronto, contains full information; also Butler's "Great Lone Land," and "Ocean to Ocean," published by Adams, Stevenson & Co., Toronto, Canada. Prairie chickens, ptarmigan, wild fowl, rabbits and deer are the principal varieties of game. Buffalo and elk disappeared a few years ago. Bass fishing in the lakes. Railroad and steamboat from St. Paul.

B., Cleveland, Ohio.—Where, in the West, either in Nebraska, Missouri, Kansas, or the Indian Territory, could a couple of sportsmen find amusement along in October or November for a couple of weeks, and which of those two months would be best? We want to find some place where we can get duck, geese, prairie chicken, quail, etc., and a few hundred miles difference in the distance won't be objectionable; but we would like to learn of some region where there will be no disappointment when we get there. Ans. You can hardly go wrong this year, but if you will make your headquarters at Atchison, Kan., you will find excellent "chicken" and other shooting.

S. B. D., Lake City, Minn.—I have shot in a general contest and own the badge. Am challenged to shot a match; under those rules we tie; does that tie have to be shot off at five birds according to rule VIII for trap shooting? I claim that ties shall only be shot off when the ownership of any property shot for is divided. The ownership of the badge is wholly vested in me and I claim that a tie does not beat, or either divide ownership. I also claim that to shoot at five birds would put me in the place of the challenging party and I would have to beat him, putting the cart before the horse. Ans. We think that you are wrong and should decide that the tie should be shot off under rule VIII.

SUBSCRIBER Philadelphia.—Is there any rule in casting the fly that compels the caster to throw the flies behind up into the trees, or is there such a rule governing fly casting at the New York State Sportsman's Conventions which compels him to throw the fly behind as well as in front of him. I think as long as the caster complies with the rules, such as length and weight of rod and length of leader and regular line without weight attached to it he has a right to throw it any way he can? Ans. The rules for fly-casting say that "no cast shall be valued unless the line be retrieved," which necessarily brings it back behind the caster.

E. L. G., Newburgh.—Can you or any of your readers give me any information about the shooting and hotel accommodations at Cobb's Island, Va.? What is the best route from New York to the island, and is there any goose, quail, or duck shooting to be had in the fall or winter? Ans. A good many columns of information have appeared in this paper about Cobb's Island. There is a good hotel on the island, but the proprietor has declined to furnish the information through our columns. Excellent geese, duck, brant, snipe and woodcock shooting in the fall and winter. To reach the island sportsmen generally go to Washington, D. C., and take the steamer down the Potomac to Cherry Stone. There is equally good shooting at Chincoteague, which can now be reached by rail and steamers of the Old Dominion Line.

C. V. B., Poughkeepsie.—In what part of the Adirondacks could I find good hunting and fishing for one or two weeks without costing too much? Please state the time and what it would cost to get there, and what game I would find next month. Can you tell me the cost of a canoe? Ans. Martin Moody's, on Big Tupper Lake, is as cheap a place as any with good plain fare. You will get lake trout by trolling in September, and good speckled trout fishing an occasional deer, with some ruffed grouse and wild ducks. The month of October is the best for general sport. Canoes are not used. Boats with guide cost \$250 per day. You could hire a boat from Moody at a trifling expense to cruise about the premises. For information of Adirondack region you should by all means buy the Adirondack Guide for sale at this office. It will save you its cost ten times over. Price \$2, with large map.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCUCLATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,

[POST OFFICE BOX 2832.]

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty-five percent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, AUGUST 10, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK.

Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, August 10th.—Racing: Saratoga. Trotting: Piqua, O.; Rochester, N. Y.; Pentwater, Mich.; Tiskilwa, Ill. Rifle: Eleventh Brigade practice at Creedmoor. Base Ball: Cincinnati vs. Chicago, at Cincinnati; Louisville vs. St. Louis, at Louisville, Ky.; Mutual vs. Athletic, at Brooklyn; Nassau vs. Hudson, at Brooklyn; Athletic vs. Lone Star, at Catskill, N. Y.; Alaska vs. Enterprise, at Jersey City, N. J.; Boston vs. Live Oak, at Boston, Mass.

FRIDAY, August 11th.—Trotting: Rochester, N. Y.; Piqua, O.; Tiskilwa, Ill. First race between the Countess of Dufferin and Madeline for "America" cup; N. Y. Harbor. Regatta, Saratoga Lake. Rifle: Third Brigade practice at Creedmoor. Base Ball: Mutual vs. Hartford, at Brooklyn; Boston vs. Rhode Island, at Boston, Mass.; Enterprise vs. Star, at Paterson N. J.; San Francisco vs. Eureka, at Philadelphia; Stottsville vs. Athletic, at Stottsville, N. Y.; Greenville vs. Summit, at Greenville, N. J.; Resolute of N. Y., vs. Alpha, at Stapleton, S. I.; Resolute vs. Hoboken, at Elizabeth, N. J.; Alaska vs. Resolute, at Jersey City; Quickstep vs. Flyaway, at Melrose, N. Y.; Monticello vs. Chatham, at Jersey City.

SATURDAY, August 12th.—Racing: Saratoga. Trotting: Piqua, O. Second race for "America" cup; regatta West Rutherford Park, N. J.; regatta Quebec. Rifle: Geiger Bulls-eye Badge, Turf, Field and Farm Badge, and Seventh Regiment "shells" at Creedmoor. Base Ball: Cincinnati vs. Chicago, at Cincinnati; Louisville vs. St. Louis, at Louisville, Ky.; Athletic vs. Hartford, at Philadelphia; Alaska vs. Mutual, at Jersey City; Quickstep vs. Dauntless, at New York; Mutual vs. Alaska, at Jersey City; Staten Island vs. Orange, at Orange, N. J.; Athletic vs. Witoka, at Brooklyn; Witoka vs. Mutual, at Brooklyn; Two nines from Franklin Lit. Soc., at Brooklyn; Winona vs. Olympic, at Brooklyn; Osceola vs. Star of Elizabeth, at Elizabeth, N. J.

MONDAY, August 14th.—Trotting: Zanesville, O. Rifle: Second Brigade practice at Creedmoor. Base Ball: Athletic vs. Hartford, at Philadelphia; Alaska vs. Olympic, of Manhattanville, at Jersey City; Chelsea of Brooklyn vs. Cricket, at Binghamton, N. Y.

TUESDAY, August 15th.—Racing: Saratoga. Trotting: Utica, N. Y.; Zanesville, O.; Manistee, Mich.; Warwick, N. Y.; Lewiston, Me.; Point Breeze Park, Philadelphia; Mendota, Ill. Match between yachts Susie S. and W. R. Brown, N. Y. Harbor. Rifle: American team practice at Creedmoor. Base Ball: Mutual vs. Hartford, at Brooklyn; Monticello vs. Enterprise, at Jersey City; Alaska vs. Chatham at Jersey City.

WEDNESDAY, August 16th.—Trotting as above. Rifle: American team practice at Creedmoor.

M. M. BARKER.—Letters for this gentleman are frequently addressed to the care of this office. Mr. Barker some months ago dissolved his connection with FOREST AND STREAM, as its traveling canvasser and correspondent, and is now, we believe, employed upon the *Rod and Gun* in some capacity.

—Now at the beginning of a new volume (Vol. VII) is a good time to subscribe for FOREST AND STREAM, especially as the fall shooting season is close at hand, and our columns always contain much valuable information on topics pertaining to the field.

GAME PROTECTION.

GUIDES AS GAME PROTETORS.

MY last letter wound up with a pair of direct assertions, that will probably meet with unfavorable criticism unless I am able to make them good; they were to the effect that the Game Law itself was indirectly the cause of the diminution of the trout and deer in our Adirondack wilderness. That it is so, and why it is so, I will endeavor to show.

The law is not only a failure, as far as restraining goes, but it is an active agent against itself; it causes the very evil it is intended to prevent. Let me get back to figures and facts again for a moment. Four years ago my guide and I spent five days in fishing three miles of rapids and deep pools. It was in May, so the fish were not yet in the "spring holes," and we iced down eighty pounds of dressed trout—not troutlings—my big one *par excellence* weighed three pounds seven ounces, and was taken at sun-set, when I could not see the white miller that unfortunately for him, he did, and fifty of my best weighed fifty-one pounds. This year I went over the same course twice and three of us caught three trout of three ounces each. After that I spent the day catching bull-frogs. (I was very lucky with frogs). I don't believe any one will do any better next year, unless the trout thrive in spite of the law. There is too much improper fishing which is legal, and too much proper fishing and shooting which is illegal. You see I draw a distinction between propriety and legality.

There is a combat between the Law on the one side and Nature on the other, and with no lawyers nor law officers to carry out its provisions, the Law fares badly. My experience has been that of many, this year, and will be that of more the next. Chubs, suckers, and bullheads feed us instead of trout, and will do so because the law carries in itself its own destroyer. As I have tried to show, our guides, our wood-choppers, and so-called "hotel" keepers, are a sturdy, independent set. Most of them are intelligent and would be quick to break up a set-line, or prosecute the man who would for mere wantonness or for profit, "hound" deer, or kill more than he needed. But not a man among them *dare do it*. The law is that he who kills bird or beast out of season becomes by the act a criminal, and thus, being himself subject to the penalties of the law, cannot proceed against others who for lighter motives infringe more grossly. Our pioneer is strong and uncultured, but his natural points are coequal with his strength. He has only his own wife and his own little ones for his companionship, and no man outside can be more devoted to his home. Our woodman is human, and he has human rights which over-weigh those of the beast. Leading the way for civilization to follow he leaves behind him the meat market, the grocery, and store, and advances axe in hand, hewing a living out of the dense forest, and digging it from the sterile soil—a living, yet a bare subsistence; a life where bread is a luxury. This man has a natural in-born right, and he knows it, to the food that Nature with one hand provides, and with the other punishes him with loss of his only capital—his strength—if he refuses. By meat he must live, and meat he will and must have. What cares he for the young of the deer if his own young are suffering for food; if his own strength, which is their support, is failing him for want of proper sustenance? Of what importance is it to him that the young partridge does suffer for its mother's care, if his own young one lies suffering with illness, unable to partake of the pork and potatoes which are its daily fare, far from the care of physicians, left to him alone, and his mate. Nature leads to his very door the most succulent of meat; he has but to take and eat. He must be more or less than human if he refrains. He kills the deer, he feeds his family, and he has become a criminal. A man, whose hands, bound by his illegal deed, though committed through the honestest of motives, cannot be laid upon real criminals who, for mere love of cruel sport or wantonness slay many, where he has slain but one. "The law is the law, and he who breaks it shall suffer death," was the old Draconian creed, and how far have we got beyond it? He sees his larder grow leaner year by year. He toils harder, but grows poorer. He sees crimes that he would but cannot prevent because he himself is a criminal. He sees the injustice of the law, he sees that it cares for the young bird and the young deer, but not for his young, that it insures, or tries to insure to the city sportsman coming in at the proper season a fair share of sport, but not to him a fair share of the necessities of life, and he rebels against it. "What is the law but a nullity, a thing to be despised?" he thinks. "Who or what is this law that says to me, 'You must starve, you and your brood; the animal's rights are greater than yours, their young must not suffer, their mates, for a season, be bereaved.' Who is to carry out this odious law? The Game Constable, a law breaker himself, elected by us who have broken the law, and who will break it, and who cannot be stopped?" So reasons the guide and woodsmen—guide only during the short season of sport; a hard laborer for the rest of his time.

And who gainsays him? Sportsmen come into the woods in June and July for trout, in September for deer. The first finds "mutton," which he knows to be venison upon his table, laughs, and, if he can, buys a saddle to carry out. The later comer eats his trout, even if he knows it comes from the spawning bed, and asks no questions. Can we expect the guides and "hotel keepers" to act as purveyors to our consciences, as well as to our stomachs, and sacrificing their own comforts, save them to be our luxuries?

We don't prosecute nor make game constables of ourselves. We are hungry, feel the lawlessness of the woodland air, we eat and are merry. I'll not accuse others, and plead guiltless, for I have eaten and enjoyed a steak from a two-year-old on a table where but for it I would have fared badly. At Round Lake, a guide was employed by a visitor to procure some lakers. The next morning he was detected, as the fog lifted, in overhauling a set-line. Public opinion was aroused, the hotel keeper was determined to prosecute him; one guide determined to drag for the line and destroy it; another proposed to "lick him." I joined in their indignation, and encouraged each party to carry out his plans; but they all fell through. I had other matters to attend to and couldn't stay. "George" knew of this one and that one killing deer out of season, and not a man dared touch him. It was the game constable's business! It was everybody's business, and nobody's. I read to them your criticism on the firing at the Hon. W. A. Wheeler's party, and as Mr. Wheeler was likely to be Vice-President, and as I lived in Washington. I was supposed to have a good deal of influence with him, and I worked them up till they all promised well; but George Burton goes free, and if any one wants lakers they have only to engage him.

A just law, a wise law, that will give to the man who, living in the woods must live by the woods, a right to do what he now does and will do in spite of the law, would make game constables, and good ones, of nineteen out of twenty of the men who are now criminals. Give the right to kill for food and killing for sport would become a dangerous business. Put the woodman in a position where he can uphold a law, and make a law he can uphold, and he will do it. There are not so many men in the woods but that our deer and fish would thrive under their protection better than without it. With my guide I saw on a fisherman's premises a spear intended to take the salmon on her spawning bed. I was assured that it was not used, but *quien sabe*. Through the ice in winter hundreds of pounds of trout are taken for the market, and law does not seem to have inherent power to stop it. Spy Lake, where, two seasons ago, fine catches of splendid trout rewarded an evening's troll, this season is but a barren pond. Three hundred pounds, I was informed, were taken from it last winter through the ice.

There is, too, destructive fishing which is not illegal, but should be; and it is to it more than to all other causes combined that Piseco is losing her brook trout. I will give my own experience. Taking a Sunday's drive to the head of the lake, I met men there who told me tales of mountain brooks, near by, "where brook trout were plentiful." Three parties who had fished them this season "had carried away, one 80, another 60, and another 36 pounds each, in two days' fishing." By Monday evening I had broken up at Rude's, and was shantied out about five miles up an inlet, a wild romantic little river spreading in two places into pretty lakes, and navigable for our boats. We were in the real woods. The next morning's work satisfied us; trout after trout sprang eagerly to our flies, none were less than three inches long, none over seven, and few over six. We threw back such of these babies as were not too badly hooked, and at noon broke camp disgusted, having in our five baskets, perhaps 15 or 20 pounds that had fallen victims, while we were working rapidly along in hopes of better game. We, too, could have gotten "80 pounds" had we chosen, but we were not fishing for a tavern. The baby trout, perhaps 400 pounds, which have been taken (for several parties of sportsmen (?) have followed us), to every pound an average of eight or ten fish, would have furnished next year to Piseco fully a thousand pounds of trout worthy of the name. Our game was but a short remove from the spawn bed. To be sure they had spots, had absorbed their sacs, and were trout—brook trout—that noble game that entitles its captor, even of a dozen with a pin hook, to dub and think himself a fisherman. Nobody tried to stop us from going to this fish preserve, because it was nobody's business; so reasoned the guides whom I reproached for permitting us to learn by experience what they already knew. Nobody could have stopped us had a trial been made had we chosen to go on, for there is no needed precept in the law which preserves such inlets to public waters. Nor is there in the law a provision that *he who shall offer for sale or barter any brook trout less than six inches in length shall suffer penalty*. Those little trout that made up the 80 pounds, I traced to this village, where they were sold to a tavern, and fed to New York drummers. At the foot of this lake another guide took another party, innocent of ill purposes as I was when I went out, up another inlet, and another fine lot of little ones paid for the trip.

The consequences of this wanton destruction are making themselves felt. The brook trout are becoming scarce, the sport is becoming a toil, the landlords and guides are becoming poorer, lake after lake, once teeming with splendid fish, are but frog and bullhead ponds, and the day is not far off when the big chub that even now too often takes the spoon, will be welcomed instead of damned. The long suffering goose whose eggs have been golden, furnishes now but silver and dross, and very soon she will have ceased her vocation as did the one of fable. There is a remedy for this surely growing evil, but that remedy must be applied promptly to be of service. Stocking the lakes will be of but little avail if the winter's depredations through the ice, and the slaughter of the young trout in the inlets be not prevented. Our hope is in a law based upon the actual situation; one that, guided by the experience of those who actually go into the woods and who learn whereof they speak, will provide penalties for wrong

doing, privileges to those who need them, and rights to those who by a higher law are entitled to them.

Our public waters in the Adirondacks, once stripped of their still goodly stock of choice fish, would be of less value than the land which now surrounds them when stripped of its timber—not worth its taxes. And it is to this condition that they are coming. Four years has lessened the speckled trout tenfold, and has increased fourfold the number of "sportsmen" who have found out the inlets which will fill their baskets with troutlings, and the tavern keepers who will pay for their disreputable load. The lakers are still comparatively plentiful, and for the brief trolling season pay for your exertions; but the laker can take care of himself—his little ones don't run up brooks where short sighted men can scoop them out; when the water gets warm his taste for a low temperature takes him down to the lower depths out of the reach of any spoon or gang. So he still lives, but this winter fishing through the ice and set lines will eventually hurt the laker supply. Then welcome chub. A thorough radical change in such sections of the law as apply to our public waters could be made which would stop this falling off. *Permit* men to do what you can't help their doing; make it their right, and depend upon them to defend their rights. Let the woodsman feel that the law is his friend, that he can feed himself and family, and still retain a power to break up wanton destruction, and he will do it; and while legally killing what he needs he will not do one whit more harm than he now does, but vastly more good. Don't expect to try your best to stop a courageous man from doing just what he wants to do, thinks he has a right to do, and is able to do in spite of you; and then expect him to put himself into your power to punish by doing to a neighbor what you have tried to do to him.

Far better than our own, would be a law based on the system of the Japanese; by it all seasons are close, and all land and inland waters preserved, and to shoot or fish, a man must procure a license; but we are not Japs, and such a state of affairs is not to be hoped for. But it would pay. A reasonable price for a day's license, a still cheaper one for a week's, and a guide's license at low figures, would ensure a yearly revenue which could be expended in stocking and preserving. Then, with chances to collect them, attach heavy penalties to violations,—to bartering, or selling fish or game out of season,—and we would have solved the problem.

I have in this letter assumed to write from the guide's point of view. I may be mistaken. I would be pleased to have my views fairly criticised in your columns. Such as they are they have been gathered and promulgated in the woods, among the woodsmen, and have met universal approbation. Nearly every wood ranger hated the very word Law when our talks began; nearly every one before we were through expressed his willingness to support a law that was not unjust. Let us have this law, secure these volunteer game constables, stock our lakes and go a-fishing.

PISCO.

ILLINOIS.—The officers of the Illinois Sportsmen's Associations are as follows: Law Committee, Col. E. Jussen, Chicago; Charles Kellum, Sycamore; L. L. Palmer, Chicago. Delegates to National Convention, Charles E. Felton, Chicago; Gen. John Tillson, Quincy; Hon. C. W. Monsh, Sycamore; C. B. Miller, Geneseo (W. B. Hanworth, alternate); J. L. Pratt, Sycamore.

WISCONSIN.—Our sportsmen are awake on the question of game preservation, and are determined to allow no illegal shooting or snaring game in this section. In fact sportsmen throughout the State are becoming more thoroughly interested and aware of the necessity of prompt and strict measures for the prevention of illegal practices in shooting. But comparatively few deer have been butchered through the close season so far as reported, as several sportsmen in Northern Wisconsin have determined not to suffer this most outrageous practice, and have achieved remarkable success.

FRED.

GEORGIA.—A correspondent writes from Savannah as follows:—"The Georgia Game Association is now in a flourishing condition. It is forming a law which will be brought before the next Legislature, the object which is to protect game during the close season in the State of Georgia."

MERIDEN, Ct., July 29th.

EDITOR FOREST AND STREAM:—

Your correspondent "Scales," complains very justly of the unlawful trout fishing which is carried on in the vicinity of Niantic, and I do not wonder that he characterizes the offence as piratical, etc. There is perhaps, as he intimates, some excuse for ignorant boys when they innocently break the laws, but for intelligent men, who claim to be sportsmen, it is simply a disgrace, to be engaged in such selfish and dishonorable practices. I know that it is not the popular thing to be continually preaching for the preservation of our fish and game, and I know that some are apt to call us "growlers," but I believe that if all the true and right meaning sportsmen of this State, would come out like your correspondent "Scales," we might possibly "shame the devil," and have sound game laws enacted, with perhaps a game constable in each town to enforce them. And when it is done, we may look for an increase of trout in our streams, and plenty of game in the coverts.

VON. G.

TRAP SHOOTING AT WASHINGTON.—A few weeks ago, for the purpose of making a test case, Mr. Theodore F. Gatchell, President of the Society for the Prevention of Cruelty to Animals, arrested several of the members of the District Game Protective Association of Washington, while they were participating in a pigeon shooting match at Brightwood Park. The case was brought before Squire Weaver, on the 2d and argued, competent counsel being engaged on both sides. The point made against pigeon shooting was that the wounding of pigeons caused unnecessary suffering. Squire Weaver sustained the view, and decided in favor of the society. The case will be appealed, and ultimately taken to the Supreme Court of the District for a final decision.

NUNQUAM ANIMUS: SED AGE CAPUT.—Never mind, but go ahead.

VOLUME SEVENTH.—The present issue begins the seventh volume of FOREST AND STREAM and the fourth year of its existence. Nursed thus far throughout the most distressing financial period in the history of the country, we feel gratified to note, as we do, each step of its progress toward maturity and fixed establishment. The paper is to day in as healthy a financial condition as need be, though we must say it needs more prompt remittances from its numerous debtors to enable it to keep its back-bone as stiff as it ought to be. There are very large amounts due us, and many of our advertising patrons have been in arrears for months. We beg all, therefore, to remit as promptly as possible, as we are not disposed to publish the paper gratuitously. Besides, we can greatly improve this journal if we can keep a wholesome balance in bank, and thereby the better serve the interests of all our readers and subscribers.

Per contra we cannot too gratefully thank those firms who have remitted promptly, and especially those who, apprehending our possible necessities, have paid for their advertisements several weeks in advance. The disposition shown by many of our patrons to sustain the paper in these troublous times is most gratifying, and shows a disinterestedness greatly to be appreciated.

CENTRAL PARK NEWS.—The Menagerie at Central Park has been rather neglected by Park Commissioners for several years, but the activity of the Director, Mr. W. A. Conklin, manages to keep it in presentable shape. When, a few months ago, the Commissioners declined to longer support the animals deposited there, the owners—largely showman—took many of them away, and the lion house consequently has rather a deserted look; but a few were left, there were a good many owned by the Park which of course remained, and many have since been added by loan or otherwise, so that the Menagerie is still a worthy attraction to the crowds of visitors. During the coming winter an effort will be made to organize a Society with a capital of over \$200,000 for the formation of Zoological Gardens on a grand scale. It is hoped that the Legislature will empower the Commissioners to set aside a portion of the Park for such Gardens; but the Commissioners themselves are opposed to this at present, claiming that they cannot spare the room, and propose that the Gardens shall be situated in Westchester county. This, the zoologists feel, would be altogether too far away; and expect, by offering one or two free days in the week, to persuade the Park authorities of the advisability of granting space within the Park limits. However, nothing will be done at present; and we reserve for the future any comment further than to express our hearty support of any movement looking to the establishment of zoological gardens.

THE UNITED STATES GEOLOGICAL SURVEY.—Dr. Hayden in charge of this Government survey is just taking the field, having been delayed until now by the quarrels in Congress. He has a small portion of Colorado to finish. Dr. Elliott Coues will accompany the Survey, and writes to the *Rod and Gun* that there will probably be four parties in the field with Cheyenne as the rendezvous. One topographical party will work in the southwestern portion of Colorado, another in the region of the Sierra la Sal, whence the expedition was driven last year by some renegade Indians; and a third will go west through the Middle Park into the northwestern portion of the Territory. The movements of the fourth, or zoological party, under Dr. Coues's charge, is not decided upon, and will depend upon the facilities at hand for transporting collections, and the most eligible field.

—A hotel is now in process of erection at Matanzas, ten miles below St. Augustine, Florida, and a steamer is being constructed at New Smyrna, to run on the Halifax River. There will be overland connection next winter between the Halifax and St. Johns rivers via Crescent Lake and Dunn's Creek. All these improvements afford facilities long much needed.

—We are informed that Mr. Alfred Jones is building a large addition to his house at Homosassa, Florida, to be ready for guests in December. This will be good news for Florida tourists, who have been disappointed in obtaining accommodations at this delightful spot hitherto.

KILL THE CATS.—Perhaps no one has ever considered the immense amount of danger done to game by cats, both domesticated and those that have taken to the woods and live there in a half wild state. A friend informs us that two whole bevy's of quails which have been frequenting his stubblefields, have been exterminated by one worthless cat, smart enough to keep out of range of his gun. There are doubtless some good cats who devote their lives to the pursuit of vermin, such as rats and mice; and there are others who prefer game suppers to any other kind. For the latter we would suggest No. 6 shot and a short road to the bone-yard.

ADIRONDACK GUIDE.—The Forest and Stream Company, which has purchased and now holds the copyright for Wallace's Guide to the Adirondacks, has just issued a new edition for the current year, which is advertised elsewhere in our columns. No one who goes to the Wilderness should be without this Guide, which all the best authorities pronounce the only perfect guide out—and so it is. In it nothing is omitted which the tourist and sportsman desires to know. The map is one of its most desirable features, and will be found accurate.

THE DROUGHT AND GAME BIRDS.—We have but recently passed through an unusually long season of drought, but we cannot hear of its having in any way injured the birds. Not so in England, where they have been similarly afflicted. An exchange says:—

"In Huntingdonshire the clays are fairly burnt up, and great cracks are visible on the pastures and ley ground; and from the stiff soils in Worcestershire we hear the same complaint, one correspondent lamenting that the young partridges and pheasants, which had hatched off well, tumble into the fissures of the soil caused by the baking sun, and perish accordingly."

Our quail suffer severely sometimes from excessive rains drowning out the young birds, but never from such causes as the above.

—The wire cable to be used as an endless chain in stretching the wires over the river for the East River Bridge arrived at the New York anchorage on Saturday. It was made by the Roebling Works at Trenton, N. J., and is 7,310 feet in length. It is expected that it will be in position by Monday next.

—This day, August 10th, is designated as the culminating period of the August meteoric showers, and those who gaze upward to night will be likely to see stars—thick.

Shot Gun and Rifle.

GAME NOW IN SEASON.

Woodcock, <i>Philohela minor</i> .	Red-backed sandpiper, or ox-bird, <i>Tringa americana</i> .
Black-bellied plover or ox-eye, <i>Squatarola helvetica</i> .	Great marbled godwit, or marlin, <i>Limosa fedoa</i> .
Ring plover, <i>Egialitis semipalmatus</i> .	Willet, <i>Totanus semipalmatus</i> .
Stilt, or long-shanks, <i>Himantopus</i> .	Tattler, <i>Totanus melanoleucus</i> .
agrifcolis.	Yellow-shanks, <i>Totanus flavipes</i> .
Red-breasted snipe or dowitcher, <i>Macrorhamphus griseus</i> .	

"Bay-birds" generally, including various species of plover, sand-piper, snipe, curlew, oyster-catcher, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

RUFFED GROUSE SHOOTING.

DOUBTLESS many of our friends are, with us, looking forward with pleasure to the time, September first, when we may commence the shooting of that noble game bird, the ruffed grouse (miscalled in many places pheasant or partridge); yet how few, even among the "crack shots" of the country, understand the habits of and are really skilled in the pursuit of this game. We remember well our first visit to Newton, N. J., full twenty years ago, where we formed the acquaintance of Mr. Peter Hoppaugh, Mr. James Shaffer, Mr. James L. Northrop, and Mr. Theo. Morford, the latter at that time being quite young in years, but handling his dog and gun like a veteran, "Phil," his splendid black-and-tan bitch being then in her prime.

At the time of our visit we had had full twenty years of almost constant practice in the way of field sports, and felt very confident we had learned about all that was worth knowing in the way of shooting quail, woodcock, snipe, and ruffed grouse. But when we came to shoot the latter game with those gentlemen, we found that we had very much to learn in order to be the equal of either of them. We do not mean in killing this bird when we got within shooting distance of it, but in the proper mode of hunting it in order to get the best chance to bring it to bag. After shooting a few days we became fully convinced that we had never met with any shooters to be compared with them in bagging grouse. The question may then be asked, how is it that they have such extraordinary skill? In answer to this question let us say that in the section of the country alluded to, at that time, the ruffed grouse could be found in sufficient numbers to make it sport equal to any we have ever enjoyed; and the shooting of this bird had become a perfect infatuation with those gentlemen, and they, having devoted years in the pursuit of this variety of game, had acquired a full knowledge of their habits. And then, by so much practice their dogs, too, knowing the wild nature of the game, would work to a charm.

All experienced sportsmen know how rare it is to meet with a good snipe dog. Those only are good which have been raised and broken on that game, and thus it is with ruffed grouse. A dog, in order to understand and work properly on this game, must be broken specially for the purpose, and such dogs, instead of dashing over the ground with a regular beat, at a high rate of speed, as soon as they enter the cover they will settle down to slow, cautious work, frequently using their eyes to spy out the spots where the grouse generally lie, and then getting themselves quietly to leeward, approach very cautious with their noses to the wind, and stopping the instant they get the faintest scent of the game; and then, as there is a perfect understanding between the shooter and his dog, the former is enabled to get in position to shoot in case the bird will not lie to point, as is often the case. At the first rise, when the bird rises before the sportsman can get within shot, or it is missed, its course is marked with wonderful accuracy, not only by the shooter, but frequently by the dog. But that which astonished us most was the fixing of the spot where a bird which had flown entirely out of sight would alight. Our first shoot in old Sussex was with the genial host of the Farmers' Hotel, Peter Hoppaugh, and his famous old dog "Dock." "Dock" was a "dropper," but having the appearance of a well-bred pointer, colors liver and white, and as spotted as a coach dog; and what our friend Peter and "Dock" did not know about ruffed grouse shooting is not worth knowing. On this day, just as we were approaching

open to all, and a prize will be given to the first, second, and third shortest strings in each match. The shooter making the shortest aggregate in the thirty shots, will receive the club medal. Rifles of any construction or calibre can be used, providing the rifle barrel does not exceed fifteen pounds in weight. Mode of sighting and resting unrestricted. All matches will be shot at forty rods, and under the time rules. For further information address Charles C. Hebbard, Secretary, No. 427 Broadway, Cambridge, Mass.

A NEW WEAPON.—The *Times* of India says: A pistol that can kill at 500 yards has been patented by Captain Burton. The butt is that of an ordinary pistol; the barrel is that of a good rifle, cut short, but having sufficient "turn" to send the bullet on its errand with the proper spin. The chief object is to send a rifle bullet at an enemy or game, without having to use the shoulder, especially when on horseback. To accomplish this the barrel is filled up with a steel handle to be grasped by the left hand, while the arm is extended as in archery. The inventor has provided a patent safety bullet which will explode as a shell when it crashes against the bones of large game, but will pass through brushwood, or the skin of a wild animal, like an ordinary ball. It will not explode if let fall upon its apex, but if fired into a box of ammunition it will blow up everything.

Rational Pastimes.

BASE BALL.—THE PROFESSIONAL CHAMPIONSHIP.

The first week of August closed with but little change in the relative positions of the contestants in the pennant race. The Chicagoans still have a winning lead, with the St. Louis second, and Hartford third, with the Boston pulling up to a close fourth, while the Athletics are last on the list of the Eastern nines and the Cincinnati the last of the Western teams, besides being at the foot of the league class. There is no questioning the fact that the semi-professional clubs of the country are rapidly coming up to the league club standard. The Rhode Islands polished off the Bostonians lately, and the Chicagoans had two narrow escapes from defeat from the Capital City nine of Indianapolis, one game being a twelve-innings affair, 8 to 7, while the New Havens, last week, easily took the Mutuals into camp by 9 to 2. Above all the Live Oaks, of Lynn, gave the Athletics a Chicago last week to the tune of 8 to 0! Two surprises marked Saturday's contests, one the defeat of the Hartford by the Mutuals by 4 to 1, and the Chicago by the Louisville by 4 to 2. This week the Chicagoans play their last games of the pennant series with the Cincinnati, and the St. Louis their last with the Louisville, and then will follow the closing games between the St. Louis and Chicago clubs. After this they all four come east for the last time.

The record to August 6th is as follows:—

Clubs.	Games Won.	Games Lost.	Games Drawn.	Games Played.
Chicago.....	26	8	0	44
St. Louis.....	29	14	0	43
Hartford.....	27	11	1	39
Boston.....	24	19	0	43
Louisville.....	19	25	3	47
Mutual.....	16	24	1	41
Athletic.....	11	30	1	42
Cincinnati.....	6	37	0	43
Total.....	168	168	6	342

—Among the best games played by clubs outside the League arena since our last may be named the following:—

August 3—Ithaca vs. Cricket, at Binghamton... 1 to 0
August 1—Meta vs. Aspin, at Boston (13 in)... 2 to 1
August 2—Star vs. Buckeye, at Syracuse... 3 to 0
August 5—Aspin vs. Resolute, at Boston... 3 to 2
August 5—Auburn vs. Buckeye, at Auburn... 3 to 2
August 3—Resolute vs. Tri-Mountain, at Boston... 4 to 0
August 3—Buckeye vs. Union, at Union... 4 to 1
August 2—Cricket vs. Ithaca, at Ithaca... 4 to 1
August 3—Androscoquin vs. Live Oak, at Lewiston, Me... 4 to 4
August 1—New Haven vs. Bridgeport, at Bridgeport... 5 to 1
August 3—Meta vs. Aspin, at Boston... 5 to 2
August 4—Boston vs. Rhode Island, at Providence... 2 to 5
August 4—Chicago vs. Capital City, at Indianapolis... 5 to 4
August 1—Mutual vs. Orange, at Orange... 5 to 4
July 31—Carbondale vs. Orange, at Orange (10 innings)... 5 to 3
August 4—Buckeye vs. Lowell, at Lowell... 9 to 0
August 1—Star vs. Buckeye, at Syracuse... 6 to 1
August 3—Chelsea vs. Argyle, at Brooklyn... 6 to 2
July 31—Auburn vs. Ithaca, at Auburn... 6 to 5
August 2—Live Oak vs. Androscoquin, at Lewiston, Me... 7 to 0
August 1—Live Oak vs. Athletic, at Lynn... 8 to 0
July 31—Capital City vs. Capital City, at Indianapolis (12 innings)... 8 to 7
August 4—New Haven vs. Mutual, at N. Haven... 9 to 2
August 1—Athletic vs. Nassau, at Brooklyn... 9 to 6

—But four model games were played in the League arena last week, the majority of the League contests being marked by double figures. They were as follows:—
August 5—Mutual vs. Hartford, at Hartford... 4 to 1
August 5—Louisville vs. Chicago, at Louisville... 4 to 2
August 1—Hartford vs. Athletic, at Hartford... 8 to 4
August 3—Boston vs. Athletic, at Boston... 8 to 3

CRICKET.

NOTES.—The match St. George vs. Toronto, announced for August 3d, was a failure, inasmuch as but few Canadians put in an appearance. An eleven was made up by Mr. Phillips, however, from players on the ground, and the result of one inning's play

was the success of St. George by 116 to 51. Bance's 28, Tome's 19, and Mastyn's 15, not out, were the best figures on the St. George side. Messrs. Campbell and Sproule, 9 each, being the best on the other side, took nine wickets for seven runs on the St. George side.

The Meriones were to have met a strong Canadian team on August 4th, at Anderson, but the Rev. Mr. Phillips was unable to collect his scattered forces to the number of the required eleven, and so accepted assistance from players of the St. George, Germantown, and Young American Clubs. This team went in on Friday and scored 120 to 62. On Saturday, however, the Meriones scored 140 to 82. This left the score a tie, 202 to 202. Bance scored 40, and Sproule 46 for the Canadians, and Hoffman 34, and Ashbridge 26.

The Manhattan's met the Union at Pater-son, at Prospect Park, August 2d, and won by 146 on one inning to 96 on two. Young Gile's 57 was the batting-palm of the Manhattan play, Loughlin alone scoring double figures on the other side.

PHILADELPHIA, August 7, 1876:

EDITOR FOREST AND STREAM:—

A cricket match of more than ordinary interest was played at Ardmore, on Friday and Saturday last, between the Canadian team captained by the Rev. T. D. Phillips and the Merion Club. The Canadian being short several men, played Lain Welsh, of the Germantown, Mr. Buckley, of the Young America, Mr. Cone, of the Hareford, and Mr. Bance, of the St. Georges. The Merion scored but 62 runs in the first inning, while, although opposed by a good field and good bowlers, the Canadians almost doubled these figures, scoring 120. The second inning for the visitors netted them only 82, making a grand total of 202 runs, and the game to all appearance well in hand. The last wicket of the Merion's went down with the telegraph at 140, and thus ended the first tie match game of which I ever heard. The ground was wet and soggy, unfavorable to good play, but the game was well played throughout. The fielding of the Canadians, except Bance and H. Barnes, was from fair to middling, particularly middling. Comfort's bowling was excellent for the Philadelphia eleven, while Barnes held the same honors for the strangers. Below I append the score, which speaks for itself:

On Wednesday, at Ardmore, the return match will be played, and the full Canadian team will be on hand. On Friday and Saturday the visitors will play the German-town, at the grounds, at Nicetown.

SCULLS.

—(c)—

THE GRASSHOPPERS AND THE BIRDS.—It was hoped that the grasshopper, from which the western farmers have suffered so much in former years would not be heard from this year. But the month of July, which teems with destructive as well as creative energies, has brought him to the surface again, and we hear of the old plague of Egypt in the new State of California. It is suggested by a contemporary that the grangers could not do better than take up arms against the grasshoppers, and that they might do this by considering the question of how far birds should be protected by effective laws for the sake of their aid in suppressing insects. The natural enemies of grasshoppers are enumerated by a late writer as moles, mice, hawks and many small birds, black crickets, and the long, green grasshopper, which is usually taken for a vegetarian, swine and turkeys. But there is no agent so destructive of insects as birds, and hence it is urged

that the grangers should take up the cause of these innocent and useful creatures, who are constantly being slaughtered in the West and elsewhere by reckless and foolish men and boys. The prairie chicken of the West, and even birds not used for food, like the insect-devouring crow and the tiny wren, which feed principally upon those who devour the food of man, ought to be secured by adequate legislation from those human allies of the locusts, whose greatest ambition is to kill everything in the feathered line which comes in their way. Next to the preservation of forest trees, which are so ruthlessly destroyed in America, we know nothing of more serious interest to agricultural populations, and indeed to the whole country, than the preservation of birds.

CANOE VOYAGE ACROSS THE ENGLISH CHANNEL.—Lieut. Colville, of the Grenadier Guards, a young man whose courage is only equalled by his modesty, amused himself on Derby Day in a striking and original manner. Starting from Charing Cross on Tuesday by the Dover mail, with a light summer canoe—one of the Maiden-head cockle shells—weighing about sixty pounds and measuring about fourteen feet in length, with a change of clothes and a bottle of cold tea, he prepared himself for the task of paddling across the channel. There was no mayor, no crowd, no special correspondent to see him cast off, his only confidant being a coast guard man, who had taken a rough forecast of the weather. At three o'clock on Derby morning—he started from Dover harbor, and paddled himself into Calais harbor by half-past nine, doing about thirty miles zigzag across the channel in six hours and a half. His reception on the French side was not enthusiastic. He went on board the mail steamer, lying ready for her mid-day passage to Dover, and was followed by a French officer, who demanded harbor dues in that injured tone which the Frenchman knows well to assume. He did not pay the dues, changed his clothes and had his breakfast on board the steamer, returning the same day to London. As an effort of pure courage, the voyage beats both Webb's and Boynton's.—*Cork Examiner.*

HOW TO TELL A HORSE'S AGE.—The colt is born with twelve grinders; when four front teeth have made their appearance, the colt is twelve days old, and when the next four comes forth, it is four weeks old. When the corner teeth appear, the colt is eight months old; when the latter have attained to the height of the front teeth, it is one year old. The two year old colt has the kernel (the substance in the middle of the tooth's crown) ground out in all the front teeth. In the third year the middle front teeth are being shifted, and when three years old these are substituted by the horse teeth. The next four teeth are shifted in the fourth year, and the corner teeth in the fifth. At six years the kernel is worn out of the lower middle front teeth, and the bridle teeth have now attained to their full growth. At seven years, a hook has been formed in the corner teeth of the upper jaw, the kernel of the next at the middle is worn out, and the bridle teeth begin to wear off. At eight years, the kernel is worn out of the lower front teeth, and begins to decrease in the middle upper front. In the ninth year the kernel has wholly disappeared from the upper middle front teeth; the hook on the corner has increased in size, and the bridle teeth lose their points. In the tenth year, the kernel is worn out of the teeth next to the middle front of the upper jaw, and in the eleventh year the kernel has entirely vanished from the corner teeth of the same jaw. At twelve years old, the crown of all the front teeth in the lower jaw has become triangular, and the bridle teeth are much worn down. As the horse advances in age the gums shrink away from the teeth, which consequently receive a long narrow appearance, and the kernels become darkish points. Gray increase in the forehead and over the eyes, and the chin assumes the form of an angle.—*Exchange.*

—Twenty miles off Cape May is a comparatively shallow portion of the sea known as the "Fishing Banks." From this place our city markets are supplied with sea-bass. At all times during the summer and early fall, when weather permits, schooners may be seen anchored there. These fish are all taken with hook and line, and average only one pound in weight, which retail in our markets at from twelve to fifteen cents per pound. Numerous lines containing two or three hooks each are thrown from every boat and the occupants are generally kept busy taking off the fish and baiting the hooks. New York also draws a considerable part of her supply of sea bass from this locality. Other fish, except an occasional sheephead, are rarely taken there. Sometimes tremendous seas sweep over these banks, to avoid which the boats take refuge within the Delaware breakwater until the ocean becomes sufficiently calm to recommence fishing.

—Dr. Thomas N. Streets, U. S. N., records the finding lately, among the islands

of the Pacific Ocean, of a crab of the high Order *Cancroidea*, and the Family *Portunidae*, or swimming crabs, living as a "free messmate" in the doaca of a holothurian. It represents a new genus and new species, but is similar to a male specimen which Dana obtained at the Feejee Islands and placed in the genus *Lissocarcinus*. Among parasitic crustaceans generally it is the female which occupies the body of another animal while the male leads a roving life. Dr. Street's specimen was a female, and he suspects may prove to be the female of Dana's male; but proposes for it *Asseda holothuricola*, removing Dana's species to the same genus under the name of *A. orbicularis*.

—James Gordon Bennett has sent an invitation to the European teams of whites and Indians to visit Newport, R. I., to play a match game at Lacrosse, under the auspices of the Newport Polo Club, offering to pay all traveling, hotel, and incidental expenses. It is possible that the team of the Montreal Club will go this month.

—Mr. James Littlehale, of Stockton, Cal., has for a year or two been raising quails. He recently set fifty quail eggs under a hen, and some days since thirty-eight of them hatched out. They seem to take delight in their big mother, gathering round and under her constantly, obeying her call and taking the food she scratches for them. Mr. Littlehale has thirty or forty grown quails that keep the family in eggs, which, although small, he asserts to be of finer and richer flavor than any other he ever ate.

The Kennel.

FOR SALE—ONE SETTER BITCH 4 years old; price \$35, also one dog pup 7 months old; price \$25. For pedigrees and other particulars address J. J. ROBBINS, Wetherfield, Conn. Aug. 10 11.

B., and Riviere du Loup, Q. Passengers leaving St. John by the morning train can reach Miramichi, Nepisiquit, Restigouche, Metapedia, and other famous rivers the same day.

C. J. Brydges, General Superintendent Government Railways. Jul 6 2m

THE "FISHING LINE."

Brook Trout and Grayling Fisheries OF NORTHERN MICHIGAN, VIA Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)
The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equalled, in the great abundance and variety of fish contained.

Brook Trout abound in the streams, and the famous American Grayling is found only in these waters.

Brook Trout Season opens May 1st.

Grayling Season opens June 1st.

Black Bass, Pike, Pickerel, and Muscalonge are also found in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities provided for tourists and sportsmen; also on and after July 1st Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, Send to Forest and Stream office, or address

Ferry boats leave New York, foot of East Thirty-fourth street, every fifteen minutes previous to the departure of trains.

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road, radiating from Chicago. Like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Nagaunee and Marquette; with another line it passes through Madison, Elroy, and to St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and, via the Illinois Central, reaches Warren, Galena and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction, to Council Bluffs and Omaha. This last named is the "GREAT TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento, San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:
THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEESE, AND BEANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by any in the West.

MARVIN HUGHITT, W. H. STENNETT,
Gen. Supt., Chicago. Gen. Pass. Agt., Chicago

THE ORVIS REEL.

The Most Compact, Neatest, Cheapest, and Durable Reel in the Market.

NO 1.—This Reel is extra nickel-plated and finely finished. Is perforated to make it light, and keep it free from sand, also that the line may dry without removing it from the reel after use. Has a very perfect click. It is very light, very strong, and holds from 40 to 50 yards of line. It is more compact and less cumbersome than ordinary 20 yard reels. It is quite narrow, and takes up line rapidly. Put up in neat Black Walnut Case, price \$5.

NO 2.—For Prizes. Same style as No. 1. Heavy Gold Plate. Extra finish, with case, price \$10. Sent by mail, postage prepaid, on receipt of price, or by express, C. O. D. LIBERAL DISCOUNT TO THE TRADE. Send for New Price List of Fishing Rods, Reels, Flies, Lines, &c., &c. Mention this paper. C. F. ORVIS & CO., Patentees and Manufacturers, MANCHESTER, VERMONT.

W. H. HOLABIRD

Would most respectfully announce to his patrons and friends that he is prepared to make

Shooting and Fishing Suits

at the above prices. The ten dollar suit is better made than any competitor can offer for the same money. My original design having been appropriated by other manufacturers, I have been compelled to make many changes in the arrangement of pockets, &c., for which I have to thank the fraternity at large for suggestions. I believe that I have the BEST SHOOTING AND FISHING COATS IN THE WORLD,

and respectfully solicit your orders. I send my new illustrated Catalogue, 16 pages, free on application.

Dealers will find it to their advantage to handle my goods. They are better known and more highly esteemed than any other make.

Address

W. H. Holabird,

VALPARAISO, IND.

N. Y. Office: No. 1 COURTLAND ST.

THE NEW

BOSTON

SHOOTING SUIT,

Manufactured only by

G. W. SIMMONS & SON,

Boston, Mass.

We offer this season an entirely new design of WATER-PROOF SHOOTING SUIT (made from extra quality duck), in the preparation of which we have been assisted by the advice and suggestions of our best resident sportsmen.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, the arm holes ventilated, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at \$13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloon.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the Golden Rule (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skilfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, water-proof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Waist Measure, Height, Breast Measure, Length of Sleeve, Size of Head.

G. W. SIMMONS & SON,

"OAK HALL," BOSTON, MASS.

apl6 6m

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFFG, FFG, and "Sea Shooting" FG, in kegs of 25 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office

88 Wall Street, New York.

GUNPOWDER.

Sporting, Mining, Shipping and Blasting Powder

Of all kinds and descriptions.

For sale in all parts of the country. Represented by

F. L. Kneeland,

Feb 10-1y 70 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.g. FFG, FFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less resistance than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

26 Murray St., N. Y.

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired.

The powder is also well adapted for shot guns. Inquire for the "Dittmar Powder" of your dealer, or address the

DITTMAR POWDER MAN'G CO.,
NEPONSET, MASS.

THE GREAT

London Gun Trial,

1875.

W. W. GREENER'S

Far-Killing Prize Guns.

Winner of Silver Cup, value 40 guineas. Winner in Class 1, for 8 and 10 bores. Winner in Class 4, for 20 bores. Winner in the Wear and Tear Trials, July, 1875. 2,500 shots fired without deterioration.

W. W. G. is the only maker who has made an average pattern of 214 shots in a 30-inch circle, at 40 yards, with a 12-bore gun, at any public trial either in England or America.

I have just received a consignment of these guns, and shall offer to individual sportsmen, for a short time, an opportunity to secure one of these celebrated guns at a popular price, viz: \$75, gold; extra for extreme close shooting, \$10. This will probably be the last chance to secure one of these guns at these very low figures. All grades and styles in stock or imported to order.

Attention is also called to my stock of guns, by W. & C. Scott & Sons, which includes all their latest improvements. No old style guns in stock.

Sole New York Agent for Holabird's Hunting and Fishing Suits. Trade supplied.

Send 25 cents for large illustrated Catalogue of Guns, and including Game Laws for all the States, and summary of Great London Gun Trial. Ready March 1st. jan13 1y

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two), its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supersede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE OF THE BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

For Forest and Stream.

Moosehead Lake and Vicinity Twenty-five Years Ago.

Concluded from last issue.

AS the sun rose the next morning I fired a gun to notify George that we were going to Kineo, and packing our things in the birch and putting the bear on top, we took our way for the house. It did not take us long to reach the dock, and soon our freight excited considerable talk, for although bears were plentiful it was rare that any were shot. The animal was soon skinned, and I took the pelt home with me, and used it long afterwards made up into a rug. The meat was cooked and enjoyed apparently by some, but it was too fat and greasy to suit me. George arrived some time after me, but without any game, for although he had seen a moose, he could not get a shot at it. During the next few days we amused ourselves fishing and climbing Mount Kineo. Trout abundant everywhere. It was only necessary to cast a fly about the shore in front of the house, or to walk over to the back bay and stand on the rock at the end of the carry to catch all the fish we could possibly use, in a very short time. At length Uncle Ellis returned from Mount Katahdin, and I at once engaged him to go with me after moose, for although I had shot one I had not succeeded in getting any. He thought Spencer Pond might be a likely place. As this was to be a trip of several days we took our cooking utensils and blankets with us, intending to use a shanty that was already built near the pond to sleep in. My friends proposed to remain at the house to hear any report before starting themselves. We got away from the house early in the morning, and soon paddled to the carry, and after a rather fatiguing journey arrived at the shanty, placed near the stream about ten rods from where it ran out of the pond. Having placed our traps in the shanty, Uncle Ellis proposed that we catch fish for supper; so having my rod ready we got into the birch, and Uncle Ellis paddled across the pond. I did not think it seemed a good place to float for deer. In many spots the lily pads were so thick as to prevent a boat from approaching the bank silently, and in others marshy ground extended back into the woods. On these last moose would likely feed, perfectly safe from us, for without the light of the moon I could not see to shoot at them. Meanwhile Uncle Ellis guided the birch to a large circular space of clear water, into which, on the farther side, a cold stream was flowing, and stopped the canoe just at the inner margin of the plants. It was about an hour yet to sunset, and, Shade of Old Izaak! what would that departed fisherman of renown have said could he have looked on the sight that was before me? The hole upon whose margin we lay was perhaps a quarter of an acre or so in extent, and the surface of the water was being churned into foam by the numberless trout that were rising in every direction. "Now my boy," said the old man, "just tickle up some of them fellars, and we won't have none but grand-dads, nuther." In obedience to my instructions I cast towards the middle of the circle. I have caught many trout since that day in many places where they are said to be abundant, but never since have I ever experienced anything like the fishing in that hole. No sooner had my cast touched the water than from all quarters the fish rushed at it and fairly mobbed the flies. To say I hooked them would not be stating the fact; they saved me any such effort, and hung themselves on the hooks as fast as I could give them any unoccupied one—and such fish as they were! I had nothing to weigh them with, and fishy weights must always be taken *cum grano salis*, but I soon had the handsomest string of trout I ever took, for I have never equalled that catch since. At the suggestion of my guide I threw back again fish I was persuaded weighed fully a pound, as not having "grow'd enough." One monster I remember perfectly well had deep gashes on each of his sides, as if they had been cut with a knife, which Uncle Ellis said were made by the talons of the fish hawks.

and he "reckoned the trout was so heavy he had to let go, or else the fish would have drowned him." In half an hour I had taken all that we could possibly use for several meals, and gave it up. The fish still continued to rise, however, in as great numbers as ever, keeping the water in a state of foam over its entire exposure. We soon were back at our shanty; and roasted some of our fish on sticks before the fire, and after waiting until the night had set in, we started to float for moose. A single star shed a feeble light upon the water, but not enough to avail us any, for the greater part of the pond and all its shore was enveloped in blackness. "Poor show for us, Uncle Ellis," I said; but nevertheless we began the circuit of the pond. After about an hour of waiting I heard a slight splashing in one of the marshy places, and the birch was pushed towards the sound. I strained my eyes to see the animals but without avail. "Darn their skins!" ejaculated Uncle Ellis, they're just trampin' all over that ere marsh, and haven't got sense enough to come this way and giv you a shot, no how." Such evidently was the fact, for though we waited until the night grew cold and I was cramped with my confined place in the bow, the splashing came no nearer and we returned to camp.

After breakfast next morning Uncle Ellis stripped a large piece of bark off a birch tree and rolled it up in the shape of a cornucopia. "I'm goin' to see if I kin git a moose to talk to me," he explained; "I just make a noise with this thing like the lowing of a cow moose, an' if thar's ary a bull about, an' he don't feel partic'lar bashful, he'll just yell out he's a comin', an' then he'll make tracks for this here cow; and then," he continued, "the nights is so dark now you can't see nuthin', so we'll see if we can git a call, tho' its most too arly to." Later in the day, then, we stationed ourselves in the canoe near the shore, and Uncle Ellis gave the first blast on his horn. It was a long, plaintive cry he produced on his primitive instrument, which echoed among the distant hills and died away far up their sides. After a short interval he sounded again and then again. At the third attempt a low roar was heard in reply way up the mountain side. "That's him," said the old man, "mebby he'll come; I'll giv him another invitation," and again the counterfeit cow bid the bull come on. In a few minutes the answering hoarse reply was heard, this time a little nearer to us. "That's right, my boy," said the hunter, "come right along, I've a fine bride for you here," and he called again. No reply came for some time, and then a muffled, grunting sound was heard in the same place the last reply came from. I turned to look at Uncle Ellis, and fancied by the expression of his face that he was not exactly satisfied, but he said nothing, and soon tried the effect of his horn again. The same kind of answer came from the same place on the mountain, and Uncle Ellis gave it as his opinion that it was a young bull which was afraid to come on lest he might meet an old fellow along with the supposed cow, and then "he'll git an awful lickin', for you know," he went on, "sometimes two bulls hear a cow callin' and both start for her, and on their arrival thar's the tallest kind uv a fight you ever seed, and that's just what that young boy up thar's afeard on." And so indeed it proved, for although the moose kept on replying to the call he could not be induced to come any nearer; so seeing we returned to camp. That night was a repetition of the night before. Moose were heard in several places about the pond, but I failed to get a shot, so we decided to return on the morrow to Kineo and get ready for a trip to the Penobscot, where fresh signs were reported.

Kineo was reached about sundown the next day. The succeeding morning, engaging another guide by the name of Rowland, who had a very good tent, we started in two canoes, prepared to remain a week or two in the woods. B. and Rowland went in one canoe, while George came with me in Uncle Ellis's birch. After a rather long stretch we reached the carry at the head of the lake, and prepared to transport our effects across to the Penobscot. A house has been built at this point lately, but at the time I write there was no vestige of any dwelling anywhere be-

yond Mt. Kineo. In due time we reached the banks of the river, and embarked for a short trip up stream to a particular spot, where Uncle Ellis desired to pitch the camp. As we glided along we were struck with the signs of moose that were visible in all directions. Every few yards broad, well-beaten paths led down to the water, hardened by the hoofs of countless moose that nightly came to drink and feed upon the tender grasses growing along the margin of the river. About a mile from the carry we came to a low bluff where we were to camp. We had met with one rapid on our way, which compelled us all to get out and wade to lighten the boats, and we were not sorry to reach our stopping place, as we expected certainly to secure a moose that night, as fresh signs were all about us. "Now boys," said Uncle Ellis, "you must catch some fish for supper while we get the camp ready, because I want to be off up stream about sundown; thar's plenty of moose here, and we must git one to-night, or else you've got to eat salt pork the rest of your lives." So George and I took a birch, leaving B. to help the guides, and went fishing. It was an easy matter. Finding a springhole we repeated the performance of Spencer Baird, and caught as fast as we could throw. Supper was quickly dispatched, and George and I, with Uncle Ellis, started up, while Rowland with his passenger paddled down in search of the noblest of deer. I was in the bow of our canoe and George in the center. We had been slowly advancing for about an hour and a half, when splashing in the water ahead betokened the presence of our mighty game. There was no moon, but the river was wide, and except along the shores, which lay in the shadows of the woods, we could see any large objects. "Thar they are," said our guide; "now you chap in the bow just hold straight this time and we'll have one of them fellars, for there is two or three ov 'em I know by the way they're knocking around, an' I'm going right among 'em." Thus admonished I got ready, and soon distinguished rising up out of the water a great black mass without shape or motion. "Shoot!" The report echoed and re-echoed through the woods, and such a commotion was raised in the river around that I thought a drove of moose was charging down upon the canoe. One or two made for the shore, but I caught sight of a long head darting past me towards the opposite bank, and I shouted "Here goes one, Uncle Ellis." The old man turned the boat and plied the paddle vigorously. "Load up, load up, and give him another ball," he called out, but the tottering canoe, in those days of muzzle-loaders, effectually prevented that operation from being accomplished. "Look out!" I said, as the head and neck of a big moose suddenly appeared directly in front of the bow, "look out! By George! we'll be on top of the brute." Too late, for the next moment the birch struck the struggling animal on the back, and I felt his hoof strike the canoe beneath me. Visions of being dashed to pieces and struggling in a deep river with an infuriated moose flashed across my mind, and I yelled out "Back water! back water! he'll smash the birch to bits; you're right on his back!" Mindful of his canoe the old man exerted himself and drew it back rapidly, and then, to my great satisfaction, I saw the huge body of the deer rise to the surface and roll over on its side. "He is dead, Uncle Ellis; go alongside and let's pull him ashore," I exclaimed; "I see him right in front." Once more the canoe advanced, and taking the animal by his long ears we slowly towed it to the bank, where we all got out and drew the moose on shore. Lighting a torch we found the bullet hole just behind the shoulder. The ball had gone right through to the other side, and we found it afterwards just under the skin. It was evident we had reached the animal in the river when he was dying and unable to go any further. If it had not been so he would undoubtedly have knocked our boat all to pieces, and very probably seriously injured some of us. "I thought, Uncle Ellis," I at length said, "that you told me one should never go near a wounded moose." "So I did, sartain, but how was I to know this one was wounded. You might have missed him, you know, and anyhow I didn't go very near him; I was a hull boat's length off ov' him." "So you were," I

replied, "but I wasn't." "Ah, I jist tell yer, everybody got to look out for himself in a scrimmage with these 'ere brutes, and you had the gun, you know. But now, boys, we'll leave this fellow here to-night, and to-morrow we'll come and skin him." With that we got into the canoe and floated down to our camp, where soon after B. joined us. He came back empty handed, but said it was all owing to the great row we made.

The next morning we decided to move our camp higher up stream, and visit our moose on the way, so soon after sunrise we had everything stowed away and were *en route*. Both boats stopped when we reached the place where the deer lay, and all got out. It was a fine bull, though perhaps not quite full grown, and we admired him greatly. It did not take long to skin him, and cutting off a large portion of the best part of the meat we left the rest of the carcass for the wolves, who, Uncle Ellis said, would soon finish it, as they were numerous in the woods. In fact, the night before, we had heard them prowling not far from us. Our camp was pitched on the left bank of the stream, and the day was passed in stretching the moose skin, fishing and getting things in order around the tent. As evening came on we prepared to go out again, this time George being on the bow. We went up stream again, and B. down. Nothing rewarded our hunt, but about nine o'clock we heard B's gun, and an hour after we reached camp he came in, and reported having killed a moose not far from where we had met them the night before. Next morning, after breakfast, we all started to see B's game. It was lying flat upon the bank, and I never remember seeing a finer animal of the deer kind. It was a cow, black as ink, and evidently in the prime of life, very large and in fine condition. The guides soon skinned it, and taking a heavy load of the meat we returned to the camp.

Very pleasant were those days passed in our camp on the Penobscot, and now having a sufficiency of meat we did not go out every night, but amused ourselves with fishing and exploring the stream. Trout were in great abundance apparently everywhere, and we could always catch sufficient for our wants in half an hour. One afternoon George and I, with Uncle Ellis, were paddling up stream, George in the bow, when suddenly a moose came out of the bushes, and walked slowly up the beach ahead of us. "Come, Uncle Ellis," I said, "We must have that chap." "Well, boys, if you'll keep mighty still, and don't move nuthin', I reckon we'll git high enuff to shoot," and he began to move the birch silently towards the animal, all unconscious of our approach. It was a beautiful sight to witness the splendid deer, slowly walking along the sandy shore, occasionally cropping a twig or leaf from off the bushes. But the rippling of the water against our bow, when we were within about twenty yards of him, caused him to turn his head, and as soon as he saw us he stopped and gazed steadily at the advancing boat. As we were perfectly motionless, he was not frightened in the least, and evidently did not know exactly what to make of us. "Now, George," I whispered, "now's your chance—shoot." The gun was brought gradually to his shoulder, the report followed, and the noble deer came with a crash to the ground, shot dead in his tracks. As our time was now drawing to a close, we concluded to start next day for Kineo, and loading up after breakfast we started down stream. I was in the bow, and as we left the camping ground, Uncle Ellis said, "Now, bow-paddle; keep your eyes open, and like as not you'll git a shot at a moose afore we reach the carry." I kept a bright look out for a long time, but the early start and the warm sun had its effect, and I began to grow very sleepy, and soon was dozing. It seemed to me that I had hardly lost consciousness, when I was startled by hearing some one exclaim, "Shoot; why don't you shoot." Starting up, I was just in time to see a cow moose with a half-grown calf by her side, walk into the bushes ahead of me. "Now, lazy-bones," said the old man, "if you hadn't gone to bed in the middle of the day, you could have killed that critter easy enough; you'd better keep your eyes open, I reckon." Shortly after we came to the carry, and each taking his load trudged across to the lake, where, embarking once more, we arrived towards evening. The next day we went on board the steamboat, and bade adieu to our happy hunting grounds.

That was the last year that moose were found in any great abundance around the lake, for during the next winter, when the snow was deep and covered with a slight crust, the lumbermen and Indians went into the woods and slaughtered the helpless animals, when they were poor in flesh, taking nothing away but the hides. I was informed that at least five hundred were butchered, and ever since then they have been growing scarcer and scarcer, while last year, when I paid my second visit to this lake, a moose was exceedingly rare in the vicinity. It was sad to think of the useless destruction that had taken place, and know that these splendid animals had been all but exterminated. Perhaps if a law is passed prohibiting entirely the killing of moose within the State for a certain number of years, and punishment swiftly visited upon those who violate it, in time moose may again be found in the woods, where twenty-five years ago they were so numerous. Unless this is quickly done, the bones of the last moose will soon be mouldering in the forests. The trout too, are disappearing in and around the lake. This assertion may provoke a smile from some late visitor to Moosehead, who has come in day after day with a handsome string of the speckled beauties; but, I speak of to-day compared with a quarter of a century ago. Every effort is being made for their extermination. The fish are never left alone. During the winter they are caught through the ice, and as soon as the ice runs out countless fishermen from every quarter resort there and use bait, until the fish begin to rise to the fly, when both are employed. This constant pursuit of the finny tribe is kept up throughout the summer and autumn, when the trout are spawning, until winter sets in, when again they are baited through the ice. When I was at Kineo, last spring, every morning a large number of boats would start from the house and go in every direction, each returning towards evening with from twenty to seventy-five pounds of fish. "What is done," I asked of my guide, "with all the fish that are taken every day; they cannot be eaten here." "They cook a great many at the hotel," he replied, "and they give some away, and the rest they throw to the hogs. Many a fine string of trout I have seen thrown to them." Comment is useless, but these are degenerate times, indeed, if any one worthy of the name of sportsman, is content to catch trout and willingly permit his game to be cast into the pig-pen when he has taken more than can be consumed. Better, far better, brother angler, throw them back into the lake for another time, and forego the momentary gratification of exhibiting your catch at the

house. On the spawning beds too, they are taken in great numbers. "I suppose," I said to my guide, "you catch plenty of trout when you are not otherwise engaged." "Oh, yes," said he, "a fall or so ago I went to a place I know and caught my birch full. I must have had over five hundred pounds, and took 'em to Greenville and got five cents a pound." And I don't think he was conscious of having done any wrong. At the outlet, I one day saw the dam covered with fishermen, all catching fish with worms. This is all right; far be it from me to assert, that fishing shall be denied to any one who is able to go after it; but the manner in which sportsmen are increasing all over our country, renders it only the more necessary that they should be compelled to seek their game at the proper season, unless we are prepared to have it entirely exterminated all over the land.

Where now, in the vicinity of Moosehead Lake, can be witnessed such sights as I have narrated—such as I saw at Spencer Pond and in the Penobscot? I fear there are none such to be found. I asked for my old guide, and others whom I met on my former visit. Alas! like the moose, they, too, had mostly departed. The jovial host, Burrows, was dead, and his son Joe had joined a Maine regiment at the beginning of the late war, and died in the service of his country. Uncle Ellis had kept about the woods he had so long made his home, until three years ago, when he was taken very ill while in his camp, at Spencer Bay, and was just able to paddle himself to a lumber camp across the lake, whence he was carried to Greenville to die. A house has been built at the carry to the Penobscot; another hotel at the outlet; an immense hotel now stands under the shadow of Mt. Kineo, and many more are dotting the shores in the neighborhood of Greenville. Several steamboats run upon the lake, and it is fast becoming, as it deserves to be, a great resort for those who wish to get away from the crowded cities and breathe the sweet air of the forest. But all these changes may take place, the wilderness can be thrown open to all, and yet, with a proper and regulated restraint, the game of fur, fin and feather, can be preserved for many years to come, to afford gratification, health and support, to all who delight in their pursuit. Sportsmen of Maine, look ye to it. ZOOPHILUS.

For Forest and Stream.

TRAMPING IN THE CATSKILLS—I.

I HAVE often wondered whether it is that few people take pedestrian trips, or whether they think others do not take interest enough in reading accounts of such trips to make it worth while to write them; or again whether it is that the papers decline to publish such accounts, for it is a fact that we seldom see them, even in *FOREST AND STREAM* where, if anywhere, it would seem natural to find such articles. I propose to solve the riddle by writing from my diary an account of a tramp of one week's duration only, taken by my friend Ingram and myself a few summers ago, and watch the interest, or want of it, expressed by the many readers of your paper among my acquaintances.

Having chosen Monticello as our starting point in our intended exploration of Sullivan and the adjoining counties, we arrived there one Saturday evening in July, having enjoyed the beautiful scenery which, from Passaic on, makes the route of the Erie the most enjoyable railroad ride out from New York. Being in search of information, as we sat smoking our after-supper cigars upon the hotel piazza, I asked a native what were the chief industries of Monticello. "Oh!" replied he, "most of the folks are lawyers and the rest live off of their money." Let us hope that the latter occasionally get up a lawsuit for the benefit of the former. Not having any law business to transact, at five o'clock next morning we "folded our tents like the Arabs and silently stole away" to White Lake, nine and a half miles distant. Having never heard of White Lake until a few weeks before, I was egotistical enough to suppose no one else had, but was undeceived on that point by finding some half-dozen boarding-houses there, apparently well filled, and showing considerable style in the way of dress, horses, etc., on the part of their occupants. Being only transients we put up at a little old country tavern about a half a mile removed from its younger and more pretentious neighbors, the summer boarding-houses. Here we found everything very comfortable and as clean as a whistle, the house being kept by three ancient maiden ladies, all of whom, we were confidently informed by the only other guest at the house, had money; but having a wholesome respect for the old English law, that a man shall not marry his grandmother, we closed our hearts to all temptation in that line, and gave our full attention to doing justice to the breakfast. Shortly after breakfast, as we sat on the piazza debating how we should spend the day, a man came up, who immediately joined in the conversation and told some remarkably "fishy" hunting yarns. Being ardent disciples of the gentle Izaak, we inquired of this communicative individual whether there was any trout fishing to be had thereabout, to which he replied: "You can fish if you want to from July to eternity, but you won't catch any." We concluded to let our tackle repose quietly in our knapsacks until we reached some point where the "speckled beauties" bit more frequently. Strolling down to the lake we spent the morning under the shade of a beautiful grove, which extended to the water's edge, making sketches (remarkable works of art they were), and taking naps which were decidedly more successful. Looking to the north the river, though scarcely to be called grand, was certainly pretty. The hills bordering the lake, though not high or rugged, were heavily wooded, and the water being remarkably clear, reflected the surroundings with exquisite minuteness. The extreme back-ground of the picture was formed by Walnut Hill, which might more correctly be called a mountain, although cultivated almost to its summit.

Not finding the attraction for us at White Lake sufficiently strong to warrant a longer stay, we shouldered our knapsacks next morning, in the cool of the early day, and trudged on toward the north, skirting the eastern border of the lake for a long distance, and after walking some ten miles came to the top of Walnut Hill, a grand breezy place, where it was luxury even to stand and breathe. Here we halted for some time, and feasted our eyes on the charming views spread out before us. Looking back in the direction from which we had come we could see the wooded hills about and beyond White Lake basking in the bright summer sun. To the northward were hills more rugged than those we had already crossed, but equally well covered with foliage, behind which, miles away, but seem-

ing near through the clear, rarified atmosphere, towered the Catskills, the Ultima Thule of our tramp. All about us at our feet laid the best cultivated portion of Sullivan county, the bright golden fields of grain relieving what might otherwise have been a monotony of green, while "the rich harvest of the new-mown hay lent to the air a fresh and wholesome fragrance." But the inner man admonished us that dinner time was approaching, and we walked on three miles further to the village of Liberty, which is stowed away so cosily at the bottom of a deep valley that we were not aware of its vicinity till coming to the brow of a steep hill we looked directly down upon its roofs and spires. We inquired our way to the Liberty House, and threw off our knapsacks at a quarter past eleven, which gave us plenty of time for a bath and a rest before dinner. How we enjoyed that dinner! our appetites sharpened by our thirteen mile walk in the bracing mountain air! From this point we had not laid out any very definite route, but found in the proprietor of the house a first-rate director, who advised us, as we were in search of wild scenery and good fishing, to follow the main road about four miles north to Parkville, and then take a by-road over the mountains to DeBruce, from whence we could get directions as to our onward march toward the Catskills. A short distance from Liberty we crossed the Midland Railroad. At Parkville, which we did not stop to examine, we turned to the right, as directed, and immediately left civilization behind us and entered upon what at first seemed a region of desolation. By the side of a pretty stream, which comes tumbling down from the mountains, stands what was once a large tannery, but the hemlock bark having given out in that vicinity it was abandoned some years ago, and now the dam is broken down and the long buildings are fast falling into a shapeless mass of ruins; while beyond the road leads up a long, steep hill, the surface of which is composed of round smooth stones, washed so bare and white that they looked almost like skulls. It was without exception the most desolate and forbidding spot I ever saw, and we traveled up that tedious hill as quickly as possible, and were glad enough to find our path at the top entering the forest. The remainder of our afternoon's walk, though the way was rough and the ascent for two miles or more was steep, was one of the most delightful of the many I have taken in my many wanderings; the cool air drawing through the locked arms of the trees over the narrow path was more exhilarating than any nectar of the gods, and the perfume of the woods more delicious than any ever concocted by Lubin. This tract of woodland, into which we had just entered, some forty-five thousand acres in extent, formerly belonged to a Mr. Hunter, of Westchester county, and is known as the Hunter Tract. On visiting his wilderness, which he had bought of the State, he was surprised to find on one of the ridges near its centre several cleared farms of considerable extent, the proprietors of which had taken possession by right of squatter sovereignty, and had lived for years almost unknown to the outer world, and unvisited even by the tax collector. With a humanity rarely to be found in such cases, Mr. Hunter did not eject these squatters, but actually bought his own land from those who were willing to remove, paying liberally for the improvements they had made, and sold to those who wished to remain at the same price at which he would have sold the wild woodland. This was more than forty years ago, but many of the old squatters and their descendants still live upon the old farms at Brown Settlement, as it is called; but their borders have been but little extended, and but few new clearings have been made, and this vast estate with its princely fortunes in tan-bark and lumber remains almost intact, and is now owned by Judge Lowe, of Monticello. Almost at the summit of the mountain which we were crossing we passed two lakes of considerable extent. The one at the left closely environed with the dark pines and hemlocks, and almost covered with water lilies; the other, a little further on, much more open, but no less lovely in its quiet repose. We afterwards learned they were called Lily and Hunter ponds respectively. Immediately after passing Hunter pond we began to descend, winding down the mountain side until at last we came out into the valley of De Bruce. As we stopped a moment to survey the scene before crossing the bridge which spanned the Willowemoc brook, I confess to have felt a Pharisaical joy in not being as some other men are, and that God had given me the taste to enjoy these wild, free scenes of nature, while at the same time a feeling of pity came over me for those poor blind birds of fashion, who, during the summer, will pursue the same vain flight in search of pleasure at Saratoga and Long Branch which they have kept up with such untiring energy and such poor results all the winter long in town.

To picture De Bruce in words is difficult, as we first saw it lying calmly reposing in the close embrace of the forest-covered mountains, with no sound audible save the tinkle of the bells upon the necks of the cows slowly wending their way homeward, or the ripple of the picturesque Willowemoc, with the whole valley shrouded in the shadows of an early twilight, which was stretching far up the mountain sides, leaving only their summits tinged with the last rays of the setting sun. It is best characterized by the one word—Peace. Eighteen years ago a tannery company bought three hundred acres here, and clearing about forty acres in this valley erected what was then the largest tannery in the State, and which now is only exceeded by one. There is also a store, a blacksmith's forge, a school, and about a dozen dwellings, all belonging to the company; so that one of the proprietors, who lives here and superintends the work, may say with truth: "I am monarch of all I survey." Besides the three hundred acres of land, they have bought the bark on the trees upon forty-two thousand acres around them, which they say will supply their wants for twenty years to come. Judging from the almost imperceptible inroads the past eighteen years' work has made upon the forest, it would seem as though it ought to last for centuries. Here we spent two days fishing, wandering through the woods and enjoying ourselves to our heart's content, and many a time I wished for an artist friend whom I had tried hard to persuade to come with us; but had he been there, I fear we could not have gotten him away within the limits of our vacation. One spot especially on the Mongraup brook, which joins the Willowemoc in the De Bruce valley, would have made a finished picture. By the side of an old saw-mill and under the moss-covered log dam, through which the water leaked in many a jet of spray where the rainbows danced, lay a deep, still pool, flanked on the side opposite the mill by a great flat-topped rock, and overhung on all sides by the richest foliage. On that rock we sat one morning, and in

less than half an hour caught as many trout as we wanted for that day's eating, and then took our rods apart, believing that the true sportsman will always limit the slaughter of the innocents by his necessities rather than his desires; or that, as Walton says: "Ye shall not use ye craftie disport of fishynge for no covetousness to the encreasing and sparing of your money only, but principally for your solace, and to cause ye health of your body and specially your soule." As we said "good bye" to the man who, with his good wife, had entertained us right royally during our stay over that imaginary line which divides Sullivan from Ulster county, and to which he had driven us to give us a lift on our onward march, we not only said but meant that we were sorry to leave him, and if spared till another summer, would treat ourselves to another and longer visit to De Bruce.

Our experiences in crossing Ulster county and in the Catskill Mountains I leave for a second narrative.

ATHOS.

For Forest and Stream.

TURKEY CHASING IN OHIO.

LEWIS CENTER is not a great way from the geographical center of the noble State of Ohio. It is not a town of ten thousand inhabitants, though should it ever have Lake Erie give it a seaport, it might get up to two hundred. It was in November when my friend Wilson, his pointers Sam and Liz, and myself dropped off the southward bound train at this point. Wilson was acquainted with a farmer named Clayton living three miles out of the village who had invited us down to shoot quail. We enquired for a hotel, and were referred to old man Lewis. He received us willingly, and we remained some days with him, making splendid bags of quail in the near vicinity by luckily dodging some proprietors upon whose "preserves" we were unconscious trespassers. We also heard some large stories about turkey shooting around there, which excited our desires and anticipations. At last we went over to farmer Clayton's. When we arose on the morning after our arrival, we found four or five inches of snow and plenty more coming in large damp flakes. Said Wilson, "It will hold up before long, and we will go ahead." Said Clayton, "I cannot husk corn to-day, so I will go with you." Said I, "We might as well stay at home; the quail will not run, and we shall be most deucedly wet and uncomfortable besides." Of course, when they started, I went with them. We often do most intensely foolish things by association. I hold that one is not responsible unless he does an act of his own free will, *ab initio*. When we play second, we have but little control over the tune. Clayton had what he called his two-barreled gun, weight about ten pounds, length of barrel about thirty-four inches, sure death every time to a squirrel upon the top of the tallest tree, like many another gun brought up in the country. The snow was just deep enough to be too deep for pleasant walking. As we went through stubble-field after stubble-field, the tendency was very great to follow in the footsteps of the man ahead, the dog coming number four. This was hunting quail Indian file. The more I reasoned upon the matter the more certain it appeared that the quail would not run even on the slowest kind of a walk, but if we should find them, would not they catch it. Two hours passed, and by great good luck we tramped into a bevy. We were fully as much surprised as they. Wilson and I brought down three upon the first rise, the "long Tom" blazing away as they went across the field; it didn't kill a squirrel that time, whether it killed a quail or not the snow was too thick to see. The direction was towards an orchard near an old deserted house. The branches of the large apple trees, covered with snow, came down almost to the ground. We thought we had them sure, but they had treed. Our dog was not accustomed to pointing up a tree, and as they went out at uncertain times and places, we managed to kill just two in seven shots. The next disappeared in the storm. A team came by and the driver called to us, "Don't you want to shoot some turkeys?" That suited me. "Of course we do." Wilson demurred; Clayton agreed that turkeys were desirable. The man said a flock of sixteen had just crossed the road above there. Two men were after them and had killed one. I pulled out my number 8's, replacing them with number 4's. We struck the tracks, followed up rapidly, and in three-fourths of a mile we came across the turkey hunters. One of them had a gun, the other a turkey. The tracks led across the open fields towards a patch of thick trees and bushes. Clayton was pushing ahead at a fearful rate, and I, wondering what he was at, tramped on as well as I could. Wilson kept along for fear of getting lost, but with many a groan. Altogether, we five men and a dog, made very creditable time through the wet snow. As we reached the corner those ahead turned to the left, I turned to the right, where the ground was broken by a small ravine. Flap! flap! not four rods beyond me, like a great windmill, starting to fly. Again, flap! flap! until the air was full of flaps broken by the reports of the stranger's single-barrel and the long Tom. I could not manage to get a glimpse of a feather. Sixteen turkeys rising within eight rods, and not a chance at them! I did think one might have turned my way, but turkeys are great for straight lines. I dashed through the thicket—too late! Clayton and the stranger had started them within a few rods, and had seen nearly all of them. Alas! they were not squirrels, upon the top of the tallest tree. While they were loading, I, having got my Ebenezer up, took the lead. In the course of half an hour the stranger came up with me. He would push ahead, I would catch up and pass, then again he would overhaul me, until I was about dead. I reflected that tomorrow was Sunday—a day of rest—and ahead I went with utter disregard as to wear and tear of muscle. The walking grew easier the more difficult it became, and I felt fresher the more wearied. Where the turkeys were leading I knew not, and cared little. My indefatigable companion still kept the lead the major portion of the time, and I wondered where he got that pair of legs. We were now passing through a large forest, and on the low ground, thirty rods ahead, were our feathered friends. I fired both barrels, but it didn't appear to disturb them out of their walk, which was a very slow walk indeed—to look at. I loaded as I went on. A turkey had turned to the left. My friend took the single track, and I saw him no more. I did not slacken my pace; had just got into good walking order; could see the flock every little while thirty rods ahead, and as they would go over a knoll I would make a rush to shorten the interval, and when I got up where I expected to see, could never see them at all, but

had to take the track again; and when I did see them again, there was the same old thirty rods between us, and they, walking off serenely, like so many aldermen with their hands under their coat tails. At last I had them cornered; to be sure it was only in a corner of the woods, but they did not seem inclined to go into the open. As they hesitated I made a tremendous rush and fired into them, at what I supposed was about ten rods; I measured it afterwards and found it nearer twenty-five. I expected to kill half of them at least. They rose and broke, some going to the left, some to the right. There were no dead ones lying about. I was tired of hunting them through the woods, so I took after five or six who flew straight across the open. Struck a track in a large cornfield, and by the time I reached the woods they were all together. After manifold twists and turns we came into a briar patch, much broken up by ditches and logs, and on the farther side came upon them in a corner of the fence at ten rods. The first barrel laid over one. As they rose I covered another, but he did not come down. I left the dead turkey under the fence and kept on, soon finding the tracks of the others. I was now reduced to number 8 shot. I reasoned that if the turkeys were half as tired as I was, I should certainly overhaul them. A mile and a half farther on I did overhaul them in an open field, and fired both barrels at 20 rods, hoping to hit one in the eye; but am afraid I did not.

At this I took the back track, soon coming to my dead turkey, which was a fine gobbler. Taking an observation to ascertain my whereabouts the briar patch appeared familiar, and I found I was at the rear of Clayton's farm, and not half a mile from the house. Being so near home made me feel hungry, so I shouldered my turkey and was soon at the house, where I found Clayton and Wilson. They had followed my track, expecting to pick up the dead turkeys, but didn't pick up any, and didn't think much of turkey shooting. They said they had overtaken my friend with the active legs, and he was very anxious to learn who that chap was who got over the ground like a "quarter horse."

It was about two o'clock when we finished our lunch, and had stowed away a large amount of cider, and I announced that it was time to start. Wilson and Clayton were horrified. "Why, we are all wet through; the snow is deep, and comes faster and wetter than ever," they said. I replied, "it is just the time to hunt turkeys—especially these turkeys, for they haven't had any dinner and cider, so we shall have the advantage of them. Always take advantage of a turkey, when you can do so legitimately, as you would of a man; which simply means, whenever you get a chance. If you will be good boys and behave yourselves you can stay at home." Andrews spoke up: "If you will go, we will go with you, and it will be best, instead of going to the left where you left them, to go to the right into the 'big woods,' which they will certainly go through on their way back." Foolish I consented and we paddled away to the "big woods," and floundered around until dark; not a turkey or anything else did we see. Wilson would have sworn if he had been alone, and hadn't been a church member. Clayton was the unfortunate cause of our troubles, and I was too tired to waste any strength in useless imprecations.

Sunday morning came off bright and warm. We were sorely tempted to go out, but drank cider and read *Godey's Lady's Book*. About two o'clock a man passed the house with a rifle upon his shoulder. Clayton went out to interview him. When he came in he said that two of our turkeys had just crossed the road within eight rods of the house. The rifleman had been after them but he was not going home. We went out, and there, sure enough, were the tracks; they had gone into a piece of woods just beyond the house. We discussed the propriety of pursuing them for some time, the getting them was such a sure thing that it was hard to give it up, but we decided not to trouble them. About four o'clock I proposed to Clayton that we take his big brindled bull-dog and walk with the turkeys. He was willing, and we were soon in the woods, sans gun, but with two pairs of legs that stiffened from yesterday were very ready to be limbered up. We followed the tracks upon a run thinking there would be no harm in trying to catch them. Thus we were rushing along over logs and through old fallen tree-tops, laughing at the idea of running turkeys down with a bull-dog, when ahead of me, within six rods, I saw one of them, and we put after him in earnest, getting within three rods before he flew. Whether he was tired, or hungry, or wounded I know not. If it hadn't been for that last three rods he would have been a gone turkey, if it was Sunday. I verily believe Clayton would have gone back for his gun if I had said a word favoring it, but I was perfectly satisfied as it was. If we had caught the turkey wouldn't Wilson have torn his hair? As we trudged slowly home Clayton proposed to go for the turkeys early on Monday morning. Wilson agreed, and we turned out about an hour before daylight. It was very cold, and had frozen hard during the night. Every step was a thunderclap in the still woods. I took my station about the middle of a high rail fence which ran across the woods. Wilson and Clayton were about 60 rods below, I was covered above by the high fence, and below by the top of a fallen tree. I had a turkey-caller, and amused myself with an occasional *kup! kup! kup!* Everything was perfectly quiet. Half an hour passed, when above me I heard a rapid pat, pat, pat through the crusty snow, and there, thirty yards off, was a turkey coming almost directly towards me. He reached the rail fence three lengths one side of me, and hopped upon the top rail. I waited anxiously for him to get down upon my side; perhaps he was waiting for another call. I could not see him, and did not dare to stir. At last, getting desperate, I rose up quickly, and shot him off his perch before he knew what hurt him. I lost my balance in some way, and as I went down upon my back among the branches of the tree top, bang went the other barrel. I reloaded. In half an hour it was daylight. Wilson and Clayton came along up. "We have seen no turkeys; what did you fire at?" they asked. "A red squirrel," I said. Clayton was indignant. "The idea of coming out here before daylight of a cold frosty morning to shoot at a red squirrel!" "Suppose you pick him up," I replied; "he is a big one, with feathers in his tail. Clayton was standing within ten feet of the turkey, which lay where it fell. He pounced upon it like a duck upon a June bug. Wilson growled out something about "what great sport it must be to shoot a turkey turkey off a rail fence at thirty feet," and we went to breakfast.

—No less than 1,000 sea-horses (*Hippocampus*) were lately born in a single tank at the Southport (England) aquarium.

Fish Culture.

THE McCloud RIVER FISHERY RESERVATION, CALIFORNIA.—The preparatory work of getting ready for taking salmon eggs, is now under full headway at the United States salmon breeding establishment, on the McCloud River, California. The river has been bridged, and the passage of the parent salmon up the stream were to have been obstructed on the 5th of August, in order to collect a large number of breeding fish below the dam. A new seventeen feet current wheel has been placed in the river to furnish water for the hatching house. Mr. Livingston Stone intends to take five million eggs this season, three and a half millions to be shipped east, and one and a half million to be hatched on the spot and returned in the form of young salmon to the tributaries of the Sacramento. The McCloud River Fishery having been set aside by the President as a Government Reservation, hatching works and improvements of a permanent character are now being erected there.

ABOUT TROUT PONDS.

IT has been found by long experience that long, narrow and deep ponds, somewhat like those in the accompanying engraving, are the best suited for trout raising, whether by natural or artificial spawning. Seth Green, it is true, advocated the pear shape, as shown in his book on Trout Culture; but this was in the early days of fish farming in this country, and his practice at Caledonia and elsewhere has run towards the canal shape. Fred. Mather, at Honeoy Falls, made his ponds long and rather narrow, and as deep as the outlet drainage would permit; and the late Dr. Slack's ponds, in New Jersey, were all of that oblong, square shape, as appears by an old *Harper's Weekly* now before me.

For various reasons, the cone-shaped ends, with the water admitted at an angle (as shown in the cut), are preferable to the square or pear-shaped, since the current would be deflected in a zig-zag direction, thus affording as much aeration as possible, and equalizing the temperature at the same time. This being admitted, the best method of construction may be considered. Of course it is assumed that you have a cold spring, that runs from 10 to 40 gallons per minute, though Mr. Ainsworth (inventor of the invaluable spawning screens) has raised many thousand trout from a fountain, that could almost flow through a goosequill. Trout may be hatched and raised in brook water, if sufficiently cold; but there is always so much sediment brought down by rains as to make hard work to keep the hatching trays clean and very unsatisfactory results. It is necessary that the ponds be so located, that surface water can be shut out; and it is desirable that there should be at least three ponds for the different sizes of fish—fry, fingerlings and spawners. These are best placed *en échelon*, where the ground will admit, that the inflow may be at the proper angle, and are best laid north and south, that the banks may not freeze inequally, and that the winter sun may be utilized to keep them free of ice; and for shade in summer, floats may be used to protect from the almost vertical sun. The banks should be simple earth works, no stone wall or plank sides allowed, if it can be avoided, as muskrats and minks are sure to burrow behind them, and let the water out at just the wrong time, or gobble the trout, as minks and otters delight to do. There should be a drain pipe from the bottom of each pond to drain them as required; or a flume the depth of the water, with moveable gate-boards, placed one over another to keep the surface at any desired height. The ponds may be made of the size and depth of those in the cut, or any other as is most convenient; but it is advised that the bottoms slope gradually up to the inlet; that the drainage may be made easily when required, and the fish gathered in close quarters when wanted. The ordinary hard pan is the best bottom; coarse sand and gravel the least desirable, as the trout are liable to cast their spawn in them, instead of the race, where the Ainsworth screens are or ought to be awaiting them. Of the hatching-house it is not necessary here to speak; but with the newly invented trays, much less space will be needed than in the old troughs, and gravel nests and all the operations can be greatly simplified, and certainly much expedited.

J. IVES PEASE.

Trout Farm, Twin Lakes, July 31st, 1876.

BLACK BASS IN CANADA.—A correspondent of the *Canada Farmer* writing from Paris, Ontario, thus speaks of black bass as found in that part of the Dominion:—

"There is a great diversity in black bass as to shape and weight. Those caught in ponds and lakes in the counties of Brant and Oxford, to which localities the writer's experience is chiefly restricted, are much larger and thicker or 'chunkier' (to use an Americanism) than those found, say, in Grand River. Notwithstanding, where there are long, deep, still stretches of water formed by mill dams as at Galt or Paris, bass are often taken averaging in weight those taken in lakes. The Pine Pond, on the south edge of the township of Blandford and Blenheim, Oxford is, or was, a favorite fishing place for both black bass and pike. Here bass of three, four, and even six pounds weight are sometimes captured, the most alluring bait being a fresh, half-grown, green, or yellow frog. The bass here are re-

markable for their thickness at the shoulders. So distinct is the figure and general configuration—especially as regards this latter quality—that we are inclined to believe the bass of Pine Pond and some other ponds to be nothing else than the "Oswego Bass" of our American sportsmen over the lines. However, as regards bass, the truth holds the same as to trout and other fish, the feeding ground alone produces remarkable changes in size, color, and general condition.

The dams on the Grand River, with one exception at Cal-edonia, are now, we believe, all provided with fish slides or ladders. The tributaries, as Smith's and Horner's Creeks, are also similarly fixed at nearly all the mills along their courses, one of the most noted exceptions being Fry's mill on Horner's Creek, which is about ten or twelve feet deep in perpendicular height. This latter is a famous resort for fish, the deep hole below the dam, about eighteen feet at the deepest, being up till lately, furnished with store of these fish. Black bass spawn naturally, that is, when the state of the river as to size admits, according to our present law, from the 15th May to the 15th June. The natural instinct of the fish would make this limit in the Grand River even later than the 15th June; but we believe the short close times for bass, as well as for pickerel (which is one month later on the list) are as well regulated as could be in a country of such large extent as our Dominion."

NEW HAMPSHIRE FISH COMMISSIONERS.—The Governor and Council have appointed as Fish Commissioners Colonel Samuel Webber, of Manchester, Albina H. Powers, of Grantham, and Luther H. Hayes, of Milton. Col. Webber, says the *Mirror and Farmer*, is a gentleman of great ability, has a clear head, and an intimate and influential acquaintance with the owners and managers of all the mills and dams upon the Merrimack river, and is a thorough and enthusiastic sportsman, with full faith in the possibility of restocking our main river with fish. He is, therefore, just the man to secure the erection of passable fishways, and to bring about the hearty co-operation of all parties in interest, so as to give us back the fishing grounds which made glad the hearts of the fathers. Previous boards have done much towards stocking our lakes and ponds with bass and other valuable fish, but they have accomplished little toward making passable the great highway of the alewife, the shad, and the salmon. Col. Webber's associates are also gentlemen who are well qualified for their positions, and who will work heartily to bring about what needs to be and can be accomplished.

—An exchange says that "Mr. N. K. Fairbank has stocked Geneva Lake recently with fish. About 20,000 speckled trout, 100,000 California salmon, 150,000 land-locked salmon, 100,000 salmon trout, 150,000 whitefish, and about 1,000,000 pike—the offspring of his hatching house—have been deposited in the lake." Were the other fish only intended as food for the pike?

Natural History.

THREE MONTHS OF FIELD NOTES.

[Concluded from page 4.]

One little bird puzzled me all the month of May, and still is a matter of doubt. It was a small, dull-colored little fellow, that never came near the ground, but from the outermost branches of the tallest trees, screamed incessantly: *Where d'ye get it? Where d'ye get it?* The emphasis was on the "where," and the whole sentence was always uttered. I did not once hear a break in the song, as is so common with all our birds. My friend, the Natural History Editor of *FOREST AND STREAM*, heard the bird too, but in spite of a wonderful agility in dodging about among the trees, he could not get fair sight of the restless creature. Since June 6th I have not heard the notes; so it probably was a migrating species. A word concerning the snipe's nest I lately found. It is well known to our gunners that a few snipe yearly spend the summer in this State. In Vol. IV. of the *American Naturalist*, I referred to this fact in detail. The nest I met with on May 26th, was a flat mat of dead grass, in which were three young birds, I should judge about two days old. On the 29th they were strong enough to run and left the nest, skulking in the long grass. They were constantly attended by the old birds, which were very tame, and therefore were easily recognized.

The hot weather of June kept the birds rather quiet, and I noted nothing of special interest in the woods; but the waders were unusually abundant on the meadows, and from the 5th to 30th I had noted few or more specimens of the great blue heron; the great white heron; snowy heron (*Ardea candidissima*); the little blue; the green; the night heron, and both the bitterns. The first mentioned of this list is not abundant, as compared with the smaller species, but by no means rare. The little blue is quite indifferent to temperature, and single specimens are often met with in winter, associated with the very common night heron, which is a winter resident now, as well as migratory. The rarest of all these long legged birds, if we except the great white heron, is the least bittern (*Ardetta exilis*). I have never found more than a single pair in the same neighborhood. When disturbed, unlike the big bittern, it gives no coarse croak as it takes wing, but with an easy flight goes a short distance and drops again into the long grass, where it is, I judge, most at home. It does not feed on fish and frogs exclusively, but pursues with wonderful agility the grasshoppers that climb the blades of tall grass and stems of the reeds. Finding a nest in 1873, I took a position near by, in hopes of seeing something of the movements of the parent birds when unmolested; but in this I was disappointed, except so far as to determine that they returned to the nest (it contained young birds) on foot. For the two hours that I watched them, they came and went continually, but not once did they fly as high as the tops of the rushes. Dr. Coues has mentioned a resemblance of this bittern to the rail-bird; when a good opportunity offers to see them undisturbed, this resemblance in their habits, and especially their movements, is readily seen. While the larger bittern and the

herons have each a stately walk, and perhaps cannot run, this little bittern will run whenever the ground will permit; and it can twist and turn in and out among the reeds and rushes with all the agility of a king-rail. I have several times seen these little bitterns, associated with the soras (*Porzana carolina*), run out from the grass to the muddy banks of the ditches, and along them for several yards, and then dart in again, never, the while, taking a step that could be called a "walk." Nevertheless, they can step along most majestically, and when, assuming for the time the proper family characteristics, they fish or go a-frogging, they act their part with due propriety; but they seemingly prefer to be like rail-birds, and we see in them that similarity to the habits of birds of another family, that we see in the shrike, as it simulates the hawks.

C. C. ABBOTT, M. D.

Prospect Hill, Trenton, N. J., July 26th.

GAME FISHES OF CONNECTICUT.

The following named species constitute the list of the game fishes found within the boundaries of Connecticut:—

Salmo fontinalis. Brook trout. Formerly very abundant, but rapidly becoming scarce. Although the State abounds in fine trout streams, very few will afford a satisfactory day's sport on account of persistent fishing and no effort being made to restock the streams. I have seen several trout taken from salt water in this vicinity, one of which was captured in a pound net set for menhaden, far from any fresh water. The color of these trout closely resembles that of the sea trout. The back is a light greenish color of metallic brilliancy, shading into white on the sides, which lack the red spots and have a slight rosy tint; the belly and pectoral fins are white.

Salmo salar. Eastern salmon. Has been largely introduced into the rivers and larger streams, but with no direct results as yet.

Salmo Gloveri and *adirondackus*. Land-locked salmon and lake trout. Large numbers of these have recently been placed in lakes in different parts of the State.

Osmerus viridescens. Smelt. This little fish is certainly worthy of the angler's notice. It is very abundant on the eastern third of the coast, and is taken around the wharves and mouths of tidewater creeks.

Perca flavescens. Yellow perch. Very abundant throughout the State.

Labrax pallidus. White perch. Common in the brackish slack-water of creeks and rivers, and frequently ascending into fresh water.

Roccus lineatus. Striped bass. Abundant in the tide-water of all our creeks and rivers, and along the rocky portions of the coast.

Grystes nigricans. Black bass. Very abundant in most of the lakes, ponds, and large streams.

Alosa praestabilis. Shad. Abundant in all of the larger rivers; rare in the Housatonic, which furnishes them very little spawning ground, as tidewater sets back to the dam, over which there is no fishway. The fishway formerly there was utterly worthless, consisting of a square wooden trough through which the water rushed with such velocity that fish attempting to ascend would be hurled back with great force immediately on entering.

Temnodon saltator. Bluefish. Abundant on the eastern third of the coast. The young bluefish are extremely abundant in the bays and mouths of rivers from the middle of July until late in the fall, and as they seize any kind of bait with avidity great numbers of them are "yanked out" from around the wharves by men and boys.

Seomber scomber. Mackerel. Sometimes abundant on the eastern portion of the coast.

Otolithus regalis. Weakfish. This fish is here called "succamang." It is common, but not large.

ROBT. T. MORRIS.

New Haven, Ct., August 3rd.

*I must ask the pardon of some anglers for inserting the names of this and the preceding species.

NOTES FROM OUR CORRESPONDENTS.—W. L. C. (Worcester, Mass.) tells of a white catfish which they are keeping active and well in an aquarium. It was caught in a small lake and weighs six ounces. . . . E. P. Wheeler (Rockland, Mass.) says that several black snakes have been killed in his locality which were fifteen feet long; others seen "thought to be" ten feet long, "and there is one that is known to be fourteen feet or longer; some think it is twenty feet long."

THE BLACK SNAKE AGAIN.

WASHINGTON, D. C., August 5th.

EDITOR *FOREST AND STREAM*:—

In my note on the "maximum length of the black snake," in your issue of June 22d, is part of a statement of which the essential portion has been left out, thus rendering the sentence entirely unintelligible. What I intended to state was that Dr. Hoy killed in Missouri April 21, 1854, an Alleghany black snake (*Coluber obsoletus*) which measured eleven feet in length. This fact is noted in the Smithsonian Report for 1854, and not in that of 1874, as I am made to say in the foot note to my article. The specimen which my father killed was nine feet eight inches in length, and not nine feet. This species is probably the longest of all our North American serpents, but is by no means the thickest, the form being very slender. It is very arboreal in its habits, and may often be seen basking across the branches in the forest, probably lying in wait for some unsuspecting bird or tree frog. It ascends and descends with astonishing rapidity, and almost always takes to a tree when pursued. It is usually of a very harmless and timid disposition, but one which I helped to capture—a specimen about eight feet long—struggled violently, and made most ferocious blows when confined against the trunk of a tree with the butt of a long rifle. A curious habit of this species when disturbed is to vibrate the tail rapidly, thus producing a sound when striking against dead leaves very closely resembling the rattle of a rattlesnake, the head being raised from the ground and the tongue darted forth in a threatening manner.

ROBERT RIDGWAY.

[While very sorry for the occasion, we are glad that Mr. Ridgway has told us more of this interesting species. The imitation of the deadly rattlesnake, in order to inspire fear in its enemies, is a fine example of the part which (Mr. Darwin would argue) mimicry plays in the evolution of higher and better forms by selection. It is now perhaps entirely intuitive in the snake, yet in its ancestors must seemingly have been acquired by observation and intelligent imitation. "Wise as serpents," etc.—Ed.]

CHARGES AGAINST THE CROW.

HAMBURG, Penn., August 10th.

EDITOR *FOREST AND STREAM*:—

From careful observations, your correspondent is enabled to give his opinion about the interesting but (and deservedly so) much abused crow family. In Berks county, Penn., the crows, it appears, have their yearly jubilees, as some sects have their feasts, meetings, etc. In the spring they congregate together in enormous flocks, countless numbers, and then, after a week or so of companionship, follows a general scattering for the woods and mountains. In this portion of Pennsylvania many crows remain during the winter, finding sustenance in carrion, which in farming districts is more or less abundant. But in the spring, when other birds are building their nests, then is the time that the insectivorous tribe suffer most severely from these black marauders, as no sooner does the crow find a nest than it pounces upon the innocent occupants and be they eggs or birds they will be devoured; in many cases the nest too, will suffer. On newly planted cornfields they will also make the annoying attacks perceptible, and as their shrewdness is proverbial the farmer's old gun will only tease instead of work destruction. I regret to state that I cannot append one really honest, sincere, and good plea for the thieving family, as they appear in this vicinity. I have frequently seen them near my residence on the banks of the Schuylkill River pounce down upon an innocent robin sitting upon her nest, make her abandon it, and then gobble up the nestful of embryo songsters. This sight was provoking enough, but then to see the grief-stricken parents fly around the murderers of their "innocents" was a sight that could not help gaining displeasure. It is to be hoped that our ornithologists will aid each other brotherly, and then definite conclusions may properly be arrived at.

OLIVER D. SCHOCK.

STICK IN A MOUNTAIN SHEEP.

DEER LODGE, Montana, July 20th.

EDITOR *FOREST AND STREAM*:—

In your issue of June 29th an article entitled "Sticks in a Deer's Body" called to my mind a very remarkable instance of a similar nature. In 1870 Reece Anderson killed a very large mountain sheep (*Ovis montana*). In cutting open the brisket he was astonished by his tomahawk coming in contact with a stick of wood of considerable size. It was evident that the animal had in jumping, or in being thrown off of some cliff while fighting, come in contact with a pointed stub of a dry fir limb, which was exceedingly hard, which had entered the centre of its brisket, and passed through its lungs about an inch back of the heart. The stick was 1½ inches in diameter, and 11 inches in long. It had broken off just beneath the skin, and the pointed end reached nearly to the backbone. The wound had healed over, leaving a slight scar and was of several years' standing, for the animal was very fat. The stick was inclosed in a cartilaginous case which closely fitted it, and was about ½ of an inch in thickness, and white.

GRANVILLE STUART.

ARRIVALS AT THE CENTRAL PARK MENAGERIE JULY 22 TO AUG. 12.—One red-winged black-bird (*Agelaius phoeniceus*), presented by Mr. Robert J. Stone; two black iguanas (*Metopoceros cornutus*), presented by Captain Williams of the steamship Alps; one mocking-bird (*Mimus polyglottus*); one sea lion (*Zalophus Giltiespiei*); one common trumpeter (*Psoophia crepitans*), received in exchange; one fawn, born in the menagerie between *Cervus virginianus* and *Cervus mexicanus*.

W. A. CONKLIN, Director.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Sciaenops ocellatus</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Archosargus probatocephalus</i> .
Salmon Trout, <i>Salmo confinis</i> .	Striped Bass, <i>Roccus lineatus</i> .
Land-locked Salmon, <i>Salmo Gloveri</i> .	White Perch, <i>Morone americana</i> .
Grayling, <i>Thymallus tricolor</i> .	Weakfish, <i>Cynoscion regalis</i> .
Black Bass, <i>Micropterus salmoides</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
<i>M. nigricans</i> .	Spanish Mackerel, <i>Cybinum maculatum</i> .
Mascatonge, <i>Esox nobilior</i> .	Cero, <i>Cybinum regale</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Bonito, <i>Sarda pelamys</i> .
Yellow Perch, <i>Perca flavescens</i> .	Kingfish, <i>Menticirrhus nebulosus</i> .

For list of seasonable trout flies for August see our issue of July 27th.

FISH IN MARKET.—The hot weather renders fish scarce, and prices continue to rule higher than they should at this season. In the great South Bay fishermen have taken up their pound nets, the catches not being sufficient to pay for working them. We quote: Striped bass, 20 to 25 cents per pound, according to size; bluefish, 10 cents; salmon, frozen, 50 cents, green, 80 cents; mackerel, 15 to 20 cents each; weakfish, 15 cents per pound; white perch, 15 cents; Spanish mackerel, 25 cents; green turtle, 12 cents; terrapin, \$12 per dozen; halibut, 18 cents per pound; haddock, 8 cents; kingfish, 25 cents; codfish, 10 cents; blackfish, 10 to 15 cents; flounders 8 to 10 cents; porgies, 12 cents; sea bass, 18 cents; eels, 18 cents; loysters, 10 cents; sheepshead, 20 cents; brook trout, \$1; pompano, 20 cents; soft clams, 30 to 60 cents per hundred; hard shell crabs, \$3 per hundred; soft crabs, \$1 per dozen.

Business has been so light of late in the Brooklyn T. Office, that one worthy brother of the angle, Collect William A. Furey, has had plenty of time to go to Peconic Bay after fish, a pastime which he much enjoys. Two weeks ago he got among a quality of large weakfish known as "tide-runners," taking many that weighed pounds each. We would have mentioned the fact in our last week's edition, but our friend's catch was so large that we could not get it all in that issue. What glorious sport he must have had in handling a 14-pound weakfish, with rod and reel and fine tackle, and Mr. Furey will not take them in any other way, unless he gets so hungry that he can't wait for his fish to play himself out. Then you ought to see him go in and collect, with no charge for arrears. The way he gathers him in would astonish the clerks in the Tax Office. Next trip he proposes to invite the Fish Men's Club to a chowder-gorge down at Peconic.

Mr. Fred. Massey, Chief Engineer of the Brooklyn Fire Department, is fly-fishing for black bass, at Alexandria Bay, which we know to be very plentiful in those waters. When the flies don't take, he uses No. 1 grasshoppers, imported from Minnesota. These measure two and a half inches in length, and five-eighths of an inch across the shoulders. When he proposes to fish, he places one of the grasshoppers into a miniature plunge trap, like those used

by pigeon shooters, sets it upon a flat wooden float six inches square, and pays it out into the river where the current runs swiftly between islands. Having guided it to the desired place where the bass are known to be, he springs the trap with a delicate silk lanyard leading to the shore; the grasshopper is tossed overboard and into the mouth of the expectant fish, and is hauled in, hand over hand, by the hook and line, to which we forgot to say the big grasshopper is made fast. We may as well say here, that in passing the hook through the insect's body, care should be taken not to pinion his wings or impede the action of his legs—we mean the hind legs—the big ones that give propulsive force, initial velocity and momentum to the leap. This method of fishing is spoken of with high approval, and we know that our leaders will be gratified to have some account from Mr. Massey of his experience with this bait. The only objection to its general adaption here, seems to be the scarcity of bait in this section, though we have no doubt that the *Acridium giganteum* could be imported from the west, or at least be induced to migrate this way.

NEW HAMPSHIRE.—The unusual warmth of the water, it is said, has caused the fishing for black bass to be rather poor in this State. A party recently visited Sunapee Lake, in which bass have been heretofore more abundant than in any other waters of New Hampshire, but returned without any. Some few, weighing from two to three pounds each, have been taken in Massabesic Pond.

NEW JERSEY.—*Kinsey's Ashley House, Barnegat Inlet, August 14th.*—There has been a decided improvement in fishing the past week. The sheepshead, for some cause two weeks ago, scattered all over the Bay. Some were taken as far up as the mouth of Forked River; they are now back on their usual feeding grounds, and some good catches have been made. Weakfish are biting good—large catches at the mouth of Forked River and the entrance buoy; they run from $\frac{1}{2}$ to $2\frac{1}{2}$ pounds. Blackfish and sea bass plenty and good size. Bluefish, large schools of $1\frac{1}{2}$ pounders, enter the inlet nearly every day on the high water, but do not take the squid well; plenty of 8-pounders outside; also bonitas. August 7th, J. Sexton, Amboy, N. J., 4 sheepshead; Wm. Inman & Son, 18 sheepshead; Joel Ridgway and party, 19 bluefish. August 8th, Capt. Perrine and party, 56 blackfish and sea bass; Wm. Bound, 12 sheepshead; B. V. Atwood, Cleveland, Ohio, 49 blackfish; C. Grim, 6 sheepshead. August 9th, T. M. Dixon, Philadelphia, 19 bluefish; W. E. Evans, Philadelphia, 3 bluefish, 11 scabass. August 10th, James Cockran, W. D. Graff, D. B. Howell, N. Y., 18 bluefish; G. L. Walters, N. Y., 34 sea bass. August 11th, S. N. Dixon, 19 bluefish, 2 sheepshead. August 12th, J. L. Saunders, 21 bluefish, 47 weakfish. August 14th, T. Taylor, Waretown, 21 bluefish.

CONNECTICUT.—*Bridgeport, August 14.*—The bass fishing on the Housatonic River is excellent near Bridgeport. HUNTINGTON.

—Lewis Smith has caught 60,000 bluefish this year in his weir at Orleans, Cape Ann.

—Hon. E. H. Kellogg, of Pittsfield, it is said, has caught 1,600 trout this season. We wonder what they weighed?

—A pickerel over two feet long was on exhibition in Salem last week. It was one of a dozen caught at Chebacco Pond.

—Late intelligence from Prince Edward Island states that fishing has not been at all a success so far this season. The reports from the codfish and mackerel catchers are of a discouraging nature.

—Six or eight halibut were found attached to the wreck of the S. N. Collimore, lately run down near Nantucket, and afterwards towed into Yarmouth, N. S. It would appear that the wreck, in drifting over the fishing grounds, probably Georges, had come in contact with a trawl.

FISHING MOVEMENTS.—The mackerel have struck off shore the past few days, and although the receipts the past week have been fully up to those of the previous week, but few have been caught for two or three days, and the tone of market is well maintained. The number of arrivals reported for the week has been 32, and the receipts about 5,600 barrels. With unfavorable weather for curing, and continued light receipts, Georges codfish have advanced steadily the past four weeks, and it would be difficult to procure lots on the basis of the last transactions, \$5 per qtl. The number of Georges arrivals for the week has been 43 and of Bank arrivals 7. Receipts of codfish 700,000 lbs. Georges, Bank, 301,000. Fresh halibut have been in light receipt, 109,000 lbs., with last sales at $8\frac{1}{2}$ and $4\frac{1}{2}$ cents. Total fishing arrivals for the week 82.—*Cape Ann Advertiser, July 12th.*

—The use of cormorants for fishing purposes, which has been practiced for centuries by the Chinese, who carefully train these birds to deliver their prey uninjured to their masters instead of appropriating it to their own use, and from China and other Oriental countries has recently been brought to England.

FISHING THIS SEASON IN CALIFORNIA.

SAN FRANCISCO, August, 3d.

EDITOR FOREST AND STREAM:—

Angling or bait fishing, and trolling with the spoon, for salmon and trout, has not been so good up to this time as it was last year in Lakes Merced and San Andreas, which are near this city, but in Pilarcitos at a somewhat greater distance the fishing with the fly and troll has been very much better. In the last lake, brook trout only, are taken. There have been several excursions north to the McCloud, Pitt, and Sacramento rivers by different parties, and the success there with the salmon, common trout, and "Dolly Varden" trout, a new kind, peculiar it seems to that region of country, and highly esteemed for beauty, sport, large size and good qualities for the table, has been capital. The rivers up there mostly run with much force of current which makes the handling of large salmon quite lively and exciting, and when an angler gets hold of a twenty or twenty-five pound salmon it not only is apt to consume much time—say an hour at least—but puts to considerable trial the sportsman's activity, endurance and muscle, especially, as is generally the case, if he has to handle many of such fish a day. These salmon are said to take pretty well the fly either early or late in the season, but about the middle of the season, or the months of June or July, they take nothing well but salmon roe, and this is rather a troublesome bait to keep on the hooks, owing chiefly to the swiftness of the current, (running about

ten miles per hour), and the somewhat shyness of the fish in seizing the bait, although there is no lack at all in their numerous attempts to grasp it. It is now pretty well settled beyond a doubt that this part of our State, and indeed, nearly all the northern portion of it, is not surpassed, if equalled, for its splendid salmon and trout in any part of the world. In order to reach this paradise for salmon and trout fishers, the angler takes from this city the Northern Pacific Railroad to the town of Redding, thence by stage to Sisson's, where every accommodation is found at a reasonable rate. The time taken up in reaching these glorious fishing grounds is only two days. About the 29th of this month my nephew and myself are going to the north fork of the Navarro River in Mendocino county, about thirty-six hours' journey from here, with only one day's staging, to tackle the large species of brook trout which abound there and also to spend a few days in shooting black and cinnamon bears, (grizzly not to our sorrow being scarce) which are quite plentiful, and found feeding on the wild fruits. On our return we shall, as usual, send you an account of our excursion, to add to the histories sent to your valuable paper from all quarters of the globe concerning the exploits of the ardent devotees of the rod and gun, etc.

E. J. HOOPER.

ANGLING IN MISSOURI.

St. Louis, Mo., August 1st.

EDITOR FOREST AND STREAM:—

We have not many notable lakes and streams for angling in our immediate vicinity, as what were really so a few years ago have been pretty thoroughly depleted by market fishermen with seines, nets, etc. Our anglers and law-makers have made no decisive war against these plagues and pests. I believe there is no Fish Commission in our State, and there will probably be no exertion made to amount to anything until the last fish has been taken. We have two "so-called" fishing clubs in St. Louis—the Murdock and King's Lake Clubs. I have belonged to the Murdock since I came to the city, five years ago. The club has been in existence ten years or more, and has had varied fortunes, some years having a goodly number of members, while in other years the membership would sink below the requisite number to pay expenses. Our great difficulty has been to select men or officers who had interest enough in the success of the club to put forth the requisite energy to secure that end. They seem to think and act as though if they went down to the club house once or twice a year, and had a good time, that would be sufficient. I look upon Murdock Lake as being the best fishing water in our vicinity, and the duck shooting in spring and fall is unsurpassed. We have a membership this year so far of about thirty-five. The lake is located about thirty miles south of St. Louis, and moderately easy of access. We have a large and comfortable club house with twelve spring beds, and keep a competent and reliable superintendent and cook there the year round. As the best grounds are filled with logs and tree tops it is not feasible to use fancy tackle, reels, etc. But with a good strong bamboo or cane pole and hook baited with a live minnow, we get generally quite exciting sport. Quietly approaching an old-tree top or log in one of our boats, a few yards from the shore, we gently drop in our baited hook and eagerly watch the painted float, when suddenly it disappears, and you find a captured fish struggling to get free. We have not long to wait in uncertainty as to whether it is a black bass, dog, cat, or croppie, as in any event you must land your fish as soon as practicable, else it will get entangled under some log, limb, or root, and you may lose him. I have fished in the waters of many States east, west, north and south, and am ready to give the palm to our lake and its comfortable club house. At no point, taking the year round, do I believe more fish can be taken or comfortable quarters found than at our lake by the bluff.

D. L. D.

PAIS FOR CONVEYING LIVE BAIT.

OCONOMOWOC, Wis., August 8th.

EDITOR FOREST AND STREAM:—

In your paper of August 3d I find an inquiry from "F. W. C.," of Boston, in reference to the carrying of live bait for bass and other fishing. The difficulty of transporting live minnows any considerable distance and having them alive when we reach our fishing ground has long been a serious one; but I believe that it has now been entirely overcome by the invention of Mr. J. C. Hitchcock of this place, of the most perfect minnow bucket ever made. This contrivance may be described as follows: It is made of heavy tin, oblong in shape, divided into two general compartments. One side is made to contain water for the minnows, which are placed in a separate pail made of galvanized iron wire, and dropped into the compartment, over which the cover of one-half of the bucket falls. The water is aerated by means of a simple device consisting of a tin tube, upon which is fixed a hollow rubber ball the compression of the ball forcing the air into the water, thus rendering any change of water unnecessary for any ordinary journey and keeping the fish alive; in this respect the machine is perfect. I have tried it and I know, having carried from seventy-five to one hundred minnows in a six quart pail for several hours and not losing one. On the other side of the bucket is a compartment made double, in which you place ice sufficient for a whole day in the heat. The melted ice furnishes you ice cold water all the time, and is drawn from a convenient opening in the lower part of the pail. Above the ice is a small tin tray of ample size for your lunch, and containing also a drinking cup. The whole is closed by a cover similar to that on the other side of the bucket, thus making a neat and compact arrangement for the purposes indicated. In one part of the country where we have about forty lakes within a radius of fifteen miles, and when we are constantly traveling from lake to lake to contend with the gamy bass of the west, this article is indispensable.

Mr. Hitchcock has promised me that he will send one of these buckets to the office of FOREST AND STREAM for the examination of those interested, and that he will shortly place them on sale in New York, and notify your readers through the columns of your paper.

GEO. A. SHUFELDT, JR.

We have received a letter from the inventor of these pails in which he promises to send samples, and says they will cost \$4 and \$5.—ED.

—A comparative trial of hemp and wire hawsers by the British Admiralty as to handiness in working was entirely in favor of the steel wire hawser, and 120 fathoms of 24-inch hemp cable weighs 7 tons 16 cwt., while the same number of fathoms of 8 inch wire cable, which is equal to, if it does not exceed the strength of the other, weighs only $2\frac{1}{2}$ tons. Commodore Forbes, of the Eastern Yacht Club, was the first person to suggest steel wire in place of hemp for hawsers, or even the heavy chain cables now in use, and his experiments were reported and commented upon in this journal last year.

—If a person swallows any poison whatever, or has fallen into convulsions from having overloaded the stomach, an instantaneous remedy, more efficient and applicable in a large number of cases than half a dozen medicines we can now think of, is a heaping teaspoonful of common salt and as much ground mustard, stirred rapidly in a teacupful of water, warm or cold, and swallowed instantly. It is scarcely down before it begins to come up, bringing with it the remaining contents of the stomach; and lest there be any remnant of poison, however small, let the white of an egg or a teacupful of strong coffee be swallowed as soon as the stomach is quiet; because these very common articles nullify a larger amount of virulent poisons than any medicines in the shops.

The Kennel.

THE CENTENNIAL BENCH SHOW.

As we anticipated and have all along predicted the Bench Show to be held in Philadelphia will far exceed in interest any similar affair ever held in this country. Up to the 12th inst. there had been 412 entries, with many more to come. It will also be seen from the correspondences which we publish below, that the Pennsylvania Railroad Company will transport all dogs intended for the Exhibition to and from Philadelphia free of charge, a piece of liberality which will be fully appreciated by sportsmen. If Mr. Landreth will now only have a catalogue carefully prepared containing all the entries, which can be sold to defray expenses of printing, he will leave us nothing more to be wished for:—

EDITOR FOREST AND STREAM:—

I send you a detailed statement of the entries for dogs, which amounts to the grand total of 412, a number that has never been approached by any other show in this country, and I am perfectly safe in saying it will reach 500. The classes for setters, which were estimated to reach 150, have swelled up to the magnificent total of 235. Mr. Nuttall, of Ireland, entering no less than seventeen, including his celebrated champion bitch Mayhe. Every preparation is being made for the reception of dogs; stalls are now being built, and everything will be in readiness. Let the sportsmen rally to the front with their entries and make this show accord with the character of the occasion. I also send copy of a letter from the Pennsylvania Railroad Company, which you will oblige by publishing.

BURNET LANDRETH, Chief of Bureau of Agriculture.

PENNSYLVANIA RAILROAD CO.,
OFFICE OF THE GENERAL BAGGAGE AGENT,
32d and MARKET STREET,
PHILADELPHIA, August 9th, 1876.

Burnet Landreth, Esq., Chief of Bureau of Agriculture:—

DEAR SIR.—Your letter of 2d inst. to our General Manager is referred to me. This Company will furnish free transportation for dogs to and from the Bench Show to be held early in September. Will you advise me as early as possible from what points on our lines the dogs are principally expected? and whether the parties in charge of the dogs will have anything to show that the animals are intended for exhibition. Also the earliest date they will commence to come to Philadelphia.

(Signed) Yours truly CHAS. R. CLEMENT,
Gen'l. Baggage Agent.

List of entries in the various classes up to August 12th:—

The gentlemen appointed to act as judges are as follows:—Chas. H. Raymond, Morris Plains, N. Y.; Col. Skinner, of the *Turf, Field, and Farm*, New York city; E. M. Gillespie, Columbia, O.; John E. Long, Detroit, Michigan. Mr. Raymond, however, we fear, will not consent to act, and we are divided in our regrets between losing the services of so distinguished, competent and upright a judge, and not seeing his magnificent kennel of dogs.

A WONDERFUL PORTRAIT.—We have seen some remarkable dog pictures; we have seen Chinese art abortions, but anything more "fearfully and wonderfully made" than the portrait(?) of Mr. Jerome Marble's Gordon setter Grouse, which appears in the last issue of "the only American Illustrated Sporting Paper," the *Chicago Field*, we have never had the misfortune to look upon. Fortunately we have seen Grouse and have the pleasure of Mr. Marble's acquaintance, and we therefore hasten to extend to him our warmest sympathies upon what must be the greatest affliction of his life—this horrible caricature upon what is really one of the handsomest Gordon setter dogs in the country.

—We are in receipt of a letter from Mr. J. W. Knox, of Pittsburgh, Pa., in which he says: "Livy arrived here last week in fine order. She is heavy in whelp by Llewellyn's Blue Prince. She is a splendid, large, finely shaped bitch, showing strongly the Laverack form with the larger size of Dan's stock. She is mostly white, with a black and white head, body ticked; she is $22\frac{1}{2}$ inches high." And now we have another letter from Mr. Knox, saying: "Livy whelped, July 20th, eight beautiful puppies, five dogs and three gyps. Livy is by Dan out of Lill I."

—Mr. Curt Bower, of Petrolia, Pa., claims the name of Rock for his field trial setter by Belton out of Mr. Knox's Dimple, but as that name is already the property of Mr. Luther Adams's incomparable dog, we suggest to Mr. Bower to select another.

REMEDY FOR MANGE.—Our correspondent Mr. Geo. M. Whitten, writing from North Uxbridge, Mass., says:—

"I wish to tell you of the success I have had with a remedy for mange given in No. 15, Vol. VI, by Thomas Burt of Utica, viz.: 1 ounce oil of tar (that should have been written creosote, as oil of tar covers a dozen preparations); 1 ounce lac sulphur; 4 ounces sperm oil. I would say that I have used the above in a very bad case of mange with most happy results, and would recommend it to any one, as it is safe, and if it does not cure it can do no harm."

COLLEYS AND THEIR TRAINING.—With the rapid growth of sheep raising in this country, more particularly in Colorado, California, and New Mexico, anything relating to that most valuable of dogs, the colley, is of interest. In Great Britain regular field trials are held in which the shepherd's friend and assistant displays the most wonderful intelligence in penning and driving sheep, and by the publicity of their trials and the prizes awarded, great encouragement is given to breeding and training. An Englishman, Mr. W. Fortbergill, has lately published a little book of twenty pages on the management and training of colley's, which gives some useful hints. The first lesson, he says, is to teach the whelp to lie down at command; then come this way or that, always behind you. In a short time he will leap over a hedge at your bidding, stand still at command, or even walk backwards or forwards as you wish. All this may be done before even it sees a sheep, and indeed many whelps have been thoroughly trained before they have been called upon to work. The more general practice, however, is to take the young dog alone, when quite strong enough to keep a few sheep up in the corner of a field, and teach him to bring them after you short distances, and so make him handy at working to the right or left. He should never be allowed to run between his trainer and the sheep, for the great object ought to be to throw the dog well off so that he may run wide. There is a great boldness or dash in a colley so taught, and he does not harass the sheep nearly so much as one in the habit of running at or close after them. You may teach him to obey signs, or words, or a whistle, and for far distances on the mountain the last is best. A dog so taught will gather miles of mountain, bringing all the sheep to the shepherd's feet, and then by an alteration in the note will take them right back again. It should always be borne in mind that the sagacity, or sense if you may will, of the colley develops with his years; and therefore, if you are quiet and patient, and have plenty of work for him, he will teach himself rapidly without your worrying yourself very much about him. It would be hard indeed for an intelligent man who had been working steadily upon the mountain with sheep dogs for a whole season, and witnessed day by day their shrewd cleverness, to declare that they do not reason. The dog that brought the shepherd's boots one by one up to his bedside from the room below, and tried to rouse the poor fellow from out of the fever in which he lay, to put them on, surely was guided by something higher than mere instinct. The great black colley that threw himself against the cottage door, to induce the inmates to come out and open the mountain gate, through which he was unable, without aid, to pass, as related in the *Field* last year, surely considered how he should act and obtain egress from the pastures to the open mountains, and acted upon his thoughts.

In this country in the States and Territory we have mentioned, the colley has another duty to perform. He is not only guide and herdsman, but protector as well; for the sneaking coyote is to be kept away, and if need be, fought; and sometimes a hungry bear with a taste for mutton, as well. According to Scottish superstition it is well to name your dog after a flowing river, "for then ye ken he will surely never gae mad."

THE HAMBURGH BENCH SHOW.—Our correspondent Mr. Von Smeedeburg, late of Hoboken, and now editor of the German sporting journal *Der Hund*, writes from Lindeman, under date of July 12th, as follows:—

"Rev. J. C. Macdona's setters were the principal event of the show, though the best prizes went to others. His setters and his former ones, now in possession of H. H., the Prince Albert Sohns of Brussels, gave a sight that can hardly be beaten in England. We saw in Hamburg the Prince's Judy, mother of the great Ranger, Venus his own sister, Ranger II, his son, and from this one a very promising litter of pups out of Venus. These "cracks" in close proximity to Rev. Macdona's Gordon setters Cluny and Fan, the Prince's Duke and Duchess, all four by Lorne out of Bloom, and near by the prize winners Monaghan, by Rover out of Minnie, and Shirley, gave us a picture which I wished the "Old Squire" could have seen. Add to that some excellent pointers of Mr. I. H. Whitehouse, of Isley Court, and four splendid foxhounds of Sir W. W. Winn, Bart., and you may well imagine how poorly most of our German dogs showed, as they look in symmetry, in speed, and in ranging, though they have a good nose and good size. Luckily a German nobleman had the good sense to buy at a high figure, the two Gordons of Mr. Macdona, and some splendid pointers, among them a bitch by the celebrated Don.

But what you will like to hear best of all, is that the Rev. J. C. Macdona will probably visit New York and Philadelphia in September next, where, I trust, he will be received with all the honor due to a breeder of the best stock in the world. I wish Egerton, his handsome little son of nine years of age, would accompany his father, for he, the boy, is a true chip of the old block. He can talk dog with the best of you, and knows the pedigrees of all the great guns in England. Besides, he is quite a linguist; he speaks not only French, but German most splendidly, and is ever willing, and proud too, to be interpreter for his father. One day during the show, Egerton, who in his becoming dress of a Highland Chief was a great favorite with all the ladies and the observed of all observers, had a long conversation with the King and Queen of Denmark, and the King and Queen of Greece, the latter of whom he told he had had the pleasure of presenting a grand St. Bernard dog to his sister, the Princess of Wales. My dog Prince, "got an honorable mention." Yours, "SMEEDY."

POOR TYKE.—The killing of a well trained setter, near the Twin Lakes station, a short time since, by the one o'clock Connecticut western train, prompts me to ask "If dogs have any rights that railroad men ought to respect?" Of the exact manner of the "taking off" of poor Tyke, none but the engineer or fireman of that train can tell. It would seem that she and her mother, "Fan," had tracked her master to the station, and were promptly bidden to go home, and as he supposed did start for home, some ten minutes before the cars were due. At any rate, they were both out of sight when he got on the train; and must have started along the trestle-work, at the west end of which one of them was struck by the cow catcher, and a "forty dollar dog" reduced in value to less than nothing. Of all this the owner got no word till his return from Salisbury in the afternoon—though the engineer must have knew all about it, and whose dog it was. Of course it is too much to ask of the average engineer to slow up his train on a grade; but

it might be generous in him to "whistle just a little" to save the life of a dog whose cash value is as great as a cow or horse, and whose intelligence, affection, and training might put to shame many specimens of the *genus homo*. The killing of a remarkable dog on the Housatonic Railroad at Ashley Falls, a year or so ago, may seem to emphasize the foregoing, and "point a moral" if not adorn a tale. This dog, in addition to being a thoroughly trained animal, was a wonderful retriever—and is known to have been sent back eight miles, and bring a ram-rod that his owner had lost the evening before, on being shown the gun minus rod, and told what to "go fetch!" He was made to run errands, carry money, and fetch goods from the store, and the mail from the post office, and was depended on to go daily to the train for the paper left off by the newsboy. One luckless day this newsboy—foolishly or scampily—dropped the paper under the train just as it was getting under way—and the poor dog was translated to the "happy hunting ground"—where, if the foolish newsboy should ever chance to go, it is hoped that "all the dogs in our town," will give him a bite of their canine teeth. Anyhow, Superintendent Franklin says "if it can be shown that the boy did it on purpose" he shall be turned up so high that he will never want to come down in Berkshire county again.

Twin Lakes, Conn.,

GYP SAV.

KENNEL PRODUCE.—On August 8th Mr. S. J. Bestor's (Hartford) cocker spaniel Juliette whelped nine pups, six gyps and three dogs, sired by his Snip. Six were engaged in advance, and all are uniformly and handsomely marked.

Mr. F. Weigand's (of Galveston, Texas) Gordon bitch Pet, imported last fall by Mr. B. G. Duval, of that city, through Mr. Geo. de Landry Macdona, Hubre House, West Kirby, has dropped a fine litter of ten pups, eight dogs and two gyps, sired by Baron, bought by Mr. J. Bingham, of that place through Barry Jennings, N. Y., which dog is out of Mr. A. Belmont's imported brace. The whole litter thoroughly takes after the mother, a perfect beauty.

National Pastimes.

CRICKET.

—The match St. George vs. Manhattan was won by the former on August 9th by 103 to 85. It was only a one-day play and the first innings decided the contest as follows:—

Umpires—Messrs. W. Brewster and C. Tyler.

THE LARGEST SCORING ON RECORD IN THIS COUNTRY.—MATCH BETWEEN CANADIAN AND GROUND VS. THE GERMANTOWN CLUB.—This match came off on the 11th inst., on the grounds of the Germantown Club at Nicetown, Philadelphia. The home club having won the toss they sent Messrs. Large and Hoffman to the bat, against the bowling of Baines of Toronto, and Irvine of Detroit. Hoffmann was bowled first ball by Irvine, Caldwell taking his place. When Campbell of Toronto, who had taken Irvine's end, bowled him, he had made 11, in which score he gave two chances. Joe Hargreaves followed, and both he and Large began to score rapidly. All the bowlers on the Canadian side were called into requisition, among whom were Messrs. Comfort, Law and Morris, of the Merion Club, of Philadelphia. When Large was finally bowled by Baines, (who throughout bowled remarkably straight), he had by fine batting and careful play placed 103 to his credit without a chance. Tom Hargreaves followed, and quickly added 48 to the score, when he was bowled by Baines. Marsh was caught and bowled for 1 by Baines, and Brewster was bowled for a single by Morris. John Hargreaves now joined his brother, and had made 6, when the game was called at half-past six, leaving Joe Hargreaves not out, for the immense score of 163, in which he gave only one chance at slip when he had hit up 139. This score is the largest ever made in this country, and the prize bat which Rev. Mr. Phillips, the Canadian's Captain, brought from Canada, became his property. Unfortunately for the Canadian side Mr. Phillips was unable to play in this match, having been injured in the Merion match on the 9th inst. It is but just to say Canada was not represented by its best players, and it was very short handed in every game, being kindly aided by members of the St. George's, Merion, and Young America. In the future we trust Mr. Phillips will visit us with his strength. The following is the score, the game being unfinished:—

GERMANTOWN'S INNINGS.

Large, b. Morris.....	103
Hoffman, b. Irvine.....	0
Caldwell, b. Campbell.....	11
Joe Hargreaves, not out.....	163
T. Hargreaves, b. Baines.....	48
Marsh, c. and b. Baines.....	1
Brewster, b. Morris.....	1
John Hargreaves, not out.....	6

Umpires, Messrs. Rhodes and Ervington.

The return match between the Canadian and the Merions was played at Aidmore, Philadelphia, last Wednesday, resulting in a victory for the home club. Mr. Phillips' team was short again; this time two men, and played Messrs. Cope and Buckley of the Young Americas second eleven. They secured in their first inning 44 runs, Calver's 21 being the only double figures. The Merions made 80, to which Ewing contributed 20, Sayres 10 and W. Huston 14. These scores were not fully deserved, as several chances were missed in the field before any considerable number of runs were made. Baine's bowling was remarkable, taking three wickets in one maiden over. The Canadian's second inning was for 85, 43 of which were from Buckley's bat, got by loose fielding, he being missed at long-leg on first ball, and his chances refused several times afterwards. The Merions played for 44 runs, with five wickets down, all clean bowled by Baines with Comfort, and Baily not out, the former with 15 runs; but game was called at 6½ o'clock, and was decided on the first inning.

BASE BALL—THE PROFESSIONAL CHAMPIONSHIP.

This week Chicago enters upon her last campaign week, the St. Louis club, the rivals still for the local Western championship, but no longer the rivals for the whip pennant of the season as far as the Chicagos are concerned. The latter club have closed their score with the Louisville and Cincinnati clubs. The former they defeated nine times out of ten by a total score of 109 to 31, and the latter ten games in succession, by the total score of 114 to 30. They now have a lead which almost insures them the pennant, the principal struggle for the remainder of the season being between the St. Louis, Hartford, and Boston clubs for second and third places in the race. The record to August 13th inclusive shows the clubs occupying the appended relative positions in pennant race:—

Clubs.	Games Won.	Games Lost.	Games Drawn.	Games Played.
Chicago.....	40	8	0	48
St. Louis.....	31	16	0	46
Hartford.....	30	13	1	44
Boston.....	25	19	0	44
Louisville.....	20	28	3	51
Mutual.....	18	25	1	44
Athletic.....	12	24	1	47
Cincinnati.....	6	40	0	46
Total.....	182	182	6	370

Among the model games of the past week were the following:—

August 7—Mutual vs. Hartford, at Hartford.....	2 to 1
August 7—Harvard vs. Racer, at Lynn.....	4 to 2
August 7—St. Louis vs. Capital City, at Indianapolis.....	5 to 2
August 8—St. Louis vs. Louisville, at Louisville.....	3 to 0
August 8—Hartford vs. Athletic, at Hartford.....	3 to 1
August 8—Resolute vs. Aspin, at Boston.....	3 to 1
August 8—Live Oak vs. Fall River, at Fall River.....	3 to 1
August 8—Star of Newark vs. Star, at Elizabeth.....	4 to 1
August 8—Meta vs. Orion, at Boston.....	5 to 3
August 9—Cricket vs. Lowell, at Binghampton.....	3 to 2
August 9—Montgomery vs. Democrat, at East New York (10 innings).....	4 to 3
August 10—Meta vs. Union, at Boston.....	4 to 1
August 10—St. Louis vs. St. Louis, at Louisville.....	4 to 2
August 10—New Haven vs. Rhode Island, at Providence.....	4 to 2
August 12—St. Louis vs. Louisville, at Louisville.....	3 to 2
August 12—Chicago vs. Cincinnati, at Cincinnati.....	5 to 0

O'LEARY'S WALK.—On Saturday night at 11:20-35, Daniel O'Leary finished his great feat of walking 500 miles in six consecutive days, with half an hour to spare. The pedestrian was in excellent condition at the finish, and will probably shortly attempt to repeat the feat at the Brooklyn Rink.

THE CLAN-NA-GAEL GAMES.—On Tuesday afternoon the Clan-na-Gael Association gave their seventh annual exhibition of Irish national games at the Jones's Wood Coliseum. There were between eight and ten thousand persons present. The following are the winners of the different prizes and races:—

Putting the Heavy Stone—James McNamara, 26 feet 3 inches.	
Putting the Light Stone—James Daly, 34 feet 8 inches.	
Running High Jump—James Daly, 5 feet.	
Standing High Jump—James Murphy, 4 feet 5 inches.	
Three Standing Jumps—Thomas Lynch, 34 feet 2½ inches.	
440-Yard Foot-Race—Time, 1 minute and 2 seconds, John O'Donovan.	
Rossa, son of the Fenian, won this race.	
200-Yard Race for Members' Sons—Bernhard Hewson.	
1 Mile Walking Match—George Odeil, first prize; 8 minutes and 7 seconds. Second prize, Edward Wixel; 8 minutes and 50 seconds.	
200-Yard Hurdle-Race—James Daly.	
1 Mile Running Race—Patrick Fitzgerald, 4 minutes and 57 seconds.	
Three Legged Race—Messrs. Tunney and Boyle; time, 13½ seconds.	
1-Mile Walking Match for Members Only—Water Martin, time, 10 minutes and 28 seconds.	
200-Yard Sack Race—Joseph Prendeville.	
100-Yard Race—Mr. George Turtle; time, 12 seconds.	
100-Yard Sack Race—Joseph Prendeville, time, 17 seconds.	

The day's sport ended with a grand hurling match between the Sarsfield and Geraldine clubs, the former winning. During the evening no fewer than twelve thousand persons were present. In the afternoon Daniel O'Leary, the pedestrian, who is a member of the Clan-na-Gael, witnessed the sports. He said he would have participated in one of the races were it not for a stiffness in his right leg. O'Leary sails for England in two weeks to walk a match against William Vaughn for £500 a side, the one walking most number of miles within twenty-four hours to win the money.

NEWFOUNDLAND BOAT.—We are indebted to our correspondent, Mr. Henry A. Clift, of Harbor Grace, for a description of Newfoundland boats. Among others there, the "high rat," a kind of punt, with jib and mainsail, will carry three or four quintals fish. A cod-seine skiff will carry five quintals. A "bully" and "jack" are nearly the same; they carry jib-foresail and mainsail, and sometimes driver, and carry ten to fifteen quintals of fish. They have, too, the "galloper," which is a large skiff, carrying boom to her mainsail, and generally has some kind of a cabin and a dirty binnacle. The boats' sails are bark—done in this way: 1st, fire; 2d, big pot; 3d, water; 4th, a lot of lath from the spruce tree; 5th, bark put into pot; 6th, pot boils; 7th, after some time the canvas put into pot; 8th, the canvas becomes saturated with the bark and remains permanently so. The nets are barked in the same way, to the awful destruction of trees.

IMPORTANT.—Care should be taken, in buying Fishing or Hunting Suits, to get a genuine Holabird Suit, and not one of the worthless imitations which are being put on the market. The best is the cheapest.—Adv.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

S. B. B., Lancaster, Pa.—See notice to correspondents at top of this column.

J. M., New York.—This is a good paper to read *clear through*. Look for your note under Natural History in issue of June 15th.

FLY CASTING.—Three anonymous querists will learn all they ask to know by referring to the article on Fly Casting in our issue of July 6th.

C. E. C., Franklin, Pa.—Please inform me where and by whom the Spencer arms are manufactured? Ans. The Winchester Repeating Company, New Haven, Conn., own the patent; the rifles are not being manufactured.

W. M. L. J., Lebanon, Ill.—Where can I obtain a copy of the Bulletin of the Nuttall Ornithological Club, and at what price? Ans. Prof. J. A. Allen, Cambridge, Mass.; \$1 a year, 25 cents single number.

E. C. K., Fishkill, N. Y.—Please answer this question for me: When does ruffed grouse shooting commence in this State? Ans. September 1st, except in Suffolk county, where the law expires October 1st.

BRANDON, Bald Mountain.—Has the Report of the National Rifle Association for 1875 been issued yet? Is the price the same as last year—25 cents? Ans. Yes, and we have forwarded you a copy for which you can remit us 25 cents.

W. B. L., Bridgeport.—Will you kindly inform me whether August is a close month for woodcock or not, in Connecticut? There are no two sportsmen in the city of the same opinion. Ans. The law forbids the killing of woodcock in Connecticut during the month of August.

C. E. V., Hyde Park, N. Y.—Is it ever lawful to shoot robins? Ans. You can shoot robins in this State between August 1st and January 1st, except in the counties of Kings, Queens, Putnam and Suffolk, where the close season is October 1st. You can shoot them at all times for scientific purposes, or when they are eating your cherries.

HUNTER, Brooklyn.—Can you tell me about the law in New Brunswick in regard to moose? I have just heard that a law prohibiting killing moose for three years has passed. Is that a fact, and if so, when is it over? Ans. Have just returned from a vacation in New Brunswick. Heard of no law to prohibit moose shooting at the proper season.

F. C. CROCKER, Portland, Me.—Can you give me any information in regard to any unleased salmon streams in Canada or New Brunswick? I have friends who, with myself, would like to lease a good stream for three rods, if we can do so at a reasonable price. Ans. Address W. F. Whittey, Commissioner of Fisheries, Ottawa, Canada. It is the only man who can give you full information with complete list of rivers.

MARKSMAN, Springfield, Mass.—Is it allowable in rifle matches for the marksmen to use more than two sights—that is, where a rifle has rear, medial and front sights, can the medial sight be raised and used in conjunction with the other two sights, rear and front, thus giving the shooter a better range along his barrel? Ans. The use of an extra sight such as you describe would not be allowed.

A. McD., Rockland, Me.—I have a setter pup five months old whose eyes are sore with a thick, white discharge running, nose dry, warm, and cant very rough; his appetite is very poor, and he don't seem to be a smart as he has been. Will you please say what is the matter and what I should do for him? Ans. Your pup is no doubt afflicted with worms. The arca nut powder will cure him. If you cannot procure it there we can send you the proper quantity, with directions for its use.

JOHN B., New Orleans.—I have a very fine imported Skye terrier two years old that has been affected the last week with slight swelling of the eyelids, the hair and eyelashes coming out around the eye. I have washed it with castile soap, which seems to relieve him somewhat, and the running is not so bad. Saving this he is in perfect health. Ans. Dissolve 20 grains of borax in 2 ounces camphor water, with which bathe the eye with a soft sponge two or three times a day. Pure spring or rain water would be better than castile soap and water.

ELK HUNTER, Auburn.—I want to take a trip to Kansas about the first of next month to hunt game, and would like to have you inform me if I can go by steamer from Pittsburgh, Pa., down the Ohio River, then up the Mississippi, then up the Missouri to Kansas, and if so how long does it take to make the trip, and what is the cheapest fare; also is there navigation from Kansas City to Topeka? Ans. You can run from Pittsburgh to Kansas City as you suggest, and from the latter city to Topeka by rail, or by boat if the Kansas River is high enough. The time it will take and the cost of such a trip we cannot tell.

L. W. N., Louisville, Ky.—1. Where and at what price could I procure Volume V of Wheeler's U. S. Geographical Surveys? 2. Please describe canker in the ear of dogs, and give me a remedy? Ans. 1. It is published by the Engineer Department of the U. S. Army for free distribution; if the edition is exhausted perhaps we can pick you up one in this city for \$3 to \$5. 2. A dog with canker has an offensive discharge from one or both ears, which causes him to shake his head repeatedly and hold it on one side or the other. Take 20 grains of sulphate of copper, 8 ounces of water, and after washing the ears out thoroughly pour in the solution. A few applications generally effect a cure.

ROB ROY, New York.—1. I wish to buy a Rob Roy or Nautilus canoe at second-hand. Do you know of any, or where had I better apply or advertise? 2. Do you know of any boat-builder whose specialty it is to build canoes, and about what would be the cost of a Rob Roy complete? 3. Can you give me the address of the Secretary of the New York Canoe Club at Staten Island? Ans. 1. We do not, but your inquiry will probably bring out a reply. 2. Messrs. Walter & Son build canoes, and a firm in Watkins, N. Y., whose address we do not know. 3. Mr. M. Roosevelt Schnyder, No. 52 William street, was Secretary of the New York Canoe Club.

POWHATAN, New York.—Will you kindly give me the address of a good, reliable man for training dogs? I have a brace of setter pups that are expected to make their mark. I do not want to get them into the hands of a man foolish enough to lose his temper and try his boot against a dog's ribs, as I have seen done by a man called a good trainer more than once. Ans. L. H. Van Schoick, Pennington, Mercer county, N. J., is a skillful, careful, humane, reliable breaker, always keeping the dogs under his care safely, and in good condition. He has broken many for us satisfactorily.

C. E. B., Woonsocket, R. I.—1. Will you please inform me what the color of a liver and white cocker pup's eyes should be? He is now seven weeks old. Do they change their color after that age? 2. Do lemon-colored spots over the eyes improve them as regards being purer bred, or are these spots objectionable? Ans. 1. The eyes of most cocker spaniels are brown, but some are yellow or gray. The eyes of pups frequently change when they get older. 2. We have seen many thoroughbred cocker spaniels marked liver, tan and white, and prefer those colors. It sometimes arises from crossing the liver and white with orange and white, or with black and tan.

A READER, New York.—Will you please inform me where, in the vicinity of Philadelphia, can be had some good reed bird shooting, and the best time to start, and also the most convenient way to reach it, and to whom I must apply? Is Munn Town, Washington county, Pa., a good place for game? What kind of game can be got there in season? Ans. 1. Reed bird and rail shooting commences on the Delaware River on the 1st September. By Pennsylvania Railroad you can run to Chester, where you can find boats and pushers and plenty of birds. 2. Good quail shooting and fair ruffed grouse shooting throughout Washington county, Pa.

B. D., Pittsfield, Mass.—Can any readers of the FOREST AND STREAM give me any information as to the best locality for moose and caribou in New Brunswick, or the address of anyone I can write to in regard to the same? Ans. The best locality in New Brunswick is the heights of land where the Miramichi, Tobique, Nepisiguit and Restigouche Rivers

have their sources. You can go from one river to another by short portages. By taking the Intercolonial Railway to Cnatham, Bathurst, or Matapedia, you can easiest obtain guides and outfits for the wilderness. There are not many good moose callers, hunting being usually practiced in mid-winter after snow falls. Inquiries at the points named—after your arrival there—will secure all the service you need.

J. W. H., Philadelphia.—I have a pointer dog puppy six weeks old that is troubled with a slight rupture (a little larger than a pea) at the navel. I cannot get bandages to stay on him, having tried nearly every plan. Now what I want to know is, whether he is likely to grow out of it, or if not, if it will probably prove a serious difficulty when he is large enough to go into the field? Ans. In a late issue of our paper you will find an able article upon rupture in dogs by Dr. Webb. It is impossible to say whether it will enlarge or not. We have had cases in our kennel which did not increase to a size interfering with the working of the dog. But as your pup is too young to break this season you will be able to see if he will be worth breaking next spring.

SUBSCRIBER, York, Pa.—I have a setter puppy, one of a litter of eleven, none of which have dew claws on the hind legs except mine. Not having noticed the fact when selecting him I now feel anxious to know, 1. Are dew claws on a setter characteristic of any particular breed? 2. Does or does it not show a strain of impurity in the blood of some of his ancestors? 3. When a gun is chambered to use either paper or brass shells which shell would be best in shooting with buckshot? Ans. 1. No. 2. It does not. 3. There is very little difference. We shoot paper shells altogether. Metallic shells are rather less expensive in the long run, but rather more troublesome, as they must be carried home and cleaned occasionally.

J. M., Baltimore, Md.—1. Can you let me know the pedigree of the imported English setter dog and bitch Rolla and Dora, said to be imported by a gentleman of Warrenton, Va., as I have a pup from the above dog and bitch, and would like to have her pedigree. Her color is liver and tan with tan spots over her eye. 2. What is the best age to break her; she is now six months old? Ans. 1. We have not the pedigree of the dogs alluded to, although there is a dog Rolla (not imported) in the Kennel Register. Mr. Luther Adams imported a bitch Dora. Your bitch is old enough now to begin her breaking; but she should not be worked hard before next November. One of her age, if skillfully handled, could be nicely broken during the coming shooting season.

F. D. S., Haverhill, Mass.—1. Will you be so kind as to inform me what breed of spaniel mine is, if you can judge from the following description: Length from end of nose to tip of tail, 38 inches; to root of tail, 26 inches; head, 7 inches; height at fore shoulder, 14 inches; age, 1½ years; color, liver and white, with very curly hair all over his head, ears and body. 2. I have the last three volumes of your paper. What will it cost me to have them bound? 3. Where can I get the arca nut you recommend in your columns? Ans. 1. Your spaniel is probably a cross of Irish water spaniel. The thoroughbreds are solid liver color. 2. \$1.50 per volume. 3. Have mailed to you the proper doses of arca nut with directions for giving it. It is the best known vermifuge for dogs.

W. H. S., Philadelphia.—1. Are Edwison C. Green's guns considered first class? I believe his works are at Cheltenham, England. 2. In the case of a medium shot would you get a choke-bore, or one with only one barrel choked? 3. How many of number 6 shots should a good choke-bore gun throw into a 30-inch circle at 40 yards, and how close would you want such a gun to shoot? 4. Is the Beach combination sight a good one to use for both target and hunting? 5. How close a target should a Frank Wesson rifle 44-100 calibre, 28-inch barrel, make at 100 yards? Ans. 1. Yes. 2. Neither; a cylinder-bored gun would be the best. 3. 250 pellets would be a good pattern with the regulation charge. 4. Yes. 5. It depends entirely upon the skill of the person shooting it.

PARAGON, Halifax.—I shall feel obliged if you will kindly tell me what I might reasonably expect to get—net—on New York for one of Messrs. Tolley's very finest make of guns, only two years old, and in perfect condition? It is a double grip, 16 gauge, of exceptional power, 6½ pounds in weight, with lock and stock fittings covered with the most beautiful "renaissance" engraving, I part with it only because I daily expect a "Paragon" snap action from them, and make it a rule never to shoot with two guns. Ans. Without knowing the first cost of your gun it is impossible to say what it will sell for. Mr. H. C. Squires, No. 1 Courtlandt street, this city, a large dealer in second-hand guns, tells us that there are none of that description on the market, and that he could get a good price for it.

V. M. W., Newark.—1. Will you please inform me the most direct route to Henderson Harbor? 2. Is the fishing for bass good in September? 3. Are the accommodations fair at the hotels, and do you know their charges per week for board? Ans. 1. Leave New York via New York Central Railroad, so as to arrive at Utica at noon; make immediate connection with B. R. Road to Watertown, and thence to Sacket's Harbor by railroad, arriving at 7 P. M.; thence by steamer to Henderson, or by the same train go on to Rome, connect immediately with Rome & Watertown Railroad get off at Adams, and take the stage over to Henderson, eleven miles. 2. Yes. 3. Hotel accommodations, Frontier House, good enough, at \$5 per week. Good boats, fishing gear and good oarsmen, are on the spot. Mr. Tyler will rent or sell as good boats as can be made, completely outfitted with minnow pail, frying pan, etc., etc., and will furnish flies, spoons, &c.

NORTHWEST, Milwaukee.—You would confer a favor on distant riflemen if you would publish the date on which the International rifle match at Creedmoor comes off, and also state if any general rifle competition is to be held at the same time. Those who desire to attend may need a short time to arrange their business for leaving. Ans. The International matches commence on September 12th with the short and mid-range matches. On the 13th and 14th the grand long-range match for the championship of the world will be shot. The regular fall meeting of the National Rifle Association will commence immediately upon the conclusion of the long-range match and last five or six days. The short and mid-range matches are open to all comers. You can procure programme by addressing the Secretary of the N. R. A., No. 23 Park Row, this city.

New Publications.

BOOKS RECEIVED.

ELEMENTS OF LATIN GRAMMAR; by Gustavus Fischer.
ELEMENTS OF ENGLISH GRAMMAR; by S. A. Whitney.
THE MASK OF COMUS; by John Milton. Edited for the Use of Classes in Reading, etc., by Homer B. Sprague.
SCHOOL MATERIAL; an illustrated catalogue.

We have received the above from J. W. Schermerhorn, 14 Bond street, New York, publishers of school books and apparatus, each of which deserves a longer notice than our space allows. Prof. Fischer is well known as a Latin scholar, and in this neat little book seems to have secured what he aimed at—a concise statement of those rules only indispensable to a general knowledge of the Latin language. The best elementary instruction in Latin is that which enables the student to read and understand the classical authors in the shortest possible time. This the author had constantly in view in preparing this work, which teaches Latin grammar and Latin reading at the same time. It consists of a grammar and of a reader, containing a connected Roman history up to the battle of Zana. The rules are brief enough to be easily memorized, plain enough to be easily understood, and so thorough as to impress a true image of the language on the mind of the student. The whole method is calculated to interest.

Mr. Whitney introduces his grammar with the motto "It is certainly time that our language should assume its majority, and be dealt with on its own terms." In his preface he complains that grammars have been

encumbered with irrelevant and weighty material which he discards, assuming that in a concise, elementary work grammatical etymology, or accidence, and syntax should be the sole contents. Points of difference between this and other grammars will be found on nearly every page. In subject matter, arrangement, classification, definitions, illustrations, exercises, the experienced teacher will see at once that new and striking features pervade the volume. Possibly the presentation of certain subjects will appear not only in a new light, but in a more satisfactory light than heretofore. On the other hand he may miss some grammatical landmarks that he has deemed essential. Notably among these are omission of the "potential" mood and of the "passive voice" from the inflection of verbs. These have been rejected, the author says, only after mature deliberation and under a firm conviction of the impropriety of retaining them. The work throughout seems to be practical and progressive.

Milton's grand old poem, Comus, has been selected by the able editor from among the "Masterpieces of English Literature" to have bound up separately for class use in reading, analysis, parsing, and rhetorical criticism. It is neatly bound in a stiff paper cover, and finely printed. At the bottom of each page is a list of synonyms and explanatory notes, and the whole is preceded by a brief sketch of Milton, and an account of the origin of the story. It ought to promote careful study of the poet.

Schermerhorn's Catalogue is an elegantly printed and illustrated list of their immense stock of books, maps, musical apparatus, school furniture, and all sorts of educational appliances and "play-ground fittings." It is astonishing how much ingenuity, skill, and grace is combined in the manufacture of school material and instructive toys. It is a compliment to every one that of the means for educating Young America this firm should have built up so large a business despite great competition.

ORNITHOLOGY: By H. W. Henshaw; being Vol. V of the reports of the Explorations and Surveys west of the 100th Meridian: Washington, 1875.

This survey, better known as the "Wheeler Expeditions," in distinction from the other surveys, is authorized by Congress to point the results of its work in six quarto volumes. Two of these have already been published, and the others are in preparation. Lieut. Wheeler's parties have always afforded opportunities for scientific collecting, and judging by the volume before us, the high expectations of naturalists will not be disappointed in the presentation of the new information gathered. Mr. Henry W. Henshaw, the author of the present volume upon the Birds of the region explored by the Survey—south of the 40th parallel and west of the 100th meridian—is one of that coterie of ornithologists who have gathered about the Nuttall Club in Cambridge, and has been with Lieut. Wheeler since 1871, at which time very little had been done. The preface details his movements since that time, the country in which collections were made and the disadvantages, bearing witness to the enthusiasm and zeal with which the author worked. It was no uncommon thing for him to prepare the skins of a whole day's shooting after dark by the light of the camp fire or the hardly more satisfactory flame of a flickering candle. The time of year was often unfavorable for seeing the birds at their best, and almost invariably too late for obtaining nests and eggs, yet over 3,000 bird skins, with a large amount of alcoholic material, eggs, nests, and skeletons accumulated from the four seasons' work. This included 296 species, many of which were new to our fauna, and some not previously described. Each of these species is recorded in this volume, accompanied by full notes of varying plumage, distribution and habits, as manifested in the southwest where many of our familiar birds appear under such a new guise as to deserve at least a new varietal name. Mr. Henshaw was particularly fortunate with the humming-birds, having found eight species within our borders; has straightened out the confusion among the western woodpeckers; and closely investigated the relations of the snow-birds in a masterly manner. One cannot open a page of this clear, elegantly printed volume without becoming interested in what the author has to say and the way he says it. We wish his notes—especially upon the nidification of the birds—were twice as copious; but remember the difficulties attending his study of them in the field. There are some errors of style which mars the delight with which we read. "Commence" for "begin" has more poor authority than good; quite Mr. Henshaw constantly uses in the sense of "very" or "considerable," when its true use is only to express completeness. But these and others have nothing to do with the great scientific merit of the work. The book is enriched with exquisitely executed colored plates drawn by Robert Ridgway of new birds, as follows:—

Thyrothorus bewickii var. *leucogast.* *Zonotrichia leucophrys* var. *intermedia.*
Coturniculus passerinus var. *per.* *Junco oregonus* var. *annectens.*
pallidus. *Junco cinereus.*
Pyranga aestiva var. *Cooperi* (male and female). *Junco cinereus* var. *dorsalis.*
Chrysomitris psaltria. *Poospiza belli* var. *nevadensis.*
Chrysomitris psaltria var. *arizonae.* *Cyanocitta ultramarina* var. *arizonae.*
Leucosticte australis (male and female). *Perisoreus canadensis* var. *capitatus.*
Myadestes occidentalis. *Asturna nitida* var. *paucula.*
Zonotrichia leucophrys var. *Gambeli.*

MAGAZINES.

The *Galaxy* for September will contain a biographical sketch of General Custer, written by Captain Frederick Whitaker of the cavalry service; also a continuation of General Custer's "War Memoirs." The publishers of the *Galaxy* received copy from General Custer just before his death, and his "War Memoirs" will be continued in several numbers of the *Galaxy*. Ex-Secretary Welles will also contribute articles in the next two numbers of the *Galaxy* on "The Nominations and Election of Abraham Lincoln." Also articles by Richard Grant White, Albert Rhodes and J. H. Siddons, together with several interesting short stories and poems.

Schermerhorn's *Monthly* is a magazine for parents and teachers issued from the publishing house of Schermerhorn & Co., 14 Bond street. The August number opens with a copiously illustrated sketch of a trip up the Hudson. Among the pictures is one of Audubon's house at Washington Heights. Other articles are on the alleged extravagance in school attire; "Curiosities of Language;" "The Results of Gramming;" "Phonology in the School-Room;" "The Uses of Exaggeration;" and miscellany.

—It is said that the money to turn the Mediterranean into the salt marshes and sand deserts of the interior of North Africa will be forthcoming, and that the work may be begun next year. If the drawing off of so much water from one place and depositing it in another don't destroy the earth's equilibrium and send us spinning obliquely through space instead of on our regular course it will be a grand thing, particularly if it does not spoil some of our harbors on this side.

A flash of lightning was seen to strike a flock of wild geese at St. Louis the other day, and one of them fell to the ground. On being picked up the goose was found to have a scarred and burnt hole extending from the back down through the body, there being no question but that the electric bolt passed through the flying bird. The feathers were somewhat singed.

—Mr. Darwin tells a story, as an example of the reasoning powers of a monkey that was scratched by a pet kitten. At first Jocko was immensely amazed. Recovering from his surprise, he set at work to discover the location of the claws. After a severe tussle he got the four feet of the kitten within his clutches, saw the nails thrust from their guards, and with the broadest grin of satisfaction he proceeded deliberately to bite the points off of each nail.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCUCLATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,

[Post Office Box 2332.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, AUGUST 17, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,

Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, August 17th.—Racing: Saratoga. Trotting: Utica, N. Y.; Lewiston, Me.; Point Breeze Park, Philadelphia; Mendota, Ill.; Lowell, Mass. Base Ball: St. Louis vs. Chicago, at St. Louis; Athletic vs. Mutuals, at Philadelphia; Louisville vs. Cincinnati, at Louisville; Madison vs. Jefferson, at Brooklyn; Alpha vs. Hudson, at Stapleton Flats; Our Boys vs. Enterprise, at Jersey City; Allen vs. Astor, at Jersey City; Alaska vs. Witoka of Brooklyn, at Jersey City; Chatham vs. Orange at Orange; Enterprise vs. Keystone, at Jersey City; Contest vs. Our Boys, Coney Island Road.

FRIDAY, August 18th.—Trotting as above. Base Ball: Alpha vs. Union, at Stapleton Flats; Nassau vs. Hudson, at Brooklyn; Alaska vs. Olympic of Paterson, at Jersey City; Monticello vs. Athletic of New York, at Jersey City; Monticello vs. Flyaway of New York, at Jersey City; Resolute of New York vs. Osceola, at Jersey City; Mutual vs. Witoka, at Brooklyn.

SATURDAY, August 19th.—Racing: Saratoga. Regatta, Beverly Yacht Club, Beverly, Mass. Rifle: Matches at Creedmoor and Glen Drake. Base Ball: St. Louis vs. Chicago, at St. Louis; Louisville vs. Cincinnati, at Louisville; Athletic vs. Mutual, at Philadelphia; Witoka vs. Contest, at Brooklyn; Putnam vs. Crescent, at Brooklyn; Our Boys vs. Goodwill, at Brooklyn; Nameless vs. Staten Island, at Staten Island; Osceola vs. Winona, at Brooklyn; Our Boys vs. Resolute, at Elizabeth; Contest vs. Alert of Greenport, at Brooklyn.

MONDAY, August 21st.—Regatta, National Amateur Association, Schuylkill River, Philadelphia. Base Ball: Chelsea of Brooklyn vs. Cricket, at Binghamton.

TUESDAY, August 22d.—Trotting: Pittsfield, Mass.; Gardiner, Me.; Earlville, Ill.; Lawrence, Mass.; Poughkeepsie, N. Y. Regatta, Schuylkill River, Philadelphia; regatta Flushing Bay. Rifle: American Team practice at Creedmoor. Base Ball: Cincinnati vs. Louisville, at Cincinnati; Chicago vs. St. Louis, at Chicago; Athletic vs. Boston, at Philadelphia.

WEDNESDAY, August 23.—Trotting as above. Regatta, Schuylkill River, Philadelphia. Rifle: American Team practice at Creedmoor.

SUBSCRIPTION PRICE REDUCED.

Inasmuch as in the general shrinkage of values, the cost of printing and of printing paper approximates to what it was before the war, while our subscription price is relatively higher than the rates then charged for similar publications, we have determined to reduce our annual subscription price to *Four Dollars* per year. We shall, therefore, credit with an additional quarter of a year all subscriptions paid since August 1st, 1876, and henceforth charge only four dollars for renewals. We trust the change will bring substantial evidence of a general approval.

Publishers FOREST AND STREAM.

—In New Zealand the Auckland Acclimatization Society is doing good work by the introduction of salmon, trout, and various birds into that country.

GAME PROTECTION.

THE NATIONAL CONVENTION.—The third convention of the National Sportsmen's Association will be held in Chicago, on the 29th of this month. A large attendance is expected, and a most interesting session. The business matters which may come before the convention, or which are open to their consideration, are of the most important description, not the least being the subject of National legislation regarding the propagation and protection of game. The officers of the National Association are: President, J. V. Le Moyne, Chicago; First Vice President, A. B. Lamberton, Rochester, N. Y.; Second Vice-President, Hon. E. H. Lathrop, Springfield, Mass.; Treasurer, R. R. Clark, Chicago; Recording Secretary, John B. Sage, Buffalo; Corresponding Secretary, W. F. Parker, West Meriden, Conn. The delegates from the New York State Association are: C. C. Morse, of Rochester; John J. Flannagan, of Utica; James Manning, of Syracuse; J. M. Wilmer, of Niagara Falls, and Col. Alfred Wagstaff, Jr., of New York.

NEW YORK, *Greenwood Lake*.—Pursuant to a call, an enthusiastic meeting was held at the Brandon House, Greenwood Lake, on Saturday last, and a Club organized under the name of the "Greenwood Lake Sportsman's Club." The following officers and trustees were elected: Hon. Smith Ely, Jr., President; Hon. Charles H. Winfield, Vice-President; Alexander Brandon, Treasurer; Wm. O. McDowell, Secretary. Trustees, Daniel E. Star, Remington Vernam, P. R. George, Willard Richards, D. B. Grant, H. C. Cook, Thomas Kinsella, Mr. Williams, L. H. Ward, Mr. Skiddy, E. J. Lewis, Dr. O. Olcott, Wm. Treadwell, Daniel Jackson, George Gifford, A. H. Vernam, S. B. Stewart, E. P. Terhune, D. D., E. T. Waterstown, L. Y. Jenness, John Gilsey, Wm. O. McDowell.

Arrangements have been made to supply a man by the year to act as Game Constable and Deputy Fish Warden, and to place at the outlet a dam or wire screen to prevent the fish leaving the lake. The Club intend to commence building immediately a fine club-house. The membership of the Club is made up almost entirely of gentlemen of means in and around New York, who have long known of the splendid fishing in Greenwood Lake, and the hunting in the mountain wilds surrounding it.

PENNSYLVANIA.—The FOREST AND STREAM Sportsman's Club of Scranton, Pa., was recently the successful plaintiff in a case of violation of the game laws in that vicinity. It seems that on the 5th day of July, while John Griffin, near Munmore, was sowing buckwheat, he heard shooting in the woods hard by, and upon going to see what it was all about, saw a little spaniel bringing a bird in its mouth, which proved to be a pheasant (ruffed grouse). Then he encountered three men, when considerable talk ensued upon taking game out of season, etc., the parties claiming that one of them, Miller, had shot the bird by accident, Taffy, (John Matters), agreed to take it and bury it at once. Before the Alderman, Taffy made out a very good case for himself and his friends—proved that he was as deeply interested in enforcing the game laws as anybody—was a sportsman himself and condemned anything that looked like poaching—that he was rather glad to have been arrested in this case, martyred, as it were, in order to prove the zeal of those who would punish offenders of every class. He felt sorry for his friend Miller, who was so unfortunate as to have such bad looking evidence brought against him, for it was all a mere accident. The court revolved the matter over and then fined Miller \$10 and put the costs, \$4, upon Taffy, while Roe, whom they call "Dickey" was discharged, being regarded as only a looker on. This case, as well as those previously conducted, proves that the FOREST AND STREAM folks are awake to their duty and that it will be difficult for any violation of the game laws, however secluded it may be, to escape the watchful eye of the members, agents or friends of the club.

VIRGINIA.—A society to be known as the Game Association of the County of Brunswick has recently been formed, with Capt. D. T. Payner as President, and Mr. Warner Lewis as Secretary. The objects of the association, viz: the better preservation of game and the enforcement of the game laws, will be strictly carried out.

—A strict enforcement of the game laws and the exaction of the penalties attached thereto is a very good thing, but there are instances where "justice should be tempered with mercy," as in the case of a raftsmen near Pembroke, Ont., who was attacked last week by two lynxes, but after a desperate struggle killed them. On exhibiting their pelts at the town he was promptly fined \$40 for killing the animals out of season.

—An enthusiastic meeting of sportsmen was held in Capt. Townsend's rooms, New Brighton, on Wednesday evening last, and an association formed to be known as the Forester Sportsman's Association, of Beaver County, Pa., with the following officers: President, Dr. W. H. Grim; Vice-Presidents, Prof. Van Baker, Wm. Elverson and Geo. Woodruff; Secretary, J. P. Edgar; Treasurer, J. J. Snellenburgh; Directors; Prof. Baker, Wm. P. Sherwood and L. Oatman. The purpose of the association is to protect game and fish, and enforce the game laws in that part of the State.

GAME PROTECTION IN NOVA SCOTIA.—The report for this year of the Game and Inland Fishery Protection Society of Nova Scotia contains the constitution and by-laws, the amended game laws now in force in Nova Scotia, and the annual report of the Council of the society.

The Council express themselves as satisfied with the operations of the past year, and the general working of the restrictive law. Moose, for instance, are again becoming plentiful in their ancient haunts, and are tame. It is important to consider the best measures to be adopted after

the expiration of the present prohibitory law in September, 1877, which, while they will allow legitimate and reasonable license in the killing of these animals, will at the same time avoid those excesses which have necessitated the passage of the present law. The committee of the Council appointed to prepare certain amendments to the law, which experience have proved to be necessary, have performed their duty, and in the last session of the Legislature these amendments became law. They are principally as follows:—

1. Restricting the number of caribou to be killed by any person or *hunting party*, in any one season, to five.
2. Altering the clause relating to the appropriation of the fines—so as to make one-half payable to the informer and the other half to the Commissioner or Warden, *if prosecuting*; but if any other person prosecutes, then that half shall go to the society. This was found necessary to prevent collusion between informers and offenders.
3. Providing that forfeited moose meat, instead of being destroyed, should be given to the poor under certain restrictions.
4. Providing an additional fine for hunting with dogs.
5. Extending the penalties of cap. 73, Rev. Stat., to the snaring and taking alive of song birds, and the destruction of their nests.
6. Appointment of a Chief Game Commissioner.

Two matters engaged the attention of the Council during the past year which have an important bearing upon the successful working of the new law, viz: the obtaining an additional number of Wardens, and a grant of a sum of money to defray expenses of prosecutions, where the offenders were too poor to pay, or where the prosecutions failed from no fault of the Commissioners or Wardens. Being met in a liberal spirit by the Government, nine additional Wardens were appointed, and assigned where most needed. The Government also agreed to pay the actual expenses of prosecutions in the cases referred to, upon the certificate of the Justices who tried the case, and upon the recommendation of the Chief Game Commissioner and the President of the society. This will remove one great cause of complaint on the part of Commissioners and Wardens, some of whom the Council know have spent a part of their meagre pittance in unsuccessful attempts to obtain convictions.

The old Commissioners and Wardens are all reported as zealous in the discharge of their duties, but many difficulties meet them in their efforts to punish offenders to the game laws. One of these is the reluctance of persons to give evidence in the courts from fear of personal violence from the accused. There appears to be no remedy for this evil, except a determination on the part of the officers of justice to punish any attempt at retaliation from those who have been convicted. The imprisonment of convicted offenders, even for a limited period, the Council are of opinion, has had a salutary effect in enforcing the observance of the law.

The protection of Inland River Fisheries (never within the control of the society since 1868) has been more than ever withdrawn from its supervision by the appointment of an Inspector of River Fisheries for this province by the Dominion Government—an office which has been secured for Nova Scotia mainly through the exertions of the society. The fact of the formation of an International Association for Protecting Game and Fish in this city, is alluded to, and the election of the President and Secretary of the Nova Scotia Society to the Advisory Committee of the International Association is announced. The Council say:—Co operation with kindred societies in the United States and the other Provinces of the Dominion will, no doubt, have a beneficial effect in mutual encouragement and in stimulating renewed exertions in the common interest we have in view.

JAPANESE LIBERALITY.—The wide difference, every day growing wider, between the national spirit of the Japanese a half century or less ago, and to-day, is illustrated in a thousand ways at the Centennial Exhibition. Among other signs of a breaking down of the old pride and exclusiveness, may be mentioned the fact that they have requested Prof. Henry Wurtz of Hoboken, one of the judges in pottery, to make chemical analysis of the earthen which they use in the manufacture of their porcelain; and have been at great pains to furnish him with adequate examples of all the materials, and full information as to their geological position, and the processes of manufacture. Prof. Wurtz hopes for important results from this investigation, which is of high economic interest.

PROF. HUXLEY.—Prof. Thomas Huxley, the eminent English biologist, arrived in this city last week, and was for several days the guest of Prof. Youmans, editor of the *Popular Science Monthly* and Mr. Appleton, his American publisher. He then went to New Haven, where he is the guest of Prof. O. C. Marsh, and will visit Boston. He intends to return to this city in September, and, contrary to his plan, will lecture here on September 18th, 20th and 22d on "The Direct Evidences of Evolution"—a subject with which he is fully conversant, and upon which everybody will be anxious to hear him speak.

—Two lively young seals were received on Thursday last at the New York Aquarium from Newfoundland. Mr. Coup informs us that it will be two months yet before the aquarium will be open to the public; the amount of labor necessary in the preparation of the tanks and getting everything ship-shape is enormous, but the work is progressing rapidly and successfully.

—We commend to our readers' attention some philosophy contained in the closing paragraphs of our leading article this week—"Moosehead twenty-five years ago."

—Prof. C. G. Ehrenberg, of Berlin, the distinguished microscopist, died recently, at the age of eighty-one years.

OUR CENTENNIAL LETTERS—NO. 9.

THE collection in Agricultural Hall is made upon the most liberal construction of the term, and embraces, besides the machines, tools, and products of husbandry, all that pertains to woodcraft, the training, stabling and feed of stock; the edible and useful products of the farm, the forest and the water; food, pelts, hides, preserved provisions, furs, leather; the common, rarer, and choice woods of all countries; the hunter's spoils from the four quarters of the globe; vegetable extracts, dyes, tobacco, medicinal plants; materials for paper and for textile fabrics; and also the more elaborate products, wine, whiskey and vinegar. Yet, among them all, there is not much which I can properly assume to be of special interest to readers of *FOREST AND STREAM*; that is, leaving out the champagne and cigars, vast quantities of both of which tantalize the eye in this building. I think I stopped longest in the Brazilian inclosure. The articles are displayed on counters around the space allotted, in pyramidal structures, and in trophies of Indian warfare on the posts and suspended from cords. The effect is very fine. The most striking feature is perhaps the skins of wild animals—the jaguar, puma, ant-eater, peccary, ocelot, badger, snakes, and alligators, and many small animals not so familiar. Beneath the spoils of the denizen of the trackless forest pyramids of timber from the trees themselves, all colors and variations, hard, soft, free, tough; boards from the Brazil pine four feet wide and four inches thick; woods like ivory, like tortoise-shell, like copper. There are probably one thousand specimens of wood in the collection, not the least curious of which is a piece of one of the immense climbing parasites which eventually destroy their supporting tree. There are three kinds of vegetable fibers in Brazil which can be made useful in the arts, and can be supplied in great abundance at a comparatively cheap rate. One grows on trees 70 feet high, and the other two on bushes from 12 to 20 feet high. The fiber is called cipo or vegetable silk, and is used in Brazil for mattresses and pillows. It is found to work up readily into paper with small expense for chemicals, and to be especially adapted by reason of the strong silky threads for bank note paper. On the counters and shelves are collections of fruits; the cocoa-nut in its husky pericarp, the same denuded, and again the shell made into cups; the cones of the gigantic Amazon pine, the nuts from the same, and a species of pine wood; palm leaves, and the hats, baskets, bags, and twine made from them; caout-chouc in its milky, gummy and colored condition; in bottles and slippers, the gum shaped by congealing on clay models, and a host of other products. Their shape and color and smell are of the wilderness, and suggest vividly the deep solitudes of the upper Amazon or Madeira Rivers, where the scream of a parrot, or the splash of a turtle, as it slips into the water to escape the Indian's long arrow, alone breaks the silence. Among other industries, that of sericulture has a place in Brazil, and one glass case contains twigs of the native tree with the cocoons of the silk worm still attached, the cocoons prepared for unreeling, and the silk unwound. A second case portrays the history of one of their native silk producers—the mirror-bearing butterfly (*Attacus aurota*), which is abundant in nearly all parts of the Empire. In general color it is light varying brown, with triangular and embroidered spots, and scalloped ornaments of a silvery lustrous white, to which it owes its name. It is stated that this butterfly produces in each generation, on an average, 240 cocoons of silk, each weighing $2\frac{1}{2}$ drams, and containing 30 grains of good silk, strong, elastic and continuous. The advantage of the culture of this species, it is said, lies in using all the butterflies contained in the cocoons, without the necessity of destroying the silk for the winding up. Brazil's exhibiting also, in the Main Building, is particularly noteworthy, and attracts attention from everyone; but there is not much there for us except some cases of very brilliant, artistically stuffed birds, and the exquisite feather flowers which excite so much admiration. They are delicately beautiful flowers and leaves, clipped out of gorgeously colored feathers with scissors, and as far surpass—to my eye—the best wax work, as diamonds do glass. The presence of its Emperor has made the Brazilian area the center of more than ordinary regard, and, like its genial ruler, this "lay-out" of the Empire seems to have made the best possible impression upon all visitors. There are many reasons why Americans should rejoice in this, and seek to weld more firmly the bonds of friendship between the two countries.

Scientific study has been largely advanced in Brazil during the past few years, by the labors of a well-known geologist from Cornell, Prof. C. Fred. Hartt who, after repeated visits of exploration to the Amazon, was made Government Geologist two years ago, and is conducting a Geological Survey of the Empire at present under the most encouraging auspices. His assistants are Mr. Richard Rathbun, of Boston, and Mr. H. Derby, of Ithaca, N. Y., besides a staff of Brazilian gentlemen. Pictures of their work are hung in the Photographic Hall. Prof. James Orton, of Vassar College, has also made extensive scientific journeys on the Amazon.

The Argentine Republic, which is just now in a most prosperous condition, is fully represented. Her broad pampas are roamed over by enormous herds of semi-wild cattle, and hides are a staple export. These and the leather produced from them are shown in large variety and of great size. The office of the agent is a rude lodge of "bull" hides. At the entrance stands a tall trophy of bows, arrows with points of hard wood 15 inches long, spears, native clubs, carved powder-horns, etc. Several miserably stuffed animals are wretched delegates from her

fauna, the most noticeable among them being the cavy, agoutis and armadillos.

Peru seems always to have been known and thought of as a country of mines and Incas, and not much else. This reputation is to a large degree sustained by her appearance here, although she brings the proofs of many advanced industries, for which the world has not given her credit enough perhaps. An exceedingly large collection of minerals has been sent, and they appear to be judiciously chosen; but I do not pretend to have a critical eye. Her silver mines still yield great returns, and would far greater if enterprise and ingenuity could get hold of them, for there is little hope of making much out of the average lazy Peruvian intellect. Their negligent way of doing things is shown by the confusion in which all their exhibits are—thrown hither and yon, as though just flung out of the boxes; and in the almost total absence of labels, which renders their extensive lot of relics of a past age almost entirely unintelligible, or at least useless in a scientific point of view. It is to be hoped this will be remedied before the Exhibition closes.

British Guiana, the land of Cayenne pepper, is another South American State on exhibition here. Sugar, rum, chocolate, ginger, pepper, etc., are familiar objects, and the zoologist will be attracted by a row of good preparations of serpents in the spirits—among them a rattle-snake under the very appropriate name of "bush-master." The secret of the fine show made by this small colony is found in the fact that its settlers are Englishmen. We have seen the splendid displays of the British Colonies in the East. Their colonies in the west are equally well represented, and contrast very favorably with the West Indian Inlands under Spanish and French rule. Take Jamaica, for example—I wish I had space to do her exhibition justice. The many rich tropical woods from her interior forests, highly polished, and also in the bark, attest her resources in timber; and not that alone, for these same trees bear food and medicines which supply the world, and are here shown in their raw state. Such are, sarsaparilla, chin-chona (quinine), cassia, bread fruit, pomegranate, coffee, gums and oils of many kinds, betel nuts, and a host of other things. The areca-nut—blessed by dog-owners—is a chestnut-shaped fruit, inclosed in a white, fibrous "shuck." The various vegetable products, too, are all represented, garden fruit, bananas and bread-fruit, cocoa, vanilla, yam-flour, starch, various dyes, etc., etc. Out of the beautiful fibrous inner bark of the lace tree, exquisite fans, handkerchiefs and bonnets are made; and out of the straight or curiously twisted llanos, quaint canes or serviceable walking sticks are cut. The forest is brought, in epitome, to our doors, and even the ferns under the trees—93 species prettily labeled—are not forgotten. You may say that I have mentioned a very minor part of the proper display of a country. It is true, but all the rest—mechanics, trades, textures, building and raw material for manufacture in every branch of art and industry, is represented on as large a scale. Jamaica is not behind the other colonies of the Crown of St. James.

Next door to her a vast quantity of corals attracts my eye, and stepping over I find myself in Bermuda. Three sides of her space are bounded by a reef, so to speak—heavy base corals from the foundation, round star-pitted "heads" from deep water, widely branching madrepores, convoluted brain-corals, laminated fungias, slender and delicate miliepores, and broad sea-fans which shade the reef with their rosy foliage. These corals are accompanied by many shells from that favored tropical sea, and all merit careful study. It is rare that so large and good a collection is seen. The long, wand-like "sea-rods" (*Plexaura flexuosa*), especially, are uncommon in collections, and the fine ones here should be attentively observed. This display, no doubt, owes its origin to Governor Rawson, who is an enthusiastic and astute scientific man, well known in Europe. Their neighbors, the Bahama Islands, also have sent a good many shells and corals, but none so valuable or beautiful as Bermuda's. There is a lack of scientific appreciation in the arrangement which mixes old denuded sea-urchins and pieces of crabs with shells, and labels the whole *Mollusks*. Some tortoise shell from the loggerhead in rough is interesting; with it as manufactured we are already familiar. Another Island not far off is Trinidad, but its principal exhibit is in the shape of basket work and cane splint weaving, a great variety of which we have just left behind us in the other Islands of the Antilles.

SHOOTING PROSPECTS.—It is with pleasure that we can say to our shooting friends that game is more abundant throughout the length and breadth of the land this season than it has been at any time during the past ten years. We have letters of invitation from our shooting friends from all sections of the country assuring us that owing to the open winter and the very favorable breeding season, the birds have done their duty in the family way, and we may depend upon excellent sport. The only trouble with us is too many have spoken at once, yet we intend that not all the birds shall reproach us for want of proper attention.

FLORIDA MIDSUMMER TEMPERATURE.—Our New Smyrna (Fla.) correspondent gives the mean midday temperature at that place for July at 88 degrees; mean temperature at 9 P. M., 77 degrees. Highest for the month, 93°, or 10° lower than in New York City; lowest, 74 degrees. At no time during the month did the thermometer indicate higher than 79 degrees at 9 P. M., so that with a refreshing ocean breeze during the day, and tolerably cool nights, a midsummer residence on the coast of Florida would be far more enjoyable than in this latitude.

—Among the most popular of the hotels at Saratoga is the Clarendon, under the proprietorship of Mr. Chas. Leland, of the Rossmore House, of this city. It is charmingly situated near the principal springs, and is frequented only by the best class of people.

—Two manatees, a cow and a calf, are offered for sale by a gentleman residing at Fort Capron, Florida. The sum of \$1,500 is asked for them.

—The subscription price of *FOREST AND STREAM* has been reduced to \$4. Twenty-five per cent. off for Clubs of Three or more.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

THE "AMERICA" CUP RACES.

The agony is over, and the piece of silver plate which has caused so much wrangling, so much letter writing, and so much discussion, remains in this country. Our Canadian friends who, from their own straightforwardness and courtesy were met in a like spirit and granted every concession, have been no more successful than Mr. Ashbury, who demanded much that was not in the bond, and received but little. That the race of Friday was a surprise, and that the Countess of Dufferin is a remarkably fast and able boat, especially in a light breeze, no one who witnessed the race will deny. Indeed, notwithstanding that we believe the Madeleine to be the fastest vessel under any conditions, had it not been for the error made by the Countess' pilot in keeping over on the west bank in the full strength of the tide, while the Madeleine was in the slack water of Gravesend Bay, the yachts would have been much nearer at the finish. The real beating was done on the run home, before the wind, and here the trained crew of the Madeleine handled their sails in the most admirable manner, while on board the Countess the "kites" were not set with the rapidity necessary in a close race, and although the "dimity" was there in like quantity, it was not made to do such good service as on board of her antagonist. Of course Saturday's race, outside, settled the question of superiority, a difference which we believe would have been more marked had there been a "breeze of wind," for, as these races were sailed mostly on an even keel, we believe that with scuppers under, the faulty quarters and stern of the "Countess" would have left her far behind her almost faultlessly modelled antagonist. In such wind as there was the Canadian yacht presented an entrance as clear and smooth as could be desired, going through the water gracefully and without fuss or drag. Although not successful as far as the cup was concerned, the Canadians can congratulate themselves upon having produced a remarkably fast yacht; one which, in her first attempt, has done herself no discredit. For which of our crack vessels has distinguished herself in a first effort? Almost without an exception they have required lengthening, cutting down, hippling, or some alteration to bring them to their best condition. So it may be with the Countess. The result of the late matches may have been to show her owners what is wanted, and we expect yet to see her leading a fleet past the home stake boat.

THE FIRST RACE.

The course for the first race was what is known as the inside course of the New York Yacht Club, being from off the club house at Staten Island to and around buoys Nos. 8 $\frac{1}{2}$ and 10, off the Southwest Spit, thence to and around the Sandy Hook Light Ship, returning over the same course, but finishing just outside the Narrows. The scene at the starting point was very animated. The wind was light from the south, and the tide running flood. Yachts of every size and description were cruising about, and a large number of excursion steamers fully loaded, and with steam whistles charged to the screeching point, were on hand. At 10.55 the first signal was given from the judge's steamer to prepare. The Countess was then standing in towards the line, but hauled her head sails to windward and lay to for the word. The Madeleine was at anchor, with fore and mainsails and main club and fore working topsails set, but got her anchor and stood for the line, and when the signal was given to start she was near the line, and went about and stood off again. Twice the yachts stood for the line ready to cross, but a small sloop yacht being in the way, they were obliged to go about again. Finally they came, nearly side by side, but the Countess was obliged to luff to clear a brig at anchor, and the Madeleine being to windward becalmed her sails and crossed the line first under good headway, while the Countess was nearly at a stand still. There was no time, however, for another start, so the latter went over, the times being: Madeleine, 11.16.31, and the Countess, 11.17.6. Both were on the port tack, standing in for the Staten Island shore, so the stretch was a short one, the Madeleine tacking at 11.18, and the Countess a minute later. The latter was carrying fore and mainsails, club main-topsail, and working fore-topsail, jib, flying jib and jib-topsail. The Madeleine was under the same canvas, with the exception of the jib-topsail; in going about she set a working main topmast-staysail, which was almost immediately taken in again as it did no good. At 11.29.30, the Madeleine being well over on the Long Island shore, tacked again, and the Countess followed suit. On this tack it was very perceptible that the American yacht was sailing the fastest; she tacked again at 11.38, but the Countess kept on long enough to break tacks with her opponent. The Madeleine made one more short tack, as did the Countess, the latter passing far enough astern to show that the Madeleine was gaining on her. The latter now made a long stretch way up into Gravesend Bay, and when she went about again was flying by the Coney Island shore, out of the tide, like a race horse. In the mean time the Countess had stood on the opposite tack, way over on the west bank, wherein we think her pilot greatly erred, for he was contending with a strong tide. When the yachts again crossed, the Madeleine was at least a mile ahead, and the race, barring accident, seemed a foregone conclusion. Both yachts now made a long stretch, to enable them to pass to windward of buoy No. 10, which they did, the Madeleine at

1.19.19, and the Countess at 1.26.32. Both had to make a short tack to weather buoy 8½, and then another long stretch outside the Hook. Here the Countess appeared to be sailing remarkably fast. The water was perfectly smooth, and there was a nice breeze. At 1.54 both yachts tacked to the southward and westward, and again at 2.10 to the eastward. The Madeleine stood on until 2.41, much longer than was necessary, when she came for the light-ship, her club fore-top-sail having been set when last in stays. At 2.51.52 she rounded and started on the home journey, setting balloon jib and immense main-topmast-staysail in a very expeditious manner; her mainsail was jibed over, and with all kites set she started on the home-stretch. At 2.56.33 the Countess rounded, but canvas was not put on her as rapidly as on the Madeleine. Her main boom was kept on the port side, and the foresail winged out, but as this did not seem to work the main boom was jibed over, and the same canvas set as on the Madeleine. The run home was uneventful. At the Hook the Madeleine had gained three minutes, and at buoy No. 10 was nine minutes ahead. From this time there was but little change in their position, the Madeleine crossing the line at 4.41.26, and the Countess ten minutes and a half later. The following table shows the result:

Name.	Start.	Finish.	Elapsed Time.	Corrected Time.
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Madeleine.....	11 16 31	4 41 26	5 24 55	5 23 54
Countess of Dufferin....	11 17 06	4 51 59	5 34 53	5 34 53

The Madeleine, therefore, wins by 9m. 58s. actual, and 10m. 59s. corrected time.

THE SECOND RACE.

The course for this race was an outside one, being twenty miles to windward from Sandy Hook and return. In the early part of the day, a heavy fog hung over the Bay, and as there was no wind, it seemed highly improbable that any race would be sailed. At ten o'clock, however, the sun had eaten up the fog, and a light breeze springing up from the southeast, there was more prospect of a race, and the Committee Steamer taking both yachts in tow started for Sandy Hook. At half-past eleven the yachts were cast off and the steamer taking up her position gave the preparatory signal at 11.52, and at 12.2 the starting. The only other yachts present were the schooners Wanderer and America, the latter having been towed down, and apparently in something of racing trim. Her performances during the day indicated that had the duty of protecting the cup she once so gallantly won been delegated to her, it would have been in perfectly safe hands. The time limit had nearly expired when the yachts came for the line, the Madeleine crossing first at 12.17.24, and the Countess at 12.17.58. Both yachts started on the starboard tack, the Madeleine apparently going the fastest through the water, but when they were well outside the Hook with a fresher breeze, the Countess drew up again. Both yachts were carrying the same sail as on the preceding day. The tack was a long one, and the positions unchanged until the Captain of the Countess kept his yacht a better full, going faster through the water until she was abeam of the Madeleine but to leeward. Had the wind continued more to the eastward, now the Countess would have had a decided advantage, but it remained steady, although somewhat fresher. The America was sailing remarkably well, being to windward of the entire fleet, while the Wanderer had dropped far astern. It was not until 3.19 that the Madeleine tacked, the Countess almost immediately following suit. At 4.42 the Madeleine again went in stays, and again at 4.55, being able then to weather the buoy, which the judges steamer had anchored, after running the necessary twenty miles to windward. At 5.1.52 she rounded in splendid style, and again the kites were spread for the run home. It was 5.13.41 when the Countess rounded, the America having gone around but three minutes behind the Madeleine. On the run home, which was without incident, the Madeleine increased her lead, and at 7.37.11 passed the winning line. The America arrived at 7.49, but it was not until 8.3.58 that the Countess passed, the wind having fallen light just before the line was reached. The following table gives the result:

Name.	Start.	Finish.	Actual Time.	Corrected Time.
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Madeleine.....	12 17 24	7 37 11	7 19 47	7 18 46
Countess of Dufferin....	12 17 58	8 3 58	7 46 0	7 46 0

The Madeleine thus beats the Countess by 26m. 18s. actual, and 27m. 14s. corrected time. The Madeleine having won both races, no third race is necessary.

A RUSSIAN YACHT.—There is at present anchored in our bay a Russian yacht, or at least a yacht sailing under Russian colors, for the Zara is no other than the Livonia, the famous schooner with which Mr. Ashbury attempted to carry off the America cup. It is rather a singular coincidence that Mr. Ashbury himself should have arrived here almost at the same time as his old yacht. The great yachtsman is now en route for California, Japan, and China. The Zara is the property of Count Stroganoff, of St. Petersburg, who, with a party of friends is visiting the Centennial.

THE DORY "CENTENNIAL."—It will be remembered that on the 15th of June last, an adventurous sailor of Gloucester, Johnson by name, started to cross the Atlantic in a common fishing boat or "dory." He has been spoken repeatedly, the last time almost at the completion of his journey. On every occasion he reported "all well," and wanting nothing. His record since sailing is as follows:—Sailed from Gloucester, June 15th. Spoken June 22d about 18 miles west of Cape Sable. Put into Barrington, N. S., June 25th, to change ballast. Sailed from Barrington about June 30th. Spoken July 2d, by steamer Amerique, in lon. 62.23. Spoken July 9th, in lon. 50.29 (?). Spoken by steamer St. Louis, July 14th, in lat. 43, lon. 47. Spoken July 19th by steamer Greece, in lat. 46, lon. 39. Spoken by steamer Mosel, July 23d, in lat. 46.54, lon. 35.22. Spoken August 2d, in lat. 48.49, lon. 16.09. And again on the 9th inst., she was spoken by the ship Defiant, fifteen miles off Tusker, two days before the ship reached Liverpool.

Later.—A dispatch from London dated August 12th, says:—The dory "Centennial" put into Boscawen, Pembrokeshire, Wales, on Saturday, for provisions, and then proceeded for Liverpool. Johnson reports that the "Centennial" was capsized once during the voyage, but he succeeded in righting her.

BOSTON YACHT CLUB.—The annual regatta of the Boston Yacht Club, Commodore Arthur Cheney, will take place off their club house at City Point, South Boston, on Monday, September 11th.

BEVERLY YACHT CLUB.—An interesting regatta will be sailed off Beverly, on the 19th inst., under the auspices of this Club. The prizes are silver cups, presented by Wm. Sohler, Esq., and the entries are limited to yachts of 30 feet and under.

—A race is to be sailed at Chicago on the 26th inst. between the yacht Ina, well known on Lake Ontario, and the Frolic, formerly the Lena, of Detroit, now owned in Chicago. As the Ina flies the Dominion flag the race will be of great interest. The race or races—for it is to be the best two in three—will be sailed fifteen miles to windward and return, the stakes to be \$1,000 a side, and the Ina to receive \$200 for expenses; no restrictions as to canvas, crew, or ballast, except that the latter must be brought back, and if demanded, weighed.

A CANOE TRIP.—Mr. W. L. Brooks, owner of the yacht Charlotte, of Stamford, Conn., reported at Newport last Friday, writes us as follows from New London:—

"A pleasant incident of our cruise occurred this A. M. A canoe was seen making its way across the bay. Upon hailing, she proved to be the M. Eugenie, and in the hands of Chas. F. Monroe, of New Bedford, is making the trip from New Bedford to Philadelphia. He is in hopes of arriving about the 20th inst. The canoe is of canvas, and was built by Mr. Monroe. Mr. M. is to be the guest of the Undine Club while in Philadelphia. He is cordially received, and enjoying the trip highly. I took the liberty of inviting him to call upon you in New York. W. S. B."

CENTENNIAL ROWING NOTES.

PHILADELPHIA, August 14th, 1876.

EDITOR FOREST AND STREAM:—

To-day brings the first of the arrivals (except the Cambridge) for the regatta with Yale—the Atalantas and the London Rowing Club crews with the boats arrived to-day. The former will be the guests of the University Club; the Atalantas are quartered with the Quaker City, and the Londoners with the Undine. The latter will, if their rowing equals their physique and reputation, prove a hard crew to beat. They bring a full complement of boats, of which we know nothing, as they are still in their cases. By to-morrow they will probably be rowing. The Cambridge men are, and for some time have been using their racing "ship." Now, that Jameson has recovered from his illness, they are sitting in the boat as they intend rowing. They have much to do yet before they do their best, and although improving are not nearing perfection as fast as expected. The Dublin men will probably be in New York to-morrow, and will come on here at once. They will make their boating headquarters at the Bachelor's Boat House, and will be the personal guests of Commodore Ferguson. Both Mr. A. and G. A. Pentland, who were to have been with the crew, were on account of sickness prevented from coming. Mr. Geo. H. Ferguson will pull bow, and the younger of the Barrington brothers comes as substitute. Columbia College have sent word that they will be on hand to-morrow. They will be met and received by the Malta Club, who will look after them during their stay. On the 22d the Amateur Association Races will begin, and several of the Clubs entered for the International races, will no doubt determine whether to row or withdraw—when they find what showing they have made in the National.

We have the official list of entries, but it came to hand too late to be printed this week.—ED.

REGATTA AT RUTHERFORD PARK.—A regatta was held on Saturday last, on the Passaic River, in front of the hotel, at West Rutherford Park. All the races were a mile straightaway. The races were held under the auspices of the Passaic Rowing Association, and representatives were present from many of the prominent rowing clubs. The first run was for four-oared shells, with the following entries:

Triton Boat Club—Newark, N. J.; crimson: S. A. Smith, Bow; M. P. Hayne, No. 2; A. R. Pomeroy, No. 3; H. S. Truax, stroke. *Eureka Boat Club*—Newark, N. J.; red and white: J. Young, bow; W. Rybo, No. 3; P. Young, No. 3; J. Anglemann, stroke. *Bayonne Rowing Club*—Bayonne, N. J.; blue: J. L. Beach, bow; E. L. Suaw, No. 2; F. Meitum, No. 3; W. L. Nan Buskirk, stroke.

The Bayonne four took the water first, securing the lead, with the Tritons second and the Eureka third. Almost immediately after the start the bow oar of the Eureka slipped his seat and the crew withdrew from the race. The Bayonne crew led for nearly half a mile, when the Triton four sent their bow-tip to the front, and held it there to the end of the race. The Triton four covered the distance—one mile—in 4m. 45s., the Bayonnes crossing the line twenty seconds later. The next event was the first heat of the single sculls, with contestants and positions as follows: F. E. Townley, Triton Club; D. McQueen, Atlantic Club. J. A. R. Dunning, Mystic Club.

The heat was easily won by McQueen in 5m. 45s., with Townley a length in the rear.

The first heat of the pair-oared gigs was between William Welch, bow, and David Roache, stroke, of the Nautilus Club, and W. Biele, bow, and E. Biele, stroke, of the Acquackanonk Club. The heat was a mere "walk away" for the Nautilus pair, who won with ease in 6m. 40s.

In the second heat for single sculls, W. B. Johnson, of the Adelphi Club, W. M. Congor, of the Triton Club, and J. W. Adams, of the Mystic Club, contested. Johnson won in 7m. 2s., Adams being fouled by Congor and withdrawing. The second heat of the pair-oar race was won by Dunning and Adams, of the Mystic Club, in 6m. 20s. The third heat of the single sculls was won Naething, of the Tritons, in 6m. 33s.

The final heat of the pair-oars was contested by the Nautilus and Mystic pairs. The Nautilus pair, Welch and Roache, led from the start to the half mile, when the Mystic pair, Adams and Dunning, shot ahead, and held the lead for about an eighth of a mile. Here the Nautilus boat forged ahead, and won the heat and race in 6m. 26s. The time of the Mystics was 6m. 30s.

The prize in the sculler's race was a gold badge, and was won by Small, of the Triton Club, his contestants being Johnson, of the Adelphi Club; McQueen, of the Atlantic Club; Naething, of the Gramercy Club. Naething led to the three-quarter point, when he was passed by Small, who, with a steady stroke, sent his boat to the finish in 5m. 39s. Small rowed under a protest from Naething. McQueen won second position, with Johnson third.

THE SARATOGA REGATTA.—Wednesday of last week was the last day of the Saratoga Regatta. Two races were rowed and most excellent time made. The Chicago crew were again successful, winning the four-oared race, with the other Western crew second. Although their form and style of rowing was lacking in elegance and finish, the great strength and excellent training of the men enabled them to row down the other crews with comparative ease. The starters for the senior single scull race were Yates, of Union Springs; Ackerman, of the Atalantas; Kennedy, of Yale, and Riley, of the Neptunes. The start was made at 11:15, when Yates and Ackerman took the water first, but they had no advantage. At the half-mile Riley led, Yates second, Kennedy third. Riley was rowing at thirty-two strokes, and was leading at the mile turn. Half a mile from home the order was Riley, Yates and Kennedy, the difference being very slight, Riley still keeping up his thirty-two strokes, and winning the race in 13m. 20½s.; Kennedy second, 13m. 34s.; Yates gave out. The winning time last year was 13m. 39s.

The crews contesting in the four-oared race were the Argonauts, of Bergen Point; Showaecommettes, of Monroe, Mich.; Beaverwycks, of Albany; Northwesterns, of Chicago, and Atalantas of New York. The Northwesterns led almost from the start, turning the stakeboat first, the Atalantas second, and the Michigan crew third. Half a mile from home the latter passed the Atalantas, but the Chicago men kept the lead and came in first in 18m. 04½s.; the time of the Michigan crew, 18m. 16½s.

THE ENGLISH OARSMEN.—The four gentlemen who are to represent the London Rowing Club in the approaching International regatta at Philadelphia arrived in this city by the steamer Wyoming on Sunday. Their names and the positions they occupy in the crew are: Robert H. Labat, bow; Frank S. Galston, Alfred Trower, and Joseph O. Howell, stroke. After landing from the steamer the day was passed in visiting the various boat-houses on the Harlem. On Monday they proceeded to Philadelphia taking with them their boats. They will row together in the four-oared race, Messrs. Galston and Labat will pull together in the double scull and pair-oared race, and the last-named gentleman will row in the single sculls.

—A dispatch from London announces that the following well-known Thames professional oarsmen will visit this country to participate in the Philadelphia regatta, namely: Spencer, of Chelsen; Thomas, of Hammersmith; Higgins, of Shadwell; and Greep, of Hammersmith. They started on the 12th of August.

Shot Gun and Rifle.

GAME NOW IN SEASON.

Woodcock, *Philohela minor*. Red-backed sandpiper, or ox-bird, *Tringa americana*. Black-bellied plover or ox-eye, *Squatarola helvetica*. Gr. at marbled godwit, or marlin, *Limosa fedoa*. Ring plover, *Agialitis semipalmatus*. Willet, *Totanus semipalmatus*. Stilt, or long-thanks, *Himantopus*. Tattler, *Totanus melanoleucus*. *agricollis*. Yellow-shanks, *Totanus flavipes*. Red-breasted snipe or dowitcher, *Pinnated grouse or prairie chicken*, *Macrorhamphus griseus*. *Cupidonia cupido*.

"Bay-birds" generally, including various species of plover, sand-piper, snipe, curlew, oyster-catcher, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

PINNATED GROUSE.—The season for shooting pinnated grouse, or as they are more familiarly termed, prairie chickens, opened in several of the Western States on the 15th inst. Among western sportsmen the 15th is looked forward to as anxiously as the 12th of the same month, is by the grouseshooters and habitues of the Scottish moors of Great Britain. The prospects for an abundance of grouse or "chickens" is very flattering, and we expect shortly to be in receipt of reports of large bags made. In Kansas the birds are particularly abundant, and in another column we publish a letter from Nebraska, where the law expires on the 1st, mentioning large bags made on the line of the Union Pacific Railroad. Probably there is no better shooting to be had than will be found on the line of the Missouri, Kansas & Texas Railroad, and on the Atchison, Topeka & Santa Fe Railroad. The shooting in Kansas is good up to December, at which time game can be sent home without fear of loss, something which cannot be done early in the season. We shall publish next week some points taken from personal experience as to routes, outfit and dogs.

MASSACHUSETTS—Marshfield, August 13th.—S. K., Jr., and two others from Boston, went to Marshfield on the 7th and 8th inst., and brought back 23 yellowlegs, two snipe, one grass bird, and 19 peeps and ring-necks. F. H. B.

Salem, August 12th.—Although there is some gunning on the tapis all the time about here large bags are not as yet in order. Ipswich advises give birds as scarcer than at Newburyport, where "summers" have been shot considerably. They with some robin, snipe and jack curlew are also in order at Hampton, N. H. I have to report 11 uplands to one gun at Lancaster, Mass.; lately, eight "summers" to one gun on "Mill Pond Branch" yesterday morning. Peeps and ring necks quite numerous on Beverly bar, but no uplands on the "Neck" as yet. TEAL.

CONNECTICUT—Litchfield Co., August 10th.—The woodcock shooting in this State is over, by law, until September 1st. In this vicinity there were but few birds killed in July. Within the last week I have heard of a good many as they are now in corn, where they come under the observation of the farmers. Ruffed grouse (partridges) are very abundant for this location, having had a good winter breeding season. This is not what would be called a quail country, but there are a few broods this season. I have had two days at the black bass lately. The first, July 31st, a cold day with northeast wind, two of us caught 39 weighing 34 pounds, the largest 2½ pounds. August 5th, at the same pond, a hot, sultry day, with no wind, caught but 16, none weighing over 1½ pounds. E. H. A.

Bridgeport, August 14th.—There is a promise of better quail and ruffed grouse shooting in this State next fall than for several years past. H.

VIRGINIA.—In the Will's near the North Carolina Line, August 6th.—I have been hunting coveys and wilets at

Cobb's Island, and now here at Capt. Blew's hunting deer. I have never seen anything like the profusion in my life; the woods are full of them, and it is a common thing for the captain to start up six or eight every day, and every morning we go out. A. H.

PIGEON MATCHES.

NEW YORK.—The long anticipated match at English "bluerock" pigeons, was shot at Saratoga on the 9th inst. The contestants were L. H. Hascall, of Grand Rapids, Mich.; J. A. Nichols, Syracuse, N. Y.; W. O. Hall, Toledo, Ohio; E. Hudson, Syracuse, N. Y.; F. J. Abbey, Chicago; Greene Smith, Peterboro, N. Y.; James Manning, Syracuse, N. Y.; W. King, Brooklyn, N. Y.; Carroll Livingston, New York city; C. Fellows, New York city; E. White, San Francisco, and S. H. Terrill, Chicago. The conditions were to shoot at ten birds, 30 yards rise, field boundary, English rules, three misses out. All but Messrs. Fellows and Livingston used ten-bore guns, which, under the rules, carried them back to thirty-one yards, the other named gentlemen shooting at thirty yards. The birds were very rapid flyers, not one of them for a moment lingering after the trap was pulled. The stakes were divided into three prizes, the first \$300, the second \$200, and the third \$100. E. Hudson won the first prize by killing eight birds out of ten, and Hascall and Terrill shot off for the second and third, when, making a tie, they divided the money.

There was also a match on the same day, between Captain Bogardus and Frank Tranx, of Albany, each to shoot at twenty-five birds; Bogardus at thirty yards rise, and Tranx at twenty-five yards, which Bogardus won by a score of 17 to Tranx's 16.

PENNSYLVANIA.—A pigeon shooting tournament in which nearly \$4,000 in prizes will be given is to be held at Sharon, Pa., on August 16th to 19th. The events on the first three days are open to amateurs only; the fourth is open to the world, and we learn that Messrs. Bogardus, Paine and South will be present and give exhibitions of their skill.

REMARKABLE SHOOTING.—A Baltimore correspondent sends us the following account of some remarkable pigeon shooting made by two Maryland gentlemen:—

"About two weeks ago a match was made between Mr. Engle, who claims to be champion of the State, and Mr. K., a gentleman from Hartford County, 50 birds each, 21 yards rise, 80 yards bounds, 1½ shot, \$50 a side: only one barrel to be used, spring traps. Mr. Engle used a moderately choke-bored No. 10 gun by W. C. Scott & Son. Mr. K. a gun of the same gauge, choke-bore, made by Mr. McComas, of this city, and a better gun for the purpose than it is I never saw. At the beginning of the match Mr. K. shot badly, missing three of his first 11 birds; then he killed 27 consecutive birds. (During the match Mr. Engle killed 29 consecutive birds). Result, 46 out of 50 for Mr. Engle; 45 out of 50 for Mr. K. When I state that this is besides several which fell dead out of bounds, I think it's remarkable. The birds were domestic pigeons, but those Mr. K. had to shoot at (each shooter supplied birds for the enemy) were very strong wild ones. About a week ago the same two gentlemen shot in a sweepstake among others, each of them shooting two chances. On one chance Mr. K. missed his sixteenth bird, so that he had killed in the two chances together 30 consecutive birds. He won the sweepstake on his other chance on his eighteenth bird, so that he had killed 33 out of 34, and as he had not missed on his second chance there is no telling how many of them he would have killed if he had kept on shooting. The same gentlemen had another match yesterday, but both shot comparatively bad. It is reported another match between them is made up. Except Capt. Bogardus, and perhaps three or four others, I doubt if two men can be named to beat this Baltimore team, judging by the scores above. T."

CHOKE BORES VS. SMOOTH.—There was recently held in England a trial at pigeons of guns choke-bored against those bored on the old cylinder plan. The trial took the form of a match between sides chosen from the fashionable gun clubs, and resulted in favor of the cylinders. There were twelve competitors on each side, shooting at seven birds each at 27 yards and a like number at 33 yards. As a matter of curiosity we give the scores at the latter distance:—

SMOOTH BORES AT 33 YARDS.		CHOKE-BORES AT 33 YARDS.	
Name.	Killed.	Name.	Killed.
Capt. F. Leighton.....	3	Mr. E. R. G. Hopwood.....	3
Mr. Booth.....	3	Mr. A. Yeo.....	5
Capt. A. Patton.....	2	Mr. W. Lort.....	2
Mr. C. Price.....	2	Mr. F. Bennett.....	2
Mr. A. Coventry.....	2	Mr. R. J. L. Price.....	6
Capt. J. Kennedy.....	2	Mr. C. Seaton.....	1
Capt. H. Paine.....	7	Mr. J. H. Whitehouse.....	4
Mr. A. Grimble.....	3	Mr. F. E. Edkins.....	5
Capt. C. H. Hallett.....	3	Mr. C. J. Chesshyre.....	2
Capt. T. Gust.....	3	Mr. J. Waddingham, Jr.....	2
Mr. W. S. Salting.....	3	Mr. T. Lant.....	3
Mr. S. E. Shirley.....	5	Sir J. Leith.....	5
Total.....	47	Total.....	40

At 27 yards the scores were 59 to 57.

We do not regard this trial as determining the merits of one system over the other, for several reasons. In the first place, we recognize among the gentlemen shooting the smooth bores the names of some of the most celebrated pigeon shots in England, while, with the exception of two or three those handling the choke-bores were not regular habitués of Hurlingham or Shepherd's Bush. Then again, concentrators were used in the cylinder bores, which would tend to bring the guns more nearly even. The *Field* says that the only point settled was that the pigeons killed by the chokes were not riddled with shot. We should think not. A gun would indeed have to be very much choked to riddle a pigeon at 33 yards rise.

SHOOTING NOTES FROM NEBRASKA.

JACKSON STATION, August 8th, 1876.

EDITOR FOREST AND STREAM:—

Being a subscriber to your valuable paper I send you a few notes regarding this section of Nebraska. Anyone desiring further information who will write me or make inquiries through the columns of FOREST AND STREAM, will be answered to the best of my ability. I am agent of the U. P. R. R. C., and prepared to answer inquiries regarding it in this State, onto procure information in regard to any station on line of road.

Jackson Station, Nebraska, is on the U. P. R. R., 100 miles west of Omaha, situated in the great Platte Valley, one mile north from that stream, about three miles south of the Loup fork, and about eight miles

from the confluence of the latter with the former stream. About half a mile north lies a range of hills of slight elevation, which are cut up by numerous ravines and basins, and extending many miles to the southwest, affording good shelter for wolves, which are very numerous, antelopes and deer. The former are found in considerable numbers, and are rapidly increasing, the latter only occasionally near by, but plenty within 25 miles. The late reservation of the Pawnee Indians—now vacant—a fine body of land about 30 by 15 miles in extent, lies 10 miles due west, scarcely any settlers intervening. This large body of unsettled land, lying directly along the Loup Fork contiguous to the hills before mentioned, and well watered, will undoubtedly attract more large game and afford rare sport near at hand. These hills are from one to three miles in breadth, are not desirable for cultivation, and will probably remain comparatively unsettled for years to come. The Pawnee reservation is not yet open for settlement.

The Platte being wide and shallow seems to be a favorite place of resort for water fowl which feed in the fields and rest on the sand bars, which form a large portion of the stream. There was no day during the winter of '75-6 that good shooting could not be had within 14 miles of the railroad depot. Geese, ducks, swan, crane, etc. Jack rabbits abound at all seasons of the year. Quail were nearly all killed by the severe winter of '74-5, but are being stringently protected, and this season shows a very gratifying increase.

The close season for prairie chickens (pinnated grouse) which closed July 31st, has been unusually favorable, there having been no illegal shooting and a splendid season. Their numbers are now legion, nearly full-grown, except some coveys of quite small, which, I think, are second season broods. Coveys numerous and generally large (from 15 to 3).

Myself and a party of four, with three worthless dogs, hunted about five hours August 1st, and two hours on the morning of August 2d, making a bag of 120 chickens and 10 jack rabbits. This is by no means a large bag, but taking into consideration the fact that we were practically without dogs, thus causing the loss of many birds, and that the shooting was all within two miles of the railroad depot, which was our base of operations, it speaks loud for the resources of this vicinity.

I make no claim to being a crack shot, but will wager that with a good dog I can make as good a bag, even over the same ground. Thos. L. Kimball, General Ticket Agent of the U. P. R. R. C., with a party, were at Columbus, August 12th and bagged about the same number that we did.

Some person not having the fear of the Lord before his eyes poisoned my liver-colored pointer, Dixie, a short time since, leaving me disconsolate, as I find it impossible to replace him. Taking him all in all never saw his equal. I would feel under obligations if some of your readers (in this vicinity) who have pointers would correspond with me.

Antelopes are reported in immense droves along the railroad between Sidney and Cheyenne. Deer and elk plenty in Boone County and west. I would be pleased to meet sportsmen from abroad, (yourself included, Mr. Editor), and would show them around here or accompany them into the upper western country after large game. Think I can safely promise a pleasant trip, to say nothing of its profitability. R. G. COVETER.

SQUIRREL SHOOTING.

EDITOR FOREST AND STREAM:—

I write to uphold a class of shooting spoken but little of in sporting books and sporting journals. A class of shooting where the quarry, although not game according to Forester and Hawker, yet requires a keen eye, a good piece, and what all sportsmen need, patience, to successfully bring to bag. I refer to that nimble little gymnast, the squirrel, in his three varieties of black, gray, and fox. In one or more of the species you will find him in every State east of the Mississippi, and where you find him abundant there you will find sport.

No costly pointer or setter is needed in his pursuit, but the better the gun you carry, the better your chances of success. Take along your Scott or Tolley; they won't suffer by the contact, and when you can bring him whirling through the air, stopped in mid-leap between two giant oaks, or roll him from a rail fence as he dashes along the riders, with a speed the eye can scarcely follow, tell me if your London gun is in small business or if you are belittling yourself, or doing anything unworthy that name you prize so much—a sportsman.

As the time is approaching when the pursuit of the squirrel can be carried on with pleasure and profit, perhaps a few suggestions in regard to the best methods of pursuing and bringing to bag would not be out of place. About the middle of August when the beech mast is tender and succulent, when grain is cut, this little nut gatherer and gleaner, is full-grown, fat, and gamy. You will find him in the early morning among the wheat-stubble, at the edge of the woods; more cautiously, for you have a wary little beast to capture; the cracking of a stick or blundering exposure of the body would be the signal for a stampede and away he would go, out of sight and shot in a moment. You are now in the sassafras bushes bordering the forest; there are two nibbling the grain just out of shot, directly in front of you, now rise, and as they rush obliquely for the woods give it to them. There they go! bang! bang! right and left; a black and a gray, while another shell slipped hastily in, cuts down number three, who was eating beyond out of sight. Very good. Now for the beech woods at the foot of the hill. As you approach you hear the nuts patter like rain on the leaves below, and the tremulous *qua quas* tell you the squirrels are there; more caution, more shots, more squirrels, more sport, and you sit down better pleased with two hour's shooting than you were last month, when after traveling all day through mud, mosquitoes, and stifling heat, you showed with pleasure three couples of woodcock, weighing in the aggregate perhaps thirty ounces.

But October is the month for this pastime—russet October, with her falling leaves, her purple grapes, her wealth of color: The month of months for the sportsman. How busy his squirrelship is; the nuts must be gathered, for the long cold winter is coming on; he has but little time for play, and yet when an unusually mellow ray of October sunshine, illumines and warms his home tree, he will snatch a few moments from the busy day, and with many a graceful flirt and playful arch of his broad brush sit in some sunny crotch and chuckle with delight. We must hunt in couples now to be successful; we must understand each other, and each one do his part. The first squirrel treed, I will, to use a common expression among squirrel shooters, "play dog." That is, a little distance from the foot of the tree you stand fast and I will describe a circle around the tree. Blacky is probably bugging the bark on the opposite side from us, and as I move around he will be sure to keep the tree between me and himself, all unmindful of you who are standing stock still, with gun ready. Bang! and he is yours. Now return the compliment when we tree another, and unless the holes are very plenty, we will have splendid sport.

The squirrel, like the deer and hare, recognizes man only as an animate object; keeping perfectly still, he will peel a chestnut on a stump not twenty feet from you, with a nonchalance surprising, but only wink an eye and he is gone. This fact makes still hunting a very successful method of capture. Find a favorable runway, or in case you are unacquainted with the woods, select a position favorable through the many oaks and hickory trees in the vicinity; you need not be careful to keep hidden, only be quiet and avoid moving around; bushy-tail will soon appear, and as a reward for your patience, oftentimes a grouse will stalk out within shot, or a sly Reynard go sneaking by. O, squirrel shooting is glorious in all its phases! I don't wish to carry the idea that I consider it better sport than grouse, quail, or woodcock, shooting; far from it. These last require a skill and coolness, easier written about than practiced, and I am confident that there are thousands of men to-day, who this fall will tramp through field, and worm through cover, behind blood dog, missing their nine out of ten shots, and coming home at night tired and disgusted, who if they would conquer their prejudices, sell their dogs, and enter into squirrel shooting with a zest, would find a real enjoyment in it. And if after becoming adepts; they try the field again,

they would find the experience acquired in cutting down Bunny in mid-air of incalculable value when the bevy arose. D.

—The *L'Avenir Militaire* of France, in view of the fact that since 1871, great interest has been taken in rifle practice in France, and that a large number of rifle organizations have been formed which have more or less communications with kindred organizations in England, Belgium and Switzerland, proposes that an international shooting match should be held on the occasion of the International Exhibition in 1878.

—The Winchester Arms Company, of New Haven, now have over 900 hands at work, being a larger force, it is claimed, than were ever before employed by any single manufacturing concern in that city. They are about loading a 1400-ton steamer, the "King Arthur," for a foreign port with their goods—being the first steamer ever loaded in New Haven for a foreign port. The exports of the Winchester Arms Company have moreover equalled in two years the entire foreign exports of New Haven. Here are three good news items for the statisticians.

CREEDMOOR.—But one match was shot at Creedmoor on Saturday, but that one was one of the most popular in progress and brought out a large field of riflemen. The *Turf, Field and Farm* badge is shot for at 200 yards, off-hand, 10 shots. Any rifle within the rules is allowed, and the State model is largely used. On the present occasion Mr. E. C. Pinney, the winner, shot with an ordinary weapon, while Mr. Hyde who tied with him used his long-range rifle with a heavy charge. The following are the names of the competitors and their scores:—

Name.	Total.	Name.	Total.
E. C. Pinney.....	44	J. B. Holland.....	35

THE CENTENNIAL TEAM.—Tuesday and Wednesday are the regular practice days of the riflemen who are to shoot in the International matches. Last week the shooting was very much better than it had been before. We append Wednesday's scores: those made the day previous were even superior. The number of shots fired at each range was fifteen:—

Name.	800 Yds.	900 Yds.	1000 Yds.	Total.
Lt. Col. Farwell.....	73	67	64	204
Major Henry Fulton.....	71	63	66	200
R. Rathbone.....	74	61	63	198
Isaac L. Allen.....	64	62	62	188
L. Weber.....	61	68	58	187
L. C. Bruce.....	60	67	59	186
Gen. T. S. Dakin.....	65	59	57	181
F. Hyde.....	66	58	55	179
Lieut. A. Anderson.....	67	56	55	178
Major G. W. Yale.....	67	56	53	176
Major H. S. Jewell.....	69	51	52	172
C. E. Overbaugh.....	65	54	55	174
C. E. Blydenburgh.....	66	53	50	174

NEW YORK.—The 4th champion badge match (monthly) of the Jamaica Rod and Rifle Association came off on the 9th inst., and resulted in the success of Col. Wm. S. Cogswell by a score of 46 out of a possible 50. This badge has been won by the Colonel twice and becomes the property of the member who shall win it three times during the season. The following is the score: 200 yards off-hand, 10 shots:—

Name.	Total.	Name.	Total.
Wm. S. Cogswell.....	46	Jno. Fleming.....	41
Geo. H. Creed.....	43	Jno. Crane.....	41
Thos. Rogers.....	41	Geo. A. Hicks.....	39
Chas. J. Stewart.....	41	Geo. W. Damon.....	38

These are not picked scores but were made by the eight members who actually entered for this match.

CANADA.—The Quebec Rifle Association began their sixth annual meeting at Pt. St. Charles ranges, Montreal, on the 10th inst. The result of the first match, the Marden stakes, 200 yards range, seven shots, was as follows:—

Name.	Points.	Name.	Points.
Private A. Johnson.....	28	Private H. M. Belcher.....	26
Corp. J. Gowan.....	26	Lance Corp. John Foreman.....	22
Private D. M. Patton.....	26		

There were 16 entries in the match.

THE IRISH TEAM.—Dispatches from the other side announce that on the 8th inst. the members of the Irish Rifle Team for America were chosen as follows: J. Rigby, Penton, Johnson, Milner, Cooper, Joynt, Goff, Greenhill, Thynne, Dyas, Pollock. Two gentlemen who won places in the competition, Messrs. Smyth and Ward, are unable to leave home on account of private affairs. The team will sail for New York on the 25th inst.

THE AUSTRALIAN RIFLEMEN.—One portion of the team of riflemen viz. the New South Wales section, who are to represent Australia in the approaching international matches, arrived in this city on Friday last. A committee of the N. R. A. appointed to meet them was at the Grand Central Depot at the train they were expected, but they came by the Erie road and the "reception" was held after they had reached the Fifth Avenue Hotel. The other portion of the team are now en route for this country from England, where they have attended the Wimbledon meeting. Our present visitors have done no shooting since the competition for their selection on the Paddington Rifle Range, near Sydney, in April last. At that time their scores stood as follows:—

Name.	Score.	Name.	Total.
Capt. Smith.....	185	Private J. J. Slade.....	174
Private Gee.....	167	Private Lynch.....	163
Ensign Maddocks.....	172		187

On Saturday the Australians visited Creedmoor and witnessed the shooting for the *Turf, Field and Farm* badge, but took no part in the contest. They will probably visit Canada before our own meeting occurs, and participate in the Dominion matches now in progress.

—Returns of rifle practice in the East India armies report a marked improvement in the shooting of the native regiments over last year.

Northern RAILWAY OF CANADA

AND

Collingwood Lake Superior Line.

ONLY FIRST-CLASS ROUTE TO THE BEAUTIFUL INLAND LAKES OF CANADA AND

LAKE SUPERIOR.

Three express trains daily north from Toronto. Steamers leave Collingwood every Thursday at 6 P. M., on arrival of steamboat express, leaving Toronto at noon.

Parlor Cars on all Express Trains.

Lake Couchiching

AND THE

Lakes of Muskoka

Are the coolest and most delightful Summer watering places in Northern Canada. Tourists proceeding down the St. Lawrence can make a pleasant detour from Toronto to Couchiching in five hours on express train with Drawing Room Coaches, thus visiting the most charming of the chain of Lakes.

Excursion Tickets

At greatly reduced rates during months of July, August and September; may be had from COOK, SON & JENKINS, 261 Broadway, New York and Centennial Grounds, Philadelphia.

ALFRED TELFER,

Gen. Agt. Northern Railway, Toronto.

THE "FISHING LINE."

Brook Trout and Grayling Fisheries

OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equalled, in the great abundance and variety of fish contained.

Brook Trout abound in the streams, and the famous American Grayling is found only in these waters.

Brook Trout Season opens May 1st.

Grayling Season opens June 1st.

Black Bass, Pike, Pickerel, and Muscalonge are also found in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities (red to tourists and sportsmen; also on and after July 1st Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, Send to Forest and Stream office, or address

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road, radiating from Chicago. Like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Nagaunee and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and, via the Illinois Central, reaches Warren, Galena and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction, to Council Bluffs and Omaha. This last named is the "GREAT TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento. San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEESE, AND BRANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by any in the West.

MARVIN HUGHITT, W. H. STENNETT,
Gen. Supt., Chicago. Gen. Pass. Agt., Chicago

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMP'Y

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTLING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

The Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOVIA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing shooting, and Still Hunting.

Also, to TUCKERTON, BEECH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

D. M. BOYD, Jr., Gen'l Pass. Agent.

FRANK THOMPSON, Gen'l Manager. feb 17 1f

THE ORVIS REEL.

The Most Compact, Neatest, Cheapest, and Durable Reel in the Market.

NO. 1.—This Reel is extra nickel-plated and finely finished. Is perforated to make it light, and keep it free from sand, also that the line may dry without removing it from the reel after use. Has a very perfect click. It is very light, very strong, and holds from 40 to 50 yards of line. It is more compact and less cumbersome than ordinary 20 yard reels. It is quite narrow, and takes up line rapidly. Put up in neat Black Walnut Case, price \$5.

NO. 2.—For Prizes. Same style as No. 1. Heavy Gold Plate. Extra finish, with case, price \$10. Sent by mail, postage prepaid, on receipt of price, or by express, C. O. D. LIBERAL DISCOUNT TO THE TRADE. Send for New Price List of Fishing Rods, Reels, Flies, Lines, &c., &c. Mention this paper. C. F. ORVIS & CO., Patentees and Manufacturers, MANCHESTER, VERMONT.

W. H. HOLABIRD

Would most respectfully announce to his patrons and friends that he is prepared to make

Shooting and Fishing Suits

at the above prices. The ten dollar suit is better made than any competitor can offer for the same money. My original design having been appropriated by other manufacturers, I have been compelled to make many changes in the arrangement of pockets, &c., for which I have to thank the fraternity at large for suggestions. I believe that I have the

BEST SHOOTING AND FISHING COATS IN THE WORLD,

and respectfully solicit your orders. I send my new Illustrated Catalogue, 16 pages, free on application.

Dealers will find it to their advantage to handle my goods. They are better known and more highly esteemed than any other make.

Address

W. H. Holabird,

VALPARAISO, IND.

N. Y. Office: No. 1 COURTLAND ST.

THE NEW BOSTON SHOOTING SUIT,

Manufactured only by

G. W. SIMMONS & SON,

Boston, Mass.

We offer this season an entirely new design of WATER-PROOF SHOOTING SUIT (made from extra quality duck), in the preparation of which we have been assisted by the advice and suggestions of our best resident sportsmen.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, the arm holes ventilated, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at \$13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloon.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the *Golden Rule* (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skillfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, water-proof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Waist Measure, Height, Breast Measure, Length of Sleeve, Size of Head.

G. W. SIMMONS & SON,

"OAK HALL," BOSTON, MASS.

apl6 6m

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½, and 6½ lbs; and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office

88 Wall Street, New York.

Have maintained their great reputation for 75 years. Manufacture the Celebrated

EAGLE DUCKING, EAGLE RIFLE, AND DIAMOND GRAIN POWDER.

The most Popular Powder in Use. Also,

Sporting, Mining, Shipping and Blasting Powder

Of all kinds and descriptions.

For sale in all parts of the country. Represented by

F. L. Kneeland,

Feb 10-1y 70 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6½ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.g. FF.g, FFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6½ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less resistance than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

26 Murray St., N. Y.

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired.

The powder is also well adapted for shot guns. Inquire for the "Dittmar Powder" for your dealer, or address the

DITTMAR POWDER MANFG CO., NEPONSET, MASS.

JUST OUT!

ADIRONDACK GUIDE.

NEW EDITION, WITH MAPS.

BY E. R. WALLACE.

Gives all possible information relative to Routes, Hotels, Resorts, Outfits, Guides, Distances, &c.; with emended railway schedules, &c.

The only Complete Guide to the North Woods.

The instructions embrace everything that can be desired. Taking it all in all, it is the most complete book that has been published on the Adirondacks, not excepting even my own—*Hon. J. T. Headley*.

I regard your "Descriptive Guide" and the "Appendix" as a most useful—nay, indispensable, manual for tourists to that wonderful Wilderness. A tour in that region is eminently a practical matter, and for that reason I regard your "Guide" as an important, useful, and timely publication.—*Benson J. Lossing*.

It is the only thing of the kind that has yet been published—the very thing that has been so long wanted and waited for.—*Alfred B. Street*, Author of "Woods and Waters."

H. L. DUNCKLEE'S

PATENT

CAMPING and MINING

STOVE.

PATENTED JUNE 22, 1875.

Outside dimensions, packed, 22x12x20 inches.

Weighing only 35 pounds, very durable, will cook for ten persons, and is especially adapted for camping purposes. The ware consists of 8 qt. kettle, 6 qt. tea kettle, 2 qt. coffee pot, fry pan, round tin pan, 2 square pans, dipper, gridiron, tent collar, 8 ft. funnel, and an oven that will roast 15 pounds beef.

The ware is so constructed that it nests and packs in the oven, and the oven and funnel pack inside the stove, as represented in cut 2, leaving room for packing half a dozen plates, knives, forks, spoons, and drinking cups. Price complete, \$15.

SEND FOR CIRCULAR.

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

For Forest and Stream.
LAKE HOPATKONG.

BY THE REV. N. PETIT.

HOPATKONG! Hopatkong! my heart is with thee.
Thy waves are so bright, and thy breezes so free,
With a boat at the beach, and a tent on the shore,
I could live in thy coolness the whole summer o'er.

From the town, from the noise, from the crowd, from the jam,
From the book, from the pen, from the swift telegram,
In the pure mountain air, with no cares to intrude,
With Nature I'd dwell in thy grand solitude.

At earliest dawn, with stars growing pale,
I'd skim o'er thy waters with oar or with sail,
I'd woo thy fair tribes with the rod and the reel,
Or the troll as it whirls in the wake of the keel.

At noon I would slumber the sunny hours through,
Or watch the white clouds curling up in the blue,
In shapes so fantastic and eager to show
Their beautiful forms in the mirror below.

At evening I'd gaze on the crimson and gold,
That burnish thy surface in tints manifold,
When the window of heaven is open apace,
That the light of the Throne may illumine thy face.

Sweet lake of the wild wood encircled by hills,
Thy beautiful grandeur the horizon fills,
In the days of the summer where I may be,
Hopatkong! Hopatkong! my heart is with thee.

For Forest and Stream.
A Caribou Hunt in Canada.

ON a bright, cold afternoon in January, in the city of Blank, I was aroused by the arrival of a telegram from my friend Nimrod, urging me to come down to St. George without delay, as the Indians had come in from a reconnoitre up the lakes and reported caribou in great abundance. I set to work immediately to hunt out all the paraphernalia requisite for a ten days' campaign among the caribou—rifles, snowshoes, moccasins, blankets, buffalo robes, eatables, and drinkables. The next morning a little after daybreak, I was on the road to St. George, my mare going at a merry pace over the icy road. A few days previously some rain had fallen, succeeded by a sharp frost, which made the road almost one solid sheet of ice. No pen could do justice to the beauty of the scenery on the road; it was beautiful beyond description; the rain had melted the snow on the beech, birch, and maple trees, and the sudden frost had fastened it in every conceivable way; some were coated completely with ice, and resembled huge grotesque icicles; others were partly covered and festooned with icicles from every branch and twig; the pine and fir trees were like massive silver frostings, and the sun's rays, striking upon the whole, produced a most gorgeous effect; every hue of the rainbow was brought out, and one could fancy it the realization of some fairy tale of the olden time as he glided along the road under canopies of icicles and the brightest of blue winter skies.

After a pleasant drive of forty-five miles through such scenes as these, varied with an occasional pipe and once baiting on the road, I arrived at my friend Nimrod's in time for an early dinner. Here I found my companion of many a hard hunt, Sebatiss, the Passamaquoddy Indian; and a word of description, in passing, may not be out of place. In height, about six feet, wiry and muscular in form, with a pleasant though serious countenance; black hair, piercing black eyes, and a moustache—a very unusual thing for an Indian. If treated as an equal he was obliging and would do anything for you, and in an emergency you might with safety trust your life in his hands. On the contrary if he was employed on a hunt, and any superiority or reserve was maintained towards him, he would prove sullen, and would act up to the letter of his agreement, but nothing further. Fear or surprise were words of which he knew not the meaning. He was in short the embodiment of Campbell's line: "A stoic of the woods, a man without a tear." All our arrangements being completed, the next day,

about 11 p. m. we made a fair, or, rather I should say, unfair start, for, having concluded to drive our horses tandem, without taking into consideration the fact that they never had been driven together before, we found that we had reckoned without our host. We had heard a good deal of prancing and whoa-whoaing outside, but this being nothing unusual, had not taken any notice of it, and time to move having arrived, we found our horses in. Nimrod's mare (a runaway devil) was in the shafts, and mine as leader, with a man at the head of each, and Sebatiss looking on with anything but an approving eye, and the hounds, Mitchiess, Mataguis, and Megahlip, (Anglice, Grouse, Hare, and Caribou,) all impatient for a start. With much ingenuity, having managed to get our man Friday and ourselves seated, and Nimrod taking the reins, the order was given to let them go, and was complied with by the wheeler plunging, and the leader standing upon her hind legs; and then followed, to a looker on, a series of most charming revolutions, wound up by turning the pung upside down in a snowdrift in front of Nimrod's house. After some coaxing Sebatiss was induced to take his seat again, and, all being right, the order to let go this time was followed by a rush on the part of the mares, accompanied by the shouts of the bystanders, and the baying of the hounds. With some close shaving we managed to turn the corners and get clear of the village. The pace being about twenty miles an hour, I suggested to Nimrod that it looked very much like a runaway. He replied, "Oh no; they are only a little playful, and will soon cool down." On turning round I found Sebatiss holding on each side of the pung, with a rifle under each arm, and a most puzzled expression of countenance, as if he had got in with a bad lot and must make the best of it. So long as the road was all clear we were all right; but about four miles out we heard bells approaching, and on making a sharp turn we saw a sleigh with two ladies in it coming towards us. It was a bad place in the road to pass—an icy sideling hill, with two pieces of timber placed on the lower side to prevent a sleigh sliding down a ravine. "Now then Nimrod look out! Upset as if you like, but do not so much as graze their sleigh robes." On they come! A nod, a smile, a glimpse of pearly teeth, a merry laugh and they are gone. "Hilloa! Nimrod, what are you up to? The pung will go over the bank." "All right old boy! Hold on the upper side," he replied. All very fine, but I happened to be on the lower side, as I found to my cost on the sleigh bringing up with a crash on the the lowest end of the timber, precipitating Sebatiss and myself, accompanied by the whole of our commissariat, over the bank. I clung with a death grip to an old hound, and down we went to the bottom of a ravine, happily without doing us any serious damage. Nimrod managed to keep his seat and hold the horses to enable Sebatiss and I to repack the pung, and in a few moments we were off again.

After crossing five beautiful lakes, my favorite haunts in summer for fly-fishing and sketching, we arrived at Steen's Camp on Spark's Lake. Here we found an advanced guard, consisting of two Indians, old Joe and Lola, (a young Mohawk on a visit to Sebatiss,) and another hound Illaasin—Anglice Wolf—and met with a right hearty welcome from the lumbermen, which is always the case, no matter who you are or whence you come, and if the fare is rough, the welcome is hearty from the jolly woodsmen, equally at home with the axe or rifle. Seeing our horses well-rubbed down, and cared for, and strapping on our snowshoes, we set out, Indian file, for the hunting grounds on the Lepraux Lakes, distant about nine miles. Sebatiss was appointed Captain of the hunt, and led the way, followed by Nimrod and myself to make a trail for the tobagauns, drawn by old Joe and Lola. The tobagan is a light Indian sledge with broad ashen runners. A trail made by three pairs of snowshoes will bear up a tobagan and render dragging comparatively light work. Just as we came in sight of the Lepraux Lakes (Lake Adelaide) we all dropped in our tracks at a signal from Sebatiss, and creeping to the edge of the wood, we saw a herd of five caribou a long way out of shot on the lake. They had evidently heard or wind-

us, for they were trotting rapidly off, their sharp hoofs cutting the ice like a winter shod horse. Sebatiss pointed out this lake as being, about thirty years ago, the scene of a most dreadful tragedy: Two Indian families were living in that neighborhood, distant about four miles from each other. An old squaw one day left one of the camps to visit the other. Some days having elapsed without her returning, the Indians became alarmed at her protracted absence and set out in search of her. An appearance of something on the ice attracted their attention, which, to their horror, on a closer inspection proved to be the remains of the old squaw. A few bones and bits of rags were all that were left, while the broken tomahawk, and three monstrous wolves lying gaunt and stark testified to a most desperate struggle.

We arrived at our camping ground, by the side of a small lake, about 3 p. m. and immediately set to work to build a comfortable camp. The *modus operandi* is as follows: A space the size of the intended camp is marked out upon the snow, and the snow dug away to the frozen ground, using the snowshoes as shovels. The frame of the camp is then set up, consisting of poles of the requisite length. The frame is about six feet in height in front, and slopes off to the ground, the whole is then thickly covered with fir boughs, and snow shoveled completely over it, leaving the opening in front, before which the fire is placed. The inside of the camp is then laid with boughs, and two large buffalo robes spread upon them, and the habitation is complete. Having procured wood and water for the night, Sebatiss, who was cook as well as captain, proceeded to get our dinner of trout and ruffed grouse, which, with the assistance of a cold ham, &c., and some excellent brandy, managed to make a tolerable repast; and I would give this piece of advice to all hunters who have Indian cooks—either at once to sacrifice their fastidiousness to their appetites, or turn their backs upon the operator. We partitioned off a part of the camp for the hounds, and each man having selected his position in the camp, and placed his blankets and furs, we called a council of war to decide upon the next morning's operations. It was finally agreed that Nimrod should take old Joe and Lola with all the hounds, and try for caribou on the mountains, and Sebatiss and I would try still hunting on the heaths and lakes. And now comes the most enjoyable part of the whole day, as, bolstered up with buffalo robes we fight our battles o'er again, over our pipes and hot mountain dew, and listen to thrilling Indian stories, of the chase and bear stories in particular. Sebatiss could speak tolerably good English, and was a most intelligent Indian, and I often sat up talking with him until the small hours warned us to seek our couch. Old Joe and Lola's vocabulary of English consisted of "yes," "no," and "I suppose so." No matter what the question was, one of these was invariably the answer.

The morning was bright and cold. About two inches of snow had fallen during the night, which improved the snowshoeing. Sebatiss prepared our breakfast, and we fortified ourselves for the day with a cup of coffee royal and started. After traveling about three miles we made Lake Victoria, a lake about four miles in length and two in breadth. About half way across the lake we struck a caribou trail; Sebatiss pronounced it to have been made the night before, and we instantly decided upon following it up. The trail led into a hard-wood ridge; and in about one mile and a half from where we first struck it, Sebatiss pointed out some impressions in the snow, saying, "Caribou, sartin; he sleep there last night; caribou sartin, he no go far this morning, he eat breakfast." The chase was now becoming exciting, as, we might at any moment come up with a herd of caribou. So, taking off the seal-skin covers from our rifles, we capped and set the locks at half-cock, (the safest way of carrying a rifle if capped) tightened our belts a hole, and to move with as little noise as possible, took off our snowshoes and walked in the tracks made by the caribou. This was most fatiguing work as in some places the holes were three feet in depth, and it required a long stride to reach from one to another. We

proceeded in this way for some distance, Sebatis examining the broken twigs, and other signs, and judging of the distance they were ahead of us. At last, finding some very fresh sign, he told me to put on my snowshoes, and take up my position behind an old maple tree, and he would make a detour and head off the caribou (caribou, like the hare, when turned always take their back trail,) and strapping on his own snowshoes he was off with a quick and noiseless stride which soon carried his stalwart form out of sight. And I was left to my own meditations in the very heart of the wilderness, five and twenty miles from civilization, the temperature about ten below zero, and my only chance of reaching any habitation depending upon the reappearance of Sebatis. There was little chance of my following the trail back to camp, for a snowshoe trail will be obliterated in a few minutes if the snow is light and drifting. It will be seen from these remarks that everything depends upon the good faith of the Indian guides. I had implicit confidence in Sebatis and felt quite at ease. There is a something truly awful in the stillness of a North American forest in winter; after a time it becomes insupportable, and one will hail with delight the whispering of the cold north wind among the pine trees, and will welcome with a shout the loud report of some monarch of the forest split by the frost, or the loud boom of the ice cracking on some neighboring lake.

Half an hour having elapsed, I began to have some doubts about Sebatis having succeeded in coming up with the caribou, when the sharp crack of a rifle at no great distance aroused me to instant action, and looking to my rifle I prepared for a shot. I had not long to wait, for the crashing of the underwood announced the approach of some heavy animal, and was soon followed by a large caribou ploughing through the snow at a terrific pace, and raising such clouds as at times to completely hide him from view. In passing me some trees intervened, so I had to make a rush for a shot, and was fortunate enough to put a ball through his left shoulder, after receiving which he made a few plunges, and pitched heavily forward into the snow, never to rise again; the ball had passed completely through his body, and he was quite dead when I came up to him. It is very dangerous to approach a caribou when wounded, as he possesses a vast amount of pluck, and will make a most desperate defense—not with his horns, but with his legs—striking out in all directions, and one blow from his sharp hoof will knock the life out of anything rash enough to approach him; the boldest hound will keep at a respectful distance. Sebatis had been unfortunate; the caribou had taken the alarm in spite of all his precautions, and led him a merry dance before he could manage to head them. In his hurry he had fallen, and some snow getting about the lock of his rifle had made it hang fire, so he lost his shot. He reported the herd to consist of five caribou, including the one I had shot (no doubt the same herd we saw on the lake the day before). One of them was the largest caribou he had ever seen, with broad, spreading antlers—something unusual, as they generally shed their horns in November.

As we had enough to do to get our caribou to camp out of the way of the wolves, we decided to postpone the pursuit of the rest of the herd for the present. We now had a keen relish for our sandwich and brandy and water, followed by the invariable pipe, and then to work. Sebatis soon procured from a species of swamp ash a most serviceable-looking rope, about eight feet in length; he made one end fast to the head of the caribou, and passing half of it over his shoulder gave me the other half to pass over mine and off we tramped. On our way we flushed some ruffed grouse, and Sebatis redeemed his reputation as a sportsman by bagging three, cutting off the heads of the first and third. After much tugging and floundering in the snow we arrived in camp with our game. Nimrod and his party had not returned, and did not make their appearance until an hour after dark. They had found caribou trails, but had not been lucky in finding game. They had also found a moose yard too late in the day to start them with any chance of success. They had bagged seven ruffed grouse and three hares. Sebatis soon had a deliciously tender caribou steak ready for our dinner, and all being pretty well fagged out, we lay to enjoying our pipes and chatting until, one by one, we dropped off to sleep.

Later in the night I was aroused by the growling of the hounds, and listening I heard the howling of wolves—at any time most dismal music, but particularly so in the stillness of the night. It begins by one wolf barking, then another takes it up, prolonging it into a howl, the rest of the pack join in, and a chorus is completed which, if once heard, can never be forgotten or mistaken. They had evidently scented and tracked our caribou to camp. As they appeared to be in large numbers I aroused the sleepers, and shouldering arms we each took a brand from the fire and sallied forth to meet the enemy, the dogs showing no inclination to join us. We found them drawn up in battle array on the edge of the lake, as we judged by their howls, but could not see them with sufficient distinctness for our rifles to take effect. We gave them a volley, which dispersed them, and returned to resume our disturbed slumbers. There seemed to be a combination of circumstances that night to prevent my getting any rest. I could not have been asleep for any length of time, when I was again awake, and could not make out for some time by what. At last high over our heads I heard a frightful peal of fiendish laughter, which had scarcely ceased when it was taken up by another fiend apparently close at hand. Determined not to be balked this time I slipped into my snowshoes, and rifle in hand stepped silently out into the night. Presently the hideous sound was repeated, and looking up into a tall fir tree which towered above our camp, a pair of glowing orbs met my horrified gaze. Crack went my rifle and down came a monstrous specimen of the great-borned owl. I just called out in time to prevent myself being made moose-meat of by four glistening barrels, all pointing in the direction in which I stood. We now determined to try the merits of hot whisky punch. It had the desired effect and we were disturbed no more that night. Shortly after day light the dreams having been discussed and breakfast over, we agreed upon the order of the day. Old Joe was of opinion that we should all go together and hunt the caribou started by Sebatis the day before; so giving him the benefit of the proverb "*consilium senum est sanum*," we started all together, struck the trail, and slipping the hounds they soon were in full cry; but as they led directly from us it promised to be a hard hunt. Nimrod, Sebatis and I kept together. Joe and Lola struck off with the hope of heading the game and getting a shot. Mile after mile we tramped perseveringly on, until at last the cry of the hounds was lost. Directly we heard it again, evident-

ly coming toward us this time. Sebatis started off at a trot; Nimrod and I followed suit. We made for a brook on Lake Victoria, which we thought the caribou would cross, and were not disappointed, for presently we saw him coming down the side of a hardwood hill, and Nimrod made a capital shot, bowling him over at 200 yards. The hounds were close up, but desperately fagged, as they must have run at least fifteen miles at a killing pace; so we had no trouble in beating them off the game. Sebatis came up almost at the same time, and kneeling beside the caribou drew his knife to put the finishing touch to the scene; the tired hounds grouped themselves in most picturesque attitudes, and with the figures, game, etc., formed a picture which Landseer would delight to paint. The hounds were soon rewarded by a plentiful feed. Old Joe and Lola joining us we arrived in camp with our second caribou—a fine specimen weighing over 300 pounds, with a noble pair of antlers. Soon all were asleep but myself and Old Joe, whose turn it was to watch and tend the fire. There sat the old Indian sentinel with his hand supporting his head, puffing away at his pipe, and evincing his satisfaction by the peculiar Indian "Ugh!" the fire lighting up his face and bringing it out in bold relief from the dark fir trees, the swarthy forms of the Indians, and my friend Nimrod slumbering quietly on the buffalo robes, the tired hounds grouped together, some huddling over the fire, the camp hung with moccasins and Indian garments of every hue, and the full moon adding her silvery light to a most weird scene.

The next day Nimrod was on the lame list and remained in camp; Old Joe also remained to make additional tobangans to get the meat out. I had had enough hunting for the time, and as I never encouraged the wanton destruction of game, I remained in camp also. Sebatis and Lola went off on a moose hunt. In the morning I attended our holes in the lake and pulled up trout. In the afternoon Nimrod had waged war against the ruffed grouse and hares, and brought to camp a goodly bag. Sebatis and Lola returned late at night, bringing with them a two-year old moose killed by Sebatis. The following day we packed our tobangans with caribou, moose, grouse, hares and trout, and pointed our snow-shoes homeward.

PASSAMAQUODDY.

For Forest and Stream.

ACROSS LOTS FROM THE ST. JOHNS RIVER TO SALT WATER.

DURING the recent heated term the clerk of the weather favored us with a higher range of the thermometer than ever before known in Florida. One day the mercury rose to 100 degrees in the shade, and I deemed it advisable to pull up stakes and steer to the south and east, hoping thereby to discover a cooler portion of old Mother Earth than that upon which the City of Jacksonville is situated. On the evening of the 18th of July I left this city on the steamer Euphemia of the Crescent City Line, and at daylight found myself at the dock at Palatka. At 7 a. m., after such a toilet as was warranted by blue shirts and twenty-cent chip hats, I visited the sanctum of Col. *Crocodylus lucius* Pratt, of the Palatka *Herald*, for the purpose of administering religious consolation to that disconsolate representative of the staff editorial. I was assured by some of his personal friends that he was suffering from ennui, the sequence of the rapid disappearance of his saurian pets of the St. Johns River; the results of the annual fusillade of hosts of pot hunters who yearly ascend the river, and who, by carelessness, emperil the lives and limbs of tourists. Unfortunately for our good intentions Bro. Pratt was absent prospecting for some fat and juicy Florida beef for the matutinal meal, and our laudable intentions ended in smoke, and we were forced to leave without rendering the assistance so much needed. For

"The eye that will not weep another's sorrow
Should boast no gentler brightness than the glare
That reddens in the eyeball of the wolf."

At 8 a. m. we left for Deep River, the outlet of Crescent (formerly Dunn's) Lake, distant nine miles. The question arises, what shall I write about the glories of the St. Johns River without repeating the threadbare description that has graced the pages of nearly every paper and periodical in the country? My pen is not adequate to the task of contributing anything new or interesting, so I shall merely refer to its evergreen banks, semi-tropical scenery, and the numerous beautiful and attractive inglesides that adorn its banks; and assign the "gator" portion to the saurian proclivities of the veracious editor of the Palatka *Herald*.

Deep River is about nine miles in length, and in its general characteristics it resembles the far-famed Ochlawaha; but is wider and capable of floating any vessel that can cross the St. Johns bar. The morning was calm and pleasant, and the bass were breaking near each shore. During our trip through the river we counted twenty-one 'gators, many of them of large size. One ancient fellow was quietly paddling across the stream, and paid no attention to the steamer. The boat approached, and he kept on his course until the stern was within three feet of his body, when he made a desperate effort and escaped without a collision. and I reverently bared my head in thankfulness to the scaly monster, for if he had collided with the steamer it is probable that the next issue of the Palatka *Herald* would have contained a harrowing description of a collision on Deep River, the sinking of the Euphemia, and the narrow escape of the passengers and crew. Here I am writing in my humble cottage, and when I think of the dangers I escaped on that occasion I return thanks to that 'gator for his agility and forbearance, and exclaim with Rowe:—

"But though my mouth is dumb, my heart shall thank you,
And when it melts before the throne of mercy
My fervent soul shall breathe one prayer for you,
That Heaven will pay you back, when most you need,
The grace and goodness you have shown to me."

At Sand Point, on the River, a large 'gator for weeks saluted the boat on each trip with hisses, bellowing and snapping of jaws; and it was evident from her actions that her nest was near. Yesterday I was informed that someone had destroyed her. When the process of incubation is ended the interesting infantile 'gators will be compelled to look after No. 1, and vainly seek for the maternal care of one who has gone to the happy hunting grounds, as a consequence of the indigestibility of a dose of blue whistlers. Those graceful and interesting beauties are rapidly diminishing, and it is proposed to organize a society for the prevention of cruelty to 'gators, and to employ a competent person to hatch them artificially, and restock the St. Johns River.

As we approached the lake we again enjoyed a view of this beautiful sheet of water—a lake that is not surpassed, if equalled, by any body of water in the State. It is crescentic in outline, hence its new and appropriate name of Crescent Lake. It is about twenty miles in length, and from three to five in width; average depth from twelve to fourteen feet. The water is pure and the tide rises about one foot. In years gone by a reverend friend described the attractive features of the lake, and insisted upon my visiting; but I fancied he was stretching his blanket, and that it resembled the majority of the lakes in the State—shallow and to a certain extent blocked up with floating lettuce, lily pads and saw grass. We have visited most of the lakes of Florida, and we unhesitatingly pronounce this one to be unequalled for aquatic sports; and we are convinced that the day is not far distant when it will attract the attention of those who delight in sailing and rowing.

The lake is well stocked with bass, and the disciple of old Isaak can enjoy the music of his reel, and admire the line of beauty as depicted by his pliant split bamboo. In addition, the lake contains bream, and at certain seasons quantities of large-sized channel bass, and a fish locally known as shell crackers. As described to me, they weigh from one to two pounds, are good biters, and are full of fight. They are represented as possessing an osseous cartilaginous structure in the mouth or throat by which they crush fresh water mollusks. I have made arrangements to have some specimens forwarded to me for examination, and you may hear more about the "shell crackers." Dead Lake is a bay or lagoon about two miles in length, communicating with the main lake at its northeasterly side. It is to a great extent filled with lily pads, and during the winter months is a great resort for ducks. Haw Creek empties into the easterly end of the lake, and by the removal of a few logs it can be rendered navigable for steamers to Horse Landing, a distance of eight miles from its mouth, and fourteen miles in a direct line from the Atlantic. We ascended this stream for several miles and found it to correspond to a great extent to the Ochlawaha. The scenery along its banks was almost tropical in character, and the various species of *Tillandsia* flourished in all their parasitic loveliness. In navigating this stream we were forced to the conclusion that the quietness and solitude would have satisfied the cravings of the poet when he sighed

"— for a cot in some vast wilderness
With a boundless continuity of shade."

On the west side of the lake and Deep River is a body of high land bounded to the west by the St. Johns River and Lake George, and known as Fruitland Peninsula. This section is rapidly filling up with northern and western people who are engaging in fruit culture, or erecting themselves beautiful homes where they can escape the withering blasts of old Boreas in winter, and enjoy the balmy and invigorating breezes that daily fan and cool this favored section during the summer months. This peninsula is favored in many respects, for the land is high, beautiful lakes exist in every direction, the health is unexceptionable, and the summers are comparatively cool. Northern people form an incorrect opinion of Florida regarding the range of the thermometer. They argue that because "it is away down South," that it must be hot and sweltering. The thermometer never rises as high as it does in the Northern States, and close, sultry and oppressive days are unknown. During the day a refreshing wind fans the brow of the working man, and at night his exhausted body is refreshed by a cool and invigorating breeze that restores his exhausted energies and prepares him for his daily toil. On the contrary, in the North, a man rolls and turns on his couch with perspiration teeming from every pore. Owing to our cool summer nights, and non-oppressive atmosphere during the day disease of a severe character occurs but seldom, and sunstrokes are unknown. Many run away with the idea that Florida is unhealthy during the summer months, but this is a mistake. I will admit that in certain localities malarial fevers exist during the summer and autumnal months, but these diseases when they do arise are mild in character and readily yield to treatment. From actual experience and observation we unhesitatingly assert that there are localities in the neighborhood of New York where persons would be more likely to contract febrile disease than in any section of Florida. As an evidence of the general healthfulness of the State I need but refer to the reports of the Surgeon General of the United States Army. Our population in Jacksonville is estimated at 12,000, and during the last month (July), the hottest ever known in the State, we had but eleven deaths, and of the entire number not one from any febrile disease. My esteemed friend, Dr. Wall, of Tampa, writing on the 15th of July, states that "thus far during the year 1876 a case of febrile disease has not been observed in Tampa or in the adjoining country." I feel assured that the State of Florida, taken as a whole, is more healthy than any State north of it—in other words, that the mortality per 1,000 is less.

I must apologize for this digression, and take up my subject of Across Lots. "Two years since a gentleman named Griffin, during his explorations, found himself on the bank of Crescent Lake, and was so enamored by the natural beauties and advantages of the locality that he was induced to purchase 1,100 acres of land, and resolved upon founding a city, and I feel assured that his most sanguine anticipations will be realized. He became associated with two enterprising and intelligent gentlemen, and the trio constitute the firm of Griffin & Co. The city site has been laid out in blocks bounded by streets and avenues seventy-five feet wide. Each block is subdivided into four lots of 150 by 250 feet. To the rest of the town plot the land has been laid out in five-acre lots for residential purposes or for orange groves. Leaving Lake Crescent, and passing to the westward along one of the avenues, there is a gradual rise for about twelve hundred feet until an altitude of seventy-five feet is attained; then a level plateau of about one thousand feet wide, followed by a descent of about thirty-five feet in a distance of eight hundred feet to Lake Lena. This lake is about one mile and a half long, and the water is very deep and pure. The peculiarity of Lake Lena is its elevation above Lake Crescent. This is an admirable sheet of water for boating purposes. It is filled with bass of a large size, and those who are piscatorially inclined can enjoy the excitement of capturing fish at all times.

On my arrival at Crescent City, I seated myself on the verandah of one of the residences, and enjoyed the breeze that was cooled by its passage over the lake, and I wished that absent friends who were sweltering in the Northern States, could have been seated by my side to inhale the refreshing wind as it ascended the gentle slope from the lake.

An intelligent friend, who kept close watch of the thermometer, assured me that on but one occasion did the instrument mark 96°. The frontage on the lake is about two miles, and it is the intention of the proprietors to make it the home of the intelligent man of means for a winter or permanent residence, where he can enjoy the advantages of good society, schools, churches, frequent mails, well stocked stores, etc. The proprietors will only dispose of lots to respectable parties, who will make satisfactory improvements. Land has been reserved for three parks, from five to ten acres each, and a frontage of one entire block on the lake has been set apart for a boat club-house and anchorage for yachts. Whenever a boat club shall be formed, the proprietors will assign the land free of charge for the erection of a boat-house.

Mr. Leggett, well known to many an old Adirondacker, is erecting a hotel at this point, and I can assure sportsmen that Mrs. L. can handle a rifle, paddle a canoe, land a bass, and properly minister to the wants of the inner man. Without making any special reference to the host, we feel assured that the hostess will prove a host within herself, and if any piscator or gunnist should find himself at Crescent City, we have every reason to believe that he will be satisfied with the accommodations at Leggett's Sportsman's Retreat. Independent of purchasers elsewhere, a large number of the residents of Jacksonville and Palatka have purchased lots in Crescent City; and among the notabilities who have invested, I may mention the names of Dr. Baldwin, the scientist and great meteorological authority of Florida; Gen. Tom Thumb, the distinguished representative of littleness; and "Al Fresco," the fellow who semi-occasionally manufactures fish stories for the FOREST AND STREAM.

Mr. Capwell, of the Capwell House, is unable to meet the demand for meals and lodging accommodations. At times, he is forced to place cots aloft to accommodate transient visitors. This gentleman deserves the thanks of the community for his enterprise in establishing the first private hotel. Mr. Mattair, the proprietor of the Mattair House, in this city, has purchased two lots, upon which he proposes erecting a first-class boarding house before winter, to accommodate fifty persons. Mayor Curtis has perfected arrangements for the erection of a first-class hotel on Eucalyptus avenue.

Convinced of the importance of reaching the Halifax River by the way of Crescent Lake, a company was organized in Jacksonville to establish a stage and wagon route to the Halifax River. At present an excellent stage is running over the route once each week, but as soon as winter travel commences two trips per week will be made, and wagons will be placed on the route to transport boats and freight. It is contemplated to build a narrow gauge railroad from Horse Landing on Haw Creek to the Halifax, and I believe it will prove a remunerative investment. At 7 a. m. we took a seat in an excellent stage, capable of accommodating eight persons. For the first three miles after leaving Crescent City, we passed over a hilly and interesting country, capable of supporting a large population. From this point to the Tomico River the land was poor, level, and interspersed with extensive savannahs, and only adapted to pastoral purposes. Along the road floral gems were dispersed in ample profusion, but the beautiful *Laurus carolinianum* reigned supreme. After crossing the Lemeca the character of the land changed, and we passed through an extensive hammock of wonderful richness, which in the past was devoted to sugar culture, and at present the remains of sugar works are discernible from the road. Here is the home of the cane, and it only requires capital and energy to make this section excel Louisiana in the production of sugar. After leaving the hammock we passed over one mile of high sandy land, covered with spruce pines, and at 4:20 p. m. came in sight of the Halifax River, at New Britain. We enjoyed the ride as the road was excellent, the coach easy in all its motions, and the driver gentlemanly, communicative and accommodating. At points the mosquitoes proved annoying, and the horse flies existed in unpleasant numbers.

In days of yore, many large plantations existed on the Halifax, but the settlers were driven off by the Indians, and the old fields soon succumbed to the live oak and pine. Ten years have not elapsed since the first settlers (after the war) located on this river; and to-day every available foot of land on each side of the stream has been purchased or pre-empted. Three years since, the present site of New Britain was a wilderness, without any inhabitants, and to-day, building lots having a frontage of 115 feet on the river, are selling for \$250. This locality has been settled by "Nutmegs," and thrift and progress are manifested in every direction. After some search we secured the services of a boatman, and in a few minutes we found ourselves at the residence of Mr. J. A. Bostrum, which is situated on the peninsula, bounded to the west by the Halifax River, and to the east by the Atlantic. Mr. B. is an intelligent and industrious Swede, and his amiable wife is a Massachusetts lady. Mr. B.'s residence is situated on a shell bluff, twenty-five feet above the river, and is surrounded by a thrifty orange grove. The house is large and neatly furnished, and the interior presented every indication of cleanliness and comfort. In the past, Mr. B. and lady have accommodated a few boarders during the winter, and it is to be hoped that they will add to their accommodations. To those who like retirement, home comforts, and the best of sea-bathing, we may say, secure rooms if you can. This gentleman has made an excellent carriage-road from his house to the Atlantic beach, a distance of half a mile. We visited the "vastly deep" and indulged in a bath. The beach shoals gradually, and is as hard as a turnpike road, with an entire absence of underow. We devoted the evening to conversation, and retired to a pleasant room and excellent bed, upon which we slept as only tramps can enjoy the embrace of old Morpheus.

The next morning we started for Daytona, distant seven miles, in a southerly direction. Four years since, this thriving place was without an inhabitant, and as an evidence that speculation in city lots has reached this locality, we were shown a water-front lot, 150 by 300 feet, for which the owner asked the modest sum of \$1,500. This town has recently obtained municipal honors, and contains a resident population of about 350 persons. It is becoming a winter resort, and possesses a hotel and six boarding houses. We entered and explored the Palmetto Hotel, run by Mrs. Hoag, and everything appeared satisfactory. Fifty guests can be accommodated, at from \$12 to \$15 per week. Charges in private boarding houses from \$6 to \$10 per week; tucker and roosting accommodations varying in accordance with price. During the winter season fishing is fair in the neighborhood, and excellent at the inlet some

twelve miles to the southward. During the winter season ducks are plentiful, but rather shy. To our surprise, we found that beach birds are scarce, or this information was gleaned from those we questioned on the subject. On the main land deer are plentiful, but as a general thing, dogs are required to drive them. On the peninsula both deer and bears exist in numbers, and the latter are frequently killed when perambulating the ocean beach in search of turtle eggs. This section is favored during the summer months, for the wind is usually easterly, and is cooled by the ocean. The other day, a gentleman who is a resident of Daytona, called upon me, but I was absent. In conversation with my better half, he referred to the range of the thermometer during the month of July, and stated that the highest point reached by the mercury was 92°. I instituted numerous inquiries, and from all I could glean, I was forced to the conclusion that medical men found the region distressingly healthy, and that it was no place for them to experiment upon their fellow beings.

At Daytona, Briggs & Co. are building a steamboat 120 feet in length, to ply on the Halifax River. In hull and upper works she resembles a western river boat. She will be provided with large and airy cabins, and an extensive saloon on the upper deck. It is the intention of the proprietors to so arrange their scale of charges, that the boat can be used by itinerant tourists as a hotel. She will leave the inlet in the morning, and proceed northward to the head of the river and return in the afternoon; the ensuing day proceed to the head of the Mosquito Lagoon, and return to the inlet, thereby making three trips to the north and three to the south weekly. This arrangement will suit the numerous restless spirits who like to be eternally moving. As the peninsula is less than a mile in width, passengers can enjoy the sea breeze as well as a pleasant trip on smooth water. To those who have been surfeited with the old beaten track of travel in Florida, we recommend the route via the St. Johns, Deep river, Crescent Lake, across lots to New Britain, and then a cruise on the Halifax.

Arrangements have been perfected for the popular steamer Florence, to be permanently placed on the route between Akronville and Crescent City. The F. is the fastest boat on the river, her accommodations are unsurpassed, and her officers are attentive and gentlemanly. The fact of this boat being placed on the route, will make it a popular one, and will induce many a tourist to visit an interesting section of the State, that has been heretofore hidden in a wilderness.

Last, though not least, there is something in connection with this route which I wish to bring prominently before your readers, and that is the advantages possessed by this route for a boat journey. There are numerous persons who enjoy the freedom and the devil-me-care-not sort of a life appertaining to a boat trip. In this connection, I can say that I believe it to be the best mode of enjoying a few weeks in Florida. A boat can be built or hired here, or one can be forwarded to this point by steamer or sailing vessel. Stores of every description can be obtained in this city. The sail from this point to Crescent City would be enjoyable. The Transit Company will provide wagons to transport a boat from Crescent City to the Halifax River, at New Britain, at a cost of from \$12 to \$20, according to size and weight. If the cruisers were so disposed, the boat could be launched at the Temoco, and this stream descended to the Halifax. I have been credibly informed, that in the former stream, large bass in immense numbers exist, and the fly-fisher or more primitive piscator who uses a bob or spoon can have ample sport. I was assured that no stream in the State can equal the lower portion of the Temoco for bass fishing. Leaving the Tomoco and turning the boat to the southward, the broad Halifax River will open up, and a pleasant sail can be enjoyed to the inlet, a distance of thirty miles. The inlet reached, channel bass, sheephead, cavalli, and other sea fish will be found in quantity. Tired of the inlet, the wanderers can steer for the head of Mosquito Lagoon, and when this point is reached, the boat can be poled through the canal to Indian River. So much has been written and published about the attractions of Indian River, that I shall add nothing more regarding this stream, but refer inquirers to the interesting letters published in "Camp Life in Florida." Indian River explored, if the voyageurs are disposed to extend their cruise, they can secure the services of a guide, and by dint of poling and pushing through swamps and lagoons reach Lake Worth, around which deer and bear hunting and turkey shooting can be indulged in *ad libitum*. Returning to Sand Point, on Indian River, transportation for a boat can be obtained to the St. Johns River, at an expense of from \$12 to \$20. The St. Johns can be descended to Jacksonville, and the various points of interest visited *en route*, the whole making a cheap and enjoyable trip of over 750 miles. Here is an opportunity for the enjoyment of piscatorial and other sports; an extended sail in calm waters; a chance to inhale an invigorating sea breeze, and visit an interesting section of the State. Owing to the absence of rain during the winter months, and the probability that frost would not be experienced, this route would suit an invalid whose disease admitted of a moderate amount of daily exercise. To me, the great attraction surrounding a cruise of this description, would be the opportunity to cut loose from the stiff and starched conventionalities of modern society—a chance to don a blue shirt, a twenty-cent chip hat, a cast-off pair of pants, and an old and comfortable pair of shoes. To me, it is perfect and unalloyed happiness to lead a sort of vagrant life, cast a line, shoot my game, enjoy a sun bath, sail when the spirit moves me, listen to the ceaseless roll of old mother Ocean, and feel that I am in a position to enjoy the beauties of nature. With a suitable boat, a boon companion, pliant rod, trusty rifle and gun, an ample supply of tackle, and a well filled food chest, a boat trip in Florida is truly enjoyable; or at least this has been the experience of

AL FRESKO.

—The effort to develop an export market for American cottons promises to be successful. The co-operation of mills representing a million and a half of spindles has been secured, and sixty packages of samples will soon be brought to Philadelphia for distribution among the foreign commissioners, who are to introduce them in their respective countries. The commissioners of Portugal, Italy, and Australia, have ordered five extra packages. The manufacturers have already addressed a petition to Secretary Fish in reference to the protection of American trademarks. —*Ex.*

—Two loons were recently caught in Lake Winnepesaukee, near the Weirs, on hooks set in forty feet of water, to which depth these strange birds descend in pursuit of food. One magnificent specimen was taken alive.

Fish Culture.

CONVEYANCE OF LIVE FISH.

We are now beginning to learn that, up to a certain point, the value of water for non-lung-breathing aquatic animals does not so much depend on its amount as upon its distribution in such a manner that it shall absorb the greatest quantity of atmospheric air, or rather of the oxygen which enters into the composition of that air, leaving much of the nitrogen out unabsorbed. The earliest observer known to me of this fact was the late Dr. R. Ball, who, in Bell's *British Crustacea*, records how much better he kept a crayfish (*Astacus*) in a shallow vessel than in a deep one. In all my aquarium work I keep this law in view, and I regulate the amount of surface of water exposed to air, as well as the actual quantity of water, according to the known requirements of the animals to be kept; and the result is very surprising both on the health of the creatures, and in the saving of the money cost of constructing and maintaining aquaria.

I also apply the rule to the conveyance of aquarium animals. To give an actual example, I find that the following animals and some others may, at certain temperatures, be safely sent from Southend, in Essex, to the Crystal Palace in boxes (or preferably in baskets) packed in damp, freshly gathered seaweed: 1, nearly all the sea anemones; 2, most of the *Echinodermata*; 3, a large number of annelids; 4, many crustacea; 5, some of the tunicates; 6, nearly all shelled mollusca, both univalves and bivalves, and some of the *Nudibranchiata*; the following fishes: amphioxus (this once came alive from Naples in a post letter, and four of them so brought are still alive in the Crystal Palace aquarium), plaice, soles, brill, rocklings, eels, gobies, blennies, (of three species), sea scorpions.

The explanation of the reason why they so travel is this: They are surrounded with moisture in a sufficient degree to enable respiration to be carried on. Take, for example, any fish so conveyed. It is not immersed in water, but its gills are kept wet by such very thin films of water that their thinness, otherwise shallowness enables them to be instantly oxygenated by contact with the atmospheric air, which enters the apertures of the containing box or basket, and which permeates the entire mass, and therefore the gill-filaments are kept wet and separate from one another, and the blood uninterruptedly flows through them, and is aerated as it does so, oxygen being absorbed from the perfectly aerated water, which thus does double duty in a measure. I admit that the balance thus maintained is a delicate one, and is easily disturbed by external causes. Thus, a heated atmosphere would cause the moisture to evaporate and the gills to dry up, and the circulation of the blood would be arrested, and the fish or other creature would soon die. So also great cold would freeze the gills into a temporarily dry mass, and death would likely ensue. But there is one thing which I do not yet understand, and which I should be very grateful to have explained. It is this, that while many of the creatures I have named will bear the four hours' journey from Southend, some of them will not bear the twelve hours' transit from Plymouth, though equal care be apparently taken with the packing in both cases. But when such packing is possible, the gain is enormous in every thing. We often at the Palace get a couple of thousand of animals, or more, in packages weighing not altogether half a hundred weight, while if the same animals needed to be conveyed in properly aerated vessels of actual water, such creatures would require a pound weight of water instead of only a fraction of a grain weight to each. The money value of the moist plan is strikingly shown in the instance of shrimps, of which we use about a ton weight every year at the Crystal Palace Aquarium, for feeding purposes; and we require them alive, because many animals refuse to eat them when dead. They cost us in good condition about a shilling a quart; but if it was necessary to bring them alive in water, they would cost at least a guinea a quart.—*W. A. Lloyd, in London Zoologist.*

✓ **BLIND TROUT EGGS.**—In my experience of ova collecting, I do not find that the percentage of good eggs is at all affected by different methods of milting. I take my fish indiscriminately, male or female, and take eggs or milt, just as the fish happen to come to hand, pouring the milted ova into another vessel as soon as my spawning dish contains eight or ten thousand eggs. If the eggs are mature when they are taken from the parent fish, they will hatch out eighty and ninety per cent., but although many eggs will come with a little pressure, they are not ripe enough to be fertilised. The ova, being deposited in the hatching troughs, will show the "germ" uppermost, and unripe or unfertilised eggs once disturbed will hardly ever fall in the same position again, and in a few minutes will turn white. After six weeks, take an egg (in which the eyes are not visible) and hold it up between the finger and thumb, or with the wire pincers used for removing dead ova, and in a few seconds the germ will leave its position and rise to the top edge of the shell; place it back in the water, and it will turn white. I think that the "germ," having left its old position, leaves an unprotected spot, and water enters. If the egg is mature when taken, my opinion is that the entrance to the egg is sealed immediately it is impregnated, as the germ increases in size and alters in appearance a very few moments after it has been milted. In Mr. Francis's "Fish Culture," he says "Dr. Davy states that the reason why a bad egg turns white is owing to the absorption of water, though why 'clear' eggs resist water so long, while others absorb it instantaneously, has not yet been discovered."—*T. A., in Land and Water.*

✓ **CHANGE OF COLOR IN FISH.**—I would wish to supplement my recent letter to your paper on the changes of color in fish, with a few extracts from other authors. In the "Treasury of Natural History," page 705, Dr. A. T. Thomson remarks: "That each species of trout has its peculiarities of color, but the common trout is the most beautiful of its class; the variations of its tints and spots, from golden-yellow to crimson and greenish-black, are almost infinite, and depend in a great measure on the nature of its food, for the colors are always the most brilliant in those fish that feed on the water shrimp. It is a curious fact that the brightness of the colors is not diminished when the fish dies, for even after he has been played with for an hour or longer by the practised angler, and at length is brought floating upon his side to the margin of the stream, and thrown upon the bank floundering, till, gasping with distant and feeble motions, he is either knocked on the head,

or dies from exhaustion, his scaly splendor is as bright as ever." In Sir H. Davy's work, "Salmonia," that great philosopher wrote: "I think it possible when trout feed much on hard substances, such as larvæ and their cases, and the ova of other fish, they have more red spots and redder fins. This is the case with the gillaroo and the char, who feed on analogous substances; and the trout that have similar habits might be expected to resemble them. When trout feed on small fish, as minnows, and on flies, they have more tendency to become spotted with small black spots, and are generally more silvery." Bertram, in his work, "Harvest of the Sea," also remarks: "The color of trout is of course dependent on the quality and abundance of its food; those are best which exist on ground feeding, living upon worms and such fresh water crustacea as are within reach." During the seasons of courtship and rivalry of the male sticklebacks and their furious pugnacity for victory, are those wondrously beautiful changes of hue attributable to food alone? I believe not, although I should like to see the subject fully discussed in the columns of your paper.—*John Colebrook, in Land and Water.*

✓ **GRATIFYING SUCCESS.**—Recently George H. Gerome, Esq., Superintendent of the Michigan State Fisheries, visited the Fish Works of Henry H. Porter, in this State, located at the Half-Way Station on the Syracuse and Auburn Railroad, some 14 miles from Syracuse, and in a letter to the *Journal*, of that place, he writes:—

"Although I had previously obtained some knowledge of the fish ponds and the fish culture improvements of Mr. Porter, yet I was most agreeably surprised to learn the extent and the value, present and prospective, of the fisheries there located, as by personal inspection I found them greatly in excess of all my previous knowledge of them. It is scarcely three years since Mr. Porter resolved on a fishery there, and he has now several small ponds, fish preserves, and a hatchery in full operation, and is turning out excellent work. Several thousand healthy looking and rapidly-growing 'speckled beauties' have already found very comfortable homes at this fishery; and the outlook for permanent effective work I think of a very promising character. Few fisheries that I have visited—and I have visited quite a large number in the 22 fish States of the country—excel Mr. Porter's in the quality and quantity of the water and in the generally favorable surroundings. The water is all spring water, free from any deleterious mineral impregnation, pure and cold, and with a flow I should judge, of 1,000 gallons per minute, and with easy facilities for an almost indefinite increase of ponds with connecting streams and rivulets.

"Mr. Porter informed me that it is his intention not to confine himself exclusively to the culture of brook trout, but to go also into the culture of the Skaneateles lake trout; also salmon, black bass, and other varieties. And of his success with all these varieties there can scarcely be a reasonable doubt.

"One thing greatly pleased me in my visit to the ponds and the hatchery. It was the system, the carefulness, and the cleanliness everywhere apparent in the establishment and in the work of Mr. Porter, for without the most perfect order, care, and cleanliness in the various processes and appliances of artificial fish culture, time and money and labor are almost certain to result in discouragement and vexation, if not in downright failure."

TEMPTING THE COMMISSIONERS.—The State Fish Commissioners are constantly in receipt of letters asking privileges in violation of the laws regarding fish. One favorite request is to be allowed to seine fish out of some pond where they are known to exist "for the purpose (only) of stocking artificial ponds." In some cases, no doubt, the writers of such letters are conscientious men, but in the majority of cases—at least so Seth Green says—they are the worst kind of poachers. Even persons who have netted all the fish out of a lake, after it has been stocked by the Commission, write on some miserable pretext for permission to net them all out again. To all such applicants the Commission have but one answer to make: They do not grant any privileges to any person to use any kind of nets in any waters in this State. And this hint ought to save the Commissioners from further annoyance.

✓ **HITCHCOCK'S IMPROVED MINNOW PAIL.**—We have received from Hitchcock & Co., of Oconomowoc, Wisconsin, one of their patent combined minnow buckets and coolers, the merits of which become apparent upon examination. We shall print a description of it in our next issue.

CINCINNATI, Ohio, August 14th.

EDITOR FOREST AND STREAM:—

In printing the article in your paper of August 10th on transporting minnows, your compositor makes it read "place a large piece of ice on top of inside bucket every ten or fifteen minutes." It should read: "Place a large piece of ice on inside bucket every ten or fifteen minutes, and churn the inside bucket up and down to aerate the water." Please correct. W. B. S.

Natural History.

TAPE-WORMS IN FISHES.

A GIGANTIC TAPE-WORM FOUND IN A SALMON—GENERAL HISTORY OF THE PARASITE.

✓ **A FEW** days ago, the Hon. Doctor Winter, of St. Johns, N. F., purchased a fine salmon, weighing fifteen pounds. On opening it, the cook set free a tape-worm, which came away in fragments, some being yards in length, and others only a few inches. The Doctor, assisted by the Rev. E. Bodwood, proceeded to put all the pieces together, and to measure carefully the strange creature. To their amazement, they found it 62 feet 4 inches long. If, then, these portions all belonged to one animal, as seems most probable, it is the longest tape-worm yet discovered? There is no record of any specimen exceeding 35 feet in length, and the great majority are under 20 feet,

Moreover, although tape-worms have been found in certain kinds of fish, I am unable to discover in any works to which I have access, an instance of one of these entozoa having been found in a salmon. On these accounts a special interest attaches to this gigantic parasite, which showed at least an appreciation of good board and lodging. The salmon itself showed no signs of having suffered anything from the presence of this unpoetical "Longfellow" in its alimentary canal. It was plump and well-flavored, and was pronounced by the Doctor, who is an excellent judge, a "splendid fellow." I confess, much as I appreciate salmon steaks, I should have hesitated to join the Doctor at dinner that day, fearing that one or more of the ova of this "protracted fellow" might find a resting-place in my digestive tube. If tape-worms are capable of such an emotion as astonishment, this one must have been considerably surprised at the sudden ejection served on him by the cook's knife. Indeed, it is difficult to conceive a snuggler location than that which he occupied. "His bread was given him, and his water was sure." Nay, he had not even the trouble of digesting his food, this being done for him by the lordly salmon, in whose duodenum he lay coiled, drinking in the nutritious juices made ready for his consumption. Talk of the tape-worms being "low in the scale of being!" It seems to me they are the real aristocrats of creation. The salmon has to work hard for a living, and to travel fast and far; the tape-worm gets an agreeable amount of passive exercise without effort, enough probably to give him an appetite, and he has no cares about to-morrow. It might be thought, perhaps, that he must feel lonely, as it is supposed only one of the species is found at the same time in the body of the same animal; but the creature is both male and female—husband and wife, so to speak, rolled up into one; and their offspring, which are countless, start in the world on their own account, and require no nursing. A tape-worm having a healthy salmon "outside of it," might be regarded as in Paradise.

The body of this specimen is flat, white in color, riband-like in form, articulated, and marked or girdled with bands. A longitudinal depression or slight furrow extends throughout its entire length. At its broadest part the body is close on a quarter of an inch in breadth. Dr. Winter very properly placed it at once in alcohol, and sent it to the museum, where I have had since an opportunity of examining it. I succeeded in finding the long, slender neck, which at the extremity next the head becomes a fine thread. I was unable to distinguish the head, which in the tape-worm is very small; but this may have been from the fact that I happened to be provided with a lens of very small magnifying power. In the slender, thread-like neck, I could distinguish no articulations. Possibly a sufficiently powerful lens would have shown the hemispherical head with its double row of hooks, fifteen in each, and its four suction disks, whereby it adheres to the inner surface of the intestine. These hooks are peculiar in shape; they consist of a straight stem or handle, a middle knob, a distinct hook or claw, surrounded by a sheath or sac. It is quite possible that the minute head has been destroyed in the process of extracting the worm from the salmon. I hope shortly to get the specimen thoroughly examined by an eminent German naturalist, who is about to visit this Island for the purpose of dredging the shores and banks for mollusca. I feel bound to state that, in the course of my examination, I found what seemed to be two necks, so that it may turn out that there were two worms, of which these are the fragments. I cannot, however, speak with confidence on this point. A microscopic examination will be necessary to settle this point, and also to determine the species.

The animal parasites, as is well known, are divided into *Entozoa* and *Epizoa*; the latter living upon the surface of an animal, the former within a cavity of the body, or within the substance of some of its tissues or organs. All these parasites, it is now known, have an independent life of their own; and most animals have each their own peculiar parasites. It seems a just retribution on these troublesome creatures that the parasitic animals are themselves infested with parasites, and it serves them right that it should be so.

It is besides an uncomfortable fact that through food or drink, or both, parasites pass from the body of one animal into that of another, including man, and that in this way the entozoa or their minute ova (eggs find way into the most delicate tissues, to be developed towards maturity. At least thirty well-marked forms of entozoa are described by pathologists as infesting the body of man, though many of them are also found in the bodies of other animals. The number of fecundated ova which most of them produce is enormous. In the tape-worm there are many millions; but "the struggle for existence" consigns the greater part of them to death as the food of animals unfavorable to their growth as parasites. It might be supposed that in the case of the tape-worm, of which the salmon was the unlucky host, a vast multitude would be developed in the cavity where it found shelter. But it rarely happens that the development of the ova takes place in the same animal, or in the same part of an animal where the parasitic entozoon has passed its life and exercised the generative function. The entozoa, or their ova or embryos, pass out of the body of the inhabited animal, and may be introduced into the bodies of other animals in their food or drink, or by piercing the integument or other tissues. The diseases which they cause tend rather to embitter existence than to cause death. It is, however, a curious fact that it is the immature parasites, enclosed in cysts, which tend to destroy the life of their host, by the destruction of parts, as they pass from one place to another, or from one stage of growth to another. The health of the salmon does not seem to have been at all affected by its undesirable guest, whatever its feelings may have been. This arose from the fact that the parasite was mature and in a free condition, in which case they are comparatively innocuous.

How did this salmon, living in such a pure element, get the egg of a tape-worm inserted in its alimentary canal, there to undergo such a wonderful development? Undoubtedly the ovum must have been in its food. Possibly the germ came from the body of some other fish which it had swallowed; or, it may be from the carcass of some land animal, such as a dog, flung into the stream in which the salmon was sporting, and partaken of by the voracious fish. The time was when the short and easy answer to all inquiries regarding the origin of these internal parasites would have been, "spontaneous generation." This theory,

however, is no longer entertained; and now it is clearly established that all entozoa are produced, more or less directly, from fecundated ova. The general and minute anatomy of these creatures has been carefully studied, as well as their modes of reproduction, phases of progressive development and transigrations from one animal to another. The first great insight into the matter was obtained in 1842, when Steenstrup discovered the principle of "alternation of generation" among the *Cercaria*, a class of worms of microscopic size, found in stagnant water. He showed that among these, generation was carried on through a series of broods produced from one parent, each brood differing from the parent and from each other. Steenstrup's great discovery has been followed up by eminent investigators in many countries; and now the result is a vastly extended acquaintance with a realm of nature, but little known, and the practical application of this knowledge to the treatment of parasitic diseases. "The germ theory" of disease promises to yield most important results in connection with investigations regarding the causes and treatment of many diseases. More and more, as the revelations of the microscope are developed, it is being established that each man is a kind of faunal province—that there is life within life—and that the cells of which the organization is built up, are each a universe for countless multitudes of microscopic creatures. In a new and wider sense, man is shown to be a microcosm.

The manner in which the tape-worms multiply their species is curious enough, and has been made a matter of actual observation by Dr. Eschricht, of Copenhagen. A full account of it may be found in Professor Owen's Lectures. The process is briefly thus: "Within each point is contained a complicated male and female apparatus, capable of producing thousands of fertile ova, and the spontaneous separation of these riper segments appears to be a natural provision for disseminating the minute eggs. Meantime, as the animal shortens by thus shedding its hindermost joints, some of those which are anterior divide into two by a transverse fissure, which two, after attaining a certain size, again divide, and in this way new joints are formed, and recede gradually from the head. But at a certain distance from the head, the divisions and subdivisions cease, and the whole nutritive power is expended in the development of the organs of generation; and at length ova begin to fill the uteri of the joints." It is only in the alimentary canal of man or other animals, that the tape worms reach maturity in this way, and then these impregnated segments separate from each other and pass out out of the body, are decomposed and the eggs set at liberty. These ova are protected by a kind of leathery husk, which gives them an extraordinary power of resistance to chemical and even mechanical violence, so that after months of exposure to the weather, the dried up segments of tape-worms yield ova, which retain all their original vitality, and are borne about by winds, waters, or other agents, as accident may determine, and thus are frequently engulfed with its food or drink by some unfortunate animal, such as our salmon. In the alimentary canal the embryo fastens itself by hooks to the mucous membrane, grows so rapidly that in three months from a mere speck it becomes a mature tape-worm, from 20 to 30 feet in length, and forms complete sexual segments or links, each being hermaphrodite, and tending to separate when completely mature. Such are the vicissitudes through which these beauties of nature pass. It may be mentioned, besides, that the embryos of the tape-worm may penetrate a vein, and in the current of the blood reach the liver or other glands, and there become encysted.

At least eight varieties of the true tape-worm have been found in man, but only two of them are of frequent occurrence—the *Tania solium*, and the *Tania mediocancellata*. The latter is the larger, is hookless and flat-headed, but it has more powerful sucking disks than the former. I am unable to say to which of these varieties the tape-worm taken from our salmon belongs. This I hope to get determined shortly by the able German naturalist, Herr T. A. Verkrusen, who is expected here soon. M. HARVEY.
St. John's, Newfoundland.

BIRDS OF CENTRAL NEW YORK.

[Continued from page 402.]

Picus villosus. Hairy woodpecker. Found throughout the year and breeds, but is most common in winter.

Picus pubescens. Downy woodpecker. A common resident, but most abundant in the spring.

Spizopicus varius. Yellow-bellied woodpecker. Common in the spring and autumn migrations.

Centurus carolinus. Red-bellied woodpecker. An irregular visitor. A few passed through in the spring of 1867, and on April 23d, 1875, I took one female.

Melanerpes erythrocephalus. Red-headed woodpecker. Resident and breeds but is not very common in winter although abundant in summer.

Colaptes auratus. Golden-winged woodpecker. Abundant and breeding from early April until the last week in October.

Bubo virginianus. Great-horned owl. Resident. Not very common, and breeds.

Scops asio. Screech owl. Not very common, but remains through the year.

Nyctea nyctea. Snowy owl. Winter visitor, not abundant.

Circus cyaneus. Marsh hawk. Common in summer and breeds. Arrives the last of April.

Accipiter cooperi. Cooper's hawk. Arrives in March, and nests.

Falco columbarius. Pigeon hawk. Not very common summer sojourner. Breeds.

Falco sparverius. Sparrow hawk. Common in summer.

Buteo borealis. Red-tailed buzzard. Resident, but rare in winter.

Pandion haliaetus. Fish hawk. A few breed.

Haliaetus leucocephalus. Bald eagle. Resident, but rare.

Ectopistes migratorius. Wild pigeon. Arrives the first week in March, is common and breeds.

Zenaidura macroura. Mourning dove. A bird of the summer when it breeds, but never becomes common.

H. G. FOWLER.

ARRIVALS AT CENTRAL PARK MENAGERIE AUG. 13 to 19.—One albino woodcock (*Arctomys monax*), captured at Pittsfield, Mass.; two albino rats (*Mus rattus*), presented by Mr. A. W. Mitchell, Elkham, Maryland; one globose curassow (*Crax globicera*), presented by Mr. J. W. Wilson, New York City; one rattlesnake (*Crotalus durissus*), presented by Mr. T. J. Daly, captured in the Berkshire Mountains.
W. A. CONKLIN, Director.

The Kennel.

THE INTERNATIONAL DOG SHOW.—Mr. Landreth sends us the subjoined list of entries for the great Centennial Dog Show, the number now amounting to 500. The list includes 17 entries by Nuttall, of Ireland; 4 entries by S. C. Cooper, Limerick, Ireland; and 2 by Ed. Sandall, Jr., Queen's Road, Peckham, England. Take the entries throughout, they embrace the very choicest of this country and Canada. The stalls for the dogs will be of first class character, the benches being 30 inches high, so that visitors will have a perfect view of the dogs. Though the catalogue is in the hands of the printer, any one wishing to compete can still enter, but will not be included in the catalogue, though standing the same chance as those that are entered more formally.

CORK DOG SHOW.—The show of dogs in Cork week before last was the largest and decidedly the best ever held in Ireland, the entries numbering 636, the result of the very liberal prizes offered, and a just reward of the indefatigable labors of the Hon. Sec. Mr. W. Desmond O'Connell, and the committee of gentlemen associated with him. Every inducement was held out to English exhibitors, who, notwithstanding the distance, attended in strong force. The exhibition was held in the Corn Exchange, which was roofed over, and admirably fitted up with substantial and comfortable benches for the larger dogs, and very nice pens for the toys. The place has also the advantage of a spacious exercise ground, which is of the greatest utility where shows extend over several days. Mr. Niall, who took first prize with three red Irish puppies in that class, writes us that two of them are coming to sportsmen in this country.

—We have been requested to state that the National Kennel Club, of which Dr. N. Rowe is President, and Mr. Chas. H. Turner is Secretary, will hold its regular annual meeting at the Audubon Club Rooms, McCormick Block, Dearbon street, near Washington street, Chicago, on Tuesday, August 29th, 1876, at 10 o'clock a. m.

BISMARCK AS A SIRE—A CHALLENGE.

NEW BRIGHTON, Pa., August 15th.

EDITOR FOREST AND STREAM:—

In the Chicago *Field* of August 12th, over the signature of M. Von Culin, in an article on breeding, occurs the following:—

"I can bring numerous cases as proofs sufficient to convince the most skeptical that I am correct, but will quote but two or three well known cases. Mr. Brooks's celebrated Bismarck, although he has sired over 200 dogs from the best bitches in the country, has not one worthy representative."

Now, Mr. Editor, I claim so have a worthy representative of Mr. Brooks's celebrated dog, namely, Sam, 16 months old, which I will match against any dog (setter) of the same age in Mr. Von Culin's kennel to hunt on ruffed grouse (pheasants) or quail, some time in October next. I inclose a draft for \$50 to show I mean business. If Mr. Von Culin will cover the amount the match can be made at once.

Jos. J. SNELLINBURG.

[We have received Mr. Snellinburg's \$50, which we hold in accordance with his desires as expressed above. We were somewhat surprised ourselves at Mr. Von Culin's statement, and can only account for its not being noticed by others from the fact that the owners of Bismarck's get have not read the *Field*. We could name a dozen dogs the get of Bismarck which are amply capable of refuting Mr. Von Culin's statement.—Ed.]

BALLARD'S FLEA POWDER.

NEW YORK, August 20th.

EDITOR FOREST AND STREAM:—

For some time I have seen Ballard's flea powder very highly recommended, but having tried so many powders, all of which were worthless, I did not try this until last week, and I found it all that has ever been claimed for it. In two or three minutes after dusting the dog with it behind the ears, along the back and under the tail the fleas commenced to drop off dead. I used it four days ago on my dogs, then sprinkled their kennels, and now I doubt if a flea can be found on them. I write this for the information of those who are still doubtful as to its virtue, and, like myself, had lost faith in all flea killers. W. S. WEBB.

Horace Smith, our Field and Kennel Editor, having given Ballard's flea powder a thorough trial in his kennel, can vouch for its wonderful efficacy in exterminating fleas and all other insects with which our dogs are affected. No owner of a good dog should be without it.

BIRT'S CURE FOR MANGE.

UTICA, August 19th.

EDITOR FOREST AND STREAM:—

In your issue of August 17th, I noticed a paragraph from Mr. Geo. M. Whitten, in which he stated that he had used a remedy for mange furnished by the writer, but that in the place of oil of tar, "it should have been written creosote." I would say in reply that it was printed as written, and written as intended, oil of tar and no creosote about it, unless you wish to rid your dog of hair, and perhaps of life. For the benefit of the gentleman, I will repeat: one ounce of oil of tar, one ounce lac sulphur, four ounces spum oil, mix and apply every third day, washing the dog previously. THOMAS BIRT.

"AMATEURS" CHALLENGE AND THE MEMPHIS FIELD TRIALS.

MEMPHIS, TENN., August 14th.

EDITOR FOREST AND STREAM:—

In your issue of July 6th is a challenge from "Amateur" to run two native dogs at the Memphis Field Trials, provided anyone will run imported or the produce of imported dogs of respective ages against them, for one week on quails early in November in Indiana. There are several reasons why this challenge cannot be accepted. First—the Memphis Field Trials will not be run until the middle of November—13th, 14th and 15th. Second—in such long trials it would be almost impossible to get judges who could leave their business for one week to follow a brace of dogs in which they have no interest. Third—the distance from here to Indiana is too great, when such a trial could be had here just as well. "Amateur" says, if he understands what is required at the field trials, he is "forced to conclude all that is required is good breaking; staying qualities are not tested at all." He is much mistaken if he thinks he can win at the next Memphis Field Trials with a dog deficient in all points or even any one point except breaking. I admit bottom will not be tested, nor can it ever be in any public field trial, as it would take a whole season to run them if the entries were as numerous as we expect to have here next November. Everything else required of a first-class field dog can be thoroughly tested; and bottom is the only thing left out on which the owners of beaten dogs can fall back. The purses in the Memphis Field Trials will be as follows (subject to the rules of the National Kennel Club): Puppy Stakes \$300 cash; \$15 entrance; \$150 to first; \$100 to second; \$50 to third. Free for All Stakes \$500 cash; \$25 entrance; \$250 to first; \$150 to second; \$100 to third. Brace Stakes (regardless of ownership). Chicago *Field* Cup, value \$150; \$25 entrance; entrance money added; cup and one quarter to first; one-half to second; one-quarter to third. In addition to the above Mr. Luther Adams gives \$25 in gold to the trainer of the best trained puppy, and \$25 in gold to the trainer of the best trained brace. Mr. P. H. Bryson gives \$25 in gold to the trainer of the best trained dog or bitch in the Free for All Stakes. If "Amateur" thinks the above purses are any inducement to bring his dogs here, and after running them in the field trial still wants to test their bottom with the progeny of imported stock for one week on quails, I will accept his proposition, provided he make the race near here instead of Indiana, which I think will be just as convenient for him (as he would already be here) and much more so for me. I now know of 23 blooded dogs (and no doubt there are many that I have not heard of) which are expected to run at the Memphis Field Trials this Fall. Out of this number I will name one over 18 months and one under which I will run against his two here on quails, or at De Vall's Bluff, Ark., on both quails and chickens for one week, ram or shine, or longer if he desires it for either money or glory. I will accept any rules which your venerable Field Editor will make. I will be glad to meet "Amateur's" and everyone's kennel at the Memphis Field Trials, as this is the only way we can determine who really has the best dog. If mine are beaten I will yield gracefully. DEAD BEAT.

A VISIT TO THE BOONTON KENNELS.

NEW YORK, August 19th.

EDITOR FOREST AND STREAM:—

Last week I paid a visit to Boonton, N. J., with the intention of spending the day shooting woodcock; but at 2 o'clock, after finding some half-dozen birds, the heat was so intense and the mosquitoes so intolerable I gave up in disgust and occupied the remainder of the afternoon in visiting some of the noted dogs in town. Inquiring for Mr. T. D. Gladstone, the celebrated dog breaker, I placed myself under his guidance, and was first taken to his brother's, who has some ten or twelve dogs on board, among which we noticed Mr. Colburn's pointer bitch Belle, who has just visited Mr. Steel's Flake; a pair of fine Gordon setters, Pomp and Dina, also the property of Mr. Colburn, both out of Mr. Belmont's bitch by Colburn's Dash and Shot; a fine pointer pup belonging to Mr. Buckland, out of Belle by Buckland's Flash, who is a remarkably promising dog, and at present looks as if he would, when of age, excel his mother in good looks. Belle, however, is a handsome bitch, and her coming whelps by Flake should be very fine. I next called on Mr. Fuller and I saw his pointer bitch Queen and her litter of six pups; also his pointer dog Snipe, out of Queen. Snipe is, with the exception of Mr. Steel's Flake, the handsomest small pointer dog I have ever seen. The sire of Queen's present litter is Mr. Burk's imported dog Bingo, who must weigh 75 pounds, while Queen will hardly turn the scales at 45. The pups are, however, about the same size, though the chances are some will take after the sire, while the majority will approach the dam in size. The remaining few hours were spent at Mr. T. D. Gladstone's kennel, where we saw Mr. Colburn's setter Don, Mr. Gladstone's Irish setter Sam, and Mr. Geo. DeF. Grant's pointer pup Pat, eight months old, out of Dr. Webb's Whisky by Mr. Schuchardt's Jim. Mr. Gladstone is loud in his praises of Pat, who, he says, works like an old dog already, and is the most promising young dog he has ever handled. When seven months old he had had seven woodcock killed over him, all of which he pointed and retrieved as well as could be wished for; should he continue to improve it is Mr. Grant's intention to run him in the Memphis Field Trials next year, if he is eligible, for the puppy stakes. Mr. Colburn's Don was sent to Mr. Gladstone as a gun-shy dog which had been sent home from Virginia to be shot; we had him out with us in the morning, and none of us would ever have suspected him of being gun-shy, as he paid no more attention to the report than to prick up his ears and look for dead birds. Mr. Gladstone certainly deserves great credit for his success with this dog, which has been with him but three months, and from the perfect command which he held over his dogs, even when all out together, it was easy to see that he was an adept at his business. His kennel is a novel of cleanliness, it being situated on the first floor of an old barn, the floor and sides of which are covered with cement, and a running stream of water within ten feet of the building. He intends to enlarge his kennel and go more extensively into the business of breaking dogs, taking them all west next season and working them on quail, snipe, and prairie chickens from September 1st to November 1st. He starts in a few weeks with Pat, Sam and Don, and on his return in November will take Pat to Virginia for three weeks. I wish him good speed, and hope to see Pat at Memphis next year. WOODCOCK.

A HINT TO BREEDERS.

STAMFORD, Ct., August 12th.

EDITOR FOREST AND STREAM:—

In this era of importing dogs and their subsequent use in improving our native breeders, it seems to me it would be answering a good purpose for owners to advertise them by adopting the following plan: Have photographs of their dogs taken on cards for distribution when requested, giving in addition a verbal description of sizes (measurements), weight, and colors of the animal on the one side, and on the other a summary of its disposition, style of hunting, speed and other qualities. The object to be secured by this plan would be the opportunity offered to anyone requiring the services of a stud dog to select the suitable "pick" for his slut the progeny for use in a particular portion of this vast and varied sporting country.

This subject might be much enlarged upon, but for the present I will simply hint at it and draw the observations of my fellow sportsmen to the suggestion. SENEX.

KENNEL PRODUCE.—Mr. Nathan Drake's setter bitch Belle, by Mr. Colburn's Dash, now in charge of Mr. S. S. Birdsall of Mott Haven, on the 19th inst. gave birth to thirteen splendid pups—seven dogs and six pups.

THE KENNEL REGISTER.

List of dogs entered in the Kennel Register since last published:—

SETTERS.

Rolla, Thos. Cumming, Esq.
Shamrock, A. Branshaw, Esq.
Bounce, C. A. Lond, Esq.
Shot, Chas. De Ronge, Esq.
Ned, Dr. F. H. Aten.
Clio and Ruby, R. O. Gates, Esq.
Bess, Lawrence Curtis, Esq.
Bridget Plunket, E. J. Rollins, Esq.
Duke, F. H. Jatzgenhorst, Esq.
Rock and Maggie, Arthur Duane, Esq.
Baron, Isaac Bingham, Esq.
Pet, F. Wiegand, Esq.

POINTERS.

Pete and Snipe, G. A. Strong, Esq.
Wash Coster, Maj. Geo. McKee.
Jim, F. Schuchardt, Esq.
Raven, May, Fannie, Van, Erie and Joe, Dr. W. S. Webb.

Game Bag and Gun.

GAME NOW IN SEASON.

Woodcock, *Philohela minor*.

Black-bellied plover or ox-eye, *Squatarola helvetica*.

Ring plover, *Agialitis semipalmatus*.

Stilt, or long-shanks, *Himantopus nigricollis*.

Red-breasted snipe or dowitcher, *Macrorhamphus griseus*.

Red-backed sandpiper, or ox-bird, *Tringa americana*.

Grat marbled godwit, or marlin, *Limosa fedoa*.

Willot, *Totanus semipalmatus*.

Tattler, *Totanus melanoleucus*.

Yellow-shanks, *Totanus flavipes*.

Pinnated grouse or prairie chicken, *Cupidon cupido*.

"Bay-birds" generally, including various species of plover, sand-piper, snipe, curlew, oyster-catcher, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

—There is no game whatever in market except woodcock and snipe. Woodcock 75 cents per pair; snipe 50 cents, to \$3 per dozen.

—As the duck season approaches, decoys are in request. We can recommend those advertised elsewhere in our columns by Harvey A. Stevens.

Correspondents and subscribers will oblige us and serve the cause by sending four-line reports of the shooting in their respective localities.

Mr. Geo. H. Johnston, of the Bridgeport White Manufacturing Company is bound for the Adirondacks soon on a deer hunt, with a jack lamp in one hand and a Fenner's portable boat in the other. We wish him all success, and have the promise of some account thereof.

MASSACHUSETTS—Worcester, August 20th.—Birds are quite plenty in this vicinity, and we anticipate better sport than for years past. W. L. C.

CONNECTICUT—Windham County, August 20th.—Good reports from Windham county. My friend Mr. L. Kimball, was sojourning near Brooklyn last week, and says quail are abundant, as well as ruffed grouse, and good prospects for woodcock. We had some fine cock shooting there last October, late in the month, but did not see a quail. W. C. B.

NEW YORK.—Hornellsville, August 20th.—Has not been much woodcock shooting this season. Dan Gardner is ahead with about 30 others, from 5 to 20. We expect some good ruffed grouse shooting this fall, as unusually large broods have been observed all through this section. STEUBEN.

PENNSYLVANIA.—Milford, Pike Co., August 19th.—The prospect for shooting small game has not been so fair in this county for the last twenty years as it promises this season. The mild winter of '75 and '6, without a single ice storm, the favorable spring, and the great quantity of birds left by the sportsmen last fall, all tend to give us promise of one of the best seasons ever known. Of course, at the present writing, we have done nothing except with woodcock, and never have we had such shooting within my recollection as during this season.

MICHIGAN—Silver Lake, Jackson, Aug. 14th.—We are camping on the banks of a beautiful little lake six miles from Jackson. There seems to be fine prospects for game here. This fall there will be plenty of ducks, plover in abundance, and a few prairie chickens, ruffed grouse and quail. A. B. COVERT.

INDIANA.—Our correspondent "South Fork," writes that he has just returned from Indiana, and got fair returns from the chicken grounds, although the weather was extremely hot.

MINNESOTA—Duluth, August 15th.—This is the opening day for grouse in Minnesota, and on the line of the Northern Pacific Railroad they are very abundant, it having been a favorable season for them. CHICK.

MINNESOTA—Brainerd, Aug. 14th.—Start to-night for the chickens. Lots of them west of here. T. P. C.

PIGEON MATCHES.

NEW YORK.—A match was shot on the 16th inst., between teams from the Leatherstockings Sportsman's Club of Oswego, and the Jefferson County Club of Watertown, at Richland, in which the first named was victorious. The teams were composed of nine men each, and the conditions 20 single birds at 20 yards rise. The following is the score:

LEATHERSTOCKINGS.			
Name.	Total.	Name.	Total.
H. C. Tanner.....	16	U. Z. Maltby.....	17
H. W. Halleck.....	16	J. G. Skinner.....	14
C. W. Coe.....	15	H. Stevenson.....	15
E. Coe.....	18		
G. D. Schreeves.....	15	Total.....	146
G. W. Lyman.....	20		

JEFFERSONS.			
Name.	Total.	Name.	Total.
W. R. Trowbridge.....	18	J. L. Phelps.....	13
W. D. Wilson.....	15	R. L. Sherman.....	13
W. F. Porter.....	9	E. L. Sargeant.....	17
R. P. Flower.....	18		
E. A. Andrews.....	18	Total.....	133
F. Boyer.....	12		

The Jefferson team were also shooting for their club badge, and Messrs. Andrews, Flower and Trowbridge, having killed eighteen birds each, in order to determine who should be entitled to wear it home they shot off the

tie at 26 and 31 yards. Mr. Flower won the badge. A sweepstakes followed, in which Mr. Maltby won first prize, and for lack of birds the other prizes were divided.

NEW YORK.—A grand shooting tournament, under the auspices of the Central City and Onondaga County Sportsmen's Clubs, is arranged to commence at the East Syracuse grounds, commencing Aug. 23d and continuing four days. The prizes, all cash, aggregate \$5,000. Class shooting—all purses to fill or be pro-rated. A feature of the last day is to be a handicap sweepstakes, to give ordinary shots a chance. Messrs. Greene Smith, President of the State Association, R. B. Harmon, Thomas Kimber, John A. Nichols, John Bedford and James Manning, of Syracuse; Samuel Turrell and Fred J. Abbey, of Chicago; Edward Gilman, of Detroit; and Robert Newell, of Buffalo, are the managers. The following is the programme for the three remaining days:—

SECOND DAY.

First Purse \$600—Ten single rises—first prize \$210; second \$150; third \$120; fourth \$90; fifth \$30.
Second Purse \$900—Fifteen double rises—First prize \$315; second \$225; third \$180; fourth \$135; fifth \$45.

THIRD DAY.

First Purse—\$400—Ten single rises—First prize \$140; second \$100; third \$80; fourth \$60; fifth \$20.
Second Purse \$600—Ten single rises—First prize \$210; second prize \$150; third \$120; fourth \$90; fifth \$30.

FOURTH DAY.

First Purse \$600—Ten double rises—First prize \$245; second prize \$175; third \$130; fourth \$105; fifth \$35.
Second Purse \$800—Grand Handicap Sweepstakes. All winners of prizes 31 yards. All scores of nine and ten 26 yards. All others 21 yards. First prize \$280; second \$200; third \$160; fourth \$120; fifth \$40. Entrance fee each class, \$5; birds extra. Shooting to commence each day at 9 o'clock.

ILLINOIS.—A grand national shooting tournament at Dexter Park, Chicago, under the management of S. H. Turrell, is to commence Wednesday, August 30th and continue four days. Class shooting, prizes cash, at ten single rises in all contests the first three days. The following is the programme:—

FIRST DAY.

First Purse \$400—First prize \$150; second \$100; third \$75; fourth \$50; fifth \$25.
Second Purse \$435—First prize \$175; second \$100; third \$75; fourth \$50; fifth \$25.

SECOND DAY.

First Purse \$425—First prize \$175; second \$100; third \$75; fourth \$50; fifth \$25.
Second Purse \$450—First prize \$200; second \$100; third \$75; fourth \$50; fifth \$25.

THIRD DAY.

First Purse \$450—First prize \$200; second \$100; third \$75; fourth \$50; fifth \$25.
Second Purse \$575—First prize \$200; second \$150; third \$100; fourth \$75; fifth \$50.

FOURTH DAY.

Purse \$975—Six best scores to win; 25 single rises at 25 yards. First prize \$225; second \$200; third \$175; fourth \$150; fifth \$125; sixth \$100. Club shoot, 50 birds each at 25 yards rise; open to teams of four men from any organized club in the United States bringing certificates from the secretary of the club that they were in good standing May 1st, 1876. First prize—An elegant gold medal, worth \$200, manufactured by Tiffany & Co., New York, and presented by John A. Nichols of Syracuse, N. Y. Clubs to pay \$20 entrance fee, which will go to make up second and third prizes; 60 per cent. for the second prize and 40 for the third.

In addition a meerschau pipe, presented by Rod and Gun, will be given to the person making the highest score in the shoot proper.

MINNESOTA.—At the Trap and Field Club shoot, at Minneapolis, on August 10th, the following excellent score was made. The competition was for the club badge.

Name.	Total.	Name.	Total.
Tinsley.....	19	Brown.....	16
Evans.....	20	Powell.....	19
Rand.....	16	Williams.....	19
Langdon.....	17	Hoy.....	19
Hobitt.....	19	Brackett.....	13
Keator.....	19	Noble.....	15
Harvey.....	18	Russell.....	18
Haley.....	16	Rodman.....	18
Camp.....	17	Babcock.....	18
Riekman.....	17		

In shooting off ties, Williams won the badge, making five straight birds at 31 yards.

—We have received from the St. Louis Shell Manufacturing Company two packages of their admirable goods, which our friends can examine at this office. These shells are made of the best material, and by the best machinery. The manufacturers claim that in the use of the conical base, a large saving is effected in the quantity of powder required, and the recoil is consequently much lessened. The shells are made of the standard size, and adapted to all English and American guns of uniform bore, and are warranted sure fire. The sizes made are No. 10, 2½ inches, No. 12, 2½ inches, central fire. Other lengths will be made to order at extra cost.—See adv.

Messrs. Eaton, Holberton & Co., have a supply ready for sportsmen, who will do well to try the coming shell.

LETTER FROM GUYON.

CORINTH, Miss., August 14th, 1876.

EDITOR FOREST AND STREAM:—

"The rain it raineth every day"—more or less, usually more, and it is fearfully hot. In fact, the mercury is about to boil out at the top of the tube. The damage to the cotton crop on account of the rain will be immense, as it is said that all the white blooming on which the rain falls come to naught. But, as the farmers say, these rains will make the corn, and sweet potatoes, and such "git up and hump themselves."

The quail and turkeys are too large to be hurt by the wet weather, and every day brings cheering reports of the unusual numbers of these birds. Ten days ago I flushed a bevy that topped the cover and went away with a whirr that made me feel good all over. There is not a sound that can so thrill my senses with delight as the quick whirring wings of sturdy, swift-flying Bob White. Several broods of turkeys—now as large as chickens—have been reared within from three to eight miles from town. We will make it hot for them the first day the law is off. Squirrels very scarce and wild, and a very little squirrel hunting now will go a long way, with the mercury nearly up to "bilin'," and plenty of "snaix" and woodticks. I went out to a "clearing" the other day, where report said squirrels were absolutely swarming, attracted by the immense number of dead trees which they were "barking." An adolescent African, on being questioned concerning them, said: "Yes, sar, dar is heap of squirrels in dat nigrum," but I wouldn't go in dar, I tell you." "Why not?" "Rattlesnakes," said he, laconically showing the whites of his eyes. However, as my nether limbs were encased in a pair of oil-tanned boots, the legs of which, on account of repeated wettings and dryings, were as hard and about as impervious as a section of stovepipe, albeit I had no snake-bite antidote, and the nearest drug store was eight miles off, I concluded to wade in. The grass was knee-high, and as thick as the hair on a dog's back. I advanced with my eyes, like the poet's, alternately gazing from earth to heaven, looking for "snakes in the grass" and squirrels in the timber. Presently I saw one of the latter and knocked him out, much to the delight of a couple of juvenile Guyons who watched me from a fence. A little further on I saw another

and the Guyonian eye was just about to glance along the fatal tubes, when right under my feet, *fizz, whizz, f-i-z-z!* Rattlesnake! I will bet I made the best standing backward jump on record. My tongue stuck to the roof of my mouth, and each particular hair stood on end like quills on the back of a demented porcupine. I looked in the grass expecting to see the fierce eyes and forked tongue, open mouth and venomous fangs of a terrible rattlesnake, the deadly *Crotalus horridus*. Instead a cicada—the dogday harvest fly—winged up, cleared the grass, and went zizzaging away. If I could have got my gun up I should have sent a charge of No. 7 after him, confound him, for giving me such a scare. I had as soon be snake-bite as scared to death. Lifting Mr. Scinurus from his elevated position, I returned to the fence, carefully following the admonition "ste, high, my brother."

When I reached my buggy the small nigger was still on the woodpile. Seeming to take in the situation, he queried: "Snakes?" I did not design a reply, but hitching up old Rip we pulled out for a drug store.

Moral.—Don't hunt in high grass without a little snake-bite antidote in case of accident.

GUYON.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

FRESH WATER.

Trout, *Salmo fontinalis*.
Salmon, *Salmo salar*.
Salmon Trout, *Salmo conifinis*.
Land-locked Salmon, *Salmo Gloveri*.
Grayling, *Thymallus tricolor*.
Black Bass, *Micropterus salmoides*.
M. nigricans.
Mascalonge, *Esox nobilior*.
Pike or Pickerel, *Esox lucius*.
Yellow Perch, *Perca flavescens*.

SALT WATER.

Sea Bass, *Sciaenops ocellatus*.
Sheepshead, *Archosargus probatocephalus*.
Striped Bass, *Roccus lineatus*.
White Perch, *Morone americana*.
Weakfish, *Cynoscion regalis*.
Bluefish, *Pomatomus saltatrix*.
Spanish Mackerel, *Cybbium maculatum*.
Cero, *Cybbium regale*.
Bonito, *Sarda pelamys*.
Kingfish, *Menticirrhus nebulosus*.

For list of seasonable trout flies for August see our issue of July 27th.

FISH IN MARKET.—Fish of all kinds continue very scarce and prices correspondingly advanced. Quotations give striped bass as selling at 20 to 25 cents per pound; bluefish, 12 to 15 cents; salmon, frozen, 50 cents, green, 80 cents; mackerel, 15 to 25 cents each; weakfish, 15 cents per pound; white perch, 15 cents; Spanish mackerel, 50 cents; green turtle, 15 cents; terrapin, \$12 per dozen; halibut, 18 cents per pound; haddock, 8 cents; kingfish, 25 cents; codfish, 10 cents; blackfish, 12 to 15 cents; flounders 10 to 12 cents; porgies, 12 cents, sea bass, 18 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 25 cents; brook trout, \$1; pompano, 25 cents; soft clams, 30 to 60 cents per hundred; hard shell crabs, \$3.50 per hundred; soft crabs, 75 cents per dozen.

—Magog, Canada, at the head of Lake Memphremagog, is reached by the Connecticut River and Passumpsic Railroads to Newport, Vt., and thence by steamboat. It is one of the few places where one can be perfectly comfortable at a rate so low as to beget the feeling that the landlord is the sufferer and the guest receiving more than his money's worth. The Park Hotel, kept by Hubbard & Jemieson, can comfortably accommodate 150 guests. It is pleasantly situated near the lake, has broad verandahs to each story, furnishes the best of food and the cleanest of linen at the insignificant rate of \$1.25 per day, charges nothing for sail or row boats, and in all respects fills the desideratum so much sought for and seldom found. Last month we saw the grouse sitting composedly upon the trees as we drove by, and we are assured that they are so seldom disturbed by sportsmen that they are abundant and tame. Deer and bears are numerous, while lake trout and speckled trout can be taken freely at the proper seasons. From the top of Mount Orford, five miles distant, 23 lakes can be counted, all of them containing fish. If any gentleman wishes to take the most delightful portion of the year for his vacation, we would recommend him to go to Magog about the middle of September and remain until the middle of October. We can guarantee him plenty of sport, as we "know how it is ourselves."

—The Westhampton (L. I.) Fishing Club had the good luck to net at one haul last week 2,500 bluefish, which they sold in the New York market at \$1,500 net.

—C. Parker, more familiarly known to the readers of the FOREST AND STREAM as Dad Parker, while fishing at the stone piles, Barnegat Inlet, on Saturday last, in company with Col. Evans of Holmsburg, Pa., accomplished the unusual feat of landing two blackfish, both caught on the one hook at the same time, and what is most extraordinary both hooked in the mouth. One weighed 4 and the other 1½ pounds. The smaller fish had taken hold first, and becoming fast, pushed the bait well up the shank of the hook; the larger fish had evidently gone for it about the time that Parker was reeling in, and the hook being well through the first fish's mouth, with point out, struck the large fish on the under lip, and both were landed. Have any of our piscatorial friends accomplished the same feat?

FISHING MOVEMENTS.—Sixty-seven fishing arrivals have been reported the past week, 12 from the Banks, 26 from Georges, and 25 from shore mackereling trips. The receipts of codfish have been about a million pounds from the Banks, and 200,000 pounds from Georges. Receipts of halibut 150,000 pounds. Mackerel receipts about 5,000 barrels.—*Cape Ann Advertiser*, Aug. 12th.

NEW JERSEY.—Kinsey's Ashley House, Barnegat Inlet, August 19th.—Owing to the bad weather we have had but a few days' fishing this week. Sheepshead have bit well on the two days when the weather was suitable to try them. On the 17th Capt. Wm. Predmore took 100 bluefish; C. F. Beck of Gardville, N. J., 15; Capt. Newberry, 23; J. Reeves, 36. Blackfish and sea bass are plenty. Wm. Bounce, 8 sheepshead; C. Curtis, Philadelphia, 11 sheepshead.

—Perch fishing at Betterton on the Delaware is now very good. As a rule, three hours' fishing are quite sufficient to take as many perch as a person desires. The best way to reach Betterton is from the Baltimore Railroad depot,

Broad street and Washington avenue. Trains leaves daily at 8:10 a. m., and in a few hours Still Pond, Kent County, Maryland, three and a half miles from Betterton, is reached. Parties who intend to visit the place by addressing a note to James Crew, at Still Pond, will be promptly conveyed to Betterton. Good board can be obtained at Mrs. Crew's at moderate charges.—*Germantown Telegraph*, 16th.

—The salmon fishing in the northwest Miramichi has been very poor this season, the poorest for years. The fishermen will lose heavily as they have been under large expenses fitting out nets, etc., and have caught very few salmon; they have got up a petition asking for an extension of the time for fishing until the last day of August, the usual time being the 15th. The fishermen were unable to set their nets before the 15th of June, the water being so high they would have been swept away.

—The Rimouski and Metis rivers (Province of Quebec), which empty into the River St. Lawrence, have yielded some fine salmon the past season, the weights reaching as high as 37 pounds in exceptional cases.

—A correspondent of the Boston Times has been fishing on Mount Kearsarge. He is an amateur, although he does not confess it. "As soon as the current has swung the line around you feel the telegraphic signal of a bite, which always tingles the furthest nerves of the body, and makes you forget for a moment your winged friends with sharp bites, and up through the foaming water comes the fish, his cream-colored side gleaming brightly in the dark room, as it were, formed by the rocky sides and the canopy of the trees over-reaching the pool, as he flashes through the air and overhead to the bank above. There is a rustle among the leaves, and the next instant, having wiggled himself off the hook, he strikes the edge of the stream. You suddenly turn, and your glasses tumble off into the brook, your feet slip out from under you, and you mark your length in the sloping bed of the stream, wetting the right leg and right side of the body, so that you are just one-half wet and one-half dry. But still you grasp the fish with both hands, and holding him hard, attempt to rise. The fish, however, is slippery and muscular, and, with the impetus of your motion, shoots out from your hand as from the mouth of a mortar, and strikes with a splash the center of the pool, hies himself away to his favorite haunt, wondering what was the matter with that crazy worm, or whether he had been drinking, and no mortal eye sees him more."

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

THE CRUISE OF THE NEW YORK YACHT CLUB.—The fleet of yachts participating in the summer cruise of the above Club, arrived at Martha's Vineyard on the evening of the 19th inst., having left Newport on the same evening. The vessels comprising the fleet were the Alarm, Dreadnaught, Rambler, Wanderer, Madeleine, Estelle, Idler, Josephine, Meta, Foam, Vision, Arrow, Vindex and Windward, together with the America and Alice, whose owners determined to try conclusions with the New York yachts. The Palmer and Restless remained in Newport. The rendezvous was at Brenton's Reef Light Ship, the signal to start being given from the flagship at 10:22 a. m. The wind was from the eastward in the morning, but throughout the day was alternately calm and baffling. The Dreadnaught and the Idler had a good set-to, in which the former was gaining the advantage, when a slant of the wind favored the Idler. The Vindex and Arrow had a similar match, in which the former was favored in the same way. But the event of the day was the race between the Madeleine and America, in which the latter received a fair and square beating on her best point of sailing, viz.: going to windward in a sea-way. The Arrow anchored in Vineyard Haven first, then the Idler, Madeleine, Dreadnaught and America, in the order named, the rest of the fleet being at anchor before nine o'clock.

—A match race has been made between the yachts Greenpoint and Susie S., to be sailed off City Island on Monday, the 28th day of August, for \$1,000 a side. The above yachts are also willing to sail a sweepstake race at the same time and over the same course, with all other yachts of the same class, the entrance fee to be \$250. Entries to close at the office of John M. Sawyer, No. 85 South street, on or before the 26th day of August, at three o'clock p. m.

—B. F. Butler says he will sail his yacht, the America, twenty-five miles to windward and return, starting from Brenton's Reef in an eight-knot breeze or upward, against any yacht of her size, or larger, to equalize on time allowance, according to the rules of the New York Yacht Club, for a sum large enough to cover the expenses of the race.

THE DORY "CENTENNIAL" SAFE ACROSS.—That daring navigator, Capt. Johnson, who undertook to cross the Atlantic alone in a sloop-rigged dory, has accomplished the feat, and arrived in Liverpool in good order on the 17th instant, after a passage of 58 days. He was spoken several times by passing steamers, but reported all well, and retained his health and endurance to the last. His dory capsized once, but he was able to right her and went on. Many a minor adventure must have befallen him.

PASSAIC CANOE CLUB.—The canoes Delaware and Qui Vive started on June 26th for the Centennial via Morris Canal and Delaware River. At 8 p. m. on the 29th they met the canoes Saranac and Dragon, as previously appointed, at Musconetcong on the Delaware, ten miles below Easton. From this point the four canoes traveled in company, shooting every fall and rapid except Wells's Falls at Lambertville, where the Saranac, which did go over, was so roughly handled that it took five hours to repair her. At 11 a. m. on July 3d the canoes hauled up at the Quaker City boat-house on the Schuylkill, where they were kindly received by Mr. Samuel Gormsley and others of that club. On the

5th the canoeists received an invitation to camp within the Exhibition grounds. Mr. Harris, of the FOREST AND STREAM, offered the Hunter's Camp for our use, which was accepted with thanks, having come expecting and prepared to camp out. We remained in the camp for nearly two weeks, and many were the questions we were asked while cooking flapjacks for breakfast over the camp stove, paddling the birch in the pond or reclining in the shade. Our blue shirts, slouch hats and moccasins excited any amount of wonder and envy in the numerous small boys, and curiosity in the adults that called. On Monday, the 17th, we left Philadelphia, homeward bound. On Wednesday evening we were entertained by the Central Boat Club of Perth Amboy. At 2 a. m. on Thursday, with the first of the flood tide, we started up Staten Island Sound, and reached Newark at 9 in the morning. Were it not for the excessive heat which prevailed, the trip would have been delightful; as it was we enjoyed it exceedingly.

The Passaic Canoe Club was organized on June 15th in Newark, N. J., with a fleet of four canoes. The following officers were elected: H. G. Fish, captain; J. F. West, mate; Wm. L. Allen, secretary; and F. S. Fish, purser. At present the club has about a dozen members. Next summer many more canoes will be added to the list, and the club as a body propose to run the Susquehanna. A trip of 325 miles has just been completed by the present club fleet. The object of the club is to promote the healthful and exciting sport of canoeing.

SCHROON LAKE REGATTA.—The Schroon Lake Rowing Club had a regatta on the 16th inst., consisting of single and double scull races, one and two miles, for gentlemen; double scull, one-half mile race, for ladies; also tub races, which afforded a great deal of amusement. The single scull mile race for visitors was won by a Trojan visitor, Mr. George Madden; the double scull for ladies was won by two Brooklyn ladies, Misses Lane and Hasbrouck, guests of the Schroon Lake House. The prizes were gold badges, and quite valuable.

—James R. Gay, last week, completed a row of 1,600 miles in 109 days from Boston to Detroit, for which he received \$500. He rowed to satisfy a wager of \$3,000 between two Bostonians, who bet that he could not do it in 120 days.

NORFOLK, Va., August 12th.

EDITOR FOREST AND STREAM:

The long-talked of single scull race between Mr. Dennis Callahan of the Elizabeth Boat Club, of Portsmouth, and Mr. Thomas C. White of the Undine Boat Club, of Norfolk, came off a few days ago, resulting in a victory for the former gentleman. The race took place over the usual course, from a point between the monitors Montauk and Passaic to the second red buoy and return, a distance of three miles. Callahan rowed in a cedar shell, while that of White was a paper one. Every point commanding a view of the course was crowded, and the harbor was fairly covered with crafts of all kinds and sizes, from the largest to the smallest. Callahan took the lead from the start and kept it to the end, turning the stake-boat 30 seconds ahead of White, and coming in the winner in 23m. 58s. The time of White was 24m. 30s.

Immediately after the race Mr. Callahan was challenged by Mr. White for another race, and also by Mr. Fred Hardy of the Chesapeake Boat Club; but as he had already accepted a challenge from Mr. J. W. Randall of the Potomac Boat Club, of Georgetown, D. C., to row here on the 18th inst., and is also one of the crew of the "Virginia," entered by the Elizabeth Boat Club for the Centennial regatta at Philadelphia, it will be seen he has his hands full, and therefore he stated that he could not row these gentlemen until free from his present engagements, when he would row them together on the same day and on the same course.

The crew of the Virginia are taking their daily spins in their boat, and although I see in the pool selling at Philadelphia the odds are 100 to 2 against them, some one will be badly sold when the race comes off. There is no reason why they should not come in the winners of a splendid race, as the famous Schley crew of Savannah did a few years ago.

—The venerable naturalist and taxidermist, J. G. Bell, has just sold his large collection of about 250 species of humming-birds to Greene Smith, of Peterboro. Mr. Bell has been thirty years in gathering this collection.

—The Canisteo Valley Club, of Hornellsville, New York, is said to contain some as good field shots as any in the State.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

W. E. T., Green Bay, Wis.—Have sent you the remedy you desire.

HAWKER.—Another gentleman has a copy of "Hawker on Shooting," by Porter for sale. We will give his address if required.

SPORT, Ottawa.—Have mailed to you a remedy for the relief of your hound.

G. W. C., Summer street, Boston.—All your inquiries about Florida are answered in the book entitled "Camp Life in Florida." Price \$1.50. For sale at this office.

H. W., Nahant, Mass.—1. Will you please inform me the price of the Wesson rifle? 2. What is the best oil for preventing guns from rusting? Ans. 1. \$28. 2. Belmont oil.

F. F. H., St. Louis, Mo.—1. What is the best method of destroying fleas in a dog? 2. What is the remedy for mange? Ans. 1. See Ballard's advertisement in another column. See answer to another correspondent.

E. P. E., East Windsor.—I would like to know where I can get some good steel traps, and do you know of any other firm that make them besides the Oneida Community? Ans. We know of no other makers of steel traps.

J. R., New York.—1. Please let me know if robin and high-holder shooting is allowed in the State of New Jersey? 2. What is the proper name for high-holder? Ans. 1. Never except for scientific purposes. 2. The "high-holder" is *Colaptes auratus*.

READER, Middlefield, Ct.—Are Davidson & Co. of No. 88 Nassau street reliable druggists, and how old a firm is it? Ans. Better inquire of some one in the same trade, or of mercantile agencies—Dun, Barlow & Co., or Bradstreet & Co.

W. S. M., Knoxville, Tenn.—Can you procure for me any book that gives instructions in boat building? also in rowing? and the price of each? Ans. A little English book called "Rowing and Sailing" is the nearest approach—we have mailed you a copy.

OLD GUY, New York City.—You examine one of Fenner's portable canvas boats at the Emporium, Melberton & Co., 102 Nassau

street. They are good boats, especially since the manufacturers have added their "snag-fender" to protect the canvas from injury.

READER, Portland, Me.—1. How can I secure the Government sanitary map of Florida? 2. What can I put on grained leather boots to keep them from peeling and scratching in the brush? Ans. 1. Probably by writing to the United States Surgeon-General, at Washington. 2. Don't know of anything serviceable.

JERSEY.—Where would you advise a man that has but little time and money to spend, to go salt water fishing about the middle of September? Ans. The Carman House at Forked River, and Wm. Lane's, near Good Ground on the south side of Long Island, are both excellent places. See advertisements in another column.

SCALES, Niantic, Conn.—Where can I get a first class cocker—a good one or none? Of course a good dog is worth his price and I am willing to pay well for a suitable article. Ans. No doubt an advertisement in our paper would bring what you desire. W. H., in our columns last week, advertises cockers for sale.

C. C., York, Pa.—Please state in the columns of Answers to Correspondents, whether there was or is a firm called Van Wart, Son & Co., who are gunmakers? also what reputation they have as gunmakers? Ans. There is such a firm as Van Wart, Son & Co., and their guns have a good reputation.

H. L.—Please inform me where the best bass fishing is on the St. Lawrence, and what are the best flies for bass? Ans. Among the Thousand Islands at Coteau du Lac, some forty miles above Montreal, and at La Prairie, nearly opposite the city Gaudy patterns for flies generally, though brown and white mixtures take well.

T. J. W., Auburn, N. Y.—In what numbers has H. G. Fowler's "Birds of Central New York" been printed? 2. Does the game law apply to taxidermists at all? Ans. 1. Vol. VI, Nos. 12, 15, 18, 21, 25. 2. The law relative to shooting song-birds does "not apply to any person who shall kill any bird for the purpose of studying its habits or history, or having the same stuffed and set up as a specimen."

W. S. G., Fordham.—I have a dispute with a friend as to whether the American horse Preckness won the Brighton Cup recently in England? Ans. He did not, but walked over the course and received only the forfeit of the seventeen other horses entered but not started. According to the conditions of the race the cup was not to be given in case of a walk-over.

R. M. A., Clearfield, Pa.—1. Where can the Kay concentrator be had? 2. Where can I get Belmont oil? I cannot learn from your columns. Ans. 1. From the manufacturers, Messrs. Kay & Co., Newark, N. J.; from Messrs. Eaton, Holberton & Co., No. 102 Nassau street, or from any of the city gun dealers advertising in our columns. 2. From H. C. Squires, No. 1 Courtland street, this city.

ROB ROY, New York.—If your correspondent "Rob Roy" will send his address to me, I will be pleased to give him all information in regard to canoes and prices in my power; and also to have him try the "Qui Vive" on the Passaic at Newark, some afternoon. Such a canoe with all fittings complete will cost \$50. I will correspond with pleasure with anyone interested in canoeing.—I. F. West, East Orange, N. J.

STRANGER.—Can you inform me through your columns where I can go in early part of September with a reasonable prospect of catching fair sized striped bass (from four pounds up) within a day or two of New York? Do you know anything of vicinity of No Man's Land and Vine yard Sound? Ans. No better place than No Man's Land. Address Capt. J. L. Sisson 22 South Water street, New Bedford, Mass. He has every facility for fishing and shooting at No Man's Land.

S. B. B., Lancaster, Pa.—I have a small terrier dog that is troubled with the mange. The hair from his neck, shoulders, and legs has fallen off so as to leave the parts bare to a great extent. What treatment would you advise me to pursue? Ans. Take bazilicon ointment 2 oz., flour sulphur 1/2 oz., spirits of turpentine enough to make the ointment of proper consistency, to be well rubbed into the skin; wash the parts affected occasionally with carbolic soap. Give the dog plenty of exercise and feed lightly.

J. E. S., Sussex, Lower Canada.—Would you kindly give me some idea as to the proper method of preparing and fitting up a crease for a cricket ground or where I could purchase a book upon the subject? also as to where seed could be purchased for a cricket turf and the price of same. We have a chance without much outlay of having one of the best grounds in the Dominion. Ans. Buy Chadwick's American Cricket Manual. M. DeWitt, publisher, 33 Rose street, New York. We will soon publish all the information you ask for.

A. J. T., Westboro, Mass.—A party of us wish to get a few weeks first class duck shooting this fall and want your advice, where and when to go. Are willing to go west of the Mississippi if we can't get it nearer, but would prefer Canada? Ans. The best places in Canada are the St. Clair Flats, near Detroit; the lakes back of Peterboro; Rice Lake; Eel River, emptying into the Bay Chaleur, Gulf of St. Lawrence; and the Thousand Islands, St. Lawrence River. September is the month to go, Puckaway Lake and Koshkonong Lake in Wisconsin are great duckgrounds; the shooting is best in October and November.

F. L. Le F., Littlestown.—My setter dog, one year old, looks very dull and rough. He has not shed off all his last winter's coat yet; his eyes are sore, with a very thick yellow discharge; his appetite is good. I have been feeding him little or no meat; have him tied through the day and let him loose in the morning for a run. What is the matter with him and what shall I give him? Ans. Your dog has worms in all probability. Have sent you some areca nut, which will relieve him if given as directed.

H. G. G., Gettysburg, Pa.—I have a very reliable setter dog two years old, who has a discharge from both eyes; a white matter substance which has been discharging for about one year. His appetite is not very good, but is as lively as any dog could possibly be. I have been bathing his eyes with cold water twice a day, but with no apparent result. Please tell me what to do for him, and where to procure the necessary medicine? Ans. Try the following remedy. Sulph. zinc, 6 grains; vin opii, 1 oz.; water, 2 oz. Give the dog 1/2 oz. magnesia twice a day for two or three days, avoiding all exciting or indigestible food, and give gentle exercise morning and evening.

G. C. W., Albany.—I see by an article in your issue of the 17th inst. of some fine black bass being taken with half grown green or yellow frog. I wish you would tell me how to fasten them on the hook? Ans. We give you the method employed by old Isaac Walton, the high priest of anglers, for we know of none better. He says: "Put your hook through the mouth, and out of his gills, and then with a fine needle and silk sew the upper part of his leg, with only one stitch, to the arming wire of the hook, and in so doing use him as though you loved him." With all due regard to the tender-hearted Isaac, we must say that we are opposed to the use of live frogs as bait, on account of its manifest cruelty. We do not know that impaling a tadpole is any the less cruel, but, owing no doubt to its fish-like nature and appearance, we could so impale it without compunction, while we would hesitate at the frog. There may be a distinction here, however, without a difference.

W. A., West Scituate.—1. Please send me one dollar's worth of areca nut. My setter has worms. I gave him the dose you sent me a year ago and he passed a tape worm 16 feet long. I want some for my horse, as I have been informed it is good for worms in horses as well as dogs? 2. My dog has canker in one ear; do you know of anything that is good for it? 3. Can I get back numbers of FOREST AND STREAM? I have lost two papers. Ans. 1. Have mailed to you some powdered areca nut. It is said to be as effectual with horses as with dogs. 2. For canker in the ear, make a solution of sulphate of copper five grains to the ounce of water; wash the ear out thoroughly with Castile soap and water, then pour in the solution. Give the dog plenty of exercise and feed little or no meat. 3. Let us know the numbers of your paper you have lost and we will replace them.

F. S., New York.—In your issue of August 10th, in answer to correspondent, S. B. B., Hudson, you state that quail can be shot October 1st in this State. When was the law changed from October 20th? and what is the phraseology of the section in relation to this matter in the new law. Ans. The phraseology of the law is thus: "Section 7. No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any quail between the 1st January and the 1st October. As amended, chapter 183, laws of 1875." The change in the law includes Long Island.

C. J. H., Hamden.—1. Is there any good hunting or fishing, and what kind near Aphetoka, Florida? 2. Is there any chills and fever there? 3. What will it cost to go there by boat and rail? Ans. 1. Apopka (we suppose you mean) is on Lake Apopka, Orange county, about twenty miles from Lake Monroe, in one of the healthiest localities in the State. There are plenty of quail in the vicinity and some deer and turkeys. You will find more game, however, near Enterprise. Cost in winter, to Jacksonville by steamer, \$20; by rail \$27. From Jacksonville on Lake Monroe \$9. You will have to go in a wagon from Mellenville to Apopka.

S. C. S., Warren, Pa.—How early must I make application for board to secure it at Mr. Alfred Jones's, Homosassa? and how much does Mr. Jones charge by the day, week, or month? Is the hunting and fishing good there? Will the hotel now being built at Matanzas be ready for the winter? What is board there, at hotel or private family? Ans. You should apply at once for board at Jones's. The charge is \$2 per day, and special terms for stated periods. Fishing and hunting excellent. The Matanzas hotel will be open next winter; cannot give you the hotel charges.

C. V. B., Jr., Long Branch.—1. When is a yacht on the starboard tack, when she is going to the right of the wind with wind on port side, or when she is going to the left of the wind with wind on the starboard side? 2. Which yacht has the right to hold her course? 3. Which has the right of way, a vessel going before the wind, or one going on the wind? 4. Are the distances rowed at Saratoga Lake and other places accurately measured; if so by what means? Ans. A boat is on the starboard tack when she has her starboard tacks aboard, or when the wind is on her starboard (or right hand) side. The boat on the starboard tack has the right of way, and the boat on the port tack must give way. The boat going before the wind must give way in all cases. The Saratoga course is said to be accurately surveyed. The national course at Philadelphia is an accurate one mile and a half, surveyed on the ice.

FIREMAN, Carmanville.—I am a fireman at Carmanville and expect to have five days vacation about the 10th of next month, and should like to go shooting very much, but do not know where to go to have sport. I should like to go shooting grey squirrels if there are any within a few miles of New York, if not anything thing that will give sport. I have got no dog so must hunt without one. And please inform me if there is a law prohibiting the shooting of birds called "high-holds" in New Jersey after the 1st of September? Ans. In the central part of New Jersey you could find some squirrel shooting at the time you mention. But there is a penalty of \$5 for shooting high-holders, (commonly called flickers) robins, and all other insectivorous birds.

PLUVIER, Boston.—1. How good are the following targets, made by a Scott breech-loader, slightly choked, No. 10 gauge, distance 40 yards, charge 3/4 drs. powder, 1 1/2 oz. of Leroy's shot, targets 30 inches in diameter, No. 7 shot, 151 in circle; No. 8, 214; No. 9, 308? 2. What is the best charge for plover in such a gun? 3. Where can Greeners book "Choke Bore Guns and how to load them," (published in June, 1876,) be obtained and at what price? Ans. 1. Your gun makes a good average target, quite close enough for all upland and snipe shooting. 2. As most shots at upland plover are made at long distances, we would use in such a gun as yours, 4 drs. of powder and 1 1/2 oz. of No. 8 shot. 3. Greeners book on choke bore guns will be published in June, price \$3.50, and will be sold by book sellers and gun dealers generally.

J. H. A., Spencerport, N. Y.—I have a fine dog that has been sick for nearly three weeks. The symptoms are vomiting for the first week, then entire loss of appetite. The vomiting ceased about a week ago, on account of not having anything to throw up; tries to vomit now as though there was something in his stomach. He coughs and breaths hard with mouth open and head up from the floor; the eyes filled with matter; nose dry and feverish, and has discharged matter within a few days. He is poor, and coat rough. I have found on him a dozen or so of lice about the size of a pea, bluish white with a small head? Ans. Have mailed to you some powders, with directions for their use, which we think will effect a cure. In order to destroy the insects upon him, anoint him with oil of tar or almost any kind of grease, and after a few hours wash the grease off with carbolic soap.

CROQUET.—A, B, C, and D, are playing croquet, A's ball is in position in front of No. 9, but near the bound, D plays at it and misses it and goes out of bound. It being A's next play, A insists that D's ball shall be brought in bound on a line where it went out, so that he, A, can play upon it. D contends that he may allow his ball to remain out of bound until it is his turn to play. Who is right, A or D? All are on their return play, A wants to play on D's ball so as to get two strikes and play down to B and put B out of position, and have two strikes back for his bridge, while if he plays through his bridge he will have but one strike at B, who is D's partner. B being next in play will pass through his bridge. C will pass through his bridge, and if he plays for bridge No. 9 and misses, D will come in bound and play upon him. Must D put his ball in bound before A plays? Ans. D must place his ball within boundary, and the reason is obvious. If it were permitted his ball to remain outside, it would be the simplest thing in the world for a player to keep his ball beyond the reach of a following adversary at all times.

WING SHOT, North East, Md.—Will you please give a description of a gun, which in your opinion, a majority of our experienced sportsmen would purchase for general shooting—field, cover, wild fowl and trap? I have reference to weight, bore, length of barrels, locks, rebounding, or not; spring plungers or those without; choke or open bore, and if choke, how about having left barrel choked more than right, and to what extent; length of shells, and laminated or Damascus barrels; action. As many of your readers are about purchasing guns now for the fall campaign an answer to the above would doubtless be read with interest? Ans. If our correspondent intends to confine himself to one gun for all the purposes he means, we would suggest that a gun from 8 1/2 to 9 pounds weight, 30 inch barrels and of 10-gauge, as best adapted for the purpose. It is well known, however, by skilled sportsmen that such a gun as would be proper for wild fowl shooting in the vicinity of North East, or any where on the Chesapeake Bay, would not be such a gun as could be carried with any comfort, or used to advantage in upland and cover shooting. We use, for all shooting, except for wild fowl, a 7 1/2 pound gun, 12-gauge, 30-inch barrels, not choke-bored, which gun we would not exchange for any other. For wild fowl in the west and north-west, where we have done much shooting, we have found that a gun of from 9 1/2 to 10 pounds weight, 32-inch barrels and 10-gauge, the proper size. But in point shooting on the Chesapeake where we have also done much shooting, we found a 14-pound single gun to be most effective. We do not use choke-bored guns for the reason that we have found that the Kay concentrating cartridges in our gun produces the effect that is claimed for the choke-bores. If we did all our shooting at very long range we would be induced to use a choke bored gun, or at all events, have one barrel choke-bored. There have been many important improvements in the manufacture of guns within the past few years and from the gun dealers advertising in our columns, good, safe, reliable guns can be had at reasonable rates. Our guns are of laminated steel. Damascus barrels are considered by some to be better, but either are good enough. In selecting a gun the purchaser should choose for himself such action as he prefers—we give the preference to the top action. The rebounding lock is considered the best—by many shooters—but we do not like spring plungers for the reason that they are liable to break at any inconvenient time.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,

[Post Office Box 2832.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, AUGUST 24, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,

Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, Aug. 24.—Trotting: Pittsfield, Mass.; Gardner, Me.; Earlville, Ill.; Lawrence, Mass.; Utica, N. Y. Regatta N. A. A. O., Philadelphia; Flushing Bay. Base Ball: Cincinnati vs. Louisville, at Cincinnati; Chicago vs. St. Louis, at Chicago; Athletic vs. Boston, Union Grounds, Brooklyn; Arlington, of S. I., vs. Allen, at Stapleton Falls; Hoboken vs. Mutual, of New York; Orange vs. Nassau, of Brooklyn, at Orange, N. J.; Enterprise vs. Chatham, at Centennial Grounds, N. J.; Quickstep vs. Clipper, at Manhattan. Rifle: Third Brigade practice at Creedmoor.

FRIDAY, Aug. 25.—Trotting as above. Base ball: Mutual vs. Boston, Union Grounds, Brooklyn; Mohawk vs. Alphas, at Stapleton Flats, S. I.; Quickstep vs. Fly Away, at Melrose; Olympic, of Paterson, vs. Alaska, at Centennial Grounds, N. J.; Resolute, of N. Y., vs. Osceola, at Prospect Park. Rifle: Second Brigade practice at Creedmoor.

SATURDAY, Aug. 26.—Yachting: International contest at Chicago for \$1,000, between the Canadian yacht Ina and the American yacht Frolic; Regatta of Quincy Yacht Club. Base Ball: Cincinnati vs. Louisville, at Cincinnati; Chicago vs. St. Louis, at Chicago; Athletic vs. Boston, at Philadelphia; Putnam vs. Athletic, of E. N. Y., at Capit line; Witoka vs. Crescent, at Capitoline; Arlington, of S. I., vs. Richmond, at Stapleton Flats; Jackson vs. Our Boys, at Elizabeth, N. J.; Contest vs. Winona, of Flatbush, at Prospect Park; Hoboken vs. New York, at Centennial Grounds, N. J.; Nameless vs. Winona, at Prospect Park. Rifle: Matches at Creedmoor. Trotting: Utica, N. Y.

MONDAY, Aug. 28.—Yachting: Match between yachts Susie S. and Greenpoint, at City Island. Base Ball: Star vs. Boston, at Syracuse, N. Y.; Trotting: Poughkeepsie, N. Y.

TUESDAY, Aug. 29.—Convention of National Sportsmen's Association, Chicago. Regatta Palisade Boat Club, Yonkers, N. Y. Base Ball: Louisville vs. Allegheny, at Allegheny, Pa.; Star vs. Boston, at Syracuse, N. Y.; Orange vs. Hudson, at Orange, N. J. Racing: Point Breeze Park, Philadelphia. Trotting: Hartford, Ct.; Massillon, Ohio; Rock Island, Ill.; Poughkeepsie, N. Y.

WEDNESDAY, Aug. 30.—Racing, as above. Trotting: Poughkeepsie, N. Y. Base Ball: Orange vs. Hudson, at Orange, N. J.; Montgomery vs. Alpha, at Stapleton Flats, S. I.; Contest vs. Union, of Unionville, at Prospect Park; Auburn vs. Boston, at Auburn, N. Y.

The subscription price of FOREST AND STREAM has been reduced to \$4. Twenty-five per cent. off for Clubs of Three or more.

The National Sportsmen's Association convenes in Chicago, at the Grand Pacific Hotel, on Tuesday, evening, August 29th, at 2 o'clock p. m.

Dr. Rowe has kindly extended a written invitation to the representative of FOREST AND STREAM to make the office of the Chicago Field his headquarters during the meeting of the National Sportsmen's Convention in that city next week, for which we extend our thanks,

HARD TO BEAT.—A Boiled Egg,

A NEW GOSPEL OF ÆSTHETICS.

TO the town of Stockbridge, Mass., is given the honor of instituting a new gospel of æsthetics which is rapidly spreading over New England, and which we hope is destined to become universal. Connecticut long ago was credited with growing that remarkable product known as "Wooden Nutmegs," but she is now completely eclipsed and agreeably superseded by her sister State of Massachusetts. Massachusetts has lately imposed upon herself the duty, through widely distributed and rapidly multiplying societies, of planting ornamental trees and flowers wherever they are needed, removing eyesores, embellishing rough spots, and transforming the repulsive into that which is agreeable to the senses. These societies endeavor, by the employment of funds raised by fairs, entertainments, subscriptions, and any other legitimate means, except direct taxation, to induce and engage with the owners of unpainted buildings to brighten them up; to repair rickety fences; hang tumble-down gates; substitute glass for old hats in window-sashes; remove unsightly ruins; demolish Canada thistles; and make crooked paths straight. Neglected cemeteries especially engage their tender attention, and the old grass-grown mounds in many a town, that have for a long time mortified the slumberers beneath them, and disgraced the Selectmen, have been made to blossom with geraniums and verbenas, and invite the consideration of relatives who had left them unwept, unhonored, and unsung, since the first sod was turned. Farmers are expostulated with to remove the unsightly compost heaps and broken-down wagons from the way side; the old inn-keeper to straighten up his sign and renew the weather-worn device upon its face that proclaimed a "sheltering arms;" and the village blacksmith to remove the rubbish that clutters and encumbers the space in front of his forge. In a word, the new Gospel of Æsthetics teaches a general rejuvenation and regeneration. It teaches these in order that people may the more enjoy the present earth and the present life, so that there shall be less necessity to look for the promised creation of "a new heaven and a new earth." Men do not know the loveliness of this world until its beauties are made to appear.

As touching the new gospel, it may be said to be only within a very few years that much attention has been paid in this country to the exterior embellishment of our private residences, though more perhaps in the matter of architectural ornamentation than in the arrangement of the grounds. Even now landscape gardening is in its infancy here. In England, even the railroad stations have their fountains, vases, plots of ground, and flower gardens artistically laid out, while here the lawns of the most pretentious residences are often overgrown, and the flower-beds a heterogeneous mass of straggling and untrimmed plants. The society of the new gospel very wisely commences its labors at this point. It aims at the introduction of new varieties of choice plants, and the extirpation of the weed-like growths that have filled nearly all our gardens for generations. It looks to the grouping and combinations of colors to produce the most striking and charming effects, and a selection thereof to follow the recurring seasons. It would keep the shrubbery in good form, and deploy the different classes of trees and varieties of foliage, as a general would, to occupy the whole field to best advantage. It banishes the homely rectangular beds with dismal borders of box, and traces its diagrams in fanciful lines, so as to bring a new beauty to the eye with each change of the kaleidoscope. It throws the coxcomb and tiger-lily over the fence, and introduces new, and more deserving occupants into their places.

Taking only this phase of the new dispensation—that relating to landscape gardening—the Æsthetic Society we speak of have an arduous task before them to instruct the ignorant and create new tastes. Their chief camps of instruction will be the horticultural gardens and the few grand parks of our large cities, where apt scholars may learn quickly; where no such advantages exist, they will have to labor persistently in the vineyard, and perhaps receive no more reward than those who may follow at the eleventh hour; but whosoever addeth one charm to the natural beauties of this earth, or mitigates by one iota the miseries of a sinful world, by so much tendeth to restore the original Eden which was made perfect for our first parents.

We wish the new gospel a universal dissemination.

IMPROVED TRAP SHOOTING.—Messrs. Eaton, Holberton & Co. have obtained the sole agency of the new spring trap for throwing glass balls. The trap is now being used by Mr. Paine on his starring tour through the west, and has excited the greatest interest among sportsmen wherever he has shown them. A number of the leading sportsmen and clubs have ordered them, and Mr. Bergh indorses them with the following letter:—

THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS, HEADQUARTERS FOURTH AVENUE COR. 23D STREET, NEW YORK, August 7th.

MR. IRA A. PAINE:—

SIR—Believing that the Omnipotent Creator of all things never designed that any of his living creatures should be wounded, mutilated, or destroyed for the mere fun of so doing, it affords me profound satisfaction to know that you have an invention which, while it supercedes the necessity of inflicting pain and suffering, as pigeons hitherto used by marksmen as a medium of obtaining accuracy of aim, it at the same time procures to those employing it all the pleasure and skill which is derived from the former practice. Having personally witnessed an exhibition at your gallery of the humane, ingenious and pleasurable pastime afforded by your spring traps, I would earnestly recommend their general use.

HENRY BERGH, President,

GAME PROTECTION.

NEEDED LEGISLATION CONCERNING GAME IN NEW YORK.

The regular annual meeting of the Standing Committee on Game Laws of the New York State Sportsman's Association was called at the residence of the Hon. Chas. W. Hutchinson, at Utica, on the 17th inst. The principal point of discussion by the gentlemen present was in regard to effecting at the next session of the Legislature the changes in the existing law, with such modifications as have since seemed advisable, which were unsuccessfully presented at the last session. It will be remembered that at the recent State Convention a committee consisting of the Hon. R. B. Roosevelt, of New York, the Hon. C. W. Hutchinson, of Utica, Col. G. W. Flower, of Watertown, D. H. Bruce, of Syracuse, and J. M. Witmer, of Niagara Falls, was appointed to visit Albany during the coming winter for the purpose of advocating the proposed changes; this committee in conjunction with the Standing Committee should succeed in framing and having passed a bill which would cover all those points that experience has proved to be necessary, and one which would meet the approval of all sportsmen throughout the State. One great drawback heretofore to effecting this important matter has been in the climatic difference between different counties, as has been shown in the correspondence published in our columns. It cannot be doubted that the majority of sportsmen, taking the entire State, are in favor of the abolition of summer woodcock shooting, and yet we have letters from the residents in the northern tier of counties who complain that summer shooting is all the woodcock shooting they have. But even these gentlemen will find compensation for being deprived of any limited amount of sport in July by a large increase in the number of ruffed grouse and quail. It seems almost like harping on an old theme to revert again to the fact that chicken partridges (young ruffed grouse) are repeatedly sold in the months of July and August, under the euphonious title of "Owls," at Saratoga and other fashionable watering places, yet the fact itself is no less notorious than that the damage and destruction to young birds is immense, and that this damage occurs in the very counties where are found the advocates of summer shooting. Therefore, one of the first points advocated by the committee is the modification of the section of the law referring to woodcock, extending the close season until September 1st.

Taking the law in the regular order in which it is framed, the first section requiring discussion is that relating to deer. As the law at present exists the killing of deer is permitted only in September, October and November; while to "have in possession" is permitted for the following months of December and January. And this brings up probably the most important point of discussion and proposed change; one which has been and will be fought bitterly by market dealers and those interested in sport from a money standpoint. It is a question which we admit has two sides to it, but in which the preponderance of right is largely in favor of the sportsman as against the pot-hunter and dealer. To permit the sale of game in the markets of this State after the commencement of the close season is offering a direct premium for pot-hunting and poaching, as well as netting and snaring, which no amount of watchfulness, no game wardens or penalties will be able to prevent; and it is an injustice to adjoining States as offering like inducement to a violation of the laws there. As the law now rests it is permitted to "have in possession" quail and ruffed grouse until March 1st, two months after the commencement of the close season, the only restriction being that the possessor prove that the birds were killed within the open season or in some State wherein the law did not prohibit the killing. The reason why this clause was permitted in the old law was because in some of the Western States the open season extended to March 1st; but in nearly every instance this has been changed, and there is now no reason why the "possession" clauses, as relating to every description of game, should not conform with the close seasons. The committee are of opinion that some strenuous measures should be taken to prevent the utter extermination, by bounding and otherwise, of deer, and with this object in view we are requested to obtain information and opinions from such of our readers as have visited the North woods this season. It would be an excellent idea to have this question discussed from the guides' standpoint. In a recent issue our correspondent Piseco argued the trout question, and showed that guides, when left alone, were the best of game protectors, at all events, as regards fish; how it may be with regard to venison remains to be seen.

The better protection of our wild fowl is a question of great importance and the committee urge the passage of a law which shall include the prohibition of two nefarious modes of shooting, fire-lighting and dusking, as now practiced upon the seaboard. The clause advocated last year forbade the shooting or dusking of any wild fowl between darkness and daylight, leaving the birds undisturbed during the feeding time. There is something so reasonable in this proposition that we cannot foresee any opposition to it. The question of the spring shooting of ducks and geese while on their way north to the breeding grounds, is one that will some day be brought up for discussion; that the practice results in a diminution in the numbers of the birds there can be no doubt, as it stands to reason that the fewer breeding birds there are the fewer broods there will be.

If last year's experience is to be taken as a guide the 1st of October is much too early, in this State, for the commencement of quail shooting. Last season the birds were in very many instances not half grown; should this season's experience be the same the committee will recommend that the old date, October 20th, be restored.

It was proposed last year to insert in the amended law a clause prohibiting the shooting of snipe or shore birds between January 1st and July 1st, the object of which was to protect the birds on their flight to the breeding grounds.

As the majority of the committee are in favor of this clause it will be inserted in the new bill. For our part, however, we do not consider that it is one which will be popular with the majority of sportsmen, and this opinion is drawn, not from our own personal views as frequently expressed in these columns, but from conversation and correspondence with a large number of gunners. Slowly but surely the flight of snipe, both in spring and fall, is tending to the westward, not, we think, altogether from the effects of too constant shooting on this side, but because the opening up of large tracts of country, the turning over of thousands of acres of rich, loamy soil containing an abundance of their peculiar food is the attraction which is drawing them. For it is a mistake to suppose that the snipe, by which term we mean the snipe *par excellence*, familiarly termed "Jack," is a marsh or even solely a meadow bird. In the fall he loves to stop his flight, even in a wheat field, where the soil is black and loamy. We do not consider that the few snipe killed in this State in the spring would ever make any appreciable difference in the number of the birds, while it does give the sportsman something upon which to break his young dogs, preparatory to the hard work in the fall.

Leaving the birds the subject of fish next comes up for discussion, although the limited time left the committee prevented the matter being gone into upon the present occasion with that detail which it demands. The fish dealers in New York very nearly succeeded in the last session of the Legislature in having passed a bill which would have entirely abrogated those sections of the law which regulate the possession and sale of trout. Extreme watchfulness will be required next year to prevent a like occurrence. It was suggested by Mr. Hutchinson that it would be well in order to encourage and aid the propagation of trout that some measures be taken by which fishing in the smaller brooks to which trout go to spawn could be prevented. But one means seems feasible, and that is to authorize county supervisors, with the consent, of course, of the owners, to name the streams in which fishing should be allowed, the object being to protect young trout, and prevent in a measure the capture and waste of fingerlings. Last year's bill contained a clause limiting the size of mesh to be used in pound nets to three inches, but later experience has taught that if the fishing is ever to be restored, particularly in the Great South Bay, that pound nets must be abolished entirely. Such has been the action of the New Jersey Legislature with regard to Barnegat Bay, and the result is evident already. But there are other modes of fishing in the Great South Bay that are equally destructive; night seining, while the fish are feeding, for instance, and which probably does more to disturb and frighten away the fish than any other course; fly netting is also injurious, the "run arounds" alarming the fish in a like manner. While it is not proposed to stop fishing with nets altogether, it is as necessary for the interests of the sportsman as the fisherman (and it cannot be deemed that the former have equal interests and rights in nature's gifts with the latter), that the use of nets should be controlled by judicious seasons and appliances. The fable of the goose with the golden eggs may be seen exemplified in the Great South Bay by the sight of pound nets hauled out of water and left on top of the stakes because there are no fish to come into them. The committee adjourned to meet at the call of the chairman.

—Much excitement is said to prevail along the Delaware River above Port Jervis in regard to the violation of the fish laws by riparian owners, who persist in putting eel weirs in the river, thereby destroying thousands of young black bass every night. Several weirs have been removed surreptitiously, and it is threatened that if all are not removed by the owners they will be removed in the same manner. Looking upon this movement simply as an evidence of increasing favor in behalf of the sumptuary fish laws that have been enacted, it gives us pleasure, though we shall deplore violence on the part of anyone. These eel weirs have been set in the river by riparian owners ever since we can remember; and the long continued and undisturbed practice has impressed these men with the idea that their vested rights are being infringed upon, or that the law itself is unconstitutional, and the fish wardens acting under it robbers. Setting the fish-protection question entirely aside, however, it should be understood that the rights of riparian owners have long since been adjudicated by the courts. It has been decided in this State at least, that persons owning land on the banks of a stream not navigable own to the center of the stream, while with respect to navigable rivers in which the tide ebbs and flows (and only such are considered navigable in a legal point of view) private ownership extends only to high water mark; and the New York Supreme Court, in *ex parte Jennings*, 6 Cow., 518, expressed the opinion that the public had an "absolute proprietary interest" in the land below. In the case of Ledyard, 2 Ten Eyck, 36 Barb., 105, the Supreme Court assumes to say that the State is trustee for the public in the case of such navigable waters, as well as trustee for the riparian proprietor. Both have rights to be protected; but the public must not be made to suffer loss by the cupidity, ignorance, or willfulness of the other party interested. [The words are our own, being natural deductions from the ruling aforesaid, as given in the text]. The Court of Appeals goes even farther when it affirms, in the case of *The People vs. Tibbetts*, 19 New York, 523, that it is beyond dispute that the State is the absolute owner of the navigable rivers within its borders, and that as such it can dispose of them to the exclusion of the riparian owners.

—The Halifax (N. S.) *Reporter* is anxious that the law prohibiting the killing of moose shall be extended for an additional period of three years. It will expire on the 1st September, 1877.

—The following letter from a Connecticut correspondent shows good pluck:—

Niantic, August 13th.

EDITOR FOREST AND STREAM:—

I sincerely wish we had more such men as Von G. I had grown tired of being told that my ideas on game laws were fanatical, and that I had better go home and ventilate my opinions. Any man is proud of his

birthplace, and I am proud of Gotham. At any rate it is ahead of this nutmeg region, and its sportsmen understand and appreciate any game that comes their way, let it be fish or fowl. Von G. gave me the first word of encouragement, and I shall stay in the ring for one more round, just to bother the boys, and at any rate ventilate my opinion. Plenty of good fellows can be found in New London that do not indulge in piratical adventures, but dislike to speak plainly to those that do. If they would get together and build up a quiet club of sportsmen I think its good effects would soon be seen; at any rate it is worth a trial.

SCALES.

HINTS ON PRAIRIE SHOOTING.

HAVING made periodical shooting trips to the western and northwestern prairies during the past fifteen years, we have frequently been asked for information as to where to go and the proper time to go, in order to have the best shooting. Before we made our first trip in 1859, we had frequently been told that the proper time to be there was the middle of August, and we would have taken that advice and gone at that time, had we not, very fortunately, been introduced to the late Wm. Bissell, of Pittsburgh, Pa., then a skillful sportsman of large experience in prairie shooting, who advised us, by all means, not to go there before the middle of September; and with one exception, we have made it a point to reach our destination not before the 15th or 20th of that month. The 15th of August is the opening day of the season for pinnated grouse—or "chickens" as they are usually called out there—and during the remainder of that month and the first two weeks of September, much larger bags can be made than later in the season; but to us there is very little pleasure in shooting a large number of this splendid game when the weather is so extremely warm, using up both the hunter and his dogs, and when it is almost impossible to prevent the game from spoiling on our hands. Moreover, in making the trip thus early in the season, the only kind of game to be found is the pinnated grouse, but by deferring the time until the latter part of September, we can have, say, a week's shooting for grouse, and at the end of that time the snipe and ducks will begin to visit the lakes and marshes which abound in the west and north-west, and afford most excellent sport. Two years ago we made a trip to Rudd, Floyd Co., Iowa, in company with Mr. Theo. Morford, of Newton, N. J.; Mr. J. J. Seitzinger, of Philadelphia, and Mr. I. Y. Ross, of Milwaukee, Wis., all keen, skillful sportsmen, and after having had about a week's capital shooting of grouse during the closing days of September, we ran back to Madison, Wis., where we spent a few days, and had most enjoyable sport shooting snipe on Nine Spring Marsh, and ducks on Third Lake. We well remember the morning we found ourselves on that marsh, with snipe all around in great abundance; how Frank, our red Irish setter, over which our friend, Theo. Morford, was shooting on that trip, began drawing across the meadow, and after trailing a considerable distance to some cover, came to a staunch point, when Theodore stepped a few paces ahead, and put up a pack of about a dozen grouse, a pair of which he neatly stopped. The rest of the pack passed just out of shot from Mr. Seitzinger and myself, and dropped in cover within a short distance. We started for them, when Theodore hailed us to know where we were going, and the answer was, "After those chickens"; "Why," said he; "I had rather shoot a dozen snipe now, than all the chickens in the State." Yet, we did go for them, and bagged half a dozen, but were really glad when we got through with them and back again among snipe. We allude to this circumstance to show the advantage of going to the west at a time when a variety of game may be found. Last season we did our shooting in Eau Claire and Trempealeau counties, Wis., where we found the sharp-tailed pinnated and ruffed grouse in sufficient numbers for fair sport. Last season was not a favorable one for such game, but this year the birds have done much better there, and right good shooting may be expected.

In making such trips as we have alluded to, in order to have the best sport, it is important that each shooter should take with him at least one good, steady, well-broken dog, and in condition to work day after day, and by all means one that is a good retriever. If a dog is a strong, well-formed fellow, and in proper condition for work, is properly fed and has a comfortable place to sleep after his day's work is over, he will do all the work required of him on such a trip; yet it is far better to have one or a brace of extra dogs along, in case of lameness or some other casualty. There are, no doubt, many places in Illinois where fair grouse shooting could be found, but during the past seven or eight years we have considered it best to cross the Mississippi River into Iowa or Missouri, or to shoot in Wisconsin. In making such shooting trips we have frequently availed ourselves of trustworthy information from the different conductors of the trains over the prairies as to the best places to stop. Many of these gentlemen are sportsmen, and we have found all to be courteous and anxious to give strangers valuable information as to where comfortable quarters and game may be found. In such shooting, it is absolutely necessary to have a team and driver, as the game is too heavy to carry any length of time; but a good team and careful driver can always be found at moderate rates.

To any member of the Can't-Get-Away Club who wishes a brief respite from labor, nothing is more enjoyable than a sail up the Hudson River to Catskill, and a Sunday sojourn at the Prospect Park Hotel, kept by the Messrs. Braisted. The comforts of the house are all that any person can desire, while the location is the most charming on the river. The Hudson here makes a huge sweep like a

letter S., inclosing the blue mountains in its embrace and winding afar off through a prospective so charming that the artist Cole selected the site near by for his home. On the opposite side of the river, on the highest elevation of a range of hills, is the residence of Mr. Church, the painter of Niagara. The river is wide here, and directly in the foreground, and midway from shore to shore, is a grassy island, where snipe occasionally venture to feed at low tide, and are as quickly shot for their temerity. In Catskill Creek, close by, Mr. Braisted will tell you they caught 25-pound striped bass 20 years ago, although there are none there now. However, sportsmen do not make this a rendezvous, and the beautiful grounds and the mountain view, and the far-reaching landscape, with the verdant dells, and the music and the ladies, more than compensate for the absence of game and fish. So thought the weary editor as he sat a week ago, on a hot day, dozing in the shade of the verandah.

WILD RICE.—Wm. H. Parker, writes from St. Elie, County of St. Maurice, Province of Quebec, Canada, to inform those of our readers who may require WILD RICE for planting, that he purchased last autumn several bushels from Henry Merriam, of Harwood P. O., had it planted in several lakes, and that it is now doing finely, promising an abundant yield.

—Our Florida correspondent says that a steamer is being built 121 feet in length and proportionate beam to run on the Halifax and Hillsborough Rivers as far south as the head of Indian River. The style of boat is like those on the Mississippi. During the winter a canal will be cut through sufficiently large for boats to pass through to Indian River, and within two years parties can go as far south as Jupiter. An outside boat to connect with the New York steamers at Fernandina will be put on in December. Through tickets can thus be had to all places on the Indian, Hillsborough, or Halifax Rivers. That portion of Florida is being settled rapidly.

THE INTERNATIONAL REGATTA.

PHILADELPHIA, August 21st.

EDITOR FOREST AND STREAM:—

The Regatta Committee of the National Association met at the Philadelphia Boat Club House, this afternoon. They had received protests against the entries of the Neptune, Argonauta, and Atalanta crews. They decided that Riley, of the Neptune, having been barred by the Executive Committee of the Association had no standing whatever, and would of course not be allowed to row. Upon evidence which they considered fully sufficient, they barred Ed. Smith of the Argonautas, but in reference to the other parties protested against, they decided that there was nothing at present to warrant action. This amateur business is a vexed question, and seems like to be.

The N. A. A. O., or rather its committees, have no power to compel the attendance of witnesses, and none to compel those to testify who do appear, yet they are the only tribunals to which amateur clubs can look for protection. Whether or not they would be justified in barring men on presumptive evidence is a grave question. Perhaps the Convention of the Association will throw some light upon the matter when it meets to-morrow night.

The drawing for heats and positions for the races for Tuesday and Wednesday, resulted in the following programme, Tuesday, Aug. 22:—

First final Heat, Four Oared Shells, 3 p. m.—Atalanta, position west; color red; Beaverwyck, position middle; color white; Yale, position east; color blue.

Second Trial Heat, 3:30 p. m.—Columbia College, position west; color red; Vesper, position east; color white.

First Trial Heat, 4 p. m.—Single Scull Shells.—Tasker, Crescent, position west; color red; Ackerman, Atalanta, position middle; color white; Robinson, Union Springs, position east; color blue.

Second Trial Heat, 4:30 p. m.—Kennedy, Yale, position west; color red; Pleasanton, Quaker City, position middle; color white; Courtaey, Union Springs, position east; color blue.

Third Trial Heat, 5 p. m.—Ke tor, Neptune, position west; color red; McMillan, Vesper, position middle; color white; Yates, Union Springs, position east; color blue.

Wednesday Aug. 23.—Double Scull Shell Race, 4 p. m.—Neptune, position west; color red; Union Springs, position —; color white; Atalanta, position —; color blue; Vesper, position east; color green.

Pair-Oared Race, 4:30 p. m.—Argonauta, position west; color red; Nautilus, position —; color white; Atalanta, position —; color blue; Beaverwyck, position east; color green.

The final heats for four-oared and pair-oared shells will be rowed on Thursday. The races will all be rowed on the National Course, from Falls Bridge to Rockland, 1½ miles straightway. Mr. E. D. Brickwood, aquatic editor, *London Field*, was appointed umpire. Besides the entries for these races, there are many of the crews entered for the International regattas only, at work on the river, and give it a lively appearance. Since my last there have arrived the Neptune, quartered with the Pacific, the Atalanta with the Quaker City, the Argonauta with the Bachelor, the Nautilus with the Philadelphia, and the Columbia College with Malta. The Eureka, of Newark, N. J., and the Beaverwycks, of Albany, are quartered in the new boat house, as is Hanlon, of Toronto, the only professional here at this writing.

I notice in practice on the river this afternoon, the four-oared crews of Cambridge, Dublin, London Rowing Club, Columbia College, Beaverwyck's, Yale and the Crescents. Much talk has been made, especially since the Harvard and Oxford race, about the great difference between the English and American stroke. No better time than to day could be had, excepting of course the day of the races for comparing them, and I am further confirmed in what I asserted some weeks since, that the so-called English stroke might more properly be named the English University stroke. There is no characteristic difference that I can see between the rowing of the London crew and several of the best amateur crews of this country. They row wonderfully clean, their oars entering and leaving the water without splash or flurry, and clearing the water perfectly on the recover, even when the rizer is rough. They drive their boats at racing speed with little apparent effort, and are to look at the most taking crew on the river, not even excepting Yale, which is saying a good deal.

SCULLS.

THE INTERNATIONAL ROWING REGATTA.—The following is the official list of entries for the Amateur Races now in progress at Philadelphia:—

INTERNATIONAL FOUR-OARED RACE.

ELIZABETH BOAT CLUB—Portsmouth, Va.—Dennis Callaban, stroke, Thomas Gallagher, 2; John Murray, 3; Peter McGrath, 4; Martin O'Connor, sub.

ATLANTA BOAT CLUB—New York.—W. H. Downs, 1; H. W. Rodgers, 2; C. A. Lyon, 3; J. E. Eustis, stroke.

FALCON BOAT CLUB—Burlington, N. J.—(No statement).

ONEIDA BOAT CLUB—Burlington, N. J.—R. M. Weston, bow; G. A. Hunt, F. G. Woodington, F. H. Deacon, stroke; F. C. Wolman, sub.

BEAVERWICK ROWING CLUB—Albany, N. Y.—James T. McCormick, bow; Jas. H. McEntee, 2; R. T. Gorman, 3; T. J. Gorman, stroke.

ARGONAUTA ROWING ASSOCIATION—Bergen Point, N. J.—F. C. Eldred, stroke; Chas. E. Dunbar; John Gunther; Edward Smith, bow; B. Stephenson, Walter Man, Nat. T. Trask, W. T. Taylor, subs.

PRINCETON COLLEGE—Princeton, N. J.—(No statement).

FIRST TRINITY COLLEGE—"BLACK PRINCE,"—Cambridge, England.—J. T. Penrose, stroke; G. L. Mann, 3; W. B. Close, 2; J. A. Jameson, bow; F. Walker, sub.

NORTHWESTERN ROWING CLUB—Riverdale, Ill.—Chas. T. Corning, stroke; John Killorin; Henry Smith; Frank W. Montgomery, bow; James Jerome, N. Wright, Peter Manning, W. B. Curtis, subs.

EUREKA BOAT CLUB—Newark, N. J.—J. Young, bow; W. Ryno, 2; P. Young, 3; J. Angelman, stroke.

DUBLIN UNIVERSITY BOAT CLUB—Ireland.—Geo. A. E. Hickson, Croker Barrington; Chas. Barrington; Geo. H. Ferguson, bow; Barrington, sub.

VESPER BOAT CLUB—Philadelphia.—H. McMillan, stroke; E. Henderson, W. T. Corson; J. B. Mingus, bow; C. F. Godshall, Howard Evans, H. W. Peacock, A. E. Abbott, subs.

HOPE ROWING CLUB—New Orleans, La.—M. Carey, Joseph Lusk, Jno. McNulty, W. Tansley.

LONDON ROWING CLUB—England.—R. H. Labat, bow; F. S. Gulston, A. Trower, J. O. Howell, stroke.

QUAKER CITY BOAT CLUB—Philadelphia.—C. R. Adams, stroke; S. Stinson, J. D. McBeath, S. Gormley, bow. H. C. Townsend, C. Wise, J. D. Ferguson, subs.

YALE COLLEGE BOAT CLUB—New Haven, Ct.—G. L. Brownell, R. J. Cook, Fred Wood, D. H. Kellogg, W. W. Collin, Julian Kennedy.

CRESCENT BOAT CLUB—Philadelphia.—Geo. Milliken, Jr., C. D. Tatman, H. W. Terry, C. E. Steel, crew. C. P. Tasker, H. C. Ridgway, H. K. Hinchman, Geo. W. Young, subs.

DUQUENNE BOAT CLUB—Allegheny City, Pa.—Frank Bremmen, stroke; Oliver Moody 3; Samuel Moody, 2; David Fritz, C. S.

COLUMBIA COLLEGE—Ithaca, N. Y.—J. T. Goodwin, C. S. Boyd, E. E. Sage, J. G. Murphy; G. Griswold.

WATKINS BOAT CLUB—New York.—A. McLafferty, bow; F. Stull, 2; A. Tyrrell 3; F. Wakeman, stroke; F. W. Jackson, sub.

MALTA BOAT CLUB—Philadelphia.—Jos. Dunston, W. A. Hopper, C. E. H. Brelsford, Joseph Raby, crew. W. H. Hill, John F. Hunter, P. A. Schemm, subs.

PENNSYLVANIA BOAT CLUB—Philadelphia.—H. Conrad, stroke; A. L. Kappes, 2; W. Rennett, 3; J. W. Barr, bow; F. W. Street, F. Kappes, subs.

INTERNATIONAL DOUBLE SCULL RACE.

ATLANTA BOAT CLUB—New York.—P. C. Ackerman, H. W. Rodgers, stroke.

ONEIDA BOAT CLUB—Burlington, N. J.—D. G. Walker, bow; R. K. Rodgers, stroke.

NORTHWESTERN ROWING CLUB—Chicago.—C. T. Corning, stroke; F. W. Montgomery, bow; W. B. Curtis, Henry Smith, subs.

COLUMBIA BOAT CLUB—Allegheny City, Pa.—R. K. Carr, Wm. Anthony.

VESPER BOAT CLUB—Philadelphia, two crews.—H. McMillan, J. B. Mingus, Frank Henderson, W. T. Corson; Howard Evans, A. E. Abbott, subs.

LONDON ROWING CLUB—England.—R. H. Labat, bow; F. S. Gulston, stroke.

UNION SPRINGS BOAT CLUB—Union Springs, N. Y.—R. H. Robinson, F. E. Yates, C. E. Courtney.

QUAKER CITY BOAT CLUB—Philadelphia.—S. Gormley, J. D. McBeath, Geo. W. Parker, S. Stinson, subs.

NEPTUNE ROWING CLUB—New York.—James H. Riley, T. R. Keator; Robert L. Leffman, Oliver T. Johnson, subs.

CRESCENT BOAT CLUB—Philadelphia.—Charles P. Tasker, George W. Young; T. B. Harper, C. E. Steel, subs.

INTERNATIONAL PAIR-OARED RACE.

ATLANTA BOAT CLUB—New York.—W. H. Downs, bow; J. E. Eustis, stroke.

BEAVERWICK BOAT CLUB—Albany.—James T. McCormick, bow; T. J. Gorman, stroke.

ARGONAUTA ROWING ASSOCIATION—Bergen Point, N. J.—F. C. Eldred, E. Smith, W. T. Taylor, John Gunster, Walter Man.

PRINCETON COLLEGE CLUB—Princeton, N. J.—(No statement).

NEPTUNE BOAT CLUB—New York.—John G. Murphy, Jasper T. Goodwin, James H. Riley, T. R. Keator, subs.

NORTHWESTERN ROWING CLUB—Chicago, two crews.—John Killorin, stroke; Henry Smith, bow; Peter Manning, J. Jerome, subs; C. T. Corning, stroke; F. W. Montgomery, bow; W. B. Curtis, N. Wright, subs.

LONDON ROWING CLUB—England, two crews.—R. H. Labat, F. S. Gulston, stroke; J. O. Howell, A. Trower, stroke.

NAUTILUS BOAT CLUB—New York.—D. Roach, bow; Wm. Walshe, stroke.

INTERNATIONAL SINGLE-SCULL RACE.

ATLANTA BOAT CLUB—New York.—P. C. Ackerman, H. W. Rodgers, E. J. Mills, Jr.

ONEIDA BOAT CLUB—Burlington, N. J.—F. C. Woolman.

ARGONAUTA ROWING ASSOCIATION—Bergen Point, N. J.—C. E. Man.

CAMBRIDGE UNIVERSITY—England.—W. B. Close.

NORTHWESTERN ROWING CLUB—Chicago, Ill.—Chas. T. Corning; F. W. Montgomery, W. B. Curtis, Henry Smith.

WATERLY YACHT AND ROWING CLUB—New York.—Joseph Magin.

COLUMBIA BOAT CLUB—Allegheny City, Pa.—Robert K. Carr.

PENNSYLVANIA BARGE CLUB—Philadelphia.—W. G. Thomas.

DUBLIN UNIVERSITY ROWING CLUB—Ireland.—No statement.

VESPER BOAT CLUB—Philadelphia.—H. McMillan, J. B. Mingus, J. B. Leibert, Frank Henderson.

UNION SPRINGS BOAT CLUB—Union Springs, N. Y.—F. E. Yates, C. E. Courtney, Robert A. Robinson.

QUAKER CITY BOAT CLUB—Philadelphia.—S. Gormley, G. W. Parker, S. D. McBeath, Frank Pleasanton.

YALE COLLEGE BOAT CLUB—New Haven, Conn.—Julian Kennedy, R. J. Cook.

NEPTUNE BOAT CLUB—New York.—James H. Riley, T. R. Keator.

CRESCENT BOAT CLUB—Philadelphia.—Charles P. Tasker, George W. Young.

FRIENDSHIP BOAT CLUB—New York.—James McCartney.

ARGONAUT ROWING CLUB—Toronto.—Roger Laube.

UNIVERSITY BOAT CLUB—Philadelphia.—J. Markoe Holman.

COLLEGE BOAT CLUB—Philadelphia.—Calhoun Megargee.

GLAMMERBOY BOAT CLUB—New York.—E. B. Welsh, C. F. Naething.

HOPE ROWING CLUB—New Orleans, La.—No statement.

LONDON ROWING CLUB—London, Eng.—R. H. Labat, F. S. Gulston.

MALTA BOAT CLUB—Philadelphia.—Horace Young.

The regattas will continue until September 15th. Among the most prominent entries, it will be seen, are London Rowing Club of London, England, Dublin University of Ireland, First Trinity Cambridge University of England, and representative crews from the principal colleges in America; also the well-known professional crews, viz.:—

Thames Crew of London, Fisherman's Rowing Association of Halifax, N. S., The "Paris Crew," St. Johns, New Brunswick, and crews from New York and Pittsburgh.

A large and commodious Grand Stand has been erected at Rockland, East Park, directly opposite the "finish," affording a fine view of the course for nearly a mile up the river.

RESULT OF TUESDAY'S RACES.—1st, Atalantas, 9:13½; Beaverwycks, 9:28½; Yale, 9:39½. 2d, Columbias, 9:13½; Vespers, 9:14. 3d, Ackerman, 10:28; Robinson, 10:58; Tasker, 11:18½.

4th, Courtney, 10:38½; Pleasanton, 11:45. 5th, Yates, 10:46; McMillan, 10:47.

Rifle.

CREEDMOOR—Saturday was a gala day at Creedmoor, two matches being on the tapis, and the fair weather attracted a large number of long-range marksmen. Four members of the Australian team, Messrs. Geo. Slade, Capt. Smith, and Lieut. Maddocks were present, the first three named participating in the match, Mr. Slade winning second position. The first event was the match for the Geiger bullseye badge, the conditions of which called for 20 shots to be fired first at the 1,000 yards range, 15 at 900, and 10 at 800, the winning score being determined by the largest number of bullseyes out of a possible 45. Mr. G. L. Morse shot remarkably well, running up a long string of bullseyes at the first range. Mr. Wm. Hayes, the celebrated off hand marksman, has taken up long-range shooting and participated in this match. The scores of those who finished the match were as follows:

Name.	1,000 yds. 900 yds. 800 yds.			T'l.	Bulls's.
	20 sh's.	15 sh's.	10 sh's.		
I. L. Allen.....	78	78	50	198	30
J. J. Slade.....	85	63	49	197	28
Daniel Gee.....	79	66	48	193	28
L. Weber.....	88	67	47	202	26
Capt. J. M'Garri Smith.	71	67	49	186	26
Maj. G. W. Yale.....	77	56	50	183	26
Thomas Lamb.....	78	63	46	187	24
C. E. Blydenburgh.....	82	63	47	192	23
G. L. Morse.....	85	59	45	189	22
R. C. Coleman.....	76	66	48	190	21
Maj. Henry Fulton.....	80	64	46	190	20
William Hayes.....	52	63	39	154	19
G. W. Davison.....	63	54	46	163	18
J. B. Rowe.....	51	55	38	144	8

The second match was the second competition for the Schuyler, Hartley & Graham badge, for rapidity and accuracy of firing. There were eight competitors, each of whom was allowed two trials of half a minute each. The winner of the trophy fired after it was supposed that the match was closed, and Mr. Lloyd entered a protest against his shooting, which will receive consideration from the Executive Committee of the National Rifle Association hereafter. The following table shows the result:

Name.	First Chance.		Seco'd Chance.		Grand Total.
	No. of Shots.	No. of Hits.	No. of Shots.	No. of Hits.	
A. B. Van Hensen.....	8	7/20	10	9/27	47
George Wood.....	6	4/14	5	5/20	34
Thomas Lloyd.....	7	3/10	7	7/21	31
W. Robertson.....	9	7/30	7	2/6	26
R. V. R. Schuyler.....	9	5/12	8	4/12	24
George Waterman.....	6	4/12	7	4/10	22
T. M. Henderson.....	6	3/11	9	2/10	21

THE TEAM PRACTICE.—Tuesdays and Wednesdays being the regular practice days of the team, the long-range targets have been given up to their use on those days. The following table shows the shooting that was done on Tuesday of last week:

Name.	800 Yds.	900 Yds.	1000 Yds.	Total.
I. L. Allen.....	70	68	61	202
T. S. Dakin.....	70	70	60	200
R. Rathbone.....	70	65	54	189
A. Anderson.....	71	63	55	189
C. E. Blydenburgh.....	63	66	65	194
W. B. Farwell.....	67	66	60	193
G. W. Yale.....	67	65	52	184
F. Hyde.....	63	64	54	181
H. Fulton.....	71	59	48	178
C. E. Overbaugh.....	70	62	44	176
L. Weber.....	71	62	—	133

On Wednesday some of the Australian riflemen now here visited Creedmoor and fired a few shots. They say that the atmospheric condition at Creedmoor requires a marked lowering of elevation as compared with the Sydney ranges. On Wednesday the scores were: Rathbone, 202; Weber, 200; Fulton, 199; Farwell, 102; Allen, 188; Bruce, 186; Dakin, 185; Anderson, 184; Blydenburgh, 181; Yale, 176; Overbaugh, 175; Hyde, 163. Col. Shaffer, of Chicago, who won a place on the team, but who was not on hand at the team practice, has been dropped from the team. It is, therefore, necessary that a rifleman who desires to shoot on the team, and is entitled to be placed thereon, must come to New York and remain for a couple of months to the neglect of his business. Such being the case, it can readily be understood why it is no object for any riflemen out of New York to compete in these matches, and the farce of sending them invitations should in future be abandoned.

THE AUSTRALIAN RIFLEMEN.—We have already noticed the fact that the gentlemen belonging to the Australian team have frequently visited the Creedmoor range. On Wednesday, of last week, they indulged in some practice, making the following scores:

CAPTAIN J. M'GARVIE SMITH.			
Yards.	Score.	Total.	
800.....	4 2 3 3 3 5 5 5 4	42	
900.....	4 4 4 5 5 4 2 5 4 0	37	
LIEUTENANT J. H. MADDOCK.			
800.....	5 5 5 3 5 3 5 3 4 5	42	
900.....	3 3 5 4 5 5 5 0 4	39	
1000.....	5 2 3 4 3 2 1 3 3 5	34	
SERGEANT D. GEE.			
800.....	4 3 3 5 3 5 4 4	31	
900.....	2 5 5 5 4 5 5	36	
1000.....	5 4 5 4 3 4 5 3	33	
J. J. SLADE.			
800.....	5 3 0 5 2 3 4 5 5 5	37	
900.....	3 4 3 3 5 3 2 4 5 5	37	
1000.....	0 2 2 5 2 5 2 5 5 5	33	

The Australians shot with Rigby muzzle-loading rifles, using 90 grains of powder and 434 of lead. The position they adopt is the "Farquerson," with feet towards the target, and the vernier scale fixed on the rifle near the heel of the butt.

—Thursday evening, September 15th, has been appointed for the banquet to be given by the National Rifle Association at the close of the International prize matches.

DUBLIN, Aug. 21.—The Irish rifle team for America has been completed by the addition of Mr. Ward, a gentleman who is reported to be a fine shot. Gen. Shaler's offer of hospitality has been made public, and is thoroughly appreciated.

—The Scotch rifle team, which is to compete in the Centennial rifle matches, embarked at Liverpool to-day on the Cunard line steamer Bothnia.

—Col. G. W. Wingate states that the Executive Commission of the National Rifle Association have decided to give no individual prizes this year to members of National Guard regimental teams.

AMERICAN RIFLE ASSOCIATION—Glen Drake Range, August 19th.—Subscription match 600 yards, five scoring shots, possible 25:—

Name.	Score.	Total.
Geo. Ferguson, first prize.....	5 5 5 4 5	24
David F. Davis, second prize.....	5 3 5 3 5	21
George Jones, third prize.....	4 4 4 4 4	20
F. F. Smith.....	5 2 5 4 4	20
Jas. W. Todd.....	4 5 5 4 2	20

Next regular match day Saturday, September 2d; two matches, all-comers, two prizes; subscription, three prizes; 200 yards off-hand, beginning at 3 o'clock p. m. Stage will run from Pelhamville depot to range on arrival of 2:20 and 3:55 trains from New York.

J. W. F., Secretary A. R. A.

The turkey competition for the challenge badge of the Jamaica (L. I.) Rod and Rifle Association, was shot on the range on Saturday last. The conditions of the match have been changed from seven to ten shots, at 200 yards, off-hand. There were eleven entries, with scores as follows:

Name.	Total.	Name.	Total.
C. A. Prior.....	42	T. B. Fish.....	40
John Fleming.....	42	W. S. Elmendorf.....	40
G. W. Damon.....	41	J. M. Crane.....	40
Charles J. Stewart.....	41	G. A. Hicks.....	39
Theodore Rogers.....	41	J. B. Bowden.....	34
A. J. Wilkinson.....	40		

The Association has directed that three competition scores shall be made Saturdays and Wednesdays for the selection of a team of eight, to be ready to respond to any challenge that may be sent them. The Association will contribute towards the International Centennial trophy, which is to be contested for at Creedmoor, and have accepted the invitation to be present on the 12th of September at that contest. The following scores were made at a practice on Wednesday afternoon, on this range, 200 yards, off-hand:

Name.	Score.	Total.
Theo. Rogers.....	4 5 5 4 5 4 4 5 5	45
Thos. B. Fish.....	4 5 4 4 3 4 5 3 4 4	40
Geo. W. Damon.....	3 4 5 2 4 4 4 4 4 5	39
Wm. S. Cogswell.....	4 4 4 3 4 3 5 3 3	37
John M. Crane.....	4 4 4 4 5 4 0 3 4 4	36
Theo. Rogers.....	4 5 5 4 4 5 4 4 4 4	44
Geo. W. Damon.....	4 4 5 5 4 4 5 4 4 4	43
Wm. S. Cogswell.....	4 4 4 4 3 3 5 5 2	38
John M. Crane.....	4 5 4 0 3 4 5 4 4 4	37

—The Singer Rifle Association of Elizabeth, N. J., have been practicing at the targets, and are now ready to start a match with a team from any manufacturing company within a radius of one hundred miles from Elizabeth, under the rules of the National Rifle Association. The Secretary of the Club is Mr. J. E. Spencer, of Elizabethport, N. J.

—The Bay View Rifle Range, of Buffalo, was formally opened last Wednesday by Major Gen. R. L. Howard, commanding the Eighth Division. Among the notabilities present at the ceremony were Inspector Gen. John B. Woodward, of this city; Major Gen. Henry Brinker, of Rochester; Brig. Gens. W. F. Rogers, Thirty-first Brigade, and W. H. Briggs, Twenty-fifth Brigade; Cols. George A. Bogy, Fifty-fourth Regiment; Louis M. Evans, Seventy-fourth Regiment; Richard Flach, Sixty-fifth Regiment, and others. Gen. Woodward expressed the opinion that the new range would compare favorably with that at Creedmoor, Long Island.

MASSACHUSETTS.—The Remington rifle presented by the manufacturers to shoot for by members of the Massachusetts Rifle Association, was finally won by Mr. Jackson, on the 15th inst. The members had previously shot for positions in the three classes in which they were placed, each winner having to hold his position as first in the class in three competitions. The prize match was, therefore, between three members, the distance being 200 yards, off-hand. The following scores show the result, according to Massachusetts style of counting: 11 and 12 are equal to 5, or a bullseye at Creedmoor; 7, 8, 9 and 10 equal 4, or minus.

Name.	Class.	Previous average.	Score.
W. H. Jackson.....	1	152 2-3	152
J. A. Lockhart.....	2	134 1-3	130
H. T. Rockwell.....	3	135 1-3	133

ANOTHER NEW CLUB.—The rifle is gaining ground in California. Last week a club was organized at Oakland, opposite San Francisco. The Board of Directors comprises the following gentlemen: Mayor E. H. Pardee, Major Gen. George R. Vernon, George D. Metcalf, E. J. Webster, and Major S. I. Kellogg, Jr. The following officers were chosen for the ensuing year: President, E. H. Pardee; Vice-President and Treasurer, Major S. I. Kellogg, Jr.; Secretary, George D. Metcalf. Major Kellogg was for a long time connected with the Twenty-third Regiment, Brooklyn, as Captain of Company A. The Club as soon as fairly organized will, it is said, affiliate with the National Rifle Association, and its matches will be governed by the rules of that body. The Mayor of Oakland has long taken an active interest in rifle shooting, and is represented to be an expert shot. His latest feat was the record of 63 out of a possible 75 points, at 1,000 yards distance.

MILWAUKEE, August 19th, 1876.

EDITOR FOREST AND STREAM:—

The sixth competition for the Remington prize, at 1,000 yards, commenced on the 11th inst., but was postponed at the end of the seventh round on account of bad weather, and resumed yesterday the 18th. John Meunier wins the revolver the second time with a score of 41 out of a possible 50:—

Name.	Score.	Total.
John Meunier.....	3 5 3 5 3 5 3 5 5	41
John Johnson.....	2 4 3 5 5 4 3 5 2	38
E. D. Bangs.....	2 5 3 3 3 4 3 2 5	33
E. Fielding.....	5 3 3 0 5 3 0 5 4	33
C. Turner.....	5 3 3 0 5 0 5 5 5	31
J. Arnold.....	5 0 4 2 4 4 0 0 2	21

At the completion of the postponed contest we went on with the seventh competition. Bangs was the lucky man, winning the prize the second time with 39 out of a possible 50:—

Name.	Score.	Total.
Bangs.....	3 5 4 5 4 4 4 3 3 4	39
Mennter.....	2 5 4 4 4 4 4 3 3 5	38
Arnold.....	2 3 5 3 3 2 4 3 3 5	34
Hawley.....	3 5 0 5 3 2 8 1 5 3	33
Turner.....	5 5 0 0 5 4 5 0 5 4	33
Johnson.....	5 4 2 3 4 3 3 0 5 3	32
Fiedling.....	3 5 0 5 3 0 4 3 4 4	31

CHICAGO, August 14th, 1876.

EDITOR FOREST AND STREAM:—

Following are the scores made by a few members of the Chicago Rifle Club at their range at South Park, on Saturday the 12th inst. The first score was for a prize donated by Col. Shaffer, consisting of a keg of fine rifle powder, which was divided into three prizes, viz.: first, second and third. It will be seen that Walter Burnham won the first, Mr. Howe second, Willard third. Messrs. Bliss and Cleveland took part in the match, but by request of the gentlemen the scores are not given below. The second shoot was simply for practice, from which it will be seen that your correspondent did some very fair shooting. Distance, 500 yards, two sighting shots:—

Name.	Score.	Total.
Walter Burnham.....	4 5 4 5 4	31
H. G. Howe.....	4 3 4 5 5	30
Geo. Willard.....	3 5 3 5 4	30
A. G. Alford.....	5 4 4 4 3	27

SECOND SCORE.

Name.	Score.	Total.
A. G. Alford.....	5 5 5 5 5	35
H. G. Howe.....	5 4 5 5 5	33
W. Burnham.....	5 5 4 5 5	33
Geo. Willard.....	4 5 4 5 5	32

The Chicago Rifle Club has been challenged by the Milwaukee Rifle Club to take part in a friendly contest at Milwaukee, between the 25th and 31st insts. The same has been accepted by the Chicago Rifle Club and Col. Thompson, chosen by the club as captain of the team, he to select the team as he shall think advisable. The Colonel is an old soldier and a "bullseye hitter," and is just the man for the place, having filled that place twice before. Of course the Chicago Club count on bringing home the laurels.

A. G. ALFORD.

National Pastimes.

SCOTTISH GAMES AT PHILADELPHIA.

ANNUAL CONVENTION OF THE NORTH AMERICAN UNITED CALEDONIAN ASSOCIATION.

On Monday of last week the eighteenth annual games of the Caledonian Club of Philadelphia were held at Schuetzen Park, in connection with the convention of the above Association in that city. The purposes of the Association, and the subjects coming before it for deliberation have already been explained to the readers of FOREST AND STREAM. In conformity with previous usage, the annual games of the club located in the city where the convention is held, came off at the time of its session. This is done with the double object of making the presence of the delegates available for lending a greater *clat* to the local games, and to that extent conferring a benefit upon the local club. Philadelphia was chosen as the place of meeting this year on account of the Centennial Exhibition, and the presence of many strangers from abroad, among whom there would in all probability, be a goodly representation from the Land o' cakes. To such, the sound of the bagpipes as the clans mustered on Monday morning, must have been like a whiff from the hills of Albion. The clansmen in costume turned out in strong force, and came from all parts of the United States and Canada: from Richmond, Washington, New York, Newark, Brooklyn, Albany, Buffalo, Toronto, St. Catharines, Montreal, and San Francisco, and from many other cities. As they fell into line they formed the finest procession of Highlanders ever witnessed in this country. Marching through the streets, five front, they attracted a great deal of attention, and of the half amused admiration invariably excited by the sight of a kilt. After parading several streets, the steam cars were taken for the Park near East Falls station, on the Norristown railroad. All that need be said of the place chosen for the games is, that the accommodation for the spectators to be expected on such an occasion is ample, and that for the athletes the ground is excellent. A very heavy shower of rain fell about noon, and no doubt deterred many from attending, but, notwithstanding, the grounds were lively in every part. The turnout of athletes was very large. The following was the

PRIZE LIST.

Putting the Heavy Stone (five entries).—1st, John Anderson, Newark, 35ft. 8ins.; 2d, Hugh McKinnow, Hamilton, Canada, 35ft. 3ins.; 3d, A. McKay, New Haven, 32ft. 6ins.
Standing Jump (seven entries).—1st, E. W. Johnston, Toronto, 10ft. 8ins.; 2d, James Crane, 10ft. 8ins.; 3d, R. Rogers, Trenton, 10ft. 2ins.
Throwing the Light Hammer (six entries).—1st, H. McKinnow, 118ft. 11ins.; 2d, A. McKay, 111ft. 1in.; 3d, J. Anderson, 99ft. 11in.
Running Jump (ten entries).—1st, A. C. Reid, Hamilton, 20ft. 3ins.; 2d, John Maloney, Fall River, 20ft. 2ins.; 3d, John Melure, Hartford, 19ft. 3ins.
Sack Race (eleven entries).—1st, W. Robertson, N. Y.; 2d, A. M. Allen, Pittston; 3d, A. Marshall, Bridgeport.
Tossing the Cider (six entries).—1st, A. McKay, 37ft. 7ins.; 2d, H. McKinnow, 37ft. 7ins.; 3d, E. W. Johnston.
Three-Legged Race (fourteen entries).—1st, W. Robertson and A. C. Reid; 2d, A. M. Allen and Charles Allen; 3d, H. Huff and G. W. Bratton.
Highland Fling (eleven entries).—1st, G. A. Matterson, Hamilton; 2d, James Kennedy, Brooklyn; 3d, F. Allcock, Richmond.
150-Yards Race (eighteen entries).—1st, J. Mebrose, 16s.; 2d, S. Daly, Philadelphia; 3d, J. McLaren, Newark.
Boys' Short Race (fourteen entries).—1st, T. Coleman, Philadelphia; 2d, R. Frigus; T. Bancroft.
Hitch and Kick (six entries).—1st, John Wee, Brooklyn, 9ft 9ins.; 2d, A. C. Reid, 8ft. 9ins.; 3d, A. Marshall, Bridgeport 8ft. 8in.
Egg Race (eleven entries).—1st, John McLaren; 2d, W. Nickerson; 3d, W. Coates.
Hurdle Race (eleven entries).—1st, John Maloney; 2d, A. C. Reid; 3d, W. Boyers, Philadelphia.

The quoit match was not decided. The competitions were in every instance keen. The hammer-throwing of Mr. McKinnow is especially deserving of notice. The following acted in rotation as judges:—Col. A. A. Stevenson, of Montreal; W. Fraser, of Baltimore; A. G. Hendrie, of Albany; R. Chisholm, of Hamilton; G. Bertram, Mr. Nichols, W. Lamond, of Philadelphia; J. B. McIntyre, St. Catharines, Canada; P. Selbie, S. Lawrie, of Auburn; Andrew Smith, of Baltimore; James A. Craig, George Goldie (Professor of Gymnastics at Princeton College), and J. S. Dingwall, of New York; H. R. Crawford, of Syracuse, and W. F. Elder.

The scenes of Monday at the club room were re-enacted on Tuesday morning. At the Park a greater number of people were present but the frequent delays made the ring less attractive than it otherwise would have been. The quoit match was finished, and the other games were decided as follows:—

Quoits (13 entries).—1st, Job Pearson, Philadelphia; 2d, A. McGregor, Newark; 3d, F. Emerick, Philadelphia.
Putting the Light Stone (5 entries).—1st, J. Anderson, 42ft. 8ins.; 2d, H. McKinnow, 41ft. 9ins.; 3d, A. McKay, 40ft. 3ins.
Hop, Step and Jump (5 entries).—1st, J. Maloney, 42ft 11ins.; 2d, E. W. Johnston, 42ft. 8ins.; 3d, Hugh Murphy, Troy, 41ft. 6ins.
Throwing the Heavy Hammer (4 entries).—1st, A. McKay, 97ft 10ins.; 2d, H. McKinnow, 95ft 9ins.; 3d, J. Anderson, 57ft. 9ins.
Standing High Jump (7 entries).—1st, E. W. Johnston, 5ft. 2ins.; 2d, Jas. Crane, 5ft. 2ins.; 3d, John Maloney, 4ft. 10ins.
Throwing 56-Pound Weight (4 entries).—1st, Hugh McKinnow 22ft. 10ins.; 2d, A. McKay, 22ft. 2ins.; 3d, J. Anderson, 21ft. 6ins.

Sack Race over Hurdles 18 Inches High (9 entries).—1st, F. Allcock; 2d, A. Marshall, 3d, J. McLaren.
Boys' Hurdle Race (11 entries).—1st, T. Somerville; 2d, A. McAdam; 3d, J. Coxe.
Broadsword Dance (7 entries).—1st, James Kennedy; 2d, James Moor, Scranton; 3, G. A. Natherson, Hamilton.
Vaulting with Pole (8 entries).—1st, William Robertson, 10ft.; 2d, J. Maloney, 9ft. 9ins.; 3d, J. Crane, 9ft. 6ins.
Mile Walking Match (9 entries).—1st, W. Hume; 2d, John McLaren; 3d, A. Marshall.
Running High Leap (7 entries).—1st, John West, 5ft. 8ins.; 2d, A. C. Reid, 5ft. 6ins.; 3d J. Crane.
Mile Race (13 entries).—1st, John Maloney; 2d, A. M. Allen; 3d, E. Wilson.
Bagpipe Playing (5 entries).—1st, A. Rankin, New York; 2d, Robert Ireland, New York; 3d, J. A. C. Dickson, Philadelphia.

This completed the games, throughout which the honors were evenly divided. A banquet was given in the evening by the Philadelphia Club. On Wednesday the sachems of the tribe met in convention at the club room on Pine street. Clubs were present from Montreal, New York, Philadelphia, Scranton, St. Catharines, Hudson County, N. J., Auburn, Pittston, Detroit, Buffalo, Newark, Troy and Cohoes, Syracuse, Brooklyn, Hazleton, New Haven, Bridgeport, Toronto, Washington, Milwaukee, Baltimore, South Adams, Albany, Hamilton, Norwich, Richmond, and Paterson. During the year, applications for admission to membership were granted to clubs from Thomaston, Conn.; Lucknow, Canada; Ottawa, Ont.; and Union County, N. J. There are now on the roll 35 societies having an aggregate membership of over 5,000. The reports of the secretary and treasurer showed the Association to be in a healthy condition, financially and otherwise. The essay prizes were not awarded. The committee on life assurance reported as best a system on the principle of cost without dividends; and a new committee was appointed to arrange details, and report at the next convention. The committee on rules for quoits recommended the adoption of those of the Toronto Caledonian Quoiting Club, which after a long debate was done. The leading points are that clay ends are to be used, and the distance between the pins is to be 18 yards. To meet the difficulty regarding the non-observance of the by-laws specifying the weights of the hammers and stones, a motion was passed that the secretaries of clubs must furnish certificates of the weight of these implements. Three prizes \$25, \$15, and \$10—were offered for the best essays on "The Influence of Caledonia Associations on the Welfare of the Scottish residents of North America." The following were elected:—President, Wm. B. Smith, of Philadelphia; Vice Presidents, Chief Thomas Somerville, of Washington, and Chief John Maxwell, of Richmond; Secretary, J. B. McIntyre, of St. Catharines, Ont.; Assistant Secretary, Thomas Monroe, of Hazleton; Treasurer, the Hon. Thomas Waddell, of Pittston; Managing Committee, James Moir, of Scranton, and Robert G. Hendrie, of Albany. The next convention will meet in Albany.

On Thursday the Highlanders visited the Exhibition on the invitation of the Centennial Commissioners. Several Scottish airs were rung upon the bells in the course of the day, and other attentions paid to the visitors.

—Williams of Indianapolis, who seceded from his club, and went to Cincinnati, is thus dismissed by the club he left:—

TO THE PUBLIC.—By a unanimous vote of the executive committee of the Indianapolis Base Ball Association, Dale Williams has been this day dishonorably dismissed from its service for gross violation of his contract, which obligated him to give his exclusive services to said association, and to not play for, or accept money from any other base ball club during the season of 1876. On Saturday last he obtained leave of absence to visit his parents at Cincinnati, and while there played with the Cincinnati Red Stockings, accepting money therefor. His contract with the Indianapolis Club is therefore declared forfeited, together with all unpaid balance of salary. It is further ordered that the manager debar said Williams from participating in any games to be played on Indianapolis grounds. By order of the Association. C. B. JACOBS, Manager.

Without Williams's aid the Indianapolis nine played a close game with the Louisvilles, August 14th, the score being 6 to 0.

BASE BALL.—THE PROFESSIONAL ARENA.

An exciting struggle is now in progress in the west, between the St. Louis and Chicago Clubs, for the western championship. The contest for the League pennant may be almost said to be ended, for it can only be by a series of unwonted defeats that the Chicago can be deprived of the winning lead in the race. She now holds her record up to August 20th, giving her 40 victories to 33 by the club standing second on the list. Those specially interested in the pennant campaign series, and who desire to know beforehand how the finish is likely to be, can make a pretty close calculation by comparing the record of games even and lost by each of the League Clubs with the record of games each have yet to play, and basing their estimates on the respective figures, they will soon be able to see that Chicago at present looks sure to win the pennant. The record to August 20th is as follows:

CLUB.	Athletic.	Boston.	Chicago.	Cincinnati.	Hartford.	Louisville.	Mutual.	St. Louis.	Games won.
Athletic.....	1	1	4	1	1	4	4	0	13
Boston.....	2	6	0	6	1	3	7	3	26
Chicago.....	5	6	0	10	2	5	5	3	40
Cincinnati.....	2	0	0	4	1	0	0	6	6
Hartford.....	9	4	3	4	1	3	3	3	32
Louisville.....	4	4	1	6	1	3	3	4	33
Mutual.....	3	1	1	6	4	3	4	1	19
St. Louis.....	6	3	4	7	3	6	4	1	33
Games lost.....	36	20	10	42	14	28	26	15	192

The appended table shows the number of games each has yet to play:—

CLUB.	Athletic.	Boston.	Chicago.	Cincinnati.	Hartford.	Louisville.	Mutual.	St. Louis.	Games to be played
Athletic.....	2	4	4	0	4	4	3	4	24
Boston.....	2	4	4	4	4	4	2	4	31
Chicago.....	4	4	0	0	4	0	4	4	20
Cincinnati.....	4	4	0	4	5	3	4	1	21
Hartford.....	0	4	4	4	4	3	4	3	23
Louisville.....	4	4	0	3	4	4	4	0	19
Mutual.....	3	2	4	4	3	4	4	5	25
St. Louis.....	4	4	1	4	0	5	4	2	22

Next week the western nine will have closed their series together, and then they will all come east on their last tour.

The record of games played by the "outside" professional nines with League Club teams, shows the latter to have sustained the appended defeats:

May 3.—New Haven vs. Hartford, at Hartford.....	6 to 4
May 4.—New Haven vs. Hartford, at New Haven.....	7 to 6
May 17.—New Haven vs. Athletic, at New Haven.....	13 to 6
May 22.—Harvard vs. Boston, at Boston.....	7 to 6
June 5.—Philadelphia vs. Athletic, at Philadelphia.....	6 to 3
June 7.—New Haven vs. St. Louis, at New Haven.....	10 to 6
June 9.—New Haven vs. St. Louis, at New Haven.....	7 to 5
June 19.—Buckeye vs. Boston, at Columbus.....	7 to 5
June 30.—Buckeye vs. Hartford, at Columbus.....	5 to 2
July 7.—New Haven vs. Cincinnati, at Cincinnati.....	3 to 1
July 10.—New Haven vs. Cincinnati, at Cincinnati.....	7 to 3
July 28.—Rhode Island vs. Boston, at Providence.....	4 to 3
August 4.—Live Oak vs. Athletic, at Lynn.....	8 to 0
August 4.—New Haven vs. Mutual, at New Haven.....	9 to 2
August 9.—Capital City vs. Cincinnati at Indianapolis.....	6 to 1
August 10.—Bridgeport vs. Hartford, at Bridgeport.....	9 to 3
August 14.—Buckeye vs. Cincinnati, at Columbus.....	8 to 3

It will be seen that all but the Chicago and Louisville nines have lost games with outside clubs.

Besides these games there was the 12-inning, 9 to 8 game, between the Chicago and Indianapolis nines, and the thirteen innings to game—5 to 5—between New Haven and Hartford.

A summary of the pennant record shows the contesting nines occupying the following relative positions up to August 20th, inclusive:

Clubs.	Games Won.	Games Lost.	Games Drawn.	Games Played.
Chicago.....	40	10	0	50
St. Louis.....	33	15	0	48
Hartford.....	32	14	1	47
Boston.....	26	20	0	46
Louisville.....	23	28	3	54
Mutual.....	19	26	1	46
Athletic.....	13	36	1	50
Cincinnati.....	6	43	0	49
Total.....	192	192	6	390

CRICKET.

—Our correspondent "Seneca" notes a fine game of cricket which was played at Syracuse on the 19th between the Buffalo and Syracuse eleven, the latter scoring 122 in one inning to the former's 45 in both innings. The best individual scores were Newson's 40, Wescott's 17, and Rex's 17, not out. The Buffalonians failed to score a single double number. Millward did some very fine bowling for Syracuse, not making a single wide throughout the game. Messrs. Nicholson, of the Germantown club, and Pycroft, of Syracuse, umpired the game. SENECA.

—The Red Stocking of Canisteo, on August 19th, defeated the Canadeas, of Hornellsville, by a score of seven to six.

LA CROSSE.—The residents of Newport were on Saturday again treated, through the enterprise of Mr. James Gordon Bennett, to an opportunity of witnessing an exciting exhibition of this very popular and peculiarly American game. The match was between the Montreal amateurs and the Indian professionals, as follows: The Indians, commanded by Paul De Lorimier, the whites, were commanded by Mr. C. P. Davidson, Q. C. Many of the players were members of the teams which recently visited England, and played before the Queen and royal family. The game, which is something like polo, except that it is played on foot with a *crosse* or stick with a netted curve at the end, has already become so popular in that country that 4,000 *crosses* were sent over in one shipment a few days ago. It is described as the most interesting of games for the spectators, the interest being continuous.

A match for the championship of the Dominion was played at Toronto on the 19th inst., between the Ontarios and Torontos, and resulted in a victory for the latter in three straight games.

PRESENTATION OF THE CHAMPION'S BELT.—The belt for the aquatic championship of Halifax harbor was presented this afternoon to Warren Smith by Mrs. Richey, lady of His Worship the Mayor, at the City Council Chamber. The Mayor entered the Chamber, accompanied by his wife and daughter, and Warren Smith was introduced by his trainer, and proclaimed by the Mayor to be the winner of the belt for the present year. His Worship explained that the idea of presenting the belt originated with the Halifax Royal Yacht Club, and that Dr. Charles Cogswell, who had manifested, as in many other matters pertaining to the history of the city, a lively interest, had in 1859 invested £100, the interest of which was to be devoted annually to the winner. This belt having been won the necessary number of (five) times by the late George Brown, whose loss was mourned by all, had become his property (in 1869), and the belt now to be presented had been provided by the City Council, in order to perpetuate the annual contest. The belt had already been won by five different persons, viz.: by William Glazebrooke, George Brown, George Lovett (who won it twice in succession), John Mann and John Brown. His Worship intimated that the names of all these winners would be engraved on the belt, together with that of the present champion. The belt was then placed on the winner by Mrs. Richey, who also handed to him the purse of money, and congratulated him on his success. A general shaking of hands with the champion followed.—*Halifax Reporter*, 12th.

—Our Natural History Editor started yesterday to attend the 25th meeting of the American Association for the Advancement of Science, now in progress at Buffalo. This is the most important event of the year in American science, particularly biology, as it is the harvest time of the year's work. We shall devote considerable space in our next issue to correspondence from the Association.

—The last number of the *Spirit of the Times* is unusually attractive. Among other embellishments it contains a capital and truthful engraving of our friend the Hon. Chas. W. Hutchinson, ex-Mayor of Utica, and President of the Utica Park Association, an engraving of the yacht Countess of Dufferin, and also of the National Cup for stallions. And yet it does not claim to be an "illustrated sporting paper."

—Mr. Cazeneuve, a newly arrived French magician, gave an invitation exhibition last week at 315 Broadway. The most notable of his card tricks, not yet seen in this country, was that of holding a pack of cards and making them gradually lessen in size as he shuffled them, until they were reduced to a little ball of paper, which finally vanished entirely.

Northern RAILWAY OF CANADA AND Collingwood Lake Superior Line.

ONLY FIRST-CLASS ROUTE TO THE BEAUTIFUL INLAND LAKES OF CANADA AND
LAKE SUPERIOR.

Three express trains daily north from Toronto. Steamers leave Collingwood every Thursday at 6 P. M., on arrival of steamboat express, leaving Toronto at noon.

Parlor Cars on all Express Trains.

Lake Couchiching AND THE Lakes of Muskoka

Are the coolest and most delightful Summer watering places in Northern Canada. Tourists proceeding down the St. Lawrence can make a pleasant detour from Toronto to Couchiching in five hours on express train with Drawing Room Coaches, thus visiting the most charming of the chain of Lakes.

Excursion Tickets

At greatly reduced rates during months of July, August and September; may be had from COOK, SON & JENKINS, 2-1 Broadway, New York and Centennial Grounds, Philadelphia.

ALFRED TELFER,

Gen. Agt. Northern Railway,
Toronto.

THE "FISHING LINE."

Brook Trout and
Grayling Fisheries

OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equalled, in the great abundance and variety of fish contained.

Brook Trout abound in the streams, and the famous American Grayling is found only in these waters.

Brook Trout Season opens May 1st.

Grayling season opens June 1st.

Black Bass, Pike, Pickerel, and Muscalonge are also found in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities offered to tourists and sportsmen; also on and after July 1st Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to Forest and Stream office, or address

fourth street, every fifteen minutes previous to the
departure of trains.

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over
two thousand miles of road, radiating from Chicago.
Like the fingers in a man's hand, its lines reach in all
directions, and cover about all the country north,
northwest, and west of Chicago. With one branch it
reaches Racine, Kenosha, Milwaukee, and the coun-
try north thereof; with another line it pushes through
Janesville, Watertown, Oshkosh, Fond du Lac, Green
Bay, Escanaba, to Nagaunee and Marquette; with an-
other line it passes through Madison, Elroy, and for
St. Paul and Minneapolis; branching westward from
Elroy, it runs to and through Winona, Owatonna, St.
Peter, Mankato, New Ulm, and stops not until Lake
Kameska, Dakota, is reached; another line starts from
Chicago and runs through Elgin and Rockford to Free-
port, and, via the Illinois Central, reaches Warren,
Galena and Dubuque, and the country beyond. Still
another line runs almost due westward, and passes
through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar
Rapids, Marshalltown, Grand Junction, to Council
Bluffs and Omaha. This last named is the "GREAT
TRANS-CONTINENTAL ROUTE," and the pioneer
overland line for Nebraska, Colorado, Utah, Idaho,
Montana, Nevada, California, and the Pacific Coast.
It runs through the Garden of Illinois and Iowa, and
is the safest, shortest, and best route to Omaha, Lin-
coln, and other points in Nebraska, and for Cheyenne,
Denver, Salt Lake City, Virginia City, Carson, Sacra-
mento, San Francisco, and all other points west of
the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVAN-
TAGES—FOR PRAIRIE CHICKEN, DUCK,
GEESE, AND BRANT SHOOTING. THE
IOWA LINE TO-DAY OFFERS MORE
FAVORABLE POINTS

than any other road in the country, while for Deer and
Bear Hunting, and for Brook Trout, Lake Salmon,
Pike, Pickerel, and Bass Fishing a hundred points on
the Northern and Northwestern lines of this company
will be found unsurpassed by any in the West.

MARVIN HUGHITT, W. H. STENNETT,
Gen. Supt., Chicago. Gen. Pass. Agt., Chicago

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMPANY

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROT-
TING PARKS and RACING COURSES in the Middle
States. These lines being CONTINUOUS FROM ALL
IMPORTANT POINTS, avoid the difficulties and dan-
gers of reshipment, while the excellent cars run over
the smooth steel tracks enable STOCK TO BE TRANS-
PORTED without failure or injury.

The lines of
The Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION
TICKETS are sold at the offices of the Company in

THE ORVIS REEL.

The Most Compact, Neatest, Cheapest, and Durable Reel in the Market.

NO 1.—This Reel is extra nickel-plated and finely finished. Is perforated to make it light, and keep it free from sand, also that the line may dry without removing it from the reel after use. Has a very perfect click. It is very light, very strong, and holds from 40 to 50 yards of line. It is more compact and less cumbersome than ordinary 20 yard reels. It is quite narrow, and takes up line rapidly. Put up in neat Black Walnut Case, price \$5.

NO 2.—For Prizes. Same style as No. 1. Heavy Gold Plate. Extra finish, with case, price \$10. Sent by mail, postage prepaid, on receipt of price, or by express, C. O. D. LIBERAL DISCOUNT TO THE TRADE. Send for New Price List of Fishing Rods, Reels, Flies, Lines, &c., &c. Mention this paper.

W. H. HOLABIRD

Would most respectfully announce to his patrons and friends that he is prepared to make

Shooting and Fishing Suits

at the above prices. The ten dollar suit is better made than any competitor can offer for the same money. My original design having been appropriated by other manufacturers, I have been compelled to make many changes in the arrangement of pockets, &c., for which I have to thank the fraternity at large for suggestions. I believe that I have the

BEST SHOOTING AND FISHING COATS IN THE WORLD,

and respectfully solicit your orders. I send my new Illustrated Catalogue, 16 pages, free on application.

Dealers will find it to their advantage to handle my goods. They are better known and more highly esteemed than any other make.

Address

W. H. Holabird,

VALPARAISO, IND.

N. Y. Office: No. 1 COURTLAND ST.

THE NEW BOSTON SHOOTING SUIT,

Manufactured only by

G. W. SIMMONS & SON,

Boston, Mass.

We offer this season an entirely new design of WATER-PROOF SHOOTING SUIT (made from extra quality duck), in the preparation of which we have been assisted by the advice and suggestions of our best resident sportsmen.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, the arm holes ventilated, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at \$13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloon.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the *Golden Rule* (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skillfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, water-proof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Waist Measure, Height, Breast Measure, Length of Sleeve, Size of Head.

G. W. SIMMONS & SON,

"OAK HALL," BOSTON, MASS.

apl6 6m

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6½ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.G., FFG, FFGG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6½ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

26 Murray St., N. Y.

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired.

The powder is also well adapted for shot guns. Inquire for the "Dittmar Powder" of your dealer or address the

DITTMAR POWDER MANFG CO.,
NEPONSET, MASS.

JUST OUT!

ADIRONDACK GUIDE.

NEW EDITION, WITH MAPS.

BY E. R. WALLACE.

Gives all possible information relative to Routes, Hotels, Resorts, Outfits, Guides, Distances, &c., with emended railway schedules, &c.

The only Complete Guide to the North Woods.

The instructions embrace everything that can be desired. Taking it all in all it is the most complete book that has been published on the Adirondacks, not excepting even my own.—Hon. J. T. Headley.

I regard your "Descriptive Guide" and the "Appendix" as a most useful—nay, indispensable, manual for tourists to that wonderful Wilderness. A tour in that region is eminently a practical matter, and for that reason I regard your "Guide" as an important, useful, and timely publication.—Benson J. Lossing.

It is the only thing of the kind that has yet been published—the very thing that has been so long wanted and waited for.—Alfred B. Street, Author of "Woods and Waters."

Sent by mail on receipt of price, \$2.

PEERLESS TOBACCO WORKS. aug3

Thomson's

Oil Finished Grain Leather Shoe-Pack or Moccasin.

With Sole, Price, \$7.50. Without Sole, \$5.50.

Made with heavy sole for land use; also without sole for snow and canoe purposes. All hand sewed and strongly made. Laced in front with hooks (over English style of water-tight tongue), thereby securing PERFECT FIT around ankle, thus preventing all slipping at the heel. Made with broad soles and on scientific principles.

Fills the want long felt by sportsmen for an easy fitting and durable shoe.

In ordering, state size of boot worn. Sent by mail on receipt of price, with 40 cents additional for postage, or by express C. O. D., everywhere. Manufactured by THOMSON & SON, 338 Broadway, New York. ju27 tf

Good's Oil Tanned Moccasins.

The best thing ever worn by sportsmen. Not injured by wetting and drying—always soft and easy to the feet. Four different styles. Prices to suit the times. Send for illustrated circular and price list. (Successor to Frank Good). MARTIN S. HUTCHINGS, P. O. Box 348 Dover, N. H. ju27 tf

The Infallible Fish Bait.

Having perfected a suitable Paste for Fish Bait, the undersigned offers same to the sporting fraternity, assuring them that it will prove more remunerative than any known substance for the purpose of angling. It is of a pale white color, square in form. By soaking in water a few seconds it becomes pliable. Taking a small piece, size of a pea, and pressing the same on or about the eye of the hook and using regular bait, any angler can kill to his heart's content. Price 2 cents each, post paid. Address JOS. LABADIE, Galveston, Texas. Ju6-3m

Skinner's New Fluted Bait.

Paper and Metallic Shells

FOR

Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dec23 tf

New Paper Shell Conical Base. WILLIAMS' PATENT.

Manufactured by the ST. LOUIS PATENT SHELL MFG CO., office 209 North Fourth street. The advantages claimed for these shells are: Cheapness, a saving of 25 per cent. in the use of powder, less recoil. These shells are equal to the best English, and 3 1/2 drachms of powder will do the work of 5 drachms in any other shells. The sizes made are No. 10, 2 inches; No. 12, 2 1/4 inches. Longer shells made to order at extra cost. Ask your gunmakers for them and use no others. Shells are not mailable. Sample 100 will be sent by express on receipt of \$1.30 for 10s or \$1.15 for 12s. aug24 9t

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the
 extreme SIMPLICITY, STRENGTH and DURABIL-
 ITY of their New Patent "SIMPLEX" Breech loader
 and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,)
 its mechanical soundness so thorough, and the
 strength and simplicity of the action so great, that
 W. & P. feel sure it will supercede all the complicated
 and manifold grips now in use, its one powerful grip
 being far stronger than any double, treble or quadruple
 grip now used. In this new action LEVER and GRIP
 ARE ONE SOLID PIECE OF STEEL and the AN-
 GLE of the BODY is left in its ENTIRE STRENGTH.
 Drawings of action and extractor will be sent on ap-
 plication, and orders may be forwarded through any
 of the best houses in the States for execution in the
 Spring.

Guns guaranteed to make patterns of from 160 to
 230 with No. 6 SHOT AT 40 YARDS, as desired.

For Forest and Stream.

Cobb's Island in Summer.

Standing beside the sea I said,
"Oh, sea and billows blue
Its time to shoot the sad bay-bird,
The snipe and shy curlew."—After Tennyson.

IT is about this time that those who call themselves sportsmen are furnishing up their guns, buying their ammunition, and making up their plans for the summer shooting, and I know your readers will thank me for sketching a route which is not so very distant that some cannot find their way to the place I am writing of, and where those who delight in true sports—the devotees of the rod or the gun, can find good fishing and gunning to their heart's content. A score or so of years ago, there lived an ancient mariner, named Cobb, who, like Kingsley's "Three Fishers," fished for a living, and also unpoetically caught crabs and hooked oysters to fill the hungry mouths at home.

"For men must work, and wives must weep,
For there's little to earn and many to keep,
And the harbor bar is moaning."

There was a small sand bank off the coast about eighteen miles from Cape Charles which lay in the midst of the bleak ocean, and the fishermen desired of building a log cabin upon it, and having a place for his nets and boats, found out the owner and offered to buy it. The bargain was quickly made, and the price paid was a mere song—a few sacks of salt and \$20, I believe. Mr. Cobb put up his humble dwelling, and soon found that his investment was a good one; such profusion of fish, oysters and clams was nowhere to be found, and he steadily added to his gains. And now a singular and wonderful change took place—his bank began to grow perceptibly larger day by day and hour by hour; as if by magic the area of the place increased, and insatiable Ocean, who often swallows up so much of our treasure and precious wealth, being in a generous mood, now gave a royal gift to the simple fisherman, even as the genii in the Arabian Nights tales gave to the caster of nets—Abou Hassan. In a few years the barren flat was changed into a firm solid island of such varied attractions that a king might covet it, a miniature principality set, as it were, daintily in the blue ocean, where trees spread their waving branches, flowers grow, and birds sing—a thing of beauty, as grateful to the sight of the storm-tossed mariner as ever the green oasis to the view of the desert traveler who has lost his way amid the sea of sand. On the spot where the log cabin was built twenty years ago there now stands a hotel and many cottages, and from being merely a fishing station Cobb's Island has grown to be a famous sea-side resort, and a spot where the votaries of the rod and gun can find more sport than any other place in a thousand miles around. To a person fond of the grand in nature it is an endless pleasure to remain here and watch the ocean in all its changing moods.

In the rear of the island are numerous flats, shoals and mud banks through which the sea forces its way. These flats extend sixteen miles from the mainland, and are marked in the chart as the "Broadwater." They belong to the State of Virginia. At high tide most of these flats are covered by the sea, and are totally submerged by the rising waters; as the tide ebbs they are left high and dry. It is on these shoals that oysters and clams are taken in uncounted numbers, there being some 400 men in and around the island engaged in that traffic, these bivalves are nearly all sent to the New York market. When the tide ebbs and these flats are left dry the oystermen land and simply gather them up in baskets, and they say the supply is inexhaustible. It is on these places also that the curlew, willet and snipe are shot, and often these flats are literally alive with them; along these creeks and channels that King of water fowl, the brant, congregates, and its feeding grounds in the fall are immediately around the island.

"Old man Cobb," as he is called—the founder of this place—is a weather-beaten, time-hardened, and salt-preserved old fellow of some sixty or seventy winters. He is,

of course, a thorough seaman, and what he don't know about fishing and gunning isn't worth considering. He has done what every good father ought to do, made his property over to his sons, three in number, and has reserved only a small slice for himself. He amuses himself by sailing his boat, smoking his pipe, and telling long fore-castle yarns about the times he has had, and the things he has seen. His three sons run the island, and are running it as a green engineer runs an old rickety train on the down grade, with all the steam up and the brakes open. Warren, the oldest, is a rough and ready fellow—kindhearted and jovial, fond of his grog and his pipe. He is the best pilot on the coast, and knows these dangerous shores better than the nautical chart. He is very liberal, rather different from his brothers, who, unlike Banquo's ghost, all have speculation in their eyes. Warren, a second edition of Mark Tapley, give him two pulls at your pocket flask, and like a jolly sea-dog that he is, he will take a long and a strong pull together; then let him light his old briarroot and take the tiller of his little craft, and the waves may dash madly against his boat and "the winds blow until they have awakened death" without affecting his spirit or vexing his soul. If you go to the island get Warren as your guide. He is not only an entertaining companion, but very reasonable in his charges, and don't go for your last cent like some other guides I wot of. Nathan, the second son, is quiet and taciturn, but is a thorough sportsman and a crack shot. Albert is the youngest, and runs the island as a watering place, assisted by Mr. Segur. Albert has the brains of the family, and if his liberal, far-seeing policy is carried out Cobb's Island will in a few years be matchless as a sea-side resort.

I cannot resist saying a word about the great abuses that exist and that are patent to every guest, being particularly hard upon the sportsman. In the first place, the price charged visitors is entirely too high, being the same as at the White Sulphur Springs and other first-class resorts where they have superb music, drives, promenades, daily mails, telegraph wires, elegant ballrooms and a perfect cuisine; there are none of these at "Cobb's." If the price was reduced from \$60 to \$40 per month it would treble the number of guests. But the crying evil is the wrong inflicted on the sportsman; he is turned over to the tender mercy of the guides, a class who live by mild extortion. When you start out to shoot birds you furnish your own gun and ammunition, then you pay \$2 to the guide for his services, and worse than all, after killing the birds you actually have to give one-half of them to the guide. Such a course is well calculated to kill the goose that lays the golden egg, and but few sportsmen can stand the drain. The fishing and shooting in and around the island is all that the heart could wish for, and in such a variety and abundance that it is intensely exciting. Those who love fishing can pull up fish as fast as they can drop their lines. Each season has its particular kind of game. In August curlews, willets and graybacks (a kind of snipe) abound. At low tide the sportsman takes his position concealed in a blind, which is rudely made of bushes, and generally constructed on the highest point of the flats; wooden decoys are then placed about thirty yards from the blind. As the tide rises it covers the feeding ground of the birds and they fly back where the ground is higher, seeing the decoys, and hearing the answering cry they swoop downward—but rarely alight—and all the shots must be taken on the wing. It is astonishing to note from what a long distance they can be lured to the decoys; sometimes they are but a speck in the air when the guide whistles, and they almost always answer the signal. As the waters advance the birds fly thick and fast, and you can shoot as fast as you can slip shell's into your breech-loader. It is glorious sport, the advancing waters silently cover the green sward, and steal around you, covers your feet, your ankles, rises to your knees, but you heed it not, for the birds now swarm around the decoys, and you drop them every time you pull the trigger, and are totally oblivious of everything else in the world; and not until the water laps the very seat you are sitting on

do you think of resting, and then you wander to your boat, your cartridge bag empty and your game-bag full.

I spent a day at Monken Island, about six miles from Cobb's. It hardly merits the name of island, for it mostly comprises sea meadows which are under water at high tide—it has a few acres of firm land, where large and bushy pines grow. This is the famous breeding place of the great sea crane, and their numbers beat anything I ever dreamed of. In one tree I counted twelve nests, and the young cranes were as thick on the tree as turkeys on their resting places. They were around you by hundreds, and so fearless that you could approach within ten feet of them; and, after knocking one or two of them over, you stop firing. Some of them are as thin as the Irishman's turkey, but are very tall, frequently four and five feet high. The willets breed at this place too, and the young ones can be seen running in every direction.

About ten or twelve miles from Cobb's is another island, known as Hog Island, where the great lighthouse stands. This island is much larger than any other on the "Broadwater," containing some 1,500 acres. This island is not a gift of Old Neptune. It has on it some ancient log houses, over a century old, and has a superb forest of immense trees. The lighthouse stands on a promontory fronting the ocean, and from its top a splendid view can be had. As far as the eye can reach, it can see nothing but the wide waste of waters bounded by the horizon—"bridal of the sea and sky." The white-capped waves sparkle in the sunlight, and off on the right you watch the dash of the billows against the rocks, where the breakers and the white spray rise high in the air. One never gets tired of watching nature in her varying beauty; the mighty ocean in her gentlest moods. The surf mourning softly against the beach, and even the roar of the breakers, come to the ear mellowed by the gentle winds, and as softly as the memory of a dream. Then the ships, those freighted argosies, outward bound, the snowy sails gleaming against the far blue sky like the wings of the sea gulls. The people of Hog Island number, all told, some seventy souls, all of whom are wreckers and fishermen—a class of humanity different from what we see in our every day world, rough, uncouth, and uneducated, but honest and hospitable. The prevailing genius, oracle and general authority, is old Aunt Harriet, and it is worth sailing twenty miles any day to meet her. Those disciples of Lavater who believe in physiognomy being the index of character, would find in an acquaintance with this old woman a hard argument against their creed. No frightened children who were hushed into a shuddering silence by the wind, or strange tales of the nursery-maid, ever imagined the face of an ogress or warlock more fearful than hers; the forehead is low, the eyes of a dark green, protruding from her head; her nose flat, with wide open nostrils, and her mouth cruel and savage looking, occupied half of her face, and is garnished with teeth as large as those of a two-year old colt. The countenance is that of a wolf, and her short, squat body, completes the illusion. She is for all the world like the Weir Wolf, with the grandmother's night-cap on, who lay covered up with bed clothes when little Red Riding Hood came home from her errand. Yet, looking so bad, no more kindly heart ever beat than Aunt Harriet's, and she probably never made an enemy in her life; and were I to fall sick in a strange place, I know of no one whom I would rather be tended by than the old woman of Hog Island. The fishing there is far superior to that at Cobb's Island, but the hunting is inferior.

I will end my letter by giving you the seasons for game and the general average for one year at Cobb's Island:—

Brant are shot in November and December; average for a gun, 40 to 60.

Bay-birds and snipes, October; 30 to 50 to a gun.

Curlews and willets, October; 25 to 40 to a gun.

Black ducks, October; 20 to 30 to a gun.

Red breast snipe; 75 to 140 to a gun.

Wild geese, December; 6 to 10 to a gun.

Among the yachts that annually visit Cobb's Island to

shoot wild fowl, are the yachts Palmer, Ibis, Dauntless, Ideal, and Vindex.

ALEXANDER HUNTER.

Cobb's Island, Va., July 29th.

[Our correspondent has failed to mention how to reach Cobb's Island. We supply the information as given by a friend who visited the place this summer, as follows: Take Old Dominion steamer from New York to Norfolk, thence across the Chesapeake to Cherrystone by steamer; thence five miles by stage to the Bay, and ten miles by steamer to Cobb's. There is also a steamer from Washington. Hotel charges \$3 per day; boatmen \$3 on snipe; on grouse, ducks, etc., in the fall and winter, \$5 per day and half your birds.—Ed.]

For Forest and Stream.

OLD DAYS AT MOOSEHEAD.

IT was the writer's good fortune to spend part of the summer of 1870 at the Kineo House, Moosehead Lake. At the period of my arrival, about the middle of July, the artisans were still busy upon the unfinished buildings. For some days I was the only guest, and as the weather had set in wet and stormy, I amused myself by driving a few nails here and there and generally noting progress. At the end of a week or so of this enforced single blessedness came other visitors, and by the middle of August a goodly number of ladies and gentlemen were ensconced in this delightfully quiet sylvan retreat. Those were halcyon days, all infesting cares laid away for the nonce, and our sole occupation to catch trout and play whist in the evenings. Among the well remembered guests and fellow anglers were W. J. Stillman, Daryl, of national fame, Thatcher Magoun, of Boston, Mr. Moore and family, Dr. Foster and Cassius Darling, of New York, the two latter little thinking they were so soon to bid an eternal adieu to those pleasant scenes and take their last trout in the waters of Moosehead.

I had taken with me as pocket companions, Roosevelt's two volumes "Superior Fishing," and "Game Fish of the North." Both these works can be conscientiously recommended to the novice as containing much valuable information, and entertaining withal. They are written *con amore* and by a master of the art. For many years it had been my habit to occasionally glance over the contents of these volumes in intervals of leisure, and as often as I turned from the known to the unknown (salmon angling) just so often did my conscience regularly smite me, and its reiterated reproach ran somewhat thus: "Thou, Rusticus, who, beginning upon tiny trout, with tiny hooks in tiny brooks, at the tiny age of seven, hast since advanced by slow and successive gradations to the dignity in-e-parable from four-pound trout and 60-pound bass and drum. Thou, I say, hast never yet beguiled the true Monarch of all Angledom; thou hast never yet captured the wary salmon. From this standpoint thou art but a wretched ignoramus. In fact thou knowest nothing whatever of true angling. The supreme test thou hast never undergone; all that thou hast hitherto accomplished is but as the foam and froth upon the surface, which only hides from view the potent and more generous beverage in the depths below. Unlike Alexander, to thee a new field of conquest is open. Go place thyself on the highest pedestal, then rest contented." Thus conscience; and to its biting words of admonition always replied in thought the chafing Rusticus. "I will, by Jove! I will, sometime go a salmoning." And he went. How he went, whither he went, and what he underwent, shall haply appear in these pages ere the waxing and waning of many moons.

Dear, charming, always lovely Moosehead; affording good store of trout to the angler, game to the hunter, studies to the artist, medicine to the sick, rest to the weary. Though basely abandoned by thy former votary for newer scenes and wider waters, his memory oft fondly recurs to thee and to the genial companions always found under Kineo's sheltering roof. As he writes he has but to lift his eyes from the paper to the wainscoting to be confronted with panoramic views of Kineo Mansion and Mountain, of Table Rock and North Bay. On the rock is seen an angler, rod in hand:

Now deftly ply thy rod; with baited breath,
As snowflakes sink, let fall thy feathery dross;
'Tis fair, land thou treadest. Mortal pray
The Fairies lend thee immortal skill to day.

All vain my appeal, unmoved behold him stand,
As turned to stone by the enchantment's magic wand;
Perchance some Merlin by Fly Vivien witched,
On bawling tyro with his tackle hitched.

Anglers are always companionable, (this is a plagiarism) especially when telling the story of "That big trout, you know," at evening on the hotel piazza, or when the noon-day heat compels a halt upon the grassy bank of some mountain stream. At such times the angler waxes eloquent, and bits of angling experience are made to do duty, I had almost said *usque ad nauseam*, but such broad asseveration were untrue. Your genuine angler is a good listener. Who ever does or can forget the localities and incidents connected with his heaviest encounters? The overhanging bank, the sharp edges of the jutting ledge, the old guarded stump with its projecting tentacles, the menacing jam of driftwood at the foot of the pool, or the forest tree fallen just across it; are not all these indelibly stamped on the angler's memory, incorporated with his very existence? How then can the story of a friend's triumphs, joys and sorrows, fail to command his best attention? Can he not match each and every recounted incident with something parallel, drawn from the tablets of his own memory? Has he not time and again been swayed by the self-same hopes and fears? Now, swelling with satisfaction at the successful capture of some aqueous monarch, saved perhaps *in extremis*, and when all hope had fled; and now almost frantic at the loss of a magnificent fish, torturing himself with vain imaginings as to what might have been had he adopted other than the losing tactics:

"Of all sad words of tongue or pen,
The saddest are these—it might have been."

Gentlemen of the Rod and Reel, we have all traveled the same road, have enjoyed the same triumphs, suffered the same disasters, and as the net result are bound together in closest bonds of sympathy.

And then, Rangeley. To omit mention of the Rangeley waters in this connection would be like playing Hamlet, with Hamlet left out. Canadian waters excepted, the neighborhood of Indian Rock affords fishing second to none upon this or any other continent. At least this was the case before civilization had invaded its sacred precincts, and before it had planted in this primeval wilderness its modern club houses and its patent new-fangled hatching

machines. Let others speak for the present. Never shall I forget the day of my introduction to the Simon pure Rangeley trout. Time, the last week in September, 1861; place, the old mill on Rangeley stream; *dramatis personæ*, a well known Boston turfman, Rusticus, and Charley Soule, proprietor of Camp Kennebag, then unknown to either of us save by reputation. Our party of four left Prescotts at 8 o'clock in the morning and after a slow and tedious trip down the lake, taking on the way one small fish with a spinner, disembarked at the usual point; and while two remained behind to guard and see our impedimenta safe to camp, our turfist and your servant set forth in advance. The road was a common logging road, such as everywhere abounds where the lumberer's axe has preceded. While threading the left bank of the stream a spruce partridge fell an easy prey, and we at length emerged into a small clearing where stood at the water's edge an old saw-mill, dismantled and long abandoned. As we approached a tall gaunt form appeared from behind the mill, and with the air of one who has found the sought for object, remarked that he was expecting us. After some desultory conversation in regard to our chances for sport, he inquired whether our party would like a fish or not for dinner, and said he would get one immediately. With that he disappeared in the recesses of the mill and quickly reappeared armed with a spear. Intent upon watching his operations, I accompanied him, while my companion continued his line of march toward Indian Rock. Arrived at the pool just below the old dam, into which was falling through and over its few remaining timbers a considerable body of water, our spearsman took position on the end of a strong plank so placed as to project just over the very center of the pool, its shore end being securely anchored and braced.

For some ten minutes did he stand there, motionless and statuesque, cautiously peering into the depths of the troubled waters. He assured me he could see a number of small trout, but felt sure, he said, "There were some big ones in there, and we want a large one you know." Anxious to take a look at the small ones spoken of, I walked out upon the plank but could distinguish nothing through the rushing water. At length the wished for moment came, the spear was cautiously sent downwards and held in position, a moment's maneuvering followed, the blow was struck, and the violent agitation of the ashen shaft showed plainly that the steel was driven home, and was fast to something possessing both size and strength. Not content with holding the fish firmly against the bottom, to make all sure a heavy grapple was lowered and in a few seconds securely hooked under the jaws of the victim. Spear grapple and fish were then slowly drawn to the surface, and in a moment more a nine pound female trout was throbbingly gasping away her last breaths upon the pebbly shore. I threw myself down beside the dying beauty in rapt admiration, noted her perfect symmetry of form, the brightness of her spots, and wonderingly propounded to him of the spear the interrogatory, whether he had ever before taken as large a trout. The reply was a crusher. "Oh, yes—frequently—we have them much larger in these waters." This statement was verified a few days later by the production of 10 fish on the morning of our departure, weighing from seven to 12 pounds each—only one or two of the latter size, however. Since that day I have seen and taken many large fish, but have never experienced the same stunning sensation as then fastened upon me by the bank of Rangeley stream. It was a revelation.

Moosehead and Rangeley, twin gems in America's diadem of lakes and lakelets! "Ambo pares piscibus; Arcades ambo." May both and each, under the fostering care of wise legislation and enforced protection, continue to furnish our descendants with the same regal sport vouchsafed to us of this day and generation.

RUSTICUS.

For Forest and Stream.

TRAMPING IN THE CATSKILLS— TRAMP II.

[Concluded from August 17th.]

SETTLING our knapsacks firmly on our shoulders we entered Ulster from Sullivan county at the forks of the Neversink, on a road scarcely wide enough for the passage of two vehicles. At our right hand the west branch of the Neversink and on our left a towering mass of rocks piled upon each other in the most promiscuous manner, and this road and a solitary saw-mill the only works of man in sight. Our next objective point was Shendaken Mountain, whose shapely outlines we could see in the distance sharply defined against the clear blue sky, and to the base of which we knew the road we were on would lead us. Somewhere near where this road first struck the base of the mountain we had been told there was a path which crossed the mountain by the "Big Injun pass;" but the uncertainty of our finding the path was only equalled by that of our getting any dinner on this side. The distance to the foot of the mountain, which proved to be about six miles, was quickly accomplished, for the road (for this part of the country) was remarkably smooth, and just as we began to look warily for an opening at the roadside which might appear to be the beginning of the path we were in search of we came upon a log hut, at the door of which sat a young man smoking his pipe. Upon making inquiry as to the whereabouts of "Big Injun" he, with true mountaineer courtesy, volunteered his services as guide, and as we walked on with him said he lived about a quarter of a mile further on. The dinner question being broached he said he could give us plenty of bread and milk, if that would suit us, and invited us in and introduced us to his family, which consisted of his wife and the stoutest, most rosy-cheeked three-year old baby I ever saw, and here, in a house of logs—one room on the ground floor and one above—our friend the barkcutter lived in true rural simplicity, apparently as happy as mortal man could be; still, he said he was getting rather tired of the woods, and hoped by the next spring to be able to buy a small farm in the central part of the county. After we had finished our dinner and praised the baby, to the evident satisfaction of its mamma, our sylvan host led us a short distance from his house and pointed out the path which, he said, if we followed for twelve miles, would take us over the mountain, and bring us out on the line of the Rondout and Oswego Railroad at "Big Injun" depot.

We tramped up hill for some three miles, when we came upon a clearing partially overgrown, in which were the ruins of three log huts. From this point the ascent was more steep and the path more rough, until it became nothing more than a way cut through the woods just wide enough

for the passage of one vehicle, and thence on to the summit we stepped and jumped from one rock and stone to another, passing on the way the wreck of a wagon in which some venturesome person had tried to make the journey over the mountain after the snow had gone; the path being only intended for use during the winter, when the snow is so deep as to cover the rocks and make a comparatively smooth road. All the way up we had been skirting along the bank of the West Branch, and near the summit came upon the true fountain head—a little spring gushing out from the hillside in a clear stream scarcely six inches wide. A few rods further up and we stood on the top of the mountain, while below us lay almost the whole of the Esopus valley. Just over the backbone of the mountain started a little stream, which plunging down its side joined the Esopus Creek at its base. Along the bank of this bubbling, boiling little brook lay our way, and down it we walked, relieving our tired limbs by bringing another set of muscles into play. As we had paused upon the summit viewing the beauty of the valley, hemmed in on the north by ranges of hills, growing higher and higher until they culminated in the well-known outlines of High Peak, Round Top, and the Hunter Mountains of the Catskill range, we had noticed black clouds rising in the west and when about one-third the way down the mountain side the great splashing drops of an approaching thunder-shower began to fall, and the rumble of the storm sounded nearer and nearer. But we found shelter in an abandoned barn just as the storm came down in all its fury. Squatting down in a dry corner like a couple of veritable "big Injuns" we drew our rubber blankets about our shoulders and smoked the pipe of peace.

"Tempus fidgeted," and soon we began to follow suit, for having a holy horror of a new hotel at the temporary terminus of an unfinished railroad, we were anxious to catch the 6 p. m. train at "Big Injun" and ride down nine miles to Phœnicia, where we knew there had been of old a comfortable country tavern, which we hoped to find still unswerved from its integrity by the railroad. We knew we had some four miles yet to travel to reach the depot, and we also knew that walking down a flooded mountain road in the midst of a thunder storm was about as wet work as sliding down a cataract, with the added discomfort of feeling in duty bound to try and keep a foothold on slippery rocks and rolling cobblestones. So we waited till the last possible moment, hoping for the rain to stop, but it never thought of doing so, and at length Ingram, protesting that we must not wait another moment, strapped on his knapsack, drew his blanket over it and his shoulders, and stepped to the door. He took but one glance at the rushing torrent filling our only road to Big Injun, and then plunged in. I followed, and at the first step the water dammed itself up against my legs and soaked me to the knees. After that I did not mind it much; there is a comfort in getting wet through after one has been painfully anticipating such a catastrophe, for one feels that at last it can be no worse. Without once sitting down to rest—involuntary or otherwise—we came to the foot of the mountain and to the depot in little less than an hour, soaked as to the lower limbs, but dry "above the belt," thanks to our rubber blankets. We found just what we had expected—a big white barn of a hotel, with a two-story piazza across the front, and a bar-room filled with half-drunken "navvys" and bad tobacco smoke. Our first inquiry was for the train, which we did not see ready to start, and were told it left at 6 a. m. instead of 6 p. m. As there was no help for it we made the best of the situation, and engaging a room soon had on dry clothes, and sent our wet ones to the kitchen fire to be dried.

The rain had stopped at about the same time we did, and the sun came out from the clouds just as we two sons also emerged from obscurity, dry clad, upon the front piazza of the Big Injun Hotel. Seeing some men moving about under a large tent which was pitched some little distance off and close to the track, we strolled over to them and found them to be three of the engineers who were building the road. They were pleasant fellows, and we spent some time in talking with them about the road, the difficulties of its construction, etc., when at length the moment which both had been thinking of with dread but which neither of us dared to speak of, came and "the clamorous tongue of time" and a big brass bell told the hour for supper. We had not fared sumptuously that day, were hungry, and felt it was our duty to eat, but of that meal I forbore to speak, save to say it would be impossible to tell which were the more objectionable, the viands or the company. Yet I am not squeamish about my food when roughing it, and when occasion requires, can eat the saltiest of salt ham and soggiest of boiled potatoes with a two pronged steel fork in the company of lumbermen and bark peelers, with as keen a relish as ever I had for a meal at Sutherland's or Delmonico's. But enough of Big Injun. We left it next morning in the train, which should have gone just twelve hours earlier to please our fancies, and breakfasted where we had hoped to sup the night before—in Phœnicia, at the foot of Stony Clove. The old tavern was there, but mine host of bygone days was not; however, he seemed to have left a worthy successor. The Stony Clove is a narrow, irregular ravine, with a boiling brook and a steep but good road at its bottom. It comes down between mountains of a goodly height to the Esopus Valley, and forms what may be called the southeast doorway to the Catskill Mountains. From Phœnicia, at its foot to Roggin's Hotel, some seven miles on among the mountains, from its head is about 22 miles; and this we had laid out for our day's walk. It was a perfect day for tramping, the sun shining brightly, but not too warm, for the storm of the evening before had left the air cool and bracing. We started off at about 8 o'clock. For eleven miles it was one steady up hill pull, now on one side of the brook, now on the other. The sunshine, the air, the views, the freedom from care and from any thoughts save those of the glorious present, and the recollections of many just such joyous days in the past—but why descend? those who by nature do not enjoy this cannot be made to understand it; and those who do have only to call on memory to know what made it such easy work tramping up those steep miles. At the end of those eleven miles stands Lane's on a sort of plateau, and from there four miles away brings one to the summit. Lane's is not a hotel, but they take some boarders in the summer, and any passer-by can generally be accommodated with something to eat. We stopped here at 11:30, and having ordered dinner went down to the stream in front of the house and caught a few trout, but the Stony Clove brook is pretty well worked each season, and the fish are small and rather far between.

After dinner we started on again, taking it leisurely, for

we had only eleven miles more to do and had all the afternoon before us. At the top of the real "clove" or ravine, is that which is generally called Stony Clove by the Catskill tourists, few of whom ever go up or down to or from the mountains by the ravine up which we had just walked. For about three miles the way, which is here as level as any ordinary country road, passes between ranges of cliffs some 300 feet in height rising on either hand almost perpendicularly, and bare from base to summit, with the exception of a few stunted pines and hemlocks, which have managed to find room to take root among the crevices in the rocks. These cliffs are at no point more than a hundred yards apart at the base, and in some places there is only room enough for the road and the brook between them. We sauntered along through this pass, stopping every now and then and seating ourselves at the roadside for a smoke, and talked of the last time we passed over this road some years ago, when a party of six of us boys coming up the clove had been storm-bound at Lane's for three hours, but being determined to reach Roggins's that night had started on just at nightfall, when the rain had stopped. By the time we entered this narrow pass it was as dark as midnight, for there was no moon, and the road was ankle deep in mud and water. Ingram and I could well afford to laugh now at our plight that night; but it was no joke then, for at every other step some one would step upon a loose stone, and slip or stumble into a mud-hole, and by the time we reached Roggins's or Gray's, as it was then, we were as used up, wet and dirty a party as ever asked admission at a respectable hotel at midnight. But now all was different. The road was dry and smooth, the air and light all we could wish for, and we arrived at Roggins's at 5 o'clock without the least feeling of fatigue, and only sorry that so delightful a day must have an end. Having refreshed ourselves with a bath, and by putting on white shirts and having our shoes blackened—it's wonderful what an exhilarating effect that last-mentioned operation has after a day's walk—we ate a tremendous supper, and lighting our pipes sat upon the piazza and enjoyed the glorious moonlight which flooded the valley before us, up which the evening mists were rolling like a silver sea, covering the Hunter Mountains with deep purple and black shadows.

We had only one day to spend in the mountains before starting for home, so we were up betimes in the morning, and as soon as breakfast was finished were off to revisit a few of the romantic spots we had learned long years ago to love. First we clambered down to the foot of Haine's Falls, and lying on the great moss-covered rock at the bottom of the lowest fall, watched the water as it came plunging toward us from its starting point, 480 feet above. Down its first leap the water comes for 120 feet in an almost unbroken sheet, sending out a cloud of spray at the bottom, but over the three lower falls it rushes, a mass of curling, seething foam, and then continues the descent by a succession of rapids until joined by the Kauterskill it forms the Catskill Creek, flows over Fawn's leap, and goes on down the clove more and more soberly to the lowlands, through which it finds its way to the Hudson with the staid deliberation of mature age. The Kauterskill Falls, the lakes and the Mountain House were also visited that morning, but they are so well known they need no description from my pen. At the Mountain House we met an acquaintance, a noted pianist of New York, who was stopping at Roggins's, but had driven over here to make a call, and with him we drove home. In the afternoon we three played ten-pins and in the evening smoked, talked and loitered to our heart's content; and when Ingram and I retired the first unpleasant thoughts that had occurred to us during the week entered our heads, for we knew our vacation was virtually over and only one day lay between us and the city with its work and worry. Next morning we bade adieu to Roggins's Mountain Home and walked down the Great Clove and on to Catskill Village, fifteen miles, much more wearily than we had walked up Stony Clove two days before, for the delightful experiences of the week made us homesick in the sense in which the Dutchman used the word when he meant he was sick of home.

If these hastily written letters suggest to any of the thousands of hard-working mortals in our great cities a way to occupy their short summer holidays without much expense, I shall be glad I have written them; for I believe that in just such tramps as this can be found more of health and pleasure than in any other way of spending a few days, where the dollars as well as the days have to be counted.

ATHOS.

Fish Culture.

POLLUTION OF NEW YORK WATERS.

Much has been said of late of the filthy state of New York Bay and adjacent waters, yet the facts following will plainly show that the food fishes shun Gravesend Bay, and the eastern shore of New York Bay to the Narrows, because the immense amount of poisonous matter carried from the sewers to the fishing grounds, and the great amount of garbage dumped off Coney Island shore makes the waters uninhabitable for the more delicate fishes. During the past few months there has been an unusual amount of offal strewn along our beach from Bath Park to Unionville, and the stench arising from it has driven many bathers from the beach hotels, and prevented excursion parties from entering the water. The pound nets soon become a decayed mass of vegetation when south and westerly winds prevail, and it is necessary to change them semi-monthly, and tar them often to prevent decay. If the garbage was carried outside of Coney Island point and dumped in a tide streak, it would be carried away to sea as there is a very strong current running from the "Potato-patch" seaward. Food fishes have rapidly decreased in our bays for the past four years, and during the present season the fishermen of Gravesend Bay and vicinity have taken in their nets, as the catch of fish will not pay for lifting and cleaning nets. Seven years ago I used to take large bluefish with the squid off Coney Island point, and occasionally in the bay; but now the most of the fish are caught along the outside beach from Long Branch to Fire Island, and the still baiters take nearly all their fish outside, or east of the lights. Early in the season, before the water becomes warm, the shad push up the bay as usual, and large numbers are taken in

April and May with fykes and drift nets, but the catch of summer fish has dwindled to almost nothing. The species taken for market are: weakfish, bluefish, shad, Spanish mackerel, striped bass, butterfish, or shiners, flukes, porgies, summer herring, and greenbacks. Gravesend Bay has always been one of the best fishing grounds on the Long Island coast, but it has now degenerated to one of the poorest, and fishermen who have lived on our shores fifty years, say they can attribute the decrease in fish to the poisonous state of the water caused by the drainage and cleanings of New York and Brooklyn. J. H. BATTY.

OYSTER CULTURE AT NEW HAVEN.

From New Haven Journal and Courier.

The planting of Virginia oysters in our waters has been done for very many years, and what was formerly "useless ground" under water, is now a "fruitful field." There are different kinds of grounds, which have to be treated differently. Some is stony, some sandy, and some is mud land, either soft or hard, and some is covered with "eel grass." That covered with eel grass is not of much account. The sandy bottom and hard bottom require less labor than the others. We are told that it used to be considered impracticable to raise oysters upon mud bottom, but here are some of the facts in that connection, and we will speak of the land upon which the young oysters are raised where it is mud bottom, and too soft even to bear up an oyster. The bottom is prepared for the cultivation of the "crop," and the first operation is to put on, say a hundred and fifty cubic yards of gravel or sand to each acre of ground, which forms a crust on the top of the mud sufficient to support the oyster during the growth to maturity.

After the sand or gravel is well settled and the crust formed, the whole surface is covered with dry oyster shells—that is, those without slime—just before the spawning season of the oyster (which is during the month of July), so that when the spawn is thrown off it floats, and hatches upon these shells which have been placed there, and the oyster at once begins to form. At this time (and subsequently until the oyster assumes some size) if the shells are disturbed the small oysters are destroyed, and not only all the labor lost, but the shells have to be all caught up with tongs, and removed to the shore to dry before they are fit for further use, as after the shells have been in the water a while they become coated with a kind of slime, and when so coated no spawn will adhere. In order to protect these small oysters from being disturbed by innocent parties who go to take clams, mussels, &c., the grounds are "staked out," and also to protect the oysters on that and other parts of the grounds from "oyster thieves," watchmen are employed, whose duty it is to patrol day and night the entire grounds, and if any one gets inside of those stakes he is ordered off.

After the second year the oysters have grown so that they become very thick and "matted together," and have to be removed. They are now in "bunches," which "bunches" are caught up and scattered on other grounds which have been prepared for them, where they have a chance to "spread themselves," and get ready for the market, which is after the third or fourth year. As the oysters grow (there being many frequently on one old shell), the old shell is "crumbled to pieces," and the oysters left are what are called "single oysters." The cultivators of the oysters in the harbor were very much annoyed in other years by the mud which the "mud machines" or "diggers," for "deepening the channel," caused, as the light mud which floated on the young oysters destroyed thousands of bushels, and thousands of dollars were lost from that cause alone. The dead oysters had to be caught and the ground "restocked," but that has been remedied in a measure by a law passed by the Legislature, which compels the dumping of the mud outside the harbor. This business of oyster culture is now increasing very rapidly, and all the ground suitable for the prosecution of it is rapidly being made use of and prepared in this way. Tens of thousands of bushels of shells have been scattered over these grounds this season, which, if the "young oysters set," and the shells are not disturbed, will in three or four years furnish for the market delicious native oysters in greatly increased abundance.

Like any other business, this of oyster culture has its disappointments, and from circumstances beyond control. Some years the spawn does not adhere so readily as at other times to the shells, and so few young oysters are "set," and then it is the "barren year." Then unless a vigilant watch is kept, persons go at night and catch them up. Then there is the "borer," "star-fish," and other "animals of the deep" who destroy them. The borer drills a hole in the shell and sucks the life of the oyster. The star-fish incloses its numerous legs about the oyster, and also sucks its life, so that in this way immense numbers of bushels are destroyed.

—W. H. Crowell, the enterprising fish culturist at Ludlow, McKean county, Pa., informs us that he will have two million trout eggs to market this season.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Scaenops ocellatus</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Archosargus probatocephalus</i> .
Salmon Trout, <i>Salmo conflens</i> .	Striped Bass, <i>Morone americana</i> .
Land-locked Salmon, <i>Salmo Gasteri</i> .	White Perch, <i>Morone americana</i> .
Grayling, <i>Thymallus tricolor</i> .	Weakfish, <i>Cynoscion regalis</i> .
Black Bass, <i>Micropterus salmoides</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
<i>M. nigricans</i> .	Spanish Mackerel, <i>Cybbium maculatum</i> .
Masacaronge, <i>Esox nobilior</i> .	Cero, <i>Cybbium regale</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Bonito, <i>Sarda pelamys</i> .
Yellow Perch, <i>Perca flavescens</i> .	Kingfish, <i>Menticirrhus nebulosus</i> .

For list of seasonable trout flies for September see our issue of July 27th.

FISH IN MARKET.—Fish of all kinds continue rather scarce, but prices from last week are diminished. Quotations give striped bass as selling at 18 to 25 cents per pound; bluefish, 10 cents; salmon, frozen, 50 cents; mackerel, 20 cents each; weakfish, 12½ cents per pound; white perch, 15 cents; Spanish mackerel, 30 cents; green turtle, 15 cents; terrapin, \$12 per dozen; halibut, 15 cents per

pound; haddock, 8 cents; king-fish, 25 cents; codfish, 10 cents; blackfish, 15 cents; flounders 10 cents; porgies, 10 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 8 to 10 cents; sheepshead, 30 cents; brook trout, \$1; Long Island pompano, 40 cents; soft clams, 40 to 60 cents per hundred; soft crabs, \$1 to \$1.25 per dozen.

—Sea fishing is slack all along shore, but will brighten soon. A dozen or so striped bass, weighing 15 pounds each were caught at Cuttyhunk last week, but there and at Noman's Land they are scarce.

—Bishop Williams, of the Episcopal Church of Connecticut, is stopping at Lake George, and he is said to be the most accomplished fisherman on the lake.

HITCHCOCK'S IMPROVED MINNOW PAIL.—Several gentlemen who have examined the apparatus for transporting live minnows, which has been sent to us by Messrs. Hitchcock & Co., of Oconomowoc, Wis., speak of it as a highly useful and convenient apparatus. The fisherman who uses it can carry his bait and his bread in the same receptacle. He can carry ice cream and ice water as well as cold chicken, and there is a lunch tray also at his service. There is a tin cup included, which is as useful for drinking purposes as it is for changing the water in the pail for the refreshment of the minnows. The water is aerated by means of a rubber tube and bulb. The ice is not put into the water, but in a separate compartment. In a word, the combination is very ingenious and convenient, adapted to the comfort both of the fish and the fisher. Anglers are invited to call and examine for themselves.

—Our friend C. F. Breeze, Esq., of Patterson, N. J., has been camping out on Bishop's Rock, Lake Hopatcong, Morris county, for a week or so, with a party of three friends, who have played the very mischief with the pickerel in that well stocked sheet of water. In a single day they captured 125 fish, including what Mr. Breeze designates as the "boss pickerel" (pike) of the lake, which weighed 14 lbs. 7½ ozs. Well, this is certainly extraordinary luck—and "it's an ill-wind that blows nobody good," whatever the pike think of Mr. Breeze. They may have opinions of their own which we are supposed to know nothing about. The fish in Lake Hopatcong generally run from 2½ to 6 pounds. Mr. Breeze informs us that these fish (including the big one, which we forgot to say he caught himself) were taken by still fishing with minnows. They had no success in trolling. The best spot to fish is in Byram's Cove, and the best camping ground is at Bishop's Rock. Another excellent water for pickerel is Echo Lake, in Passaic county, six miles from Charlottesville by Wickham's stage. Take the Midland Railroad to Charlottesville. Good hotel kept by Mr. Wickham.

—A correspondent, "P. N.," noticing our reference to Dan. Parker's having taken two blackfish on one hook, at Barnegat, says:—

"My friend Mr. Amos Burhans, did the same thing, taking two frost fish (instead of blackfish) in the same manner in the fall of 1873."

MAINE.—*Sherman Mills, August 19th, 1876.*—Here anglers can catch just as many trout and toge as they want, weighing from half to thirty pounds. I spent two months around these lakes last fall, and could get just as many as I wanted. There are plenty of ruffed grouse and ducks. There are some moose. Caribou are very plenty, and so are bears. A good guide can be obtained for a fair price. By referring to me at any time, any information will be freely given. EDWARD A. CUSHMAN.

MASSACHUSETTS.—*Boston, August 26th.*—The smelt fishing under proper protection, promises to be good at Cohasset this season. D. T. C.

Cohasset, August 4th.—The smelt fishing promises to be good at Cohasset this season. The bay has been well supplied with large schools of young fish of various kinds. Protection tells, with free runs and good fishways.

FISHING MOVEMENTS.—The number of fishing arrivals reported at this port the past week, has been 84, 11 from the Banks, 46 from Georges, and 27 from mackerel trips. The receipts for the week have been about 1,000,000 pounds Bank cod, 550,000 pounds Georges cod, 145,000 pounds halibut, and 3,900 barrels mackerel. Schooner Herbert M. Rogers, Capt. Richard Warren, of this port, brought 165 barrels of large mackerel, which were caught in one haul off Block Island. They sold readily for \$25 a barrel, the gross receipts of the trip amounting to \$4,125. Schooner Fleetwing, Capt. Amos Rackhiffe, of this port, has landed 1,700 barrels of mackerel since the 17th of April. This is the highest number we have yet reported.—*Cape Ann Advertiser, Aug. 25th.*

NEW YORK.—*Lake George, August 20th.*—I am located near Bolton, with wife and children in tents, and have been having a glorious time. The islands of the lake are dotted with camping parties, and the fishing is first rate. I caught a black bass to-day not twenty rods from the door of the tent weighing 5 pounds 7 ounces, which is about as large as they ever become here, although there is now and then one taken weighing 6 pounds, but they are the exception; the general average is from half a pound to two pounds. Some visitors complain that the fishing here is played out, but you will generally find such parties anchored on the rocks hauling in sun-fish, with worms for bait. There have been several pickerel caught at Bolton this summer, weighing from 16 to 21 pounds. For bait they use minnows, grasshoppers, crickets, frogs, and the spoon, but I have had the best success with grasshoppers and minnows. Lake trout are becoming plentiful, and some very fine ones were taken this season. And taking it altogether, with its daily mail, and facilities for procuring ice, milk, vegetables, and other necessities, Lake George is the campers paradise. FRITZ.

NEW YORK.—*Greenwood Lake, Orange Co., August 25th.*—The easy access by the new Montclair and Greenwood Lake Railroad, has suddenly made this a most popular place of resort, the hotels being overcrowded. The fishing is hard to beat, and black bass weighing three pounds are caught every day. I can assure good sport to all who come. The lake is only 42 miles from the city by rail. H.

NEW JERSEY.—*Kinsey's Ashley House, Barnegat Inlet, August 27th.*—The week opened very favorably with bluefish, and good catches were made on Monday, Tuesday and Wednesday. We are having splendid success with the barb, or kingfish, running from 1 to 1½ pounds. Sheepshead dull; weakfish ditto; striped bass are getting plenty and good catches reported. B.

—On last Thursday, Mr. Wm. Embick, while fishing in the Conococheague creek, near Chambersburg, Pa., succeeded in hauling out nine very fine bass, the three largest of which measured fourteen inches in length. They were caught with hook and line.

—The following note is from an esteemed friend, Geo. H. Johnson, of the White Manufacturing Company, Bridgeport, Ct. Our readers may expect some pleasant letters from him:—

INDIAN LAKE P. O., Hamilton Co., N. Y., Sunday, Aug. 20th.

We reached this charming spot at 11 o'clock last evening, groping our way through almost impenetrable darkness and rain, which continued until 10 o'clock this morning. The route hence is via Adirondack Railroad from Saratoga to North Creek, where W. D. Wakeley's very comfortable stages are in waiting upon the arrival of the noon train. The ride through the country was very pleasant despite the weather, and we thoroughly enjoyed the constantly changing scenery, which every turn of the road brought to view. This is the shortest and best route to reach Blue Mountain Lake and Racquette. There are over 100 guests at the Blue Mountain House. Mr. E. R. Wallace, author of "Guide to the Adirondacks," left there yesterday. They report fishing and hunting pretty fair, one party having caught six trout weighing over 18 pounds. There are more deer in this vicinity than there has been in several years past. We start in the morning for the Indian Clearing on the headwaters of Moose river, a locality 17 miles distant, and but rarely visited by campers on account of its difficulty of access. We take one of Fenner's portable boats with us, and of our success with it and the sport to be found there we propose to acquaint you hereafter. HUNTINGTON.

A REMARKABLE FISHING ADVENTURE.

BROOKLYN, N. Y., August 23d.

EDITOR FOREST AND STREAM:—

I send you a paradoxical story for the FOREST AND STREAM. Although it is about the biggest fish story of all yet set afloat, it is in my belief true. Being true it ought to be given to your readers.

Thirty years ago Mr. Barney Collins, then 50 years of age, was a resident of county Cavan, Ireland, an adept in all that was in that age and locality known about forest and stream. One day Mr. Collins determined to fish for such catches as the lake might offer upon that renowned sheet of fresh water known to every Irish sportsman as Lough Sheelan. A casual glance at any map of Ireland will enable anyone to locate for himself this beautiful lake. It is about ten miles long by four miles wide. Cavan, Longford and W-Meath are the counties which border upon this lake. Mr. Collins spent the entire day upon the lake in a small boat ten feet in length (the why of this particularity will soon appear) without getting so much as a nibble. Precisely at 6 o'clock p. m. his little boat's prow struck the shore and Barney began to prepare his traps for his tramp homeward. In spirit he was vexed, and suddenly seizing his fishing pole—an elegant affair, mounted with a triple multiplying reel and a three-ply horse hair line, hand made, 75 yards in length—and grasping the line a few feet from the end, with a good old Irish expletive testifying of his vexation, he whipped the water once by the side of his boat. Instantly his line began to reel off at frightful speed. Carefully manipulating his pole he let the line pay out, looking for the time when he might reel in. But to his surprise the fish took every yard of his line, and when he felt the strain was too severe he dropped his pole into the water, and instantly seizing his oars gave chase. In a short time he captured the pole, but not by any means as yet the fish. His prey took the boat in tow, and actually dragged it six times around the lake besides crossings and criss-crossings too numerous to mention. All night long Mr. Collins sailed over Lough Sheelan and all the next day until 4 o'clock p. m., when he succeeded in killing his game in true sportsmanlike style. His game proved to be a six pound lake trout—nothing more and nothing less.

At the instant he whipped the lake in his vexation because of his day of ill success, he hooked the trout by the tail. Twenty-two hours to kill a six-pound trout when hooked by the tail; such at least is the morale of this tale.

You need not hesitate to publish this story as a fact. Mr. John Hanna of Brooklyn, gave it me as a reminiscence of his boyhood days. He says there are yet living many good and true men who will corroborate his statement word for word. C. HATCH SMITH.

Natural History.

SCIENCE IN THE UNITED STATES.

OPENING OF THE QUARTER CENTENNIAL OF THE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE—ABSTRACTS OF THURSDAY'S PAPERS.

BUFFALO, Aug. 25, 1876.

EDITOR FOREST AND STREAM:—

The city has grown suddenly wise and serious in deference to the presence of the American Association for the Advancement of Science, which is now holding its annual session here. The attendance is exceptionally large, particularly of the older members, who were among its founders. Prof. Wm. B. Rogers, the President, has returned to the pursuit of scientific knowledge, in which, he rightly says, there is no satiety, after an absence of 10 years enforced by ill health; Prof. Joseph Henry, the first President, is here and many others of equal eminence, if not age, might be named. Another feature is the presence of a large number of distinguished foreign men of science who have been at Philadelphia. The most generally known of these, perhaps is Professor Thomas Huxley, the cordiality and enthusiasm of whose reception is manifested in a thousand ways. He has not said very much, and very little of his studies, but he compliments highly the work of American naturalists, particularly of Prof. Marsh, of New Haven, whose investigations among the fossils of the West, he says, make absolutely certain what before was only speculation in the theory of the development of animals. The routine of organization was got through with on Wednesday, and in the evening a very large audience gathered in St. James's Hall to listen to the annual addresses. That of Prof. Young was a review of the progress in astronomy during the past century. Prof. E. S. Morse, of Salem, Mass., one of the Vice Presidents of the Association, also delivered an address on the Evolution Theory as expounded by Darwin, which was the most remarkable and interesting thing thus far given.

The address was divided into two parts, first a review of the contributions of Americans to this theory; second, the evidences which support it. For many years the study of zoology in this country was at a low ebb. Its votaries confined themselves to making inventories and classifying. Prof. Morse, who was himself a pupil of Prof. Agassiz, regards the advent of that distinguished philosopher in this country as the turning point in biological science. He insisted that these labors of observation should be made available to explain the phenomena and relations of life. He ridiculed the mere accumulation of records of specific or varietal differences in animals. Such observations were but means to a greater end. He opposed with all his might the development theory, and offered instead one in which he has had no followers. He believed in several distinct creations of men and animals. He declared that the reasoning which would overthrow a plurality of origins for the races of men, would effect the same result with animals and would ultimately result in acknowledging the descent of man from monkeys. Most of his pupils have accepted theories of evolution.

Prof. Morse gave an admirable resumé of the contributions of Americans to the Darwinian cause. All those whose works he quoted were not, however, necessarily Darwinists. The citations covered a wide range and brought into view the labors of a large circle of eminent naturalists and paleontologists. To each of these Prof. Morse gave as fair credit as the limits of his address would permit. It is an astonishing array and is for the first time brought together. The evidences cited are comparatively near to us and they are more effective in forcing conviction than those from a distant hemisphere. Summing up all these and other proofs of the evolution theory, Prof. Morse appealed to the unbiassed judgment of his hearers. The argument included all the well known tenets of the Darwinians and was especially strong in tracing the elevation of man and the ape-like form preceding him, to their superiority of intellect developed under the pressure of circumstances. Their brains, not their muscular superiority saved them from being the prey of the strong beasts around them. The growth of man from the solitary savage to the social condition was also reviewed. The necessities of the infants of the human race for care and protection, laid the basis for family relations and made man a social being. Finally, the address closed with a deduction from the law of heredity—a warning against any system of pardoning or releasing criminals that would place them where they could propagate children like themselves, in whom the inherited traits of their bestial ancestors would be again and again revealed.

On Thursday morning the different Sections into which the Association is divided organized and got to work. Section A is that Physics and Chemistry with Subsections of Chemistry and Microscopy; Section B is Geology and Natural History with a Subsection of Anthropology. Section B is, of course, the one whose proceedings most interest the readers of FOREST AND STREAM, and it seems to be the popular one here, its meetings being filled with ladies and gentlemen living in the city, as well as including the majority of the members of the Association. Prof. Morse is President, and makes a capital one. Yesterday several papers were read of general interest, besides others of more value to specialists. The first of these was by Capt. W. H. Dall, of Alaska fame, on the mode of extrusion of the eggs in limpets—the little conical shells which cling so tightly to the rocks between tide-lines on the New England coast. The oviduct of Cuvier does not appear to exist, and no other means of exit appearing, the method by which the eggs reached the surrounding medium has remained a mystery. The ovary is covered with a thin membrane and hangs in the visceral cavity touching, but not mechanically connecting with, the floor of the large renal sac. Mr. Dall discovered that in the great Mexican limpet the ovary or testis becomes congested over a portion of its surface, which swells and becomes pustular; over this congested portion the ova or sperm finds its way through certain small temporary perforations, into the renal sac, from whence its exit is easy via the external discharging orifice of the renal, or kidney sac. A somewhat similar state of things is known to exist in some low forms of fish and mollusks, but its occurrence among the limpets is quite new and unexpected. The following papers were read in their order:—

Notes on the North American Ganoids; (a) the supposed transformation of the tail of *Amia*; (b) the serrated appendages of the hyoid isthmus of *Amia*; by Burt G. Wilder.

Origin of Kames or Eskers in New Hampshire, by Warren Upham.

Note upon the Geological position of the Serpentine Limestone of Northern New York, and an inquiry regarding the relations of this Limestone to the Eozoon Limestone of Canada, by Prof. James Hall.

Prof. Wilder's paper upon *Amia* (the mudfish) showed how nearly it was related to the gar pike or "billfish" of the west in many particulars, especially when young. The curious buckler underneath its throat seems to be a remnant of the armor which many of the old ganoid fishes of the Devonian seas wore, which has outlived its usefulness. Several arguments were derived from the anatomy of the tail, and its changes in the growth of the fish, to show that a series of similar changes had gradually affected the permanent shape of the tail in the development of the whole family as shown in the fossil series from the older to the newer rocks; and pointing toward the conclusion that the "sturgeon-like" tail was the original form, which in the bony fishes has become modified into the ordinary heterocercal tail (of the perch, for instance) where the backbone ends at the beginning of the tail fin.

[To be continued.]

ANIMALS FORMERLY AT CAPE MAY.—In 1857 the Geological Survey of New Jersey published a volume upon the geology of Cape May county, for which Thos. Beesley furnished a list of the birds and animals of that extremity of the State. The book is now very rare. Among the larger animals, the opossum, weasel, raccoon, skunk, mink, gray fox, musk-rat, and gray "rabbit" (*Lepus americanus*) are given as not rare or common; the otter was "by no means rare, but on account of its cunning and shyness seldom captured;" the red fox was "seldom taken;" the black bear was put down as "quite plentiful at certain periods, particularly in the dense cedar swamps in the upper part of the county," five having been shot that autumn. All of the squirrels are included in the list, with the remark "not abundant," and a few deer were said yet to remain in the northern part of the county. The wild cat (*Lynx rufus*) was rare.

HABITS OF THE PRAIRIE DOG.—I notice in your issue of July 13th, an article on the Prairie Dog, by Maj. Merrill, in which he appears to be of opinion that these singular little animals cannot be trained or domesticated. On these points some information may prove interesting to your readers. In 1867, and for several years afterwards I was stationed at Fort Lyon, Col. About May of that year one of the men brought my son a young prairie dog, we judged about two months old. He was at once christened Dick, and soon became the pet of every one in and out of the house. I found but little trouble in teaching him, and in a short time he would sit up on his hind legs, jump up in our laps, and do other things at command. He very soon learned where the cake was kept in the side board, would go to it, sit up and bark until some one of the family responded to his call; nor would he go away or stop his noise until his wants were supplied. He at first made his burrow in front of the house but for reasons best known to himself soon abandoned it, selecting a more secure place under the house. On entering the house, if I wanted him, I would strike on the floor and call him by name; he would at once answer by a quick, sharp bark, and soon after come in through the most convenient opening, and at once run up to me, sometimes sitting up and barking to express his pleasure, at other times climbing up and seating himself on my shoulder. He would jump upon the lounge and stretch himself out alongside of us for a snooze. He was very fond of playing with my dogs—would romp as one of them. He was generally quiet and kind, but would sometimes show his disapproval of what we were doing to him by snapping at us. Dick was fond of milk but I do not recollect that he ever used water. Much to the regret of my family and all the officers and ladies of the Post (for he was a general favorite) a rat terrier mistook him for a rat and before we could prevent it killed him.

I know of an officer who sent a pair of prairie dogs to his relatives near Cincinnati, where they were turned loose on the lawn. They soon became at home and tame, affording much amusement to the family and visitors, and if I am not mistaken, propagated. From the large number I have seen tamed and my own experience with them, I am fully convinced that, if taken when young, they can be domesticated. As remarked by the Major, these little fellows are very ingenious in building their homes. In most of those I have seen dug out, the hole is in the shape of an inverted syphon, the long arm opening out of the surface. The other end is enlarged into a chamber, and here is where they bring forth their young, and is their home. To my mind the reason for this shape is obvious. Many and many a time have I seen the attempt made to drown them out, and though barrel after barrel of water has been used, seldom has it met with success. The chamber at the short end, acting as an air chamber prevented the entrance of the water.

PLUME DEL ROSA.

Post Canby, Alexandria, La.

BIRDS OF CENTRAL NEW YORK.

[Continued from page 36.]

Bonasa umbellus. Ruffed grouse, or partridge. Not migratory, and common.

Ortyx virginianus. Quail; resident throughout the year. Common in Seneca county, but not so much so in Cayuga county. Breeds.

Equatarola helvetica. Black-bellied plover. A rare spring and autumn migrant.

Charadrius fuscus. Golden plover. Spring and autumn migrant; not common.

Agialitis vociferus. Killdeer. Summer visitor; arrives in April.

Agialitis semipalmatus. Ring plover. Common in spring and autumn.

Streptopelia interpres. Turnstone. A rare migrant.

Phaethon minor. Woodcock. Common summer sojourner and breeds. It arrives in April and departs in October.

Gallinago Wilsoni. Wilson's snipe. This is a common spring and autumn migrant, arriving in April. It then passes north and returns in August with its young. It remains until November, and then proceeds southward to its winter home.

Tringa minutella. Least sandpiper. Abundant during the spring and fall migrations.

Limosa hudsonica. Hudsonian godwit. The godwit is a rare spring and autumn migrant.

Totanus melanoleucus. Greater tell-tale. Common in the spring and autumn migrations, especially in August and September.

Totanus flavipes. Yellow-shanks. In the fall abundant with the tell-tales.

Ardea herodias. Great blue heron. Common in summer and arrives in May. It breeds.

Ardea virescens. Green heron. Arrives in May, and breeds, but is not very common.

Nyctiardea grisea. Night heron. A rare visitor.

Botaurus minor. Bittern. Common in summer and breeds.

Ardeola exilis. Least bittern. Rare, but breeds.

Gallinula galeata. Florida gallinule. A common summer bird, arriving in May and departing in September.

The Kennel.

THE CENTENNIAL BENCH SHOW.—We took advantage of a leisure day to run on to Philadelphia to see what preparations were making for the International Bench Show, and we are glad to announce that in the multitude of classes which comes under the supervision of the Chief of the Agricultural Bureau, not one promises a finer display than Class 33, to which our canine friends are assigned. The systematic manner in which the whole thing is arranged and the numbers of entries already registered is sufficient evidence that a master mind and an expert in the "bench show business" is "to the fore." The entries of foreign and native dogs will run up to near 600, and our American Bench Show will compare favorably with those of Europe.

IRISH SETTERS AND FALSE PEDIGREES.—If there is one thing which more than another we desire to avoid introducing into our columns, it is a controversy of a personal nature; but where the dispute is between two persons whose residence is on the other side of the Atlantic, the arguments against its admission are of two fold force. We have received a long letter from Mr. S. J. Hurley, of Killybegs, Ireland, the gentleman who some time since preferred charges against Mr. Niall, of the same place, of selling to gentlemen in this country worthless dogs with false pedigrees, referring principally to a personal encounter between Mr. Niall and himself, which we must decline to print for the reasons above stated. In a recent issue of our contemporary, *Rod and Gun*, we have read a letter from Mr. William Jarvis, the principal purchaser, we believe, of Mr. Niall's dogs, in which he states that, after having made a searching investigation, he is entirely satisfied as to Mr. Niall's integrity and the genuineness of his dogs' pedigrees. If, therefore, the parties on this side who are most interested are satisfied, we can see nothing to be gained by continuing the discussion.

PRICES OF ENGLISH DOGS.—The following list of prices realized at a recent sale in London, will enable our sportsmen to gather a fair idea of the prices at which kennel produce sells in England. Astonishing prices have been published as paid for dog flesh there, but as we have already shown, the tall figures were as fictitious as fanciful. We quote from *Bell's Life*:—

"The rapidly approaching shooting season causes sportsmen to search for pointers and setters for the moors and stubble, and at the sale of sporting dogs at Aldridge's on Saturday last many attended in order to obtain dogs for this purpose. About 30 pointers and setters were sent to the hammer, including 14 pointers from the kennels of Lord Sefton, a remarkably fine lot by some well-tried dogs from some famous bitches. The pick of them brought fair prices. Capt. Hodder, of Lenton, Notts, sent to the hammer five setters, but being rather coarse and badly feathered, and the majority youngsters, they (unfortunately for the breeder) were disposed of at uncommonly low figures. A number of other pointers and setters, from want of character and pedigree, also changed hands at low prices. Appended is the list of prices:—

POINTERS, THE PROPERTY OF THE EARL OF SEFTON.			
Duchess, liv. w. b., 4 yrs., by Sam out of Duchess (Mr. Poiden)	£	s.	d.
Mare, liv. w. d., 3 yrs., by Mars—Ruby (Mr. Hamilton)	27	6	0
Ben, liv. w. d., 2 yrs., by Bounce out of Jilt (Lord Vivian)	25	4	0
Brag, liv. w. tanned d., 2 yrs., ditto, ditto (Lord Vivian)	25	4	0
Sam, liv. w. d., 2 yrs., by Sam out of Elrit (Mr. Pilkington)	11	11	0
Bell, liv. w. b., 2 yrs., by Mars out of Bell (Mr. White)	27	6	0
Mask, liv. w. d., 1 yr., by Mars out of Jilt (Mr. Elkington)	7	7	0
Dash, liv. w. d., 1 yr., by Noble out of Jane (Mr. Levick)	2	2	0
Bess, liv. w. b., 1 yr., ditto, ditto (Mr. Rawlins)	14	14	0
Rap, 1 yr., by Ben out of Elrit (Lord Vivian)	4	14	6
Rake, 1 yr., ditto, ditto (Mr. Elkington)	5	5	0
Rock, 1 yr., ditto, ditto (Lord Vivian)	8	8	0
Moll, 1 yr., ditto, ditto (Mr. Elkington)	4	4	0
Nell, 1 yr., ditto, ditto (Mr. Pilkington)	8	8	0

SETTERS, THE PROPERTY OF CAPT. HODDER, LENTON NOTTS.			
Tone, bk. w. Laverack d., 3½ yrs. (Mr. White)	8	18	6
Wallace, bk. t. Gordon dog, 18 months (Mr. Whitehead)	4	4	0
Rapid, lem. w. d., 11 months (Mr. Hine)	4	4	0
Ranger, lem. w. d., 11 months (Mr. Hine)	5	5	0
Ben, lem. w. d., 4 yrs.	10	5	6

POINTERS, THE PROPERTY OF A GENTLEMAN.			
Shot, lem. w., 3 yrs., by Corporal—Fan (Mr. Newman)	8	8	0
Dot, about 2 yrs., by General—Fan (Mr. Jameson)	1	11	6
Major, 11 months, by General out of Helen (Mr. Hine)	2	2	0
Essex, ditto, ditto (Mr. Hine)	1	1	0

MR. SNELLENBURG'S CHALLENGE.—Mr. J. J. Snellenburg of New Brighton, Pa., wishes us to state that his proposed field trial match with Mr. Von Culin is for \$500 a side. We have heard nothing yet from Mr. Von Culin in reply to Mr. Snellenburg's challenge printed in our paper last week, though the dog "Sam" is all ready.

—In Ireland they have Cork Dogs, and recently they had a Cork Dog Show. This breed must take to water naturally, and no doubt belong to the class which the poet refers to, whose "bark is on the sea."

SCAMP, a large half shepherd and half mastiff, raised in the northern part of this State, lately while out with his owner in the woods, got into a covey of partridges or ruffed grouse, and strange to say caught one. He immediately brought it to his master without so much as ruffling a feather. When a chicken is to be killed, some of the family take Scamp out and show him one particular hen. He will immediately give chase, and in a few moments pounce upon the bird with his fore paws, and bring it to the kitchen alive, never leaving the marks of his teeth in the flesh. We would call this dog a *fine retriever*.

PROF. THURY'S THEORY.—A Hornellsville correspondent (Steuben) says:

"We have some very fine dogs here, and are constantly adding to the number by breeding and purchase. That rule of Prof. Thury's (Page 268, Vol. 6, FOREST AND STREAM) don't work with dogs, if it does with heifers. My pointer bitch did not visit the dog until the last two days of the heat, and the produce was 10 gyps and no dogs. I saw the statement some years ago and tried it, and the result was 8 gyys and 1 dog."

RABIES CANINA.—We clip the following query and answer from the *Scientific Farmer* for August:

When a dog is bitten by a dog suffering from rabies, what chance of hydrophobia, and how long before the bitten dog will develop symptoms—the longest and shortest intervals?

Speaking with much latitude, the stage of incubation, that is, the time elapsing between the receipt of the bite or inoculation of the virus, and the presenting of the first symptoms of this distressing malady, may be said to vary from thirty days to eighteen or twenty months; the duration depending perhaps upon the virulence and quantity of the poison, as well as upon the constitution and age of the inoculated. The period appears to be shorter in the very young than in the more advanced in years. Exceptional

cases are recorded where the symptoms have set in as early as the eighth day, whilst others are known in which the appearance has been delayed for four to five and seven years. One instance is on record where it is said that twelve years intervened between the bite and the hydrophobic symptoms. In 1863, M. Renault published the results of some experiments which had been conducted with the object of learning the time of incubation in the dog. From these it appears that of 131 dogs bitten by mad dogs, and inoculated with hydrophobic saliva, 63 remained well at the end of four months. The disease was developed in the 68 others thus:

In 25 dogs the disease set in between the 5th and 30th days.

In 31 dogs the disease set in between the 30th and 60th days.

In 7 dogs the disease set in between the 60th and 90th days.

In 5 dogs the disease set in between the 90th and 120th days.

HYDROPHOBIA.

OFFICE OF THE BROOKLYN SOCIETY
FOR THE PREVENTION OF CRUELTY TO ANIMALS,
199 Joralemon street.

To the Editor of the Brooklyn Eagle:

The recent hot weather seems to have developed an unusual degree of apprehension concerning hydrophobia, and the barbarous destruction of inoffensive animals throughout the city calls for a protest on the part of the Society. That the disease is a very rare one there is not the least doubt; that it is frequently the result of imagination every physician knows, and that hot weather has but little to do with it is an unquestionable fact. The French Government has instituted an exhaustive examination on this subject which shows that among a population of over 32,000,000—the most careful attention being paid to every symptom having the remotest analogy to hydrophobia—105 cases had their origin in the bite of a dog, twenty in the bite of a wolf, eight the bite of a cat, and five were attributed to the bite of unknown animals. In 100 cases they learned when the bite was received, namely: 25 in March, April and May, 25 during June, July and August, 23 during September, October and November, and 27 during December, January and February. Statistics taken in our own country have given similar results, except that the number of cases occurring with us are shown to be greater in winter than in summer. But it should be remembered in considering these statistics that not more than one case in thirty terminated fatally. The *Brighton Herald*, an English journal, says: "During the last half century scores of persons have been bitten by animals reported rabid, but it is remarkable that not a single instance can be adduced in which any human creature has been subject to the consequences which such bites and inoculations are said to produce."

Hydrophobia is not unfrequently a disease purely of the imagination. Some time since a man in Chicago was bitten by a dog that was known to be perfectly well. The victim, however, brooded over the idea that sooner or later he would die from the effects of the wound, although there were no manifestations of a serious character. But his apprehensions made him anxious and restless and almost frenzied, and in a few days he brought upon himself fits of an alarming type. From all the circumstances it was evident the man was in a dangerous condition and needed medical attention. Physicians were called, but he soon expired in great agony. From beginning to end this man's case, so far as the dog was concerned, was one entirely of imagination. If anybody questions the effect of imagination let him turn to the history of witchcraft in New England, where superstition was fostered to the extent of taking life. People sickened and died under imaginary spells, and pious clergymen and wise magistrates countenanced the hanging of innocent victims. "Let dogs delight to bark and bite," was an unfair saying of Dr. Watts. Dogs may delight to bark, as people do not unfrequently delight to talk, but they do not delight to bite. And no dog will bite unless he is provoked or disturbed in his guard over his master's property. A mad dog always seeks to avoid society, and, if permitted to reach the public highway, he will never go out of his course to bite, but will finally, if let alone, drop dead without doing the least injury to any one.

As before intimated, a genuine case of hydrophobia, even in the dog, is of very rare occurrence, but when the disease does manifest itself, its symptoms are marked and easily defined, and to one who has given the subject the slightest attention there should be no mistake concerning a proper diagnosis. The trouble is that to persons of superficial observation, an epileptic fit—very common among dogs—may be mistaken for hydrophobia. The dog, when suffering from an attack of epilepsy—which is a sure guarantee that he is not mad—runs about wildly, staggers, falls down, regains his feet, toddles around mechanically, froths at the mouth (which is another positive indication that he is not mad, for a mad dog never froths at the mouth), and, as if entirely deprived of sight, runs against anything in his way. With the mad dog the case is entirely different. He dreads at the mouth, is possessed of preternatural strength, and never staggers or falls except to die. He never bites mankind if he can possibly avoid it, and seeks to keep himself aloof from human beings. He takes long journeys of thirty or forty miles to vent his restless desire for motion. When journeying he does not walk or run, but proceeds in a slouching manner, a kind of trot, and his aspect is dejected. His eyes do not glare or stare, but they are dull and retracted. His appearance is very characteristic, and if once seen can never afterwards be mistaken. In this state he will travel the most dusty roads, his tongue hanging dry from his mouth, from which, however, there drops no foam. If no one notices him he gladly passes them by. He is very ill, he cannot stay to bite. From these symptoms, which never vary, hydrophobia in the dog may readily be detected. The poor sufferer invariably flees from home and master when attacked by the disease, and, if not noticed in his wanderings, is perfectly harmless.

GEO. WILL. JOHNSTON, Superintendent.

The corrected list of judges on dogs at the International Bench Show is as follows:—

John E. Long, Detroit, Michigan; Col. F. G. Skinner, New York; John Swann, Baltimore, Md.; Dr. L. H. Twadell, West Philadelphia; Geo. Drolet, Montreal, Canada.

The Judges have liberty to call to their assistance such experts as they may select—a very desirable provision.

SWIMMING FORTY MILES.—Captain Bunce, of the *Leonida*, is the owner of a large Spitz dog, named Jack, that was picked up in the middle of the Sound several years ago, as he was swimming about several miles from land. On Tuesday the captain left the faithful creature on the East Neck wharf by some mishap, and Jack, seeing the vessel some distance out in the bay, decided to follow. As the vessel was under good headway, little notice was taken of his jumping off the wharf, as it was supposed that he would soon return. The vessel reached New York that night. Nothing was seen of the dog about here during the following day, but what was the astonishment of the captain and crew, on going up to the deck while the vessel lay in her dock in New York on the morning of the second day, to find the faithful creature at his post watching over the vessel in his usual manner. He was thoroughly exhausted by his long swim of over forty miles, however, and could do nothing but lie about and recruit his strength for two or three days.—*Huntington Long Islander*.

LIVE STOCK AT THE CENTENNIAL.—The U. S. Centennial Commission have issued the following circular, addressed to exhibitors of Live Stock:—

BUREAU OF TRANSPORTATION.

To Exhibitors of Live Stock:—

1. The Live Stock display at the International Exhibition will be held within the months of September, October, and November, 1876; the periods devoted to each family being as follows:—

Horses, Mules, and Asses, from September first to fourteenth.

Dogs, from September fourth to eighth.

Horned Cattle, from September twenty-first to October fourth.

Sheep, Swine, and Goats, from October tenth to eighteenth.

Poultry will be exhibited from October twenty-seventh to November sixth.

Shipping Directions.—Prepayment of Freight and Charges.—Live Stock must be free from all charges incident to its transportation, when received at the exhibition enclosure, and each animal or crate must be marked with an official tag issued by the Chief of the Bureau of Agriculture.

3. **Arrangement with Transportation Companies.**—The exceptional arrangements made by the United States Centennial Commission with transportation companies do not in any way affect the rules of such companies in regard to the classification of goods, or the conditions of receiving or transporting the same, except in requiring the prepayment of freight. The rates for transporting goods for the Exhibition will be obtained from the agents of the transportation companies at the place of shipment, and not at Philadelphia.

4. **Through bills of lading and advice of shipment made.**—Through bills of lading should be obtained so that Live Stock will be sent direct to the Exhibition from the place of shipment. They must show the precise route by which the animals or crates are to be transported, specifying in detail every road over which they are shipped, from point of starting to Philadelphia, so that they may be returned by the same route as received. If forwarded by water, the line transporting them must be named. A duplicate copy of the bill of lading must be mailed by the shipper to the Chief of the Bureau of Transportation, United States Centennial Commission, Philadelphia; and letters of advice should also be forwarded, giving information of the shipments made.

5. **Terminal Services.**—The transportation, receiving and reshipping of live stock exhibited, also the storage and repair of empty crates will be at the expense of the exhibitor.

6. **Empty Crates and Rates of Storage.**—The charge for removing, storing, and returning empty crates and packing material for exhibitors who request it, will be as follows:—
For empty crates of dimensions 27 cubic feet or less, 50 cents.

For empty crates of dimensions between 27 and 75 cubic feet, 75 cents.

For empty crates of dimensions over 75 feet, per cubic foot, 1 cent.

For box-boards, strappings, &c., (only received when securely fastened in packages) —

For packages weighing 50 pounds or less, 50 cents.

For packages weighing between 50 and 75 pounds, 75 cents.

For packages weighing over 75 pounds, per pound 1 cent.

7. **Neglected Stock.**—If no authorized person is at hand to take charge of stock in the Exhibition, it will be stalled at the cost and risk of whomsoever it may concern. At the close of each serial exhibition, all animals must be removed without delay, or they will be placed at board, at the expense of whomsoever it may concern.

The Centennial Commission reserves the right to explain or amend these regulations, whenever it may be deemed necessary for the interests of the Exhibition.

A. T. GOSHORN, Director-General.

D. TORREY, Chief of Bureau of Transportation.
Philadelphia, August 14th, 1876.

KENNEL PRODUCE.—Mr. Jacob Glahn's black-and-tan setter bitch Maggie whelped eleven puppies, six dogs and five gyys, on the 1st inst. They are by Mr. Jarvis's Dick. Maggie's pedigree is as follows: Maggie by Colburn's Dash, out of imported Kathleen; she by Lord Mory's Grouse out of Flora, owned by William Kirk, M. P., Keadly, Ireland.

Mr. J. P. Edgar, New Brighton, Pa., claims the name of "Bismark, Jr.," for his orange-and-white setter pup by Mr. J. S. Snellenburg's orange and white dog Sam, from Mr. Woodruff's setter bitch Dinah.

Mr. F. S. Merrick claims the name of "Buster" for pup of same litter. Mr. J. S. Snellenburg claims the name of "Lizette" for a bitch of same litter.

AN INCIDENT.—"Teal," of Salem, Mass., mentions this incident:—"Last Monday morning the Salem cadets went to camp at Magnolia. On Tuesday morning it was quite foggy, and while one of the waiters was standing at the entrance of a large tent he heard a black breast whistle. Being a gunner he answered, when the first thing he knew, out of the fog close at hand came a small bunch of plover and darted through the tent over his head, and out at the rear opening. This incident, I am inclined to believe, as the waiter had no motive to deceive, and is a good shot and well acquainted with shore birds. I never heard the like before, but knowing there is always a first time for everything I give you these notes."

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER. FOR THE WEEK.

—It has been decided to sail the races of the New York Yacht Club at New York on September 19th, instead of at Newport. The fleet at Newport dispersed yesterday.

—The yacht America got among the rocks off Gloucester recently, and is now being repaired. This makes twice this year. What's the matter with your eye, Ben?

—The Royal Canadian Yacht Club of Toronto, will hold its annual regatta on the 7th and 8th of September. His Excellency, Earl Dufferin has offered three medals, gold, silver, and bronze, for competition.

—Mr. J. F. Loubat, owner of the yacht Enchantress, has presented to the New York Yacht Club a magnificent silver cup of the value of \$1,000, which is to be sailed for on October 12th, in a regatta open to schooner yachts of 100 tons and over, belonging to any organized yacht club in the world. The course will be from off Owl's Head, New York harbor, to and around the Sandy Hook Lightship, leaving the same on the starboard hand; thence to and around the Lightship on Five Fathom Bank, off Cape May, N. J.; and return to Sandy Hook Lightship, leaving both on the port hand. The cup is now on exhibition at Tiffany's, Union Square.

NEWBURYH REGATTA.—On Saturday last a very interesting regatta was held in Newburyh Bay, there being five races in all. In the single scull race there were six entries, but only two starters, Ellis Ward, of the famous Ward Brothers crew, Cornwall, and John Mekeel, of Creskill, N. J. Ward and Mekeel have been in training for the Centennial races at Philadelphia, for which they are entered. The race was very close and exciting, Mekeel winning by three lengths in 26m. 13s. The following were the starters in the double sculls races: Dan and Gil Ward, of Cornwall; John Mekeel and Alfred Moshier, of Creskill, N. J.; Richard White and Peter Adams, of Fishkill, and Ellis Ward and Dennis Gilmartin, of Cornwall. There was also a very close contest between Mekeel's boat and Dan and Gil Ward's, the former winning by one length in 24m., Ellis Ward's boat third. The first mile and a half to the stake-boat was made in 11m. 10s. The other races were as follows: Single sculls, two miles, G. Donoghue, of Newburgh; single sculls, same distance, Alexander Darragh, of Newburgh; double sculls, two miles, G. Donoghue and Alexander Darragh.

FLUSHING YACHT CLUB.—The fifth annual regatta of this club was sailed last week, over the usual course in Flushing Bay. In the first three classes there were not entries enough to fill, but the Katie S., Annie, and Pluck and Luck, sailed for a cup given for the fastest time made over the course. The fourth class, for boats of twenty-one feet and under, was represented as follows: Quits, 20 feet 7 inches; L. B. Prince, 20 feet 3 inches; Rosanna, 19 feet 9 inches; Ripple, 19 feet; Ella, 18 feet; Lyra, 18 feet; Jane, 15 feet. The Pluck and Luck was the winner of the silver cup for the fastest time over the course, and although the L. B. Prince was first in the fourth class, (the only one in which the entries filled) the Ella won on time allowance.

THE CHICAGO YACHT RACE.—Fifteen thousand people assembled on the lake shore, at Chicago, on the morning of the 26th inst., to witness the start of the first race between the yachts Ina, owned by the American Consul at Toronto, and the Frolic, owned by Captain Prindiville, of Chicago. The terms of the race were, that unless the distance of thirty miles was accomplished inside of six hours there was no race. The race was won with two turnabouts, the stakeboat being seven and a half miles from the start. The stake was \$2,000 a side, the winner of two of three trials to take the money. The start was made at 10h 25m., and the race was remarkably close and exciting to the finish, which was made at 3h. 59m., the Frolic coming in about four minutes ahead of her competitor.

LONG BRANCH REGATTA.—The second annual regatta of the Long Branch Rowing Association was held on Wednesday of last week, at Pleasure Bay. The single scull race, mile heats, best two in three—open to club members only—was closely contested by G. Seligman, F. Leven, D. W. Dougherty, T. Seligman, W. Content, and C. A. Dougherty. The first heat was won by F. Leven, and the second and third by T. Seligman. A two race of fifty yards followed, which was amusingly contested by Edward Seligman and Louis Stienberger, the latter winning easily. A swimming match of one mile then followed, with six contestants, and was won by Harry Wallack, with W. Dougherty a close second. The prizes were presented in the evening at the West End Hotel.

COLLEGE POINT REGATTA.—The annual College Point (Long Island) regatta, open to all boats owned in Queens and Westchester counties, will be sailed in the Sound on Thursday, September 7th. The start will be at noon, from Donnelly's Boulevard Hotel, at College Point.

—The Louisville Commercial is now publishing an interesting account of a canoe voyage lately accomplished by its manager, Mr. A. H. Siegfried and a friend. Their little craft was first launched in the Canisteo river at Hornelleville, this State, and thence floated down the Chemung to the Delaware. The account of their adventures is quite pleasant to read, trifling in themselves perhaps, but enjoyable, as the writer justly remarks, because such a voyage brings one into direct and usually favorable contact with people along the route. With scarcely an exception they were well treated, often cordially, and the experiences of the voyagers is such as should induce others to imitate their example. Certainly there is no method of spending a vacation in a way more enjoyable than to launch your canoe at the headwaters of some stream and float down

through the scenes by the river banks, which are not to be seen by tourists who travel in any other fashion.

—It is proposed to have an International Rowing Regatta on the Potomac next month, and a Committee of the Analostan Club of Washington has been designated to invite the boat clubs of Cambridge and the Dublin Universities, as well as the London Rowing Club, to take part.

FOURTH ANNUAL REGATTA OF THE NATIONAL ASSOCIATION OF AMATEUR OARSMEN—OVER THE NATIONAL COURSE, PHILADELPHIA, AUGUST 22, 23, AND 24, 1876.

PHILADELPHIA, August 20th.

EDITOR FOREST AND STREAM:—

The fourth annual regatta of the National Association was rowed on Tuesday, Wednesday, and Thursday of this week. If we are to judge of the dissatisfaction it created, the meeting can scarcely be called a success. The weather each day was all that could be desired; the crews entered were above the average; the time made was not bad; the attendance was large, and the course perfectly policed. Still, no one seems to be satisfied with the results.

The ultra amateurs, or rather the radical amateurs, hoped that all the "suspected" crews would be barred, and are indignant because they were not. The friends of the Neptune and Argonauta are equally indignant that Smith and Riley were not allowed to row. The drawing and withdrawals so placed the single scullers, that their races were almost devoid of interest. The decision of the umpire in the foul between the Columbias and Atalanta is severely criticised. The Columbias' chances were not improved, even if they were not ruined by the sickness of two men. The Regatta Committee, not over harmonious among themselves, come in for as much unpleasant comment, and were in as much hot water from beginning to end as their worst enemies could ask. The Executive Committee escaped no more easily, and looking back over the week, nothing seems to have run so smoothly as the Convention of the Association at the Undine Boat House on Tuesday. It was presided over by Mr. Arthur F. Dexter, of the Massachusetts Club, of Providence, and his clear, prompt, and impartial rulings and executive ability, had much to do with the harmony of the Convention.

The feeling of the Convention was strongly against the abuse of the Amateur Definition. The resolution throwing the burden of proof on the suspected parties, was the strongest piece of legislation it has indulged in these two years. It may seem strange, that with all these parties at the meeting, the vote should have been unanimous, but there did not really seem to be any way to dodge the vote without a tacit acknowledgment of guilt. There was quite a discussion as to the length of time to be allowed an accused person to prove his innocence. There was an effort made to have it fixed at two weeks, but that being inconsistent with the rule closing entries two weeks before the regatta, one week was suggested. A delegate naively remarked, that if it required an honest oarsman seven days to prove his honesty, that it was certainly a "suspicious circumstance." Before the meeting there was a disposition on the part of a number of clubs to withdraw from the association, in despair of ever being able to correct the abuse.

It is to be hoped that the Executive Committee, as organized with three new members, will act carefully and consistently in the matters that no doubt will be brought forward during the coming year.

FIRST DAY.—FINAL HEATS.—FOUR-OARED

1. ATALANTA BOAT CLUB—New York.—John E. Ustis, stroke; C. A. Lyon, 3; H. W. Rodgers, 2; W. H. Downs, bow. Position east, colors red.
2. BEAVERWYCK ROWING CLUB—Albany.—T. J. Gorman, stroke; R. T. Gorman, 3; J. H. McEntee, 2; J. T. McCormick, bow. Position middle, colors white.
3. YALE UNIVERSITY—New Haven, Ct.—Julian Kennedy, stroke; D. H. Kellogg, 3; W. W. Collins, 2; Fred Wood, bow. Position east, colors red.

After the usual caution the umpire started them off, all getting away together. As is usual the first quarter was gained with the boats nearly abreast. Yale was the first to drop away, coming over into the Beaverwyck's wash losing as much by bad steering as the Atalantas were gaining by good. The latter in excellent form were driving their boat at a great rate, showing themselves winners before the mile was done. The race was then for second place. The Albany crew were getting very ragged off "the clearing," when Yale quickened their stroke, which had been too slow for a good pace, and had their steering been else than wretched they would have gone right by. At the head of the island, these two were on nearly equal footing when their oars came together, and the boats stopped. The Atalantas already well ahead kept on increasing their lead to half a dozen lengths. Without claiming any foul Yale and Beaverwycks drew apart and started home, the latter getting a lead which Yale could easily have overcome if they had stopped corkscrewing all over the course. Their eccentric steering was possibly the result of a bad felon on Wood's finger: Atalanta, No. 1, 9m 13½s.; Beaverwyck, No. 2, 9m. 28½s.; Yale, No. 3, 9m. 39½s.

1. SECOND TRIAL HEAT FOR FOURS.—COLUMBIA COLLEGE—Ithaca, N. Y.—J. T. Goodwin, stroke; C. S. Boyd, 3; E. E. Sage, bow. Position west, colors red.
2. VESPER BOAT CLUB—Philadelphia.—H. McMillan, stroke; Frank Henderson, 3; W. T. Corson, 2; J. B. Mingus, bow. Position east, color white.

This proved the most interesting race of the whole regatta, and the showing of the Vesper crew was a surprise to the many who considered the Columbias safe for a walk over. Philadelphia crews have of late won so little credit in the Association and open regattas that they are scarcely counted in the result, but this race will make Yale anxious about their heat in the International on Monday, they being drawn with the Vesper and Crescent. Both boats made a good start, the Columbias going ragged and looking flurried, their strokes not being pulled out, but at Laurel Hill they

had a length and settled to better work. The Vesper men spurred, lapped Columbia but dropped back at the half-mile posts, the race seeming to be over. Not so, however, for with a quickened stroke that they held all the way home, they began chasing their leaders, rowing right in their wash, and apparently trying to touch their rudder. First on one side then the other they would lap, losing much by not going straight on. The Columbias were evidently beginning to feel their work; they were dropping the fancy part of their stroke, and losing their confidence. Within the last quarter their boat suddenly went toward the east. The Vespers, encouraged by a shout from their friends ashore, by a magnificent burst, drove up even, and Columbia straightened out only just in time. Amid the only genuine enthusiasm of the day the boats crossed the line with the College boys less than half a length ahead, in exactly the same time as the winners of the first heat: 9m. 13½s. The Vespers, 14m. Number 2 in the Columbia was so badly baked that their crew could certainly not have held their lead a hundred yards further.

FIRST TRIAL HEATS—SINGLE SHELLS.—1. Chas. P. Tasker, Crescent Boat Club, Philadelphia. Position west; color red. 2. P. C. Ackerman, Atalanta, position middle; color white. 3. R. H. Robinson, Union Springs, position east; color blue.

Robinson was once recalled for false start, and then they got the word go. Ackerman was first and Tasker last. Tasker soon had a lead but at a pace that he could not hold. Robinson pulling with a lugging stroke, was holding the big Atalanta man, and making a beautiful race; the two men pulling stroke for stroke, down to the three-quarters, when Ackerman drew easily away, winning as he wished in 10m. 28s.; Robinson, 10m. 55s.; Tasker, 11m. 18½s.

SECOND TRIAL HEAT—SINGLES.—1. Frank Pleasanton, Quaker City, position west, color white. 2. Chas. E. Courtney, Union Springs, position east, color blue.

J. Kennedy, of Yale, withdrew. The race was a waste of time and the description would be a waste of paper. Courtney, 10m. 38½s.; Pleasanton, 11m. 45s. Flip is a pleasant gentleman and has lots of pluck, but when will he learn not to make an exhibition of himself.

THIRD TRIAL HEAT—SINGLES.—1. Henry McMillan, Vesper, position west, color white. 2. Frank E. Yates, Union Springs, position east, color blue. T. K. Keator of the Neptune withdrew on account of the action barring Riley.

This was another farce, McMillan had had one hard race entirely out of condition and in very bad form. Yates must have wondered how the Vesper's double drove Curtis and himself so hard last year. McMillan's use of the slide was such that his boat stopped dead between each stroke. Near the finish Yates padded along at ease until McMillan overtook him, and then made a close finish for the benefit of the spectators. Yates, 10m. 4s.; McMillan, 10m. 47s.

SECOND DAY.—DOUBLE SCULL RACE.

1. UNION SPRINGS BOAT CLUB—Union Springs, N. Y.—1. C. E. Courtney, stroke; R. H. Robinson, bow. Position west, color red.
2. ATALANTA.—P. C. Ackerman, stroke; H. W. Rodgers, position middle, color white.
3. VESPER.—Harry McMillan, stroke; J. B. Mingus, bow, position east, color blue.

The other entry, Neptune, withdrawn. The Union Spring men soon showed themselves winners, steering beautifully, rowing well within themselves and leading. The Atalanta crew pulled well, but were over-matched. The Vesper men are both stale, and were soon out of the race, their sliding being very bad. Union Springs, 1, 9m. 19s.; Atalanta, 2, 9m. 26s.; Vesper, 3, 10m. 10½s. The time is a close approach to that made in the fours on Tuesday, even allowing for the difference in the force of the wind, which on both days was fresh from the southwest.

PAIR-OARED SHELL RACE.

3. ATALANTA.—J. E. Eustis, stroke; W. H. Downs, bow, position east, color blue.
2. NAUTILUS.—Wm. Walshe, stroke; David Roach, bow, position middle, color white.
1. ARGONAUTA.—John Gunster, stroke; W. T. Taylor, bow, position west, color red.

The Beaverwyck's pair withdrawn. The Argonauta put in their crew in place of Smith and Eldred. The Jersey crew went to a lead at the jump, the Nautilus after them and the Atalantas doing good work on the east being last. At halfway down the course the order was changed, the Atalantas brightened up a little, took a lead of a couple of lengths, the Argy's weakening, were first collared, then passed by the Nautilus and the race was practically done. The Nautilus tried hard to catch the Atalanta, and made a plucky chase, but they are entirely too light to last on a hard race with a large crew. 1. Atalanta, 10m. 10½s.; 2. Nautilus, 10m. 29s.; 3. Argonauta, 10m. 50½s.

THIRD DAY.—FINAL HEAT.—FOUR-OARED SHELLS.

1. COLUMBIA COLLEGE.—Position west, color red.
2. ATALANTA.—Position east, color white.

After rowing for perhaps 500 yards, the Atalanta spurring for a lead, seemed to be coming over into Columbia's water, trying to head them. Columbia, who had started badly, were holding on well in spite of their two sick men, Boyd and Grisswold. For some reason they began coming out until the two boats came together. The umpire decided that the fault was mutual, and ordered them to restart from where they were. Goodwin, stroke of the Columbia, claimed to have broken his oar in the foul, and asked for a new one. The umpire referred the matter to the Regatta Committee, who after taking Goodwin aboard, ordered the steamer down to the boat house for a new oar. This caused a delay of an hour, when the same crews were called to the starting point and again sent away. The form in neither boat was anything to brag of. No. 3 in the Atalanta, seemed to think his legs better than his back, for he used the former to the exclusion of the latter, doing bad work with his slide. Stroke in Columbia while pulling with wonderful energy, clipped off his stroke at the finish worse even than on Tuesday, and No. 2 went one better on the stroke's fault. The racing was close and desperate, but just as the mile post was passed, Boyd, No. 3 in the Columbia, who has been sick for some days fell over on his back. Although with wonderful pluck he regained his seat, only to fall again at the next stroke, his captain saw that it was useless, and withdrew. Mr. Boyd was taken on a steamer and soon recovered. It is hoped he will be able to pull again in Monday's races. The Atalantas crossed the line in 9m. 36½s. Final heat for singles between Yates and Ackerman, which was rowed prior to the fours, resulted in a victory for Yale in 10m. 39½. Ackerman's time being 10m. 46s. The officers of the regatta were: E. D. Brickwood, Aquatic Editor London Field, Umpire; Walter Madeira, Judge; Wm. Tucker, John Hockley, Jr., and W. H. Hills, Time Keepers.

SCULLS.

THE INTERNATIONAL REGATTA.

PHILADELPHIA, August 28th, 1876.

The first day of the great International Regatta has proved the most successful of any day's racing that it has fallen to my lot to see. The weather was grand—a cool south westerly breeze falling gradually as the sun lowered. The first race was started on the dot, and at the end of the fifth, time was so far beaten that the umpires had more than half an hour to wait for it to overtake the programme.

The course was, thanks to the energy and judgment of Capt. Chateau, perfectly clear. The banks were lined with a greater crowd than ever before attended a regatta in Philadelphia.

The racing in four out of the seven heats was close. The Press representatives were well cared for; the umpires boat was not overloaded; no fouls (requiring a decision) occurred; and in fact the annoyances that usually attend boat races absented themselves entirely. At one minute of two o'clock the Eureka, Argonauta, and Dublin crews drew into positions:—

EUREKA—Newark, N. J., Red.—Bow, John Young; 2, Wm. Ryne; 3, P. Young; stroke, J. Angelman. Average age, 26; average weight, 143½; average height, 5 feet 7 inches. Cedar shell Alex. Clark, built by Thomas Fearon, Yonkers, N. Y.; dimensions 18x42; weight 120 pounds.

ARGONAUTA—Bergen Point, N. J., White.—Bow, Ed Smith; 2, B. Stephenson; 3, C. E. Dunbar; stroke, F. C. Eldred. Average age, 26; average weight, 151; average height, 5 feet 8½. Cedar shell, not named; built by Thomas Fearon, Yonkers, N. Y.; dimensions 21x41; weight 100 pounds.

DUBLIN UNIVERSITY, R. C., Ireland, Blue.—Bow, G. N. Ferguson; 2, C. Barrington; 3, C. B. Barrington; stroke, G. H. Hickson. Average age, 23; average weight, 161 pounds; average height, 5 feet 11 inches. Cedar shell not named, built by Biffen, England; dimensions 22x40½; weight 120 pounds.

At 2 p. m., Mr. Frank G. Brown, of the Nassau boat club, New York, the umpire, gave the word and away they went. The Eureka, disregarding all rules respecting time, or swing, but pulling to win, soon led half a length, Argonauta with lots of slash, and some rolling, right after them, and the Dublin not steering well, coming in right behind them. Hot racing it was to the mile, and then Dublin and Argonauta fought it out for second place, getting together off the Island, the Jersey men rowing into Dublin's starboard quarter. The foul in no way affected the result, the Dublin's coming in second, the Bergen Pointers having been handsomely passed. Time.—Eureka, 9m. 29½s.; Dublin, 9m. 36½s.; Argonauta, 9m. 42s.

The Eureka is the crew that was "not spoken of." Those who bought the pools of \$52 for \$2 will probably talk a little.

In the second heat were:—

VESPER—Philadelphia, Red.—Bow, J. B. Mingus; 2, W. T. Corson; 3, F. Henderson; stroke, H. McMillan. Average age, 26; average weight, 152; average height, 5 feet 9½ inches. Paper shell not named, built by E. Waters & Son, Troy, N. Y.; dimensions 18x40; weight 110 pounds.

YALE COLLEGE—New Haven, Conn., White.—Bow, J. R. Cook; 2, W. W. Collin; 3, D. H. Kellogg; stroke, J. Kennedy. Average age, 22; average weight, 159½; average height, 5 feet 10½ inches. Paper shell not named, built by E. Waters & Son, Troy, N. Y.; dimensions 18x41; weight 105 pounds.

CRESCENT—Philadelphia, Blue.—Bow, C. E. Steel; 2, H. K. Hinchman; 3, H. W. Terry; stroke, George Milliken. Average age, 25; average weight, 129½ pounds; average height, 5 feet 9 inches. Cedar shell Chamoult, built by Byron Bros., Philadelphia; dimensions 16x43; weight 112 pounds.

As was expected, the race was between Yale and the Vespers, the Crescents being out of the race at once. The struggle was desperate, Yale pulling magnificently at 36; the Vespers ragged at 40; but no great lead for Yale, who held ahead. The race was not up until the Vesper went in too far to west, and Yale showed up several lengths ahead. Yale, 9:02½; Vesper, 9:13½; Crescent, 9:46½. Yale's rowing and steering throughout was beautiful, and up to that moment, considering the low water and head wind, their time was the best ever made on the course. The change in the bow worked to their advantage. From the third heat the Quaker City withdrew, leaving:—

THIRD HEAT—3:30.

COLUMBIA COLLEGE—New York City, Red.—Bow, E. E. Sage; 2, G. Grikwood; 3, C. S. Boyd; stroke, J. T. Goodwin. Average age, 21; average weight, 138; average height, 5 feet 11½ inches. Cedar shell, not named, built by Thos. Fearon, Yonkers, N. Y.; dimensions, 19x42; weight, 95 pounds.

ELIZABETH—Portsmouth, Virginia, White.—Bow, J. Murray; 2, P. McGrath; 3, T. Gallagher; stroke, D. Callahan. Average age, 24; average weight, 152½; average height, 5 feet 11 inches. Cedar shell, Virginia, built by Charles B. Elliott, Green Point, N. Y.; dimensions, 18x46; weight, 90 pounds.

This was another disappointment. The Virginian's rowed a terrific stroke, and instead of "dabbing," as they did in practice, really pulled and pulled, hard and together, at about 42, keeping a beautiful course, working the Columbias hard clear through. On Columbia's snap there is no discount. Stroke, and No. 3 finished their stroke in the end badly, but managed to keep their side up, and the crew have won a hard race, winning it by a fine spurt, which brought them even at the end of the Island to two lengths ahead at the finish. Columbia, 9m. 11s.; Elizabeth, 9m. 20½s. The Virginians ceased rowing several strokes from the finish, or the difference would not have been more than three or four seconds.

The fourth heat was between:—

BEAVERWYCK—Albany N. Y., Red.—Bow, J. T. McCormick; 2, J. H. McEntee; 3, R. T. Gorman; stroke, T. J. Gorman. Average age, 25; average weight, 154½; average height, 5 feet 9½ inches. Paper shell, The Brothers, built by E. Waters & Son, Troy, N. Y.; dimensions, 20x41; weight, 110 pounds.

FALCON—Burlington, N. J., White.—Bow, Allen Horn; 2, H. McKim; 3, Thos. Meyers; stroke, J. W. Horn. Average age, 27; average weight, 13½; average height, 5 feet 10 inches. Cedar shell, Elaine, built by George Roan, New York, dimensions, 20½x43½; weight, 135 pounds.

DUQUESNE—Alleghany City, Pa., Blue.—Bow, David Fritz; 2, Oliver Moody; 3, Samuel Moody; stroke, Frank Brennan. Average age, 21; average weight, 131½; average height, 5 feet 7½ inches. Cedar shell, John G. Fisher, built by Jewett, England; dimensions, 18x41; weight, 145 pounds.

The Falcon crew made a bad start, caught crabs without end, and from knowing nothing about rowing—for physically they were good—they were forced to draw out before Laurel Hill was reached. The other two made a fight for some time, but at half-mile the Albany men were giving a liberal wash to their Pittsburgh friends, who though they spurted, were not able to catch them. The Beaverwyck's time was 9:14. The Duquesne ceased rowing several lengths from the finish, and their time not taken. Worse rowing than was all around in this heat, I don't care to witness.

The fifth heat, the Malta having withdrawn, was between:—

PENNSYLVANIA—Philadelphia, Red.—Bow, J. W. Barr; 2, W. H. Renner; 3, A. L. Kappes; stroke, H. Conrad. Average age, 23; average weight, 144½; average height, 5 feet 8½ inches. Cedar shell, Pennsylvania, built by Charles B. Elliott, Green Point, N. Y.; dimensions, 20x42; weight, 135 pounds.

WATKINS—N. Y., White.—Bow, A. McLaerty; 2, F. Stoll; 3, A.

Tyrell; stroke, F. Wakeman. Average age, 21; average weight, 132½; average height, 5 feet 9½ inches. Paper shell, not named, built by E. Waters & Son, Troy, N. Y.; dimensions, 19x41; weight, 105 pounds.

This was bad enough. The Pennsylvanians after playing circus in their boat awhile, seeing it was no use to row, drew out at the half-mile, leaving the Watkins to do the cruise as they liked, which they did in 9:06½—excellent time—as they were not pushed. The wind had fallen, and fast time was expected and realized in the sixth.

Here the Atalantas having a man sick in bed (Rogers) stepped out.

At 5:45 the race started between:—

LONDON, R. C.—England, Red.—Bow, R. Labat; 2, F. Gulston; 3, A. Trower; stroke, J. Howell. Average age, 28; average weight, 154½; average height, 5 feet 10 inches. Cedar shell, not named, built by Twaddle & Winship, Newcastle-on-Tyne; dimensions, 18x40; weight, 105 pounds.

NORTHWESTERNS—Riverdale, Ill., White.—Bow, W. B. Curtis; 2, Henry Smith; 3, John Killorin; stroke, Chas. Corning. Average age, 32; average weight, 160; average height, 5 feet 11 inches.

The most beautiful exhibition of rowing ever seen in this country, was on the part of the London Four. Starting off 43 strokes for the first minute, they kept it up to the tune, on each successive minute, of 41, 40½, 40½, 40, 40, 41, 40, and for the fraction 34 strokes. As they seemed in doubt as to where the finish line was, paddling for three or four strokes, I should put the minute, had it not been rowed out at about 39 or 40. In all this their form was magnificent, the swing fore and aft and work together being perfect. "It looks like a sculler's boat," said an old oarsman on the steamer. Gulston did indeed "hump himself," and to some purpose. His round back is not apparent when one is following the crew. Their course was equal to their rowing. The famous North Westerns rowed fast and badly; their steering was much too far to the east, but they followed up Dublins, 8m. 55s., with 8:59½.

The last heat was between:—

TRINITY COLLEGE, CAMBRIDGE UNIVERSITY, England, Red.—Bow, J. T. Penrose; 2, G. S. N. Mann; 3, W. B. Close; stroke, J. A. Jamieson. Average age, 22; average weight, 162; average height, 5 feet 10½. Cedar shell, not named, built by Twaddle & Winship, Newcastle-on-Tyne; dimensions, 18x41½; weight, 110 pounds.

ONEIDA—Burlington, N. J., White.—Bow, R. N. Weston; 2, G. A. Hunt; 3, F. G. Woodington; stroke, F. H. Deacon; average age, 22; average weight, 145½; average height, 5 feet 10½ inches. Cedar shell, Oneida, built by Thomas Fearon, Yonkers, N. Y.; dimensions, 18½x41; weight, 96 pounds.

It was, as expected, a walk over for the Cantabs. If the heat did lack interest as a race, it was a fine sight to see their even, machine-like swing, as rowing down at good pace, they finished in 9:06½; and so ended as successful a day's racing as could be possible.

It is to be hoped that the other day will go off as well, and the International Regatta will be all that is hoped of it. On Tuesday the racing began at 2 p. m., with the first trial heats for single shells. In the drawing the first heat was fixed as follows:—

No. 1, Jas. McCartney; 2, F. Henderson; 3, G. E. Man; 4, Geo. W. Young.

SECOND HEAT.—1, J. B. Leibert; 2, E. D. Mills, Jr.; 3, J. M. Holman; 4, W. B. Cutlis.

THIRD HEAT.—1, R. A. Robinson; 2, C. T. Corning; 3, S. Gormley; 4, C. P. Tasker.

These will be followed by the second trial heats of fours, thus:—

FIRST HEAT 4:15 P. M.—1, Eureka; 2, Beaverwyck.

SECOND HEAT.—1, First Trinity, Cambridge; 2, Watkins; 3, Columbia College.

THIRD HEAT.—1, London; 2, Yale.

It is odd that the crews making best time in the first trials should face together in the second. The final heat of fours, and the remaining first trial heats (five in number) were rowed off on Wednesday. The Paris and Dublin take place to-day and to-morrow, and the Professional races on Monday and Tuesday of next week. **SCULLS.**

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

ANTONIO, Little Falls.—Ans. "No," as directed.

J. S. & Son, New York.—We were not aware that we had advertised to furnish Dekay's "Birds" at all; but think we can get it for \$15, certainly not for \$5.

D. L. R., Catskill.—Please tell me if there is a law now existing in New York State prohibiting rail shooting until September 20th. Ans. There is not.

R. M. A., Clearfield, Pa.—My setter pup, six months old, has worms and I would like to try the article 1 frequently see mentioned in your Answers to Correspondents—aranea nut? Ans. Have mailed to you the remedy with directions for its use.

SUBSCRIBER, London, Ont.—Can you say whether there is any duck or quail shooting within 30 miles of Niagara Falls on either the Canadian or American side, and where it is and how you can get at it? Ans. See game report in Shot Gun column.

A. M. D., Rockland, Me.—We cannot send you "aranea" nut, or anything else, to the mere initials you give; besides, we make it a rule to pay no attention to anonymous writers. Send your full name, and we will help you out.

H. W. H., Newark, N. J.—I have a black-and-tan terrier who seems to be troubled with worms, as he is continually biting and scratching himself. What is good for him? Ans. Have mailed to you a remedy which will in all probability cure your terrier.

McC., New Lisbon, O.—Could you recommend a course to be pursued in organizing a party of four or more to make an excursion as suggested by "Fred Beverly," chapter 7 of "CAMP LIFE IN FLORIDA"? Ans. Probably a four line advertisement in our columns would bring satisfactory replies. We know of no other method.

OSCEOLA, Nahant, Mass.—Will you please inform me whether the Flobert parlor rifle is good for target practice and shooting small birds for specimens? Ans. Yes just the thing, particularly as shot cartridges come made on purpose for them. We have frequently killed bats with them.

R. L. V., Newark.—1 What causes the leading of guns? 2. What does a dog trainer generally charge for training a dog? 3. What kind of oil is good for keeping rust off of a gun, and where can such oil be obtained? Ans. 1. Rough barrels and friction. 2. \$50. 3. Belmont oil; can be had at any gun store.

J. W. M., St. Louis, G. H. R., Morristown, Tenn., and others.—As we have heretofore stated, Henshaw's "Ornithology of the Wheeler Expedition" is published by the Engineer Department of the U. S. Army for free distribution; if the edition is exhausted perhaps we can pick you up one in this city for \$5 to \$8.

S. AND R., New York.—Will you kindly inform us through your paper of some place near New York, where we can go fishing with little expense? Ans. For fresh water fishing go to Greenwood Lake, 45 miles from New York by the Montclair & Greenwood Lake Railroad; for salt water fishing, hire a boat at Canardie, reached by rail from East New York, Queens Co., L. I.

SQUIR, Nahant, Mass.—Could you inform me if the recolling of a shot gun would make much difference in the accuracy of the shooting, and if so, you would oblige me much by telling me how to correct the error. Ans. The recoil in a gun is apt to throw up the muzzle and also when expected to cause a flinching which is fatal to a correct aim. To obviate it reduce your charges of shot and try the effect.

H. A. D., Catskill, N. Y.—There has been some dispute here in regard to the time for shooting Virginia rice birds, or, as they are known here, by the name of "rail birds." Would you be so kind as to inform me of the time for shooting them? Ans. Rail are not protected by the game laws of this State. The proper time to kill them is after September 1st, at which time the close season expires in New Jersey.

G. C. P., Harrison, N. Y.—As I have learned that you are kind enough to enlighten the unsophisticated sportsman (through the medium of your paper), will you please have the goodness to inform me what are the best proportioned charges of powder and shot, naming size of the latter, for squirrel shooting; the gun being a Wesley-Richard 9-pound 10-bore, and barrels 30 inches in length. (Muzzle-loader)? Ans. Use 4 drachms of powder and 1½ ounces No. 7 shot.

M. G. L., Greece City, Pa.—Did you ever hear of hunting woodcock at night (or pot-hunting) in Louisiana by white men or black? If so, let us know in your answers to correspondents. Ans. We cannot remember of hearing of this mode of shooting being pursued in Louisiana, but it was formerly a very common way of killing woodcock in Virginia. Torches were used, and the birds were so abundant that it was an easy matter to shoot them, as they arose affrighted from the bushes.

SHRIMP.—We have been bass fishing in some of the interior lakes and had poor success, although we know the waters to be abundantly stocked. Have tried troling, flies, salt-water shrimp, frog, crayfish, &c. Now, as you know everything, what do you recommend? Ans. If all other varieties of bait fail, try the fresh-water mussel. The salt-water mussel is a favorite bait in the sea and estuaries, and under the now accepted law that fish will feed best upon that of which there is the greatest abundance around them, provided you give them more facilities for their accepting it than they otherwise possess, fresh-water mussels ought to be very killing in those waters where they exist.

BLOSSBURG, Pa.—Can the owner of any private trout pond kill and eat, or sell to others for the purpose of food, the trout in his pond, during the close season? Ans. He can kill and eat his own trout, just as he can kill and eat his own mocking bird, if he likes that kind of food. It is his own property. He can kill all the fish in his pond at any time, substitute others for them, or fill up the basin with earth and plant trees. Nevertheless, he cannot sell his fish to others for food, or publicly invite people to fish out of season. Laws are made for the public benefit, and were only the individual himself concerned, the law would not trouble itself to declare whether he should eat trout out of season, diseased meat, or strychnine.

LENOX, Conn.—I wish you would advise me as to the proper mode of teaching my setter to retrieve game in the field? Nearly two years old, he is yet an inveterate chicken killer, doing it once and a while on the sly, bringing the chicken on the premises, and this notwithstanding the adoption of your advice for this evil, namely: a smart application of a cowhide whip when taken in the act. He will fetch on command almost any inanimate article, from a buckskin mitten to a five cent coin. Ans. As your setter has been broket to retrieve a glove and other things at command you can soon get him to retrieving birds by first tying the wings of a bird to a glove or a roll of paper and confirming him in retrieving that, after which give him a little practice with a dead bird about the house and you will have no trouble to make him retrieve birds shot to him.

C., Utica, N. Y.—1. Have the Supervisors of a county a right to prohibit woodcock shooting, when the game laws allow it? 2. Can robins and golden-winged woodpeckers be shot in August in Central New York? 3. Where would you advise a party of three or four to go in order to get good snipe and plover shooting, and maybe some ducks, within two hours of Utica? Ans. 1. No, they have not, and all regulations or ordinances passed by Supervisors, are, where they conflict with existing state laws, null and void. 2. Robins can be shot in Central New York after August 1st, but the shooting of flickers, or golden-winged woodpeckers, is prohibited at all times. 3. Good snipe shooting can be had on the Montezuma marshes, but as regards shooting within two hours of Utica you should be better posted than ourselves.

T. E. D., Pittsburgh.—1. What is the correct name of the kildeer? They are very numerous in Westmoreland County, Pennsylvania. 2. I own a fine Gordon setter bitch that was served by a setter imported from Russia. He was a large and powerful dog, was coal black except a small patch of white on the breast. My bitch is black and tan, and was sired by an imported Gordon. Last week she whelped a large litter of pups which puzzled me. Their color was as follows: two whelps were white except their heads, which were black; two were orange, three were a very dark brown, and two were coal black after the sire. Can you tell me the cause of so many colors, and whether they will make good hunters; both mother and sire are thoroughly broken and splendid hunters. Ans. 1. The kildeer, or kildee, is a plover, known to naturalists as *Agallitis vociferus*. It is not recommended as a luxury. 2. It is no doubt the cropping out of impure blood in the ancestors of the parents of your pups that gives them their unusual colors. You would probably find this mainly due to the influence of the sire, if you could investigate it thoroughly. There is no reason why they should not make good hunters.

C. P. F., Philadelphia.—1. What part of the U. S. is best for cattle and sheep raising and what is the climate? Ans. Southern California and southwestern Texas. Climate equable. 2. Does not New Mexico compare with the best? Ans. Excellent. 3. Is it a fact that one can set up a ranche without paying any taxes? For instance in the region of the Black Hills. Ans. Would advise you not to meddle with the Black Hills. We suppose you can enter under the Homestead Act in the places named. The taxes would be light, and you would contribute your mite towards supporting the country that supported you, which is fair. 4. In what State would one have to go to have shooting of all kinds, such as bear, deer (of all kinds) buffalo, &c., and at the same time have a ranch, also shooting over dogs? Ans. You can find all this in the places we have named. 5. Do you know of any reliable scout who would accompany a party for several months who is well acquainted with the West, &c.? There is a party waiting your reply, one of them a member of the Cambridge crew. We want to stay several months, but do not want a very cold place. Ans. We can refer you to suitable parties. Meanwhile address the advertiser in our paper of July 13th, "Select Hunting Party for the Southwest."

D. A., Cleveland, O.—I have a lake some two miles in length by one in width. At each end, extending some ways into the lake it is black mud soil; the sides are of gravel and sand; water clear and deep. Of fish it contains black bass, spotted bass, sunfish and catfish, I am desirous of raising some good fish; can you tell me what kinds would do best in such water? Would whitefish prosper? Where can I get such fish as are best? What is the best work published on raising fish? Ans. Our correspondent's inquiries are far more intelligent than those of most people who seek information concerning this important and growing industry. He gives all the necessary information concerning his lake, except its location, which is rather necessary for an intelligent reply. "D. A." has already the most valuable kind of stock in his lake, viz: the black bass. As there are two varieties I would also recommend the other, which ever he may now have. I would also recommend the white catfish. It is not yet known whether the whitefish will thrive in small bodies of water. The problem is now being solved in Central New York and other localities. On this point I would refer "D. A." to his own townsmen, Dr. Garlick and Dr. Sterling, the former of whom gave the writer his first lessons in fish culture more than 20 years ago. As to the best work on fish culture I will say, all are behind the times, there having been no recent publication.—MILTON P. FAIRBANK, Aquaculturist, Wrentham, N. J.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,

[Post Office Box 2832.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, AUGUST 31, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,

Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, AUGUST 31.—Trotting: Poughkeepsie, N. Y.; Massillon Ohio; Rock Island, Ill. Racing: Point Breeze Park, Philadelphia. Base Ball: Orange vs. Nassau of Brooklyn, at Orange, N. J.; Browns vs. Stars, at Syracuse.

FRIDAY, SEPTEMBER 1.—Trotting: Hartford Conn.; Massillon, Ohio; Rock Island, Ill. Racing: Point Breeze Park, Philadelphia. Base Ball: Cricket vs Boston, at Binghampton, N. Y.; Chicago vs. Stars, at Syracuse. Rifle: Australian trials at Creedmoor.

SATURDAY, SEPTEMBER 2.—Regatta Beverly Yacht Club, at Swamp scott, Mass. Trotting: Rock Island, Ill. Base Ball: Haymakers vs. Boston, at Lansingburgh, N. Y.; Osceola vs. Staten Island, at Prospect Park; Contest vs. Orchards, of Greenpoint, at Prospect Park. Rifle: Australians at Creedmoor.

MONDAY, SEPTEMBER 4.—International Convention of Archaeologists at Philadelphia. International Bench Show of dogs at Philadelphia. Trotting: Dubuque, Iowa; Davenport, Iowa. Rifle: Australians at Creedmoor.

TUESDAY, SEPTEMBER 5.—Nineteenth annual meeting National Rifle Club at Springfield, Mass. Central New York Fair at Utica, N. Y. Racing as above, and at Penn Yann, N. Y., Springfield Mass.; McComb, Ill., and at Montgomery City, Mo.

WEDNESDAY, SEPTEMBER 6.—Meeting National Rifle Club as above. Central New York fair as above. Racing as above, and at Westchester, Pa.

The subscription price of FOREST AND STREAM has been reduced to \$4. Twenty-five per cent. off for Clubs of Three or more.

CENTENNIAL REGATTA AT PHILADELPHIA.—Our reports of the International Regattas at Philadelphia are prepared by Mr. J. Gillingham, Secretary of the International Regatta Committee, and will be found correct.

—There are 10,000 forest and field fires burning at present in different parts of the country, and all the Forest Preserving Associations that can be formed will not avail to extinguish them unless rain comes. Dozens can be seen at one time from any given mountain peak, and the destruction to dwellings, barns, and fields, as well as forests is already very great.

—A Lake George correspondent speaks of the gorgeous spectacle afforded nightly to visitors there, the mountains on the eastern shore having been one mass of fire for several days. Every evening the lake is dotted with boats filled with visitors from the different hotels, gazing on the entrancing display. All the hotels at the lake are well filled—the Mohican, the Wilson, Bay View, Fourteen-Mile Island, the Hundred Island House, etc.

NATIONAL SPORTSMEN'S CONVENTION

PROCEEDINGS AT CHICAGO.

The Convention organized on Tuesday, at Grand Pacific Hotel, Delegates present from Michigan, Indiana, Ohio, New York, Massachusetts, Illinois, Missouri, Pennsylvania and Tennessee. President J. V. Le Moyne delivered an address as follows:

* * I think our efforts will command more respect and attention when it is known that they are unselfish, that we strive to secure, not to ourselves, but to the whole people, and especially to those who come after us, what we believe to be a great blessing. One of our chief designs is to urge and demonstrate the importance of the preservation of the game, as a means of national education.

Every intelligent person will admit that whatever conduces to make a strong, stalwart, active, manly race, is of the first importance to us, individually and as a nation. Heretofore the condition of our country has made the needed demand. The efforts necessary to conquer a new country, to drive back the Indians, hew down the forests and to overcome all the difficulties which surround the frontiersman, have furnished the necessary stimulus, but now our people are crowding into large cities and manufacturing towns, and the physical struggle is being superseded by mental strife—health and strength are being sacrificed to secure wealth and position. We need some influence to maintain the balance, and the pursuit of game has in all ages of the world supplied this great need of humanity.

The real object of our present work is not so much to preserve the game for our own benefit—we can still find it—but its preservation has been wrongly neglected, and in this, as in many other important reforms, the present generation seeks to make amends to the future for the negligence of the past.

An earnest effort is now demanded or it will be too late; few persons who have not been interested observers would believe how rapidly the game is being swept away. We have a great many difficulties to encounter. We are opposed by the ignorance of the many, who have no conceptive view of the value of this blessing, and by the cupidity of the few who can only consider a petty present profit to themselves, and who seem in their selfishness indifferent, whether by killing the game out of season or by wholesale slaughter, the very seed is destroyed.

It seems strange that the legislatures of the Western States have never considered the value of game simply as a source of income which deserves their care. The game laws have all been passed at the solicitation of the sportsmen, and where not opposed, are at least treated with indifference by men who claim to be too practical for such weakness. I have heard legislators say that they did not shoot and did not care for the game, etc. In England and Scotland very large sums are realized from the game, and in Canada large sums are paid for the privilege of fishing; but here, although no charge is made for shooting on the land of any one, the States which abound in game realize a very handsome income from it. Take Iowa as an example. She has her spring duck shooting and snipe—woodcock in July, grouse, quail and ducks in August, September, October, November and December. I think it is a low estimate to say that she has a season of 175 days; for that reason it is safe to say, that scattered over the whole of that State there are not less than five hundred men from other States shooting there during the season. (I have made this estimate after consultation with a number of persons connected with railroads, and who know.) Each man will spend there—including his board, hire of teams, boats, men, boys, etc., etc.—not less than \$5 per day. This will give a total of \$187,500, brought into Iowa every year by non-residents. But this is not by any means all the contribution. Many of the visitors get interested in localities—see a piece of land for sale—either get some Eastern friend to buy and settle on it, or buy it themselves and throw away some money on it, or they lend some needy farmer the money to improve his stock, etc. Many a dollar is left in Iowa in some of these ways. But take the amount already computed—\$187,500—capitalize it, say at 5 per cent., (and this is as high a rate as the land will pay clear of all taxes, etc.,) and you have the game of Iowa constituting an interest of \$3,750. This would seem worth some little attention, even from the average legislator.

In 1870, Iowa had about six hundred thousand head of sheep, I believe, as a source of income, and treated only as wealth. Her game was worth more than twice as much as all her sheep; her farmers would not allow the sheep interest to be slighted. Some of our newspapers keep harping upon our duty to conciliate, and make the farmers our friends—perhaps the writers themselves do this, perhaps they know some certain plan for capturing the gentle granger—if so, they should give us the prescription. The farmers are just like the rest of us, they are indifferent to what they do not think is of interest to them, and the only way we can influence them is by educating them. Of all men, the farmer has the most interest in preserving game, and all insectivorous birds—they are his friends. Professor Riley, the State entomologist of Missouri, estimates that one grouse will, in one season, consume the eggs and larvæ of locusts enough, if hatched out, to destroy one hundred acres of crops. It must be a difficult matter to estimate the number of insects—the little birds searching the ground over every day the year through—will consume, and one such visitation—as some portions of the West had from the grasshoppers—would seem sufficient to teach the very ignorant that, when the regulations of nature are interfered with, the guards she has furnished are destroyed, the penalty is certain to follow.

There is, undoubtedly, a certain degree of prejudice against legislation on the subject of game. I presume the reason of this is that in a state of nature there is no right of property in wild animals, and they are the common property of all, and for that reason not proper subjects of legislation; or it may be considered that this object is beneath the dignity of the legislator—as an object of mere amusement—certainly it has always been difficult to get the attention of law-makers.

This prejudice cannot be derived from our English ancestry for they have had game laws from time immemorial, and although some of the laws were made to repress and keep down a hardy race inclined to rebellion, and to discourage the use of arms, yet at a very early day laws were made to preserve the game.

Our first great object is to arouse sufficient interest in

this matter to make proper legislation possible, when we shall have so far succeeded in our missionary effort, the question that presents itself is, what is the best form of legislation. My experience is that we can only succeed by punishing those who have the game in possession. Of course all game laws will prohibit the killing, but I have never yet known a case tried which did not wholly depend upon the proof of possession of the game. If I was obliged to choose between a prohibition against the killing or against the selling of game out of season, I would greatly prefer the latter; where one bird is killed by a man for his own use 100 are killed for sale. They are killed in out of the way places where detection and prosecution are impossible; they are sold principally in large towns and public places. No law will ever be worth enforcing which does not provide for the punishment of all persons who have game in possession out of season, no matter when, where or how killed.

The man who buys or sells game out of season must be held responsible as are those who sell stolen goods. Considerable controversy has arisen about the right to sell game in one State which had been killed in another State—not in violation of the law—and this defence has been greatly insisted upon. Each State must have the power to regulate the sale of any description of food, or indeed of any property, in its own markets; and it can be no defence in a prosecution for violating the law of one State that the act complained of was made legal by the law of some other State—or that the property while it remained within the confines of the other State might legally be sold and used. If this is not correct, then the officers of one State must administer the laws of other States from which they have no authority. Prosecutions for violation of the game law are usually tried before a justice of the peace. If the question of guilt is to be affected in the laws of other States, when the game may have been killed—the justice must understand and be able to administer the laws of all the surrounding States. This construction must not only be a rather unreasonable demand upon the legal resources of a justice of the peace, but it makes the laws of one State subordinate to those of other States. This position is not tenable, and the law of any State regulating the possession or sale of game is either valid or void under the constitution of that State, and wholly irrespective of the law of any other State.

But the man who kills the game or fish out of season, and the man who sells them, are not the only criminals. There is another, and he is scarcely ever reached; he is the one who furnishes the inducement to the criminality; who, either to gratify a low appetite, or a snobbish ambition for display, will pay a high price for game or fish out of season; he has been called "the wealthy gourmandizer." We must spread the information as to the unfitness and unhealthfulness of game and fish out of season, and people should know how unwilling the real epicure would be to use it, and how much of ignorance as well as bad taste is displayed by seeking it. By informing public opinion, its condemnation will be a great corrective. The most important object that we can accomplish is to excite public interest and extend public information.

Allow me to suggest that the usefulness of our game protective associations are being seriously interfered with by the trap shooting. I have no word to say of objection or condemnation of this amusement, or the men who pay so much attention to it. But I do object to the association of game protection and trap shooting. I do object to the game protective associations being used to arrange shooting matches—for the reason that a great many of the sportsmen who are interested in the preservation of game, are not interested in trap shooting, and they are beginning to suspect that the chief object of these associations is trap shooting, and they take no interest in them, and we are thus losing this element of strength—which I think it important we should secure.

I say this with considerable hesitation, and only because I think it ought to be considered. I have heard friends say that they took no interest in our State Association, because it seemed to be an arrangement for pigeon shooting—game protection being a secondary consideration. I trust this association may not have to encounter any such prejudice—we cannot afford to lose the support of any of the sportsmen—certainly not of those who have this correct appreciation of our object. Our friends who are given to this amusement, I know, would not desire it, and we should not allow the erroneous impression to be given or continued—that this association has anything whatever to do with trap shooting.

A great deal has been said about the importance of securing uniformity in the laws of different States. We hope that as this association brings together the representatives from different States, we may be able to agree upon an effort; but my experience is that it is difficult to get any legislation at all, not absolutely unfriendly to us. Frank Forester said this trouble all came from ignorance, and I concur. The game laws of any State might be a fair indication of the average intelligence of its legislature—and until you can secure equal intelligence and honesty of purpose in all the legislatures, I doubt if you can secure uniformity of legislation on any subject. Of course time and education will remove our troubles, but will it be removed before the game is game? We can only make an earnest effort to demonstrate now the importance of one object and the great blessing which may be secured to our whole people. We have every reason to be hopeful.

CAMP LOUNGES.—The Camp Lounge Company, which have advertised extensively in FOREST AND STREAM and other papers, have presented to this office two lounges which may be said to be really luxurious. They are very compact, light to carry, and are folded away in a morocco case, which itself constitutes a pillow when the affair is placed in position for use. It takes but a minute to do this, and the tired voyager is more than compensated for his trouble in carrying it by being kept clear of things that creep upon the ground, the dew, or even the rivulets that may chance to flood one's resting-place after a shower. There is a frame to hold a mosquito bar—so that, taken all in all, the Camp Lounge is a decided improvement upon the old bed of balsam boughs, with all its fragrance, which poets like to sing of when they have not lain out all night in the wet and got sap in their eye from the limb that projected over their heads. In the day time it serves its purpose equally well.

HAY FEVER.—The disease popularly known by this name numbers thousands of victims who are annually afflicted with its distressing symptoms, and obliged to suffer for weeks or flee to places where they will be exempt from its attacks. Persons constantly write to us, saying "Where can I go to find sport, and escape the hay fever?" The New York *Herald* has a letter from New Market, N. J., which will interest these sufferers. It is a little village among farms on the New Jersey Central road, 25 miles from this city. It has Revolutionary memories and relics, and will celebrate a little Centennial of its own next year, when it promises to bring together an astonishing number of centenarians, for this locality has long been celebrated for the longevity of its population. The deaths by lung complaints are said to be only one-third as many each year in New Jersey as in Massachusetts, three-fifths as many as in New York, and one-half as many as in the Western States. As for the country in the immediate vicinity of New Market, it is still lower. Wonderful accounts are related of the curative properties possessed by its peculiarly mild and genial climate, and of the remarkable cures effected in cases of chronic and acute asthmatic affections. It is asserted, and the proof presented, that the moment invalids afflicted with the disease in its worst stages were brought within the particular precinct that moment they began to breathe more freely, and in a comparatively short time the great difficulty and pain which they had experienced in respiration were almost wholly, if not entirely, removed. Whether it is the atmosphere, which, when the wind blows from the west, is remarkably dry, clear and invigorating; whether the marvelous properties are in the soil and absorbed by the air; whether it is the cool, refreshing, delicious water; whether it is any one of these, or all combined; there is no doubt that wonderful cures have taken place in every case of asthma which has been brought for relief to New Market heights. If the locality is all that is claimed for it, what a favorite resort it will become for the army of afflicted all the year round, for the beneficial effects are not confined to any particular season!

SHORT TRIPS OUT OF TOWN.—Occasionally the editor slips away for a Sunday respite to some one of the cool and attractive spots near the city which are accessible by a two or three hours' journey by rail or steamboat. The latter is always preferred, because the sail is of itself a pleasant excursion; the dust is avoided, the cool air invigorates, and the limbs are not confined as in a railway carriage. One will be surprised to learn how many pleasant resorts there are near by to which he can hie away for a day, or two days; and he will not know until he makes the experiment, how much the body and mind are refreshed and recuperated by the brief recess from business. Not to mention places accessible by rail, (and they are manifold) it is an advertised fact that there are no less than 49 points available daily by steamboats that leave the North River and 80 by the East River—making 129 in all. To almost any of these the "Can't Get Aways," might resort without serious loss of time, and with decided material gain, if they would only have faith to make the attempt. There is no excuse for the complaint that business prevents, for there is scarcely an occupation but will admit of brief temporary absences. The cost is trifling and the enjoyment benificent.

—Seth Green, Esq., has sent us some correspondence relative to the destruction caused to the fish in the Delaware river by the so-called eel weirs set in the stream, to which we referred in our last issue. The game laws bearing upon the case are sufficiently explicit and sweeping to include the offenders within their provisions. See sec. 25, chap. 433, Laws of 1872, as amended, which reads that no fish shall be taken in Orange county except with a hook and line, or spear, under a penalty of \$25 for each offense. But our editorial of last week was designed to go farther and show those who are inclined to cavil at the game laws, or question their legality, that they can be reached by a more general law which covers the rights and privileges of riparian owners and prevents their damaging the public. The destruction of fish purchased at public expense for the public benefit is a damage to the public, and the offenders can be held. These eel weirs take bass that are not big enough to take the hook.

"OH SCISSORS!"—We were somewhat startled last week by a foreign gentleman of agreeable address who approached our desk with a mien peculiar to wizards and magicians, and quietly *sans ceremonie* commenced to untie a pair of gleaming scissors which he held in his hand. First he broke the back of one blade, then of the other; put both legs over the shoulders, like a contortionist; turned the implement inside out; and concluded by wrapping the handles around the points, and making the thing swallow itself, so that at the finish it looked like one of those metal corkscrews which fold up into a horse-shoe-shaped handle. Before we had opportunity to manifest a becoming degree of astonishment, he gave the compact little tool a flip, and lo! it revealed the engraved words **FOREST AND STREAM** on the shining blade. No chance yet for expression of surprise, for with manipulation dextrous and quick, the magician produced a little morocco case out of the same secret receptacle, thrust the instrument into it, far out of sight and drew forth a pack of cards, directing our attention thereto. We suspected no less a person than the illustrious Mons. Cazenave, the French professor of *legerdemain*; but upon looking at the cards, which proved to be only business cards, we saw inscribed the name of Marx & Co., dealers in gloves at 430, Broadway. We looked at

Profesor Marx with an inquiring gaze, but in the twinkle of his eye, we detected mischief afloat and the quiet joke which he was perpetrating upon us.

Scissors! All editors have a weakness for scissors. When they are writing their best editorials they handle their scissors as abstractedly as a schoolboy whittles his bench while studying his grammar. Scissors! What a reinforcing mental power in time of need! We admitted their potency. We acknowledged them as ac-scissors-ies before the fact. We remembered that "*Scissors*" was the last word of the drowning woman as she sank beneath the surface with disputation on her lips. So we pocketed the imputation with the gift and promised to write this article; promised to show how much more convenient the necessary little implement was, closed up in this way, and how much less danger there was of committing suicide by accidentally falling upon the points, sticking out of our vest pocket in the old-fashioned way. Mr. Marx says he has a patent on this article and expects to make such a fortune out of it that the glove business will close like a morning glory at night-fall. He makes them of all sorts and sizes, from the editorial excerptist to the little implement used by fly-dressers: prices \$1 and upward.

CAPT. PARKER GILMORE KILLED BY A LION IN SOUTH AFRICA.—English papers announce the death of this well known author and sportsman. The British *Mail* of July 31st says:—

"A correspondent writes to us: Capt. Parker Gilmore, author of numerous works on travel, exploration, and natural history, and an old contributor to the *Field* and *Land and Water*, who has seen much active service while in the army, having served while in India, China, and the Crimea, for all of which campaigns he had received decorations, fired at and seriously wounded a large lion that had been prowling round his bullocks during the night, when camping out on the Limpopo. Near the wagon was a thick piece of thorn-bush, and here the maimed beast took shelter. All the Captain could do would not induce the bushmen to make an attempt to drive the brute out, so alone he entered cover. A shot immediately afterwards was fired, and his attendants believing it announced the death of the lion, ran up, but to their surprise, found the Captain down and insensible, with the lion gnawing his shoulder, while one foot was over the victim's face. His remains were taken to Tati or Bamangwato.

"Such a termination to the hunting career of this well known author was almost expected on the Limpopo; he was cautioned by experienced hunters about his rashness.

"Many a wagoner and transport rider when they learn of the Captain's fate will heave a sigh, for he was the kindest, most genial soul alive, and wherever his bronzed and weather beaten face appeared he brought jollity. In fact, his wagons and provisions, were free to all, and his purse whenever he met an unfortunate deserving aid."

During his last visit to America, Capt. Gilmore honored us with a call and though the interview was brief, it was sufficient to indicate that an acquaintance with the gentleman would grow in value as it ripened. We deplore, in common with the fraternity, the distressing event.

WHAT TWO ADVERTISERS SAY.—Whatever kinds of goods are advertised in **FOREST AND STREAM** seem to find immediate inquiry and sale. We are ourselves often surprised at the results effected. One reason undoubtedly is, that we make it a rule never intentionally to advertise what is not as represented, and another is that our constituency represents our best classes of wealthy men, who indulge in luxuries, and can afford to buy them. We publish two more letters of voluntary testimony to the value of our paper as an advertising medium:—

LISLE, Broome County, N. Y., August 21st, 1876.

EDITOR FOREST AND STREAM:—

In renewing our advertisement of the Baker gun, I take much pleasure in informing you that your paper has been of much value to us, and greater than we anticipated, although previously convinced of its worth. Our correspondence has been very heavy, no less than between 500 and 600 letters having been received as inquiries resulting from the advertisement referred to.

We now find that it will be necessary to increase our facilities for manufacture to meet the growing demand for our gun. Respectfully,
W. H. BAKER.

CANTON, New York, August 25th, 1876.

DEAR MR. HALLOCK:—

There has hardly been a day since my advertisement appeared in your paper that I have not received from one to eight letters of inquiry from all parts of America. I have sold all the boats I had on hand and all I could build. I would like to send one to your office and believe it would please you. Very truly,
J. H. RUSHTON.

BOGUS HAVANAS.—The pure "Havana" for which we are called upon to pay an exorbitant price, turns out after all to be a fraud and a sham. The *Voz de Cuba* has examined samples of tobacco taken from various warehouses in Havana, and found them to comprise the growth of Porto Rico, Santo Domingo, Honduras, and Kentucky. Connecticut was no doubt also represented. If we are to smoke brown paper cigarettes, and Yankee fillings and wrappers, we might as well make them at home. In fact it is worthy of notice, that the better grades of American cigars, not pretended "Havanas," are coming rapidly and deservedly into favor.

—Prof. J. A. Allen, of the Museum of Comparative Zoology at Cambridge, and a well known author, speaks of our journal as follows in a private letter:—

"I notice great improvement in **FOREST AND STREAM**. It is a most excellent paper. I am glad to see attention called to the needless and injurious destruction of our smaller birds. Too much prominence cannot be given to this important subject."

—The Lachine Boating Club of Montreal has just received from Troy its new four-oared out-rigger. It is a beautiful paper shell, rigged with sliding seats, and steered from the bow.

Rifle.

BETTER ARMS REQUIRED FOR OUR SOLDIERS.—Major Reno reports to the Chief of Ordnance, that in the Custer massacre, out of 380 guns used by his command, six were rendered unserviceable by a failure of the breach block to close, leaving a space between the head of the cartridge and the end of the block; when the piece was discharged and the block thrown open, the head of the cartridge was pulled off, and the cylinder remained in the chamber, whence with the means at hand it was impossible to extract it. Major Reno considers this due to radical defects in the construction of the parts of the gun, which do not always fit snugly together, or are liable to yield to the strain of the discharge and their own weight. An Indian scout, who was with that portion of the regiment which Custer took into battle, relates that from his hiding place he could see the men sitting down under fire, and working at their guns—a story that finds confirmation in the fact that officers, who afterwards examined the battle-fields as they were burying the dead, found knives with broken blades lying near the dead bodies.

Major Reno also says: "My loss would have been less had I been provided with some instrument similar to the trowel-bayonet, and, I am sure, had an opponent of that arm been present on the night of June 25th, he would have given his right hand for 50 bayonets. I had but three spades and three axes, and with them loosened ground, which the men threw into piles in front of them with tin cups and such other articles as could in any way serve the same purpose."

We shudder at such dreadful details at this, yet continue to send our soldiers into the field to fight bloodthirsty foes with arms which the first discharge ruins, and no means of forming a protection. We might learn a lesson from the very red-skins we fight. They had the best arms the United States could afford—Winchester repeating rifles of the newest pattern, and Colt's revolvers with the latest improvement. An Indian makes the possession of the best gun to be had his highest ambition, and begrudges no expense. The head men encourage this and help him to get it. But our head men are perfectly contented so long as the contractors at Springfield are, and trouble themselves very little as to the qualities, quite satisfied to let the poor fellows sit down in the midst of a terrific battle and tinker with their jack-knives the guns with which they must save their lives and those of their comrades.

Another point which requires attention, is the fact that the men engaged in these fights were armed with the short cavalry carbine, the effective range of which is probably not more than 200 yards. If we are forced to have cavalry to fight the Indians, why not arm them properly. It must be a delightful condition of affairs to be pitted against an enemy who can keep you always within range, while he himself is quite secure.

CREEDMOOR.—Notwithstanding that the only match shot at Creedmoor on Saturday was that for the Marksman's Badge presented by Mr. H. C. Poppenhuisen, yet the fine weather drew together one of the largest crowds that have assembled to witness a match of equal importance. The conditions of the match were that each contestant should fire five shots at 200 yards off hand, and five at 500 yards in any position. The following are the scores aggregating over 30 points, out of a possible 50:—

Name.	200 Yds.	500 Yds.	T'l	Name.	200 Yds.	500 Yds.	T'l

Many riflemen were out practicing for the fall meeting now close at hand. The Australian riflemen were present practicing for elevations, and one of them, Mr. J. S. Lynch, made 185 out of a possible 225 at the three long ranges.

THE AUSTRALIAN RIFLEMEN.—The Victorian branch of the Australian team arrived in this city on Wednesday last, and proceeded on the same afternoon to Creedmoor, where they met the Sidney branch branch, who were practicing. The newly arrived members comprise Capt. B. J. Wardell, who has never been beaten by a Victorian in either the Intercolonial or all-comers' matches; Corpl. T. Draper, winner of the Sarsgood Cup last year; Capt. H. J. King, winner of the same trophy in two successive years; Capt. A. M. Greenfield, Adjutant of the Ballarat Rifles, and Major J. T. Sleep. On Wednesday the Sidney branch in their practice made the following scores, firing 15 shots each:—

Name.	800 Yds.	900 Yds.	1000 Yds.	Total
J. J. Slade.....	69	69	66	204
Daniel Gee.....	63	67	63	193
Capt. J. McG. Smith.....	69	67	56	192
J. S. Lynch.....	74	60	50	184
Lieut. J. H. Maddocks.....	69	56	57	182

On the following day the newly arrived members tried their rifles on the to them new ground, making the scores below at the same ranges with 10 shots each:—

Name.	800 Yds.	900 Yds.	1000 Yds.	Total
T. T. Draper.....	45	46	38	129
B. J. Wardell.....	32	45	41	118
A. M. Greenfield.....	42	39	34	115

The members of the team have resolved to carry out four competitions among themselves, for the purpose of determining who shall go on the team proper and who on the reserve. These trial matches will take place, the first to-day, the second to-morrow, the third Saturday, and the fourth on Monday. After the matches a team captain will be chosen.

—The Metallic Cartridge Company of Bridgeport, are sending a large quantity of their goods to Turkey.

OUR INTERNATIONAL TEAM.—Tuesday and Wednesday being the regular practice days of the gentlemen comprising the American long-range team, they assembled as usual at Creedmoor on those days last week. The most noteworthy incident connected with the shooting was the remarkably fine practice made by Capt. L. C. Bruce, his scores heading the list on each day. As the conditions of 15 shots at each range are adhered to, we give only the totals, the highest attainable score being 225 points:—

Name.	Tuesday.	W'day.	Name.	Tuesday.	W'day.
L. C. Bruce.....	199	203	F. Hyde.....	169	192
Gen. T. S. Dakin.....	194	200	Maj. Henry Fulton.....	187	192
Isaac L. Allen.....	191	191	Lieut. A. Anderson.....	193	191
Lieut. Col. Farwell.....	193	198	L. Weber.....	withdrew	190
R. Rathbone.....	196	196	C. E. Overbaugh.....	171	187
N. Washburne.....	150	195	Maj. G. W. Yale.....	173	180
C. E. Blydenburgh.....	196	194	Maj. H. S. Jewell.....	189	167

On Wednesday the aggregate score of the eight highest men was 1,576 points, or 70 points higher than the highest score ever made for the Elcho Shield.

THE CENTENNIAL MATCHES.—The Adjutant General of the State has approved of the programme proposed for the Centennial matches to be shot at Creedmoor under the auspices of the Centennial Commission. The first part of the programme includes three international matches, one each at short, mid and long range, to be contested, the first two on September 12th, and the last on September 13th and 14th. The first of these is open to all comers at distances of 200, 500 and 600 yards, with any rifles, ten shots for each competitor at each range, the prizes being mostly Centennial Commission medals, aggregating for the two matches \$730. The International Long-range Match is for a Centennial trophy, to be held for future competition, and two medals of the Centennial Commission, which may be held without reserve. The match is open to teams of eight from all countries, with any rifle, at 800, 900 and 1,000 yards, thirty shots at each distance. The second part of the programme opens on September 18th. It includes an inter-State military match for the bronze statue of a "Soldier of Marathon," which shall be held for future challenge. There will also be a contest for the Wimbledon cup worth \$500, presented by the National Rifle Association of Great Britain, open to citizens of the United States only, at 1,000 yards distance. There are also two other prizes presented by J. H. Stewart, of London, optician of the associations of both England and America. During the latter part of the meeting the Irish-American return match will be shot on the same conditions as heretofore.

—At a meeting of the Joint Committee of the National Rifle Association and Amateur Rifle Club, held on Friday last, it was decided to have an excursion in the harbor of New York, visiting the fortifications and the excavations at Hell Gate Point on Monday, the 11th of September, and on Saturday, the 16th, an excursion up the Hudson River, stopping at West Point. On motion of Mr. Johnson the Committee on Entertainment was instructed to complete and publish the entire programme at the earliest possible date. Col. Mitchell, in behalf of the Banquet Committee, stated that it had been decided to hold a banquet to be given to the visiting teams at Delmonico's, on Monday, September 18th, instead of on the 15th, as had been previously determined. On motion of Col. Wingate, it was decided to erect awnings at the several firing points at Creedmoor, for the use of the competing teams on the days of the matches. A general invitation was prepared to be sent to the Joint Committee and officers of the National Rifle Association, inviting them to hold themselves in readiness to accompany the Reception Committee to receive the visiting rifle teams. The Scotch team will arrive by the Bothnia on August 28th or 29th, the Irish team by the City of Berlin on September 2d or 3d, and the Canadian team on the Erie Railway at 7:30 a. m. on September 8th.

THE RIFLE ON LONG ISLAND.—The weekly competition for the challenge gold badge of the Jamaica Rod and Rifle Association took place on their grounds on Saturday afternoon. The conditions were: 200 yards off-hand, any rifle not exceeding ten pounds in weight, trigger pull not less than three pounds, 10 shots each, targets same size as Creedmoor short range. The shooting was remarkable, the average score for each contestant being 42-1-10. Mr. Rogers making the best 45 out of a possible 50 won the badge for the fourth time this season.

THE SCORE.

George W. Damon.....	41	A. J. Wilkinson.....	34
James M. Oakley.....	41	Charles M. Prior.....	30

The third contest will take place on Saturday next. By the way, in our last issue the compositor transposed the "weekly" match of this club to the "turkey" match, much no doubt to the disgust of the members. "Turkey shooting at 200 yards, off-hand," the secretary of the club writes us, "is not our forte."

—At Oswego, August 13th, George White, of the Forty-eighth regiment, in practice, made the following scores, with a strong northwest wind:—

200 YARDS.	Total.	500 YARDS.	Total.
Score.		Score.	
4 4 5 4 4	21	4 5 5 4 5	23-44
4 5 4 4 4	21	5 5 5 4 5	24-45

RHODE ISLAND.—A match was shot at Newport on Saturday between a number of gentlemen, mostly summer residents, the prize being a Peabody-Martini rifle, the entrance \$5 each. The conditions of the match were, five

shots each at 500 yards. Of the 15 entries only seven came to the firing point, their scores being as follows:—

Name.	Score.	Total.	Name.	Score.	Total.
E. H. Totten.....	3 5 4 4 4	20	S. Powell, Jr.....	2 5 2 5	16

There was a sweeping wind blowing.

THE UTICA CITIZENS' CORPS.—This Corps held their annual trial of marksmanship at Alexandria Bay August 25th. The prizes were first and second gold medals, to be worn one year; third, \$10; fourth, a box of cigars; distance 100 yards; position off-hand; no sighting shots, neither was any member allowed to take his rifle from the armory for practice, and as there is no range at Utica anyone who wished to practice labored under great difficulty. There were 44 competitors. The following are the best scores:—

SYNOPSIS OF PROVINCE OF QUEBEC RIFLE ASSOCIATION MATCHES, HELD AT MONTREAL, TUESDAY, AUGUST 15TH, AND SUCCEEDING DAYS.

No. 1.—At 200, 500, and 600 yards; 5 shots at each; 25 prizes; highest possible 75; Rifles, long Snider. First prize won by Mr. O'Grady with 62.

No. 2.—At 500 yards; 7 shots; 20 prizes. First prize won by Mr. Blacktin, with 35 out of possible 35. Snider.

No. 3.—At 600 yards; 7 shots; 20 prizes. First prize won by Mr. Cruik, with 26 out of possible 35. Snider rifle; light bad, and heavy wind; IX direction.

No. 4.—Battalion match; teams at 5 men a side; distances 500 and 600 yards; 7 shots at each. Won by Three Rivers Regiment.

No. 5.—Wythe match, distance 400 yards; position kneeling; 7 shots in each, at 400 yards. Won by J. Mason, of Hamilton; score 32 out of possible 35; Snider rifle.

No. 6.—Association match, open to teams of 5 men a side from all associations in affiliation with P. of Q. R. A. Won by Montreal Garrison Artillery. Highest individual score Capt. Ralpe, 42 out of possible 50, at 500 and 600 yards, 5 shots at each.

No. 7.—Standing match 200 yards; rifle, Snider's. Won by Bell, of Toronto, with 30 out of possible 35; 20 prizes.

No. 8.—Strangers' stakes optional; Snider's, at 500 yards, vs. small bores, at 800 yards; 7 shots. Won by Harris, with 34 out of 35, after a tie with D. Mitchell; Metford rifle; 20 prizes.

No. 9.—Ladies' stakes; rifles optional, as in No. 8; Snider's to shoot at 500 yards, small bores at 900 yards. Won by J. J. Mason, with Metford rifle, with score of 47 out of possible 50, Mr. Fisher vs. A. R. C., New York, being second, with a Snider, scoring 44 at 500 yards; 20 prizes.

No. 10.—Small bore, championship match; 15 shots at 1,000 yards. Won by Mr. Little, of Toronto, with 64 out of possible 75.

No. 11.—Consolation match, at 200 and 500 yards; 5 shots at each. Won by McGillivray, with 45 out of 50, Snider rifle.

The weather on Tuesday, Wednesday and Thursday, was all that could be desired, but the wind was a very unusual one and most puzzling, varying from 11:30 to 12:30, and with large-bore rifles, like the Snider, very difficult to deal with. In first small bore match No. 8, wind was very squally; squally from IX quarter, with a dismal rain. In Nos. 9 and 10, light and wind were both good; wind over right shoulder. The entries averaged about 120 for match, and the shooting was extremely steady; in fact, misses were rarely to be met with at any distance. The management was good, and nothing unpleasant occurred to mar success at meeting. The Governor General's gold medal for highest aggregate score, was won by Mr. Slaw, of Danville, and to show the closeness of competition there were only 4 points difference between 10 highest aggregate scores. Mr. Mason, Jr., carried off aggregate prizes for small arms, and Mr. Cruik was second.

CANADA.—In the provincial rifle competition, at St. John, N. B., on the 24th inst., the National silver medal was won by Captain Bixley, with 83 points, at ranges of 200, 500 and 700 yards, seven rounds at each. The Governor General's silver medal was won by Lieutenant Warden, of the Eighth cavalry, making 84 points, and the bronze medal by Sergeant Hunter, of the Engineers, with 83 points.

—T. B. Brown, No. 1 Bond street, sends us a photograph of the badge presented by Mr. J. L. Mott, of Mott Haven, to the Eighth Regiment Rifle Club for competition at 200 and 500 yards. It is made of red, yellow and green gold, wrought in with platina. The arms of the State of New York are of red gold (satin finish) in semi-relief. The target is platina and black enamel, the markers in red, white and dark enamel. The rifle, which is an exact model of a Remington military, is of red, gold and platina. The laurel branch is green gold with bright buds. The

badge is beautifully finished, the combination of the different colors of gold and platina having a very pleasing effect. It is from the establishment of T. Kirkpatrick, 859 Broadway.

—There is some talk out West of choosing a northwest team to contest with Fulton's Creedmoor team for the championship of America, if not of the world.

—T. O. Kinney, of the Hartford *Courant*, has been appointed by Col. Hudson Superintendent of rifle practice for the First regiment, C. N. G., and will rank as captain.

Game Bag and Gun.

GAME NOW IN SEASON.

Moose, <i>Alces macchis</i> .	Black-bellied plover or ox-eye, <i>Squatarola helvetica</i> .
Caribou, <i>Tarandus rangifer</i> .	Ring plover, <i>Egialitis semipalmatus</i> .
Elk or wapiti, <i>Cervus canadensis</i> .	Squirrels, red, black and gray.
Red or Virginia deer, <i>C. virginianus</i> .	Stilt, or long-shanks, <i>Himantopus</i> .
Hares, brown and gray.	<i>agricollis</i> .
Reed or rice-bird, <i>Doichonyx oryzivorus</i> .	Woodcock, <i>Philohela minor</i> .
Wild turkey, <i>Meleagris gallopavo</i> .	Red-breasted snipe or dowitcher, <i>Macrorhamphus griseus</i> .
Pinnated grouse or prairie chicken, <i>Cupidonia cupido</i> .	Red-backed sandpiper, or ox-bird, <i>Tringa americana</i> .
Ruffed grouse or pheasant, <i>Bonasa umbellus</i> .	Gr. at marbled godwit, or marlin, <i>Limosa fedoa</i> .
Quail or partridge, <i>Oryz virginianus</i> .	Willet, <i>Totanus semipalmatus</i> .
	Tattler, <i>Totanus melanoleucus</i> .
	Yellow-shanks, <i>Totanus flavipes</i> .

"Bay-birds" generally, including various species of plover, sand-pipers, snipe, curlews, oyster-catchers, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

—The game market is bare—only a few woodcock at \$1.25 to 1.50 per pair. No arrivals of prairie fowl as yet. The weather is too warm.

—The season of rail and reed-bird shooting on the Delaware River opens on the 1st of September, and as the associations for the protection of game, both in Pennsylvania and New Jersey, are on the alert for those who are disposed to shoot in advance of the season, it is to be presumed that excellent sport will be found by legitimate sportsmen after the proper time arrives; and as rail shoot-as pursued on the Delaware River differs so widely from all other kinds of shooting, we presume that many sportsmen from the interior who are visiting the Centennial Exposition will avail themselves of the opportunity they will now have to indulge in, and perhaps distinguish themselves in, a day's rail shooting. Before breech-loaders were adopted it required considerable care in fixing up all things necessary for the rapid loading of muzzle-loaders, such as "rail boxes," shot cartridges, loading rods, &c. But now with a breech loader, which can be secured from a friend, or hired at a gun store, and with from fifty to one hundred properly loaded shells, say with two drachms of powder and three-quarters of an ounce of No. 10 shot, one is prepared to strike out for Chester or the Lazarita, where good, clean, tight boats and the most skillful pushers may at any time be obtained. As this kind of shooting is done altogether from a clean, dry boat the shooter requires no special change of clothing.

To show in what vast numbers this bird is sometimes found on the reedy flats of the Delaware River, a few years ago, while we were living in Philadelphia, we ran down to Chester, secured a pusher, and started out with about twenty other boats, and as all shooting ceases when the tide begins to fall, the boats return about the same time, when, by actual count, we found that the number of rail killed amounted to fifty per boat, making full one thousand birds killed at one tide, giving a little over three hours' shooting. On that occasion we killed one hundred and three birds, and one or two other boats did a trifle better.

In order to have the best show for a shoot it will be better to secure a pusher, which can always be done by application at the gun stores of Mr. John Krider, corner of Second and Walnut streets, or Mr. Abm. Peterman, in Dock street above Walnut, Philadelphia.

There is no law in this State protecting rail, but fair shooting may be obtained on the Hackensack meadows, especially in what used to be known as the English Neighborhood.

—The first English snipe of the season was flushed on the Hackensack meadows on the 27th inst. by our shooting friend, W. Justin Von Lengerke, of Hoboken. This is early in the season for *Scolopax Wilsoni* to put in an appearance.

—Mr. K., of Baltimore, to whose pigeon match with Mr. Engle, we made reference in our issue of August 17th, wishes us to state that he used a W. & C. Scott & Sons' No. 10 choke-bore gun, 10½ lbs. weight, imported for him by Mr. McComas. These two gentlemen have shot several matches recently, one on August 9th, 50 birds, 26 yards rise, Engle 36, K. 38; and another on the 16th, which resulted in a tie on 44 birds out of 50, which K. is inclined to think amateur shooters cannot beat. They shoot with one barrel only, at the Baltimore Club grounds.

NEW HAMPSHIRE—Laconia, Aug. 28th.—Fair bags of woodcock have been made this season, and prospects good for more as soon as the moulting season is over. Ruffed grouse shooting begins September 1st, and bids fair to be good, although injured some by lawless pot-hunters. For the last fortnight upland plover have been unusually plenty, but are now leaving every day. F. R. G.

CONNECTICUT—West Meriden, August 29th.—In nearly every part of this State quail are said to be quite plentiful, and the same may be said of ruffed grouse. Sportsmen may look for good shooting here this fall. F. R. G.

MASSACHUSETTS—Salem, Aug. 21st.—Up to Wednesday night the gunning at Ipswich was poor, but Wednesday night and Thursday morning it was pretty good. I saw 1 sickle-bill, 2 black-breasters, 10 summers, 1 robin snipe, and 68 peeps and ring-necks in one lot that were brought from "Eagle Hill." Was out on Gallows Hill pastures Thursday with a friend; we each got an upland, 2 summers and a snipe. Shot in Powder House Cove last Wednesday morning 11 black-breasters up Danvers river Thursday evening, and a bunch of about 40 summers alighted in Collins's Cove the same afternoon. Took a walk Sunday forenoon; saw 4 summers, 4 winters, 3 grass birds, 2 robin snipe and about a dozen peeps; called them all within easy range, but owing to the day and other folks' feelings I left my gun at home. Quail numerous; partridges about as usual; woodcock scarce and swamps dry. No uplands on the neck as yet. Teeters quite plenty. Some blue-winged teal are seen.

Advices from Ipswich, Rowley and Essex, give birds scarce. I was in at the killing of some 30 odd "Summers" and "Winters," grass birds and robins, snipe, peeps, etc., near this place on Saturday last. Shot a sora rail on last Monday—first this season—and the first English snipe on Wednesday last. A small bundle of "fowl" reported off Magnolia lately—species not ascertained. Woodcock scarce. Other shooting matters quiet. TEAL.

New Bedford, August 26th.—Birds are not plenty as yet in this vicinity. G. A. White, one of our best marksmen, shot 23 black-breasted plover and some few yellow-legs, &c., one day this week. CONCHA.

NEW YORK—Niagara Falls, August 25th.—There will be good quail shooting here, this fall, and good shooting is promised in Canada. The quail season in Canada begins October 1st; here November 1st, as per Supervisors' law, and October 20th, as per State law, (take your choice). There are no ducks here of any account before October or November. Woodcock are plenty I understand, although I have not been out after them. They are offered in the Buffalo market at 50 cents per pair.

HIRAM E. GRIFFITH.

PENNSYLVANIA—Chambersburg, Aug. 24th.—Wild turkeys are reported plenty on the North Mountain near Shipensburg. Several flocks of young turkeys have been seen by the farmers along the mountain.

VIRGINIA—Leesburg Aug. 25th.—A few bull-bats (birds like whippoorwills), doves and plovers have been killed here, the plover so far as to burst on falling to the ground. On August 25th two guns killed eight plover and six doves; August 26th 14 plover, 4 doves, 1 pigeon. No fishing worth mentioning. T. W.

WISCONSIN—Montello, August 24th.—No very large bags of game reported by sportsmen in this section. Considerable complaints were made of scattered and partially destroyed broods at the opening of the season, and it appears that despite the precaution taken, many birds were killed during the close season. This is indeed vexatious to true law-abiding sportsmen, and illustrates forcibly the want of game constables in each township where game abounds. The prospect for duck shooting still holds good; the rice and water vegetation is abundant, and the wood ducks are even now quite plentiful. FRED.

KANSAS—St. Louis, Mo., Aug. 23d.—Have just returned with a friend from Southeast Kansas near the Indian Nation, after shooting five afternoons from 4 o'clock until dusk. Bagged, or rather "wagoned" 207 grouse. The new Kansas law prohibits shipping game out of the State. I never saw birds so plentiful. I must have seen a thousand quail in the five days I was out, and most of them good of size. J. W. M.

NOTES FROM VIRGINIA.

NORFOLK, Virginia, August 12th.

EDITOR FOREST AND STREAM:—

I saw in your last issue a letter from Mr. W. F. Scherff, of Savannah, in which he speaks of a new invention lately patented by Capt. J. T. White, of that city, for loading paper and metallic shells. I can speak in the highest terms of this new invention of Capt. White's, and with one of his loading machines a sportsman has no need of a choke-bored gun, as he can regulate the shooting of his gun by a little practice to suit himself, and every sportsman should have one, as by its use he would be enabled to kill birds at distances that otherwise would be missed or perhaps but slightly wounded. For pigeon shooters they would be invaluable.

Business calling me to Lancaster, Pa., a short time ago, I had the pleasure of meeting while there Mr. H. B. Vondersmith, of that city, a keen and thorough sportsman. He has several fine setters in his kennel—black and tans, and red Irish. One of the latter he but recently purchased for a stock dog, from Mr. Chas. H. Turner, of St. Louis. Among the black and tans were his famous old Tom and Jim, from, I believe, Jas. T. Tilley's stock. He informed me more birds had been killed over Tom than over any other dog in that section of the State, and that both he and Jim were very hard to beat in the field.

The Norfolk Game Protective Association, of which Mr. J. A. Adkinson is the very efficient Secretary, has been and is doing a great deal of good in enforcing the game laws of this State, especially throughout this and some other sections which have been overrun with market shooters from other States. Any gentleman or party of gentlemen, from the North or elsewhere, coming here in search of sport, will be cordially and fraternally received by the members of the Association, who will do all they can to make their stay pleasant and afford them the best shooting to be had, but the professional market shooter had better stay away. Mr. Adkinson, who is a thorough sportsman, and one who can fully appreciate all the beauties of nature which so vividly present themselves in the forest and stream, is an old type, and was formerly one of the proprietors of the *Daily Virginian*, the most prominent paper in Norfolk, and one of the best by all odds published in the State, and is yet connected with it, and to him, Mr. W. H. Seabury, and others, your correspondent would hereby return thanks for courtesies received. GEORGIA.

MILFORD, Pa., August 20.

EDITOR FOREST AND STREAM:—

Pike county cannot be classified among those which boast of good woodcock ground, her high mountains and rough, rapid streams affording (as a general thing) poor feeding grounds for the birds; but the percentage of birds killed this season in comparison with others convinces

me that the migratory birds will double in numbers those of any previous season within my recollection.

On Monday last Halstead Wells, D. A. (better known as "Bub") Wells of this place; Hiram Westbrook of Ridgewood, N. J.; and Ed Bayliss of New York, took a boat and followed down the Delaware river thirteen miles, stopping at the best woodcock grounds along its banks, calling by the way on Mr. Scott, the genial brother of Genio C., whose residence is on the bank of the Delaware, and bagging in that distance 38 woodcock. They claim they could have killed "any quantity" of quail and partridges had they been in season, and seem to look forward with fond anticipations to the 1st of October, when the season for these birds opens. I have raised, in hunting woodcock this year, as many as nine beaves of pheasants or partridges in a day, the broods running from six to twelve; and if there are any sportsmen in New York who can shoot—not on paper, but in the brush—they can have a fine sport this autumn by visiting Pike county—five hours from New York—as they can by going to Iowa or any of the Western States. But first they must understand the brush is rough, the country hilly, and when they get a bird it will not be one of the kind they dream of which comes and sits on the end of their guns. I would advise about the 10th to 25th of October, when they may shoot any and everything. I do not intend this as an advertisement or inducement held out to sportsmen to come to Pike county to shoot, because it does not benefit me; but as a lover of the sport and a sympathizer with those whose business confines them to the city and who seldom have a day to spend. I assure them that in four hours they can be upon as fine hunting grounds as the country affords. To those who are more fond of fishing I will say the streams and lakes abound in black bass, but as the season with them opens the woodcock season your humble servant preferred "not the bass." As I am going to shoot to-morrow, and as the nights are short, I'll leave my description of partridge shooting until next time. MILFORD.

PIGEON MATCHES.

NEW YORK—THE SYRACUSE TOURNAMENT.—A grand pigeon shooting tournament was inaugurated at Syracuse on Wednesday of last week and continued for several days thereafter. The first day's sport was made very interesting from the fact that among the participants were several noted pigeon shots, the list including the champion, Capt. Bogardus, who, strange to say, was beaten in both matches; H. Silsby of Seneca Falls; F. Pearson, Cleveland, Ohio; F. A. Abbey, Chicago, Ill.; Greene Smith, Peterboro, N. Y.; F. Pearson, Cleveland, Ohio; Milton Hoag, Seneca Falls, N. Y.; T. A. Tucker, Providence, R. I.; M. M. Mayhew, Utica, N. Y.; and C. F. Wheel, Cleveland, Ohio. The first match was a sweepstakes at 10 birds each under the usual conditions, which resulted as follows:—

Name.	Score.	Name.	Score.
F. A. Abbey.....	10	F. Pearson.....	9
A. H. Bogardus.....	10	S. A. Tucker.....	9
William T. Perry.....	10	H. Twist.....	9
C. F. Wheel.....	10	Greene Smith.....	8
H. Silsby.....	10	R. H. Plank.....	8
M. M. Mayhew.....	10	M. M. Mayhew.....	7
Ed Hudson.....	10	Fred Frazier.....	7
J. A. Nichols.....	9	W. Swandown.....	6

TIES OF TEN—25 YARDS RISE.

Name.	Score.	Name.	Score.
Abbey.....	10	Hoag.....	5
Bogardus.....	10	Perry.....	4
Wheel.....	10	Hudson.....	4
Silsby.....	10		

SECOND TIES—31 YARDS.

Name.	Score.	Name.	Score.
Abbey.....	10	Bogardus.....	10
Hoag.....	10	Wheel.....	10
Silsby.....	10		

THIRD TIES—31 YARDS.

Name.	Score.	Name.	Score.
Abbey.....	10	Hoag.....	10

Mr. Fred Abbey of Chicago, won first money, \$28; Mr. F. Pearson won second, Mr. Plank third, and Mr. Mayhew fourth.

Following the first sweepstakes another under similar conditions was immediately started, and resulted as follows:—

Name.	Score.	Name.	Score.
A. H. Bogardus.....	10	H. Twist.....	8
C. F. Wheel.....	10	James Brown.....	8
Ed Hudson.....	10	J. H. Ten Eck.....	8
M. M. Mayhew.....	10	M. M. Mayhew.....	7
H. Silsby.....	10	Greene Smith.....	7
J. A. Nichols.....	9	S. A. Tucker.....	7
F. Pearson.....	9	W. Swandown.....	7
R. H. Plank.....	9	Charles McCommon.....	7
Charles McKinley.....	9	Major White.....	6
Fred Frazier.....	8	F. Abbey.....	5
William T. Perry.....	5		

In shooting off the ties of ten, each of the contestants killed five birds, and at 30 yards Messrs. Hudson, Hoag and Silsby did the same again, shutting out the champion. In the final round Mr. Hudson also killed five and took first money, Mr. F. Pearson took second money, Mr. Twist of Seneca Falls third and Mayhew fourth.

The feature of the second day was a double-bird match between Henry Gale of Syracuse, and M. M. Mayhew of Utica. They shot at 100 birds each, and made the remarkable score of 173 birds, Mayhew killing 87 and Gale 86. Another match, a little out of the ordinary, was between Ed Hudson and James Holloway, at ten single rises, 40 yards. This match was made to test the relative merits of guns rather than shooters, and resulted in Holloway's killing eight and Hudson seven. Both shot with guns made by Messrs. Nichols & Lefever of Syracuse, and the scores show that the guns were all right. Our space will not permit us to give the scores of the numerous other matches and sweepstakes, but the tournament was in every respect a decided success.

The attendance at the tournament Friday was less numerous than on the previous day. In the handicap sweepstakes, 21 and 26 yards rise, J. W. Schley of Savannah, Ga., took first prize; Wheel of Cleveland, the second; and Mr. Holloway of Syracuse, third prize. In the second handicap sweepstakes Mr. Wheel beat Hudson and took first prize, Holloway second, and Pearson third.

On Saturday, the last day, a match was shot between teams of two from the cities of Cleveland and Syracuse as follows:—

Name.	Score.	Name.	Score.
James Holloway.....	49	C. F. Wheel.....	46
Ed Hudson.....	42	W. Pearson.....	40
Total.....	91	Total.....	86

A strong gale of wind was blowing across the traps during this contest, which made the birds quite difficult to kill. The Cleveland team used the Parker gun, and the Syracuse the Lefever; and, by-the-way, the best shooting during the whole tournament was done by those who used the Lefever gun. SENECA.

TRAP SHOOTING.—Below will be found the scores shot by members of the Midway Shooting Club of Matawan, N. J., on the 23d inst. Sweepstakes, \$200 entrance; 1st

and 2d money \$10 to 1st, \$6 to 2d; 3 birds each; 21 yards rise, 80 yards boundary, 1½ oz. shot, H & T ground traps.

Name.	Score.	Name.	Score.
H. A. Warne.....	10	W. A. Dunlap.....	11
J. Wilson.....	0	J. Vanbrockel.....	11
William Beers.....	10	W. Clarke.....	10
Frank Hyer.....	0	F. Taylor.....	10

First money won by Dunlap, second divided between Warne and Vanbrockel.

Second Sweepstakes; rules same as above; 7 entries; \$3 each, \$21; \$14 1st and \$7 second money:—

Name.	Score.	Name.	Score.
H. A. Warne.....	11	W. A. Dunlap.....	11
J. Wilson.....	11	J. Vanbrockel.....	11
W. Beers.....	11	C. H. Warne.....	11
Frank Hyer.....	0		

H. A. Warne, Dunlap and Vanbrockel divided 1st money; C. H. Warne won 2d money.

Match for Club badge, 10 birds each:—

W. A. Dunlap.....	11	11	11	10	0	11	0
Steve Lambertson.....	10	10	10	11	0	11	0

Match for \$20, 10 birds each:—

Name.	Score.	Five.	Three.
Frank Hyer.....	0	11	10
James Wilson.....	11	11	11

Won by Wilson.

Rational Pastimes.

BASE BALL—THE PROFESSIONAL ARENA.

—Last week's play in the West closed up the series of League Pennant contests between the Western club teams, and the result of the contest leaves the Chicago Club in possession of the local championship honors. St. Louis can boast of winning "by a large majority" in the record of club vs. club, the score being 6 to 6 in their favor. They will play again next week at Rochester in an exhibition game, and will probably make a match of the kind in Brooklyn. It would pay them to do so. The League Pennant record shows the clubs occupying the following relative positions:—

CLUB.	Chicago.	St. Louis.	Hartford.	Boston.	Louisville.	Mutual.	Athletic.	Cincinnati.	Games won.	Games drawn.	Games played.
Chicago.....	6	4	3	6	9	5	5	10	42	0	54
St. Louis.....	4	6	3	3	6	7	6	7	35	0	52
Hartford.....	3	3	6	5	3	9	4	33	1	49	
Boston.....	0	3	2	2	2	3	9	6	30	0	52
Louisville.....	1	4	1	2	2	3	4	8	25	3	57
Mutual.....	1	1	1	2	2	2	3	6	20	1	48
Athletic.....	1	0	1	1	2	2	4	4	13	1	52
Cincinnati.....	0	2	1	0	2	0	2	7	0	52	
Games lost.....	12	17	15	22	29	27	38	45	205	6	176

—The model games since our last record are as follows:—

August 15—Meta vs. Alert, at Boston.....	5 to 1
August 15—Active vs. Aspen, at Taunton.....	5 to 3
August 15—Hemlock vs. Delaware, at Monticello, N. Y.....	5 to 3
August 15—Etna vs. St. Louis Red, at Detroit.....	5 to 4
August 16—Fall River vs. Rhode Island, at Providence.....	3 to 1
August 16—New Haven vs. Hartford, at New Haven (3 innings).....	5 to 5
August 17—St. Louis vs. Chicago, at St. Louis.....	3 to 0
August 17—St. Louis Reds vs. Jackson Mutual, at Iowa.....	3 to 0
August 17—Prairie City vs. Bluff City, at Polo, Ill.....	5 to 4
August 18—Indianapolis vs. Buckeye, at Indianapolis.....	2 to 1
August 18—Witoka vs. Mutual at Brooklyn.....	3 to 2
August 18—Louisville vs. Cincinnati, at Cincinnati.....	4 to 1
August 18—Chelsea vs. Irving at Honesdale.....	4 to 2
August 18—Eastern vs. Athletic, at Columbus.....	4 to 2
August 18—Bloomfield vs. Springfield at Springfield.....	5 to 3
August 18—Hartford vs. Boston, at Boston.....	5 to 4
August 19—St. Louis Reds vs. Etna, at Iowa.....	4 to 2
August 19—New Haven vs. Bridgeport, at New Haven.....	5 to 1
August 19—Rhode Island vs. Fall River at Fall River.....	5 to 3
August 19—Tecumseh vs. Standard, at Hamilton.....	5 to 4
August 20—Alert vs. Andon, at St. Louis.....	5 to 4
August 22—Buckeye vs. Alleghany, at Columbus.....	4 to 4
August 22—Alpha vs. Albion, at Brooklyn.....	5 to 2
August 24—Louisville vs. Buckeye, at Columbus.....	4 to 3
August 24—Somerset vs. Locust, at Boston (11 innings).....	4 to 3
August 25—Cincinnati vs. Louisville, at Cincinnati.....	3 to 1
August 24—Fall River vs. Lowell, at Fall River (10 innings).....	3 to 2
August 26—Louisville vs. Cincinnati, at Cincinnati.....	3 to 2
August 28—Star vs. Boston, at Syracuse.....	4 to 1

CRICKET.

—A match between the Manhattan and Staten Island Clubs on August 24th ended in a rather acrimonious dispute over a decision of the umpire. The contest ended with the appended score:—

A LIGHTHOUSE IN THE WILDERNESS.—Mr. Verplanck Colvin, who is now engaged in his survey of the Adirondacks, has a station on top of Blue Mountain from which a brilliant light is flashed every night at 9 o'clock precisely. It is seen at a great distance, and although intended solely for the use of the surveyors at other stations, is of great benefit to sportsmen and summer excursionists. At first they used to dodge the flash, thinking it a streak of lightning; but now they find it very useful to correct their time.

Northern RAILWAY OF CANADA AND Collingwood Lake Superior Line.

ONLY FIRST-CLASS ROUTE TO THE BEAUTIFUL INLAND LAKES OF CANADA AND
LAKE SUPERIOR.

Three express trains daily north from Toronto. Steamers leave Collingwood every Thursday at 6 P. M., on arrival of steamboat express, leaving Toronto at noon.

Parlor Cars on all Express Trains.

Lake Couchiching AND THE Lakes of Muskoka

Are the coolest and most delightful Summer watering places in Northern Canada. Tourists proceeding down the St. Lawrence can make a pleasant detour from Toronto to Couchiching in five hours on express train with Drawing Room Coaches, thus visiting the most charming of the chain of Lakes.

Excursion Tickets

At greatly reduced rates during months of July, August and September; may be had from COOK, SON & JENKINS, 21 Broadway, New York and Centennial Grounds, Philadelphia.

ALFRED TELFER,

Gen. Agt. Northern Railway, Toronto.

THE "FISHING LINE."

Brook Trout and Grayling Fisheries

OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equalled, in the great abundance and variety of fish contained.

Brook Trout abound in the streams, and the famous American Grayling is found only in these waters.

Brook Trout season opens May 1st.

Grayling season opens June 1st.

Black Bass, Pike, Pickerel, and Muscalonge are also found in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities offered to tourists and sportsmen; also on and after July 1st Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to Forest and Stream office, or address

J. H. PAGE, G. P. & T. A.,

Ferry boats leave New York, foot of James Slip, Sundays excepted, from 7 A. M. to 7 P. M., every 30 minutes previous to the departure of trains from Long Island City. Sunday boats from James Slip—9.30, 10.30, 11.30 A. M.; 1.2, 3.4, 5.6, 7 P. M.

Ferry boats leave New York, foot of East Thirty-fourth street, every fifteen minutes previous to the departure of trains.

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road, radiating from Chicago. Like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Nagaunee and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and via the Illinois Central, reaches Warren, Galena and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction, to Council Bluffs and Omaha. This last named is the "GREAT TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento, San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEESE, AND BRANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and Bass Fishing a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by any in the West.

MARVIN HUGHITT, W. H. STENNETT,
Gen. Supt., Chicago. Gen. Pass. Agt., Chicago

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMPANY

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTLING PARKS and RAC COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

The Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOVIA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

TROUT Fishing, Wing shooting, and Still Hunting.

Also, to TUCKERTON, BEECH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for "SALT WATER SPORT AFTER FIN AND FEATHER."

D. M. BOYD, JR., Gen'l Pass. Agent.

FRANK THOMPSON, Gen'l Manager. feb 17

The Infallible Fish Bait.

Having perfected a suitable Paste for Fish Bait, the undersigned offers same to the sporting fraternity, assuring them that it will prove more remunerative than any known substance for the purpose of angling. It is of a pale white color, square in form. By soaking in water a few seconds it becomes pliable. Taking a small piece, size of a pea, and pressing the same on or about the eye of the hook and using regular bait, any angler can kill to his heart's content. Price 2 cents each, post paid. Address JOS. LABADIE, Galveston, Texas.

THE

"Boston Shooting Suit."

(NAME COPYRIGHTED).

MANUFACTURED ONLY BY

G. W. SIMMONS & SON,
Boston, Mass.

SOLD everywhere in the U. S. by all first-class dealers in

SPORTSMEN'S GOODS.

EACH GARMENT DISTINCTLY MARKED

"BOSTON SHOOTING SUIT,"

made by

G. W. Simmons & Son.

This new design of WATERPROOF SHOOTING SUIT, made from extra quality duck, has acquired quick celebrity. Advertised for the first time in April last in the FOREST AND STREAM. In five months it has attained such popularity as to be called for from all parts of the country, and even from England.

"Shipping clothing to England strikes us very much like sending 'Coals to Newcastle,' but the merits of the 'BOSTON SHOOTING SUITS' have been heard of in the Old Country, and that land of sports men has sent an order to Messrs. Simmons & Son, which will doubtless be followed by many others. Our Editor-in-Chief, who knows something about a sportsman's requirements, is using this same equipment in the Adirondacks."—Boston Paper.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at \$13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloon.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the Golden Rule (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skilfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, water-proof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Bust Measure, Waist Measure, Inside Seam Coat Sleeve, Inside Seam Pantaloon; Mention Height and Weight.

W. H. HOLABIRD

Would most respectfully announce to his patrons and friends that he is prepared to make

Shooting and Fishing Suits

at the above prices. The ten dollar suit is better made than any competitor can offer for the same money. My original design having been appropriated by other manufacturers, I have been compelled to make many changes in the arrangement of pockets, &c., for which I have to thank the fraternity at large for suggestions. I believe that I have the BEST SHOOTING AND FISHING COATS IN THE WORLD,

and respectfully solicit your orders. I send my new Illustrated Catalogue, 16 pages, free on application.

Dealers will find it to their advantage to handle my goods. They are better known and more highly esteemed than any other make.

HAVING FREQUENT CALLS FOR our celebrated Vanity Fair "Frog Cartoons," beg to announce that we will mail the set, 6 pictures, to any address on receipt of 15 cents. This price covers only cost of postage and this advertisement. WM. S. KIMBALL & CO., Rochester, N. Y. Aug 31.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes Fg, FFG, FFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less recoil than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER CO.,

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the
 extreme SIMPLICITY, STRENGTH and DURABIL-
 ITY of their New Patent "SIMPLEX" Breech loader
 and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two),
 its mechanical soundness so thorough, and the
 strength and simplicity of the action so great, that
 W. & P. feel sure it will supercede all the complicated
 and manifold grips now in use, its one powerful grip
 being far stronger than any double, treble or quadruple
 grip now used. In this new action LEVER and GRIP
 ARE ONE SOLID PIECE OF STEEL and the AN-
 GLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on ap-
 plication, and orders may be forwarded through any
 of the best houses in the States for execution in the
 Spring.

Guns guaranteed to make patterns of from 160 to
 230 with No. 6 SHOT AT 40 YARDS, as desired.

For Forest and Stream.

A Day with the Ruffed and Canadian Grouse.

ON a lovely morning toward the end of September, W. and I started out from the country residence of a friend to have a day with the grouse. Never will I forget the glorious scene which, as we gained the summit of a hill, burst upon our view, and held us entranced in admiration at its matchless beauty. Far away in the distance lay the beautiful Bay of Fundy with scarce a ripple on its broad bosom, gently washing the grand old cliffs and headlands, "rock-ribbed and ancient as the sun," partially obscured by their misty mantles which, though torn and parted, still clung to them and disputed possession with the rosy morning sunlight nestling so coyly on their rugged slopes. In the mid-distance a belt of woodland reveling in all the gorgeous coloring of its ripened leaves, pale green and orange, scarlet and gold, mingled in glorious confusion, challenged your admiration, and at your feet the little village lay asleep, with its white spire soaring heavenward and bathed in the soft morning light. With regret we turned from the lovely scene, and whistling to heel our good dogs Rex and Gipse, resumed our onward march along the shore road, until arriving at a hard-wood ridge, we turned our dogs into the cover.

A description of the dog best suited for partridge and grouse shooting may not be out of place. The dogs we used on this occasion were the result of a cross between the Irish setter and spaniel. A dog broken to tree grouse is almost useless for any other kind of sport. He must be a diligent hunter, have a good nose, and when the birds are flushed give tongue lustily, watch when they alight, station himself at the foot of the tree and continue his barking until his master comes to him. He must also be a good retriever, or many wounded birds would be lost; when one or two birds are shot from a tree where several have alighted, those remaining fly off. The dog must then follow and take up his position under any tree upon which they may have again alighted, and continue barking until his master comes up, and so on until all the birds are *poted*—the latter word I use advisedly, and there is no concealing the fact that it is appropriate. I admit that in a day's shooting many shots are obtained at birds on the wing; but upon the whole the cover is so thick that most of the shooting is done at birds sitting upon trees. I have often seen a common, dirty, mangy cur prove a capital dog for grouse shooting, the only faults being that he can seldom be taught to retrieve, and is apt to pounce upon the bird the moment it drops and mouth it savagely. Frequently, when calling at country houses to inquire where the best ground for grouse was to be found, I have heard the merits of a dog owned by the occupant highly extolled. Upon one occasion, having expressed a desire to see the animal, something bearing a strong resemblance to an animated door mat was produced; on another, the proprietor holding my "bird dogs," as he termed them, in supreme contempt, kindly offered me the loan of two dogs of his, renowned in the neighborhood for treeing grouse; one of the animals was a dirty poodle—a regular

"Muff upon legs, as sits up and begs,"

the other I had in my simplicity mistaken for a tame fox.

To resume: We followed the direction our dogs had taken and waited patiently in hopes of hearing them give tongue, which desirable result not taking place we whistled them to heel, and turned them into the cover on the hillside. Presently we heard Rex give tongue, followed quickly by the whirring of wings and the peculiar note uttered by the cock grouse when alarmed. Hurrying on we found Rex prancing round a large beech, on which we discovered several grouse. At this moment Gipse barked sharply in another direction, and leaving W. I hurried to her aid. She was seated at the foot of an old birch eagerly looking up among the branches and quivering with excitement. I had some difficulty in finding out where the

birds were. At length I discovered a fine old cock grouse seated away up near the top of the tree, and just above I saw the head of another bird. Bang! bang! and down came two plump fellows. Whirr! whirr! whirr! away go the rest of the covey. Gipse followed them to their next resting-place. After loading I rejoined her. This time she was dancing round under a group of tall birches, but for the life of me I could not make out a bird on any of the trees, and was about to give it up, when I saw the leaves move away up amongst the topmost branches of the tallest birch. Looking intently I discovered what I thought to be the breast of a bird partly concealed by leaves. Bang!—I had fired at a piece of loose bark. Whirr! Whirr! flew the birds from a neighboring tree. Bang! and down came a bird—splendid shot on the wing, and worth all the others put together. Calling Gipse to heel, I set about retrieving the other birds. Being her first day out for the season she mouthed the first bird, but the administration of a little strap made her more careful, and the other birds were retrieved in beautiful style, which made me all the more sorry for what instantly followed. Having missed her from my side while reloading I was wondering what she was after, when I heard her whimpering away off to my right, then give tongue, and the next instant a fine buck hare bounded through the open with Gipse close behind. This being unpardonable, as I had taken especial care to break her from "fur" in her training for grouse shooting, the strap came into requisition again. I never have recourse to strapping unless compelled to it by dire necessity; had I shot the hare and passed over the above offense my sport for the day would have been ruined, as she would have hunted hares, squirrels, and all kinds of vermin indiscriminately.

Having bagged my game I hastened to rejoin W. I found him at the same tree where I had left him. He was in a state of great perplexity. He had shot one bird, and was unable to find any others on the tree, notwithstanding which Rex kept up an incessant barking, and it was evident that there must be a bird somewhere on the tree, which supposition was corroborated by Gipse joining in and giving tongue lustily at the same tree. After a careful examination from every point of view we felt convinced that the dogs were at fault, and were giving tongue to the old scent. Before calling them off I desired W. to secure a good position for a shot in case there might be a bird concealed in the tree. Then I picked up some dead branches and began to pelt the tree with them. After the third shot Whirr-r-r-r! flew a grouse from his hiding place away up in the topmost branches; just before he gained the dense cover W. knocked him over. Having retrieved the bird we jogged on in search of more game. After walking some distance we came upon an old winter road; in the true acceptance of the word road there was none. The trees had been felled to allow the passage of teams hauling wood in winter, but in summer it was barely passable for foot passengers. To follow one of these old roads often involves one in endless trouble, as they are intersected at short intervals by others of a similar description, and you are gradually led into a perfect labyrinth, and unless familiar with the country are apt to wander away for miles and experience great difficulty in finding your way out again. One is, however, often led to follow them from the fact that they are much frequented by grouse that come to sun themselves in the open. We had not walked over a quarter of a mile when the dogs began to whimper, then give tongue, and up flushed a covey of Canadian grouse. Bang! bang! and down go two. Bang! and down goes another. The rest of the covey flew into cover and were treed by the dogs. Hastening in the direction from which the barking came we found three birds in an old fir. W. and I each shot a bird. Whirr-r-r went the third, but the cover was so dense that we could not discover in what direction. Rex retrieved one bird, and although both dogs hunted the cover most thoroughly the third bird was not forthcoming. After a time they both returned to the tree and kept up such a row at the foot of it that we imagined there must be other birds on it. In vain we strained our

eyes—not a bird could we discover. Just as we were about giving it up I espied a dead grouse lying upon one of the topmost branches. How to get him was the question, which I solved by climbing the tree after a vain effort to dislodge him by throwing up bits of branches. Returning to the old wood road the dogs retrieved the birds which we had shot on the wing. Although many birds are lost by being left in this way to be retrieved at leisure, still there is no help for it; the dogs are broken to follow the birds when flushed and tree them, and if checked to recover dead birds the covey would be lost. We now sought a brook which we heard bubbling across the road, and sat down to have a snack and pipe. On the whole we had had a successful morning, having bagged two brace and a half of ruffed grouse and one and one-half brace of Canadian grouse.

Refreshed by our rest we started off again on the old wood road, and soon were cheered by hearing the dogs give tongue again. We found them both under a tree where three ruffed grouse had alighted. I shot one and the others flew off without offering any chance for a shot. W. followed the dogs and bagged another. While in the act of reloading I noticed the tops of the tall ferns by which I was surrounded waving to and fro, as if swayed by a gentle breeze. As there was not a breath of air stirring I was at a loss to account for the cause. Presently I heard the cluck of a grouse, and looking intently I discovered the head of an old cock grouse peering out from the ferns. Motioning W. to come up, I intimated to him what I had seen, and it being a fine open space and likely to afford a shot at the birds on the wing, I moved forward and flushed them. Whirr-r-r-r-r! up rose a covey of nine birds. Bang, bang, bang! two splendid right and left shots. Up came the dogs at the report of the guns, and four fine birds were retrieved. The dogs then began beating about on the old scent, and to our surprise flushed three grouse under our very noses. I admit that in ordinary shooting it is out of all order to permit your dogs to range to empty guns. However, in grouse shooting some laws are more honored in the "breach than in the observance," and the dogs, after retrieving, are allowed to go on ranging at will. Having reloaded we again found the dogs giving tongue under an old fir; but so dense were the branches we failed to find the birds. It is surprising when in the pursuit of grouse how far one will wander away without being aware of it. We fancied that we were not more than a quarter of a mile from the old wood road, but we walked full four times that distance without finding any trace of it, and at length came out on a path which I at once discovered was not the one which we were in search of. However, as the ground was favorable for grouse, we pursued it. Presently we heard the dogs yelping in front of us. After much hunting we came up with them, almost concealed by tall ferns under a group of beeches upon which a covey of grouse had taken up temporary quarters. W. fired and missed; I killed one bird and W. knocked over another on the wing as they went off.

The dogs showing signs of fatigue, and the day wearing on we decided to return. To do so it was necessary that we should first find the road. We set off in the direction in which we supposed it to be, and tramped for half an hour through dense forests without finding any trace of it. A brook intercepting our way, we followed it in hopes that it would cross the old wood road. No such luck was in store for us, and it became evident that it was leading us still farther into the forest, which latter fact became more apparent every moment as we groped our way through ferns and brakes, growing so luxuriantly as to hide us from each other. "I say, W., where are you?" "All right, old boy, come on." On emerging from the brakes I found him leaning against the trunk of a tree, in the most perfect picture of wilderness which the wildest imagination could conceive. Overhead the branches and leaves were woven into a net-work so dense as almost completely to exclude the daylight. The bark of the old beeches and maples were covered with lichens and mosses brown and weather-stained. On some of them, grew strange boles and ex-

crecences resembling the claws of wild animals, and apparently the growth of ages. Monstrous toadstools, and rank poisonous looking flowers revelling in a dark luxuriant growth clustered about the roots, and underfoot a carpeting of richly hued mosses yielded to your slightest pressure. In places huge granite boulders lay piled together forming arches over strange cavernous openings in the soil, probably leading to the den of wolf or bear. No twittering bird on joyous wing, or chattering squirrel leaping from bough to bough, cheered us with their presence. No sunbeams glittering between the branches, and topping the leaves with gold charmed our sight. In the gloomy twilight horrid owls on silent wings, fluttered about like evil spirits—fit occupants of the dreary scene. On the decayed stump of an old beech sat one of these harpies feasting on the palpitating vitals of a hare, which he held tightly clutched in his talons. For sometime we were quite at a loss as to how we could best extricate ourselves from our unpleasant dilemma. Listening attentively we heard what we thought to be the tinkling of a cow bell, but felt doubtful about putting any trust in it, the sound being imitated to perfection by the moose-bird, which I knew to my cost, as on a former occasion when retreating from a day's fishing with a brother sportsman, now in South Africa, we were overtaken by darkness in a dense forest, and followed for some time the tinkling of what we took to be a cow bell, but which proved to be a moose-bird. Finding out our mistake we halloed, in hopes of being heard by the friend at whose house we were visiting. We were heard and answered, and led on from a comfortable fire on dry ground, until we reached a swamp, when our friend thinking that some one was mocking him gave up hallooming in reply to us, and we had to spend the night in a dismal swamp. At daylight what was our chagrin to find that we were within a few rods of the main road, tearing that the cow bell might also prove a mere will-o'-the-wisp, and lead us still deeper into the mazes of the forest, we did not accept of its guidance. Once or twice we had heard a strange sound resembling the booming of distant cannon. Sometimes we could hear it distinctly, then it would fade away like the wind sighing among the trees, again we could hear it at measured intervals, and noting the direction from which it came we felt convinced that it was the surf breaking on the sea shore. As we had utterly failed to find the old winter road and the prospect of our doing so was not very encouraging, we decided upon trying to reach the coast.

After traveling for about a mile in the direction of the sound, we could hear the surf breaking on the shore quite distinctly, and pushing on with renewed spirits we at length arrived at a small bay and clambered down the cliffs to the shore.

I at once recognized the place as the scene of a former excursion in quest of wild ducks. I knew the ground sufficiently well to be aware of the fact that if we followed the shore for about two miles, we would be able to regain the main road. Although pretty well fagged out, we had no time to rest, as the tide was rising rapidly and darkness creeping on apace. It seemed that we were getting out of the trying pan into the fire, or in our case read water, as on reaching a prominent headland, we discovered that the tide had stolen a march upon us, and we had to double the pace, walking to our knees in water. On reaching *terra firma* we found ourselves in a regular *cul de sac* between two headlands. There was not a moment to be lost, and we started at racing speed along the beach with our dogs at our heels. But the advancing tide was again victorious, and the surf rolling in huge waves over a mass of rock which had become detached and fallen away from the mainland, barred our progress. We were both good swimmers and by abandoning our guns and game, we might swim around the cape, but I was not sufficiently familiar with the ground on the other side to warrant me in encouraging my friend to risk it. The only alternative left was to try and find a place in the cliffs which we could scale. In this we signally failed. The cliffs rose clean and smooth for fully 100 feet above our heads, without presenting sufficient footholds for a cat. Some ten feet above the shore there were one or two places where we might get standing room, but as there was evidence of their not being above high water mark, it would have been more folly to risk it. We were at our wits' end. Casting my eyes about in despair of finding any way of escape I noticed a reef of rocks jutting out into the bay; the end nearest the shore was covered with sea weed, but at the extreme seaward end the rocks rose to a considerable height, forming what I afterwards learned was called the Thumb Cap. They looked dry and were comparatively above high water mark. This seemed the only chance left us, and we determined to try it. The tide was rising rapidly and even now washed our feet, and the surf almost carried our legs from under us as we gained the slippery, weed covered rocks. With great difficulty, and in constant peril of being washed off, we clambered from rock to rock, encouraging each other and accompanied by our faithful dogs, who casting wistful glances into our faces, seemed to enter into and sympathize with our mutual danger. At one point we thought that we would have to abandon our guns, but W. succeeded in gaining a secure footing, and I passed them up to him. After desperate exertions we reached the highest pinnacle of our eyrie, and completely exhausted we seated ourselves on the bare rock. Rex was with us but Gipsy was missing. Looking down from our perch, in search of her, I saw her swimming for the rock upon which we were seated. She must have lost her footing and slipped into the water. To attempt to reach her was a perilous undertaking, but with the assistance of W. I determined to try it. Creeping down the rocks as far as practicable, I lay out at full length, W. bracing himself and grasping my leg to prevent my slipping off. The moment I put out my hand the intelligent animal swam to it, and allowed me to drag her up. And all of us reached our perch again in safety.

It was now sundown, and our little rock was completely surrounded by the tide. On the shore where we had stood a few moments ago, the waves were rolling in and spending their fury on the old cliffs, recalling in the most vivid manner Tennyson's beautiful:

"Break, break, break, at the foot of thy crags, oh! sea."

For weary hours we sat upon our airy perch. The first hour was one of intense anxiety to us as we were not certain that we might not be washed off by the surf if the wind rose. Fortunately it was perfectly calm, and with delight we hailed the first indications of the falling tide. With a feeling of inexpressible relief we filled our pipes and chatted over the adventures of the day. As soon as the tide permitted, we came down from our pinnacle and walking along the beach for two miles we found a break

in the frowning cliffs, which we were able to scale and in a few minutes reached the main road.

PASSAMAQUODDY.

THE LUNENBURGER'S MISTAKE.

TRUE or false, that amusing story of Uncle Dan'l and the Mississippi steamboat in Clemens and Warner's delightful "Golden Age," has a parallel in a Nova Scotian tradition concerning the truth of which, if we are to believe its possessors, there is no shadow or shade of doubt, being "raal fact—every blessed bit of it."

It is not generally known nowadays that the first steamship which crossed the Atlantic—the Savannah, of American build, launched in 1817—was also the first to visit Halifax, after her return from Europe. Two fishermen, father and son, from the neighboring Dutch settlement of Lunenburg were plying their vocation on that memorable occasion. All the day had been calm, but luck poor; and nightfall found them with only half a "fare," drifting off the entrance to Halifax harbor, and the guiding light of Lambro twinkling in the distance like a star.

"Hans," said the father, "you 'member now vat I says. Ven you zee von lighthouse dwinkle ash dat shost now, vy dot means haze; und haze means von fine night, und py-and-py a leedle cloudy. Und in cloudy und galm vedder der visch pite like zharks. Dis fare so leedle ve got now not vorth dakin' in, Hans; zo ve stays out all night, und goes home in der mornin' mit her full to the kunnel, my zon—vat you dinks?"

"All right, vauer," said the obedient Hans, in ready acquiescence.

Hours went by. A brisk rally, in which the bites came so thick and fast that our fishers scarce had time to clear their hooks for the next cast, had passed, leaving their boat with room for but little more, and the Dutchers were drowsing over their cold lunch like men who know that they have plenty of time and can afford to luxuriate, when suddenly appeared on the dusky horizon, as to the elixir-seekers of Bulwer's "Strange Story," a vast and solitary eye of fire. Its rapidity of approach over the becalmed waters excited the wonder, and then the fear of the observers. When at length the grimy, uncouth hull and *oultre* rig, the huge black funnels, disembodying vast volumes of red-illuminated smoke, the fierce flash of molten slag and cinder pouring from beneath the sponsons into the hissing sea, coupled with the thunder of the paddles, the loud pant of escaping steam, and dismal clank of the engines burst upon eye and ear, their terror was complete. They fell upon their knees, but their frozen tongues refused to utter the confused appeal for mercy and protection that took part shape in their bewildered souls. And thus they remained until the awful apparition drew abeam, then passed astern without sign of notice, and with undiminished speed closed rapidly in with the land. Then our fishers, hopeful of having escaped observation, recovered their suspended speech. Hans was first to break silence. With a long breath, he ejaculated rather than asked:—

"Mein Gott in Himmel, father! Vat ish dat?"

Slowly the answer came in bated breath:—"Sh-h, ton't spoke zo loud! Hans, my zon, dat ish der tufel."

Hans cogitated. Presently the monster disappeared behind Lambro Head. Then Hans grew bolder, and skepticism began to rear its "brazen front" amid his thoughts. "Fader! You dink zo dat dings vas the tufel vor sure?"

"My zon! Vat else coodt it be?"

"Vell, fader, I dinks it might be Oldt Ponybarty. He knows the plack art, you know, and b'raps he made der tufels make him dat concern to get off St. Helena mit, und now bees gomin' to kill der Englishmens, und plow up der citadel, purn der town, und zink der fessels."

Hardly were the words uttered than the awful shriek of the steamer's whistle raved among the hills, and tore the silence asunder. Down fell the Dutchmen—this time prone among their fish—but when the unearthly scream ceased, Hans cautiously raised his head. "Mein Gott!" he ejaculated, "is it gomin' pack for us?"

"Bray, my son, bray," responded the old man. "I can't. It ish der tufel, poy—nopoddy but der tufel can snore, und grunt, und fessel all in one breat' like ash dat!"

"Vell, I s'bose it must be," conceded Hans, "cos I hear der beeples always say dat the tufel is comin' to Halifax. But I don't nefer hear somedoddy tell dat he vas goin' to pring all hell mit him, pesides." N. W. BECKWITH.

For Forest and Stream.

NOTES FROM TENNESSEE.

NASHVILLE, Tenn., August 5th, 1876.

IN the early times of Middle Tennessee, the territory at present occupied with bright grain and waving corn, was densely thronged with tall, grim sentinels of the forest. It was populated by a tribe of aborigines, through whose agency the heavens were often illuminated with the flames arising from the huts of adventurous settlers, the work of whose ready and willing hands and quick brains was destroyed in a short time. Cereals now grow upon, and handsome residences mark, the spots where the earth drank the red life-blood of hundreds of brave, hardy men, against whom the savages waged a fierce warfare. In the turbid waters of the Cumberland and its numerous tributaries, the noble buck slacked his thirst and laved his feet. Trees, which are now frequented by the agile squirrel, deceitful opossum and pugnacious raccoon, were formerly the retreat of the shaggy bear and fierce panther. Wolves were plentiful in several counties, now known as such, but then not designated by such an appellation, as the organization of the State was prevented by the many serious obstacles presented in the way of Indian massacres and destruction of camps. Volleys were fired upon persons ascending or descending the Cumberland, and the whizz of the leaden messengers of death was succeeded by many a death-shriek, and often replied to in such a determined manner that the pale moon looked down upon the inanimate forms of red men, whose acts had been rewarded with bullets fired by those, many of whose relatives had fallen by the hands of painted warriors.

Since the settlement of the greater portion of this part of the proud old Volunteer State, the destruction of game of all kinds has been prosecuted with such vigor, that but a limited quantity is now left. Thanks to a wise legislature, a law for the preservation of game in certain counties was enacted. It provides that deer shall not be hunted or killed from March 1st until September 1st in each year, nor other game from March 1st until September 15th. The excellent effects of the law are visible among enlightened

sportsmen, although there are many possessors of guns in the rural districts who recognize no law in that respect, but continue to bag game out of season. Having resided among the hills and valleys so long, they do not consider that a body of men can prohibit them from hunting game on their own premises. It will, in all probability, forever remain a mooted question, whether or not a farmer can be prevented from hunting certain game on his farm during the time forbidden by law. Still, the intelligent farmers have observed and felt the necessity for such a law, and are ready and willing to abide by it. The feeling of unity which usually dwells among sportsmen, and connects them with a bond of respect and admiration, does not exist here as much as it should. However, that will, in all likelihood, be appreciated by all, and the wants supplied by a more thorough organization.

There is not, according to my opinion, a better way in which to enjoy life, than in the delightful occupation of rambling through the woods in quest of the nimble squirrel or through a field, following a trusty pointer in search of partridges. It is while doing this, that one can commune with the beauties of nature, and breathe the pure, fresh air of heaven. The sport is exciting, and the warm blood courses through every vein, making one feel invigorated, and thankful to an all-wise Providence for the pleasures provided for His creatures.

FERN.

HUNTING AND FISHING IN VIRGINIA.

BERKELEY SPRINGS, Va., Aug. 22d.

EDITOR FOREST AND STREAM:—

As I am in a quandry, I must get you to help me out. The letter I wrote, and which you published, has been the cause of my getting a number of letters of inquiry in reference to the hunting in this country. Some of these letters have been in the post office since June, directed to P. Clayton, (without the Pendleton attached) and the Post Master only gave them to me this morning, which I hope will be a satisfactory excuse to the persons who wrote for my not having answered them before this. In answering the many letters of inquiry that I have received I have thought that through the medium of your paper I could answer all at once as the inquiries are generally the same.

First.—The way to get here from the North and East is to Baltimore, thence by Baltimore and Ohio Railroad, 123 miles to Sir John's Run, a station on the B. & O. R. R. and two and a half miles from this place, which is reached by stage. Second.—It is 461 miles from Cincinnati by B. & O. R. R. Third.—Board can be gotten here from \$6 to \$17 per week. At most of the country houses they will charge \$6, some of them \$10, and the hotels \$12 and \$17 per week. The fare in the country is plain but good. The hotels first-class. My suggestions to those who wish to come, is to rent a tent 12x14 feet with a good fly and plenty of blankets (also India rubber) and pitch the tent near some farm house where they can get their meals and have everything quiet and to themselves; also a change of good stout clothing, coarse heavy boots, a good gun, energy and endurance. With these success will follow, provided the parties have the coolness necessary, and can shoot at all. It is no child's play to hunt in this country. One must be determined to take hard and fatiguing ramps and obey the instructions given by those who know the habits of the game, and the reward will more than pay for the effort. I took my first hunt yester ay, since the expiration of the game law. I must have seen 30 or 40 ruffed grouse, a number of squirrels and two foxes. I killed six ruffed grouse, six squirrels, and one fox, as much as I wish to kill and have to carry on a hot August day; and this was done over green dogs, one of them a cocker, six months old, presented to me by Mr. C. H. Raymond of your city. I have chosen the name of Mark for him and when I get anything uncommon out of him I will give you his pedigree and record. I think he will make a fine turkey and grouse dog if he ever gets over the scare of being brought here by express. He evidently was jerked and hauled about by the Express Agent, and it requires all the gentleness I am possessed of to get him to come to me. We have quite a number of gentlemen here at the hotels who are doing some fishing. Mr. Latrobe, of Baltimore, and Mr. Biddle, of Philadelphia, have been quite successful with the artificial fly. Mr. Biddle took a 42 pound bass the other day with a fly, the first one of that size that has ever been taken about here with artificial bait. Parties of two or three go nearly every day and bring in from 20 to 50 to each party, ranging from half to two pounds apiece. From the first of September until January the hunting will be very good. The woods are filled with game and the hunters are bringing in to the hotels deer, turkeys, grouse, and squirrels. One day the hunters brought in nine wild turkeys. I have just been called upon by a young man of the village to tell me that he was after a fine flock of turkeys, but could not kill any, so I must go and try my hand at them as they are only a mile or so from town.

P. CLAYTON PENDLETON.

Fish Culture.

—A Convention of the American Fish Culturists' Association will be held at Judges' Hall, on the Exhibition Grounds at Philadelphia, on the 5th, 6th, and 7th of October. At the close of the convention it is the intention to give a banquet, at which the entire bill of fare will be of all kinds of fish found upon the Pacific or Atlantic coast.

—An extensive propagation of eels is carried on at Comacchio, near Ferrara, Italy, not far from the mouth of the river Po. Extensive ponds have been hemmed in and partitioned off by a labyrinth of dykes, sluices, and canals, into which they ascend from the sea when very young, and where they are detained for about five years before arriving at a condition to be taken. The average annual catch exceeds \$250,000 in value, and the whole town is engaged in the industry under systematic control. Most are roasted and the flesh packed for exportation. Some are simply pickled or salted, and others dried.

CONNECTICUT RIVER SHAD FOR CALIFORNIA.

We have been favored by Prof. Baird with the following report of the shipment, by the U. S. Commission of Fish and Fisheries, from Holyoke, Mass., to the Sacramento river, Cal., of 100,000 shad under the charge of Messrs. F. N. Clark, and T. H. Bean. It will be observed that the transportation was most successful, the fish arriving in good order:—

Mr. F. N. Clark left Holyoke, Mass., on Tuesday, Aug. 1, at 7:30 p. m., with 9 cans (100,000) fry, and 2 water cans. Temperature of water at Holyoke was 75°. This temperature was changed gradually until the cans ranged from 70 to 72.

T. H. Bean joined Mr. Clark in Cleveland, on Wednesday, August 2. Left Cleveland at 7:40 p. m., Wednesday,

Aug. 2. All the fry in good condition—the oldest seeming to want food. Temperature of all the cans, 70°.

Arrived at Chicago at 8 a. m., Thursday, Aug. 3. Here the fry were all transferred to clean cans. With the aid of the letter of request from the Central Pacific Railroad, and through the courtesy of Mr. Geo. Revett, Assistant Superintendent Chicago, Rock Island and Pacific Railroad, passes were obtained for ourselves and the cans from Chicago to Council Bluffs.

Arrived at Council Bluffs at 10 a. m., Friday, August 4. One can of fry was distributed to the remaining 8 cans, to make room for water. Cans were transferred to a Union Pacific through baggage-car. In Omaha we worked steadily to keep temperature down, not allowing it to go above 72°. Left Omaha at 12 noon, Friday, August 4. Fish all doing well, and temperature of cans 69° to 70°, while the air was 74° at noon, and 76° at 1:25 p. m.

Reached Elkhorn river at 1:30 p. m. Conductor held train for us while we filled two pails with water, temperature 79°, and somewhat roily. It is said by persons who live near Elkhorn river, that it is now well-stocked with species of eastern fishes, the progeny of the shipment accidentally deposited there in 1873.

It was necessary to have a large supply of river water at Laramie. Conductor M. M. Patterson, telegraphed ahead to have water meet us, as the river is some distance from the station. Unfortunately, the telegram did not get there in time. Conductor Heath allowed us time to get 3½ cans of Little Laramie river water at Wyoming, 16 miles west of Laramie. This supply was to last 18 hours.

After leaving Wyoming, the temperature of the cans began to fall. When they had reached 66° and 67°, which they did at 9 p. m., on Saturday, August 5, it was necessary to make a fire in the baggage car. After water was warmed, there was steady work until midnight to keep the temperature between 68° and 70°. Temperature of air was 51° outside the car. The stove was very useful until 7:30 a. m., on Sunday, August 6.

Sunday, August 6, 12 noon, temperature of air 82°. Arrived at Evanston at 1:30 p. m., Sunday, August 6. Here we distributed one can of fry through the remaining seven, to make more room for water. Took 3 cans of water from Bear river, temperature 66°. This was a timely supply as we had traveled 18 hours without taking water.

Arrived at Ogden, Utah, at 6:15 p. m., Sunday, August 6. Found all necessary arrangements satisfactorily made for us by the Supt. of Central Pacific Railroad, through the influence of Mr. B. B. Redding, Land Commissioner of C. P. R. R., Mr. R. H. Pratt, Supt. Salt Lake Division of C. P. R. R., had the cans transferred, and his men filled the water cans with Weber river water.

Between Ogden and Humboldt no water was taken. The distance is 459 miles, and the time 23 hours.

Arrived at Humboldt at 5:05 p. m., Monday, August 7. The hose leading from the spring was brought into the car, and our water cans filled where they stood. Temperature of water 66°. Good water was obtained with little trouble between Humboldt and Sacramento.

At 6 p. m., Monday, August 7, near Rye Patch, temperature of air was 76°.

Tuesday, August 8, 2:30 a. m. Took water at Truckee, temperature 48°. As the temperature of cans was 68°, and reserves of water rather cool, the Truckee water had to be used very cautiously until we reached Blue Cañon.

Arrived at Blue Cañon at 5:30 a. m. Secured enough warm water (not hot) to keep the cans from falling lower. They were now at 66°, and we had no stove in the baggage car. The warm water at Blue Cañon tided us over this difficulty, for by 8 a. m., cans were again at 68°, and at 9:30 a. m., they stood near 70°.

Arrived at Sacramento at 10:15 a. m., Tuesday, Aug. 8, with the fry all alive, but some very weak. Mr. B. B. Redding, Mr. S. R. Throckmorton, Mr. Livingston Stone, and Mr. Bassett (of Sacramento), met us at the depot with many inquiries concerning the trip, and the present condition and prospects of the fry. Gentlemen pressed towards us from all sides in their eagerness to see the diminutive shad so long expected, and so seldom seen on the Pacific side. Members of the press came early for information to set before the public. Great interest was shown in all the processes for the proper care of the fry. It was doubtful whether they could be taken to Tehama until water was brought from the Sacramento. Although roily, it proved to be good, and soon revived the weak fish, so that there was no fear of losing them on the way.

Left Sacramento for Tehama at 3:10 p. m. With plenty of good water and ice the rest of the journey was simple and easy. Mr. Redding and Mr. Stone accompanied us to Tehama, and congratulated us heartily on the condition of the fry. At 9:05 p. m., Tuesday, August 8, the fry were planted successfully in the Sacramento river at Tehama. Temperature of the river 72°, which was the temperature of our cans. Great enthusiasm was manifested at the close of our successful journey, and many persons, assisted in moving the cans from the depot to the river.

The entire loss was less than one per cent. Lowest temperature reached was 65°, highest, 72°. Longest time without fresh water, 23 hours. Lowest temperature of air, in car would have been 51° without stove, and the highest was 86° in Sacramento valley.

Coolest water taken was 48°; warmest, 79°. The only real difficulties seemed to be the scarcity of water containing food, and the fatigue to the fry and those who have them in charge. We received uniform good treatment and timely assistance from railroad men all along the route. California hopes yet to receive a full car load of shad.

The first shad taken in the Sacramento in 1873, and now preserved in the California Academy of Sciences in San Francisco, was shown to us during our visit. It is, without doubt, a true *Alosa sapidissima*. It has the appearance of a two-year old fish. A specimen 23 inches in length, said to be a shad by the same persons who pronounced the above a shad, is exhibited in Sacramento. A pair of shad, we were told, were embraced in the menu of a notable feast in San Francisco recently. Fishermen at different points along the coast of California and Oregon, have reported the taking of fish which from the description must be shad, and Indians have taken the same fish in traps in the Sacramento.

—A. R. Fuller, Esq., of Meacham Lake, New York, writes September 4th, in a way to encourage fish culturists:—

"My operations with the fish here begin to tell; I find an increase in trout in the Lake and Clear Pond, also in the minnows and sunfish in Clear Pond, and at small cost."

EEL CULTURE IN GERMANY.—With a view to encourage the increased production of the eel in Germany, the authorities of the Hünningen Piscicultural Institution have made arrangements for the supply and sale of a large quantity of eel fry; the latter to be imported annually from the North of France. The results obtained in the ponds of the institution, and the opinion expressed by its director, Mr. Haack, that eel culture if properly conducted, either in ponds or lakes, would pay well, have already induced a number of landed proprietors and others to order for experimental purposes from 1,000 to 20,000 head of *montée*, as the fry is called in French, and in the majority of cases the young eels arrived at their destination—Treves, Nuremberg, Schweinfurt, &c.—in healthy condition. Experience has shown that they travel best in cool weather, packed either in metal or wooden boxes between the moistened leaves of aquatic plants or moss. At the expiration of twenty-four to thirty hours they should, if possible, be freshened up by exposure to a lively current of water, and will then bear another twenty-four's journey. No particular care need to be taken in turning out the eels, but before doing so, fresh water from the pond should be added to that in the transport-vessel in order to equalize the temperature. At Hünningen, the ponds destined for eel raising are to be stocked at the same time with carp (yearlings), a similar description of water being suitable for both fish. The ponds in question have no regular in-and-out flow, but the water in them is let off and renewed once a year, late in the autumn. The same diet given to young salmon and trout (viz., chopped meat freed from sinew and gristle) will be tried first. That even without any artificial food eels make rapid growth, is proved by the experience of the well-known eel fishery at Comacchio, in Italy.

Concerning the geographical distribution of the eel in Germany and Austria, it may be mentioned that the fish is met with to some extent almost everywhere, except in the Danube and its tributaries, i. e., in the basins inclining to the Black Sea. The most elevated waters in which it has been found are lakes Montigler and Terlag (2,200 feet) in South Tyrol. Of so-called "sea" or "blank" eels—which according to Münter, are exclusively females—considerable quantities are captured on dark nights off the coast of Pomerania from the middle of August to the middle of October, before the commencement of the breeding season. From Stralsund and Pylitz, in the above province, a large number of eels, both smoked and fresh, are despatched every year to Poland, Romania, and Russia; while on the other hand, most of the eels consumed in the Prussian capital come from Denmark, being imported via Stettin. Finally, as to the eels known as "lücksale," these are furnished by Hamburg and neighborhood.—*Pied*

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Sciaenops ocellatus</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Archosargus probatocephalus</i> .
Salmon Trout, <i>Salmo confinis</i> .	Striped Bass, <i>Roccus lineatus</i> .
Land-locked Salmon, <i>Salmo Gloveri</i> .	White Perch, <i>Morone americana</i> .
Grayling, <i>Thymallus tricolor</i> .	Weakfish, <i>Cynoscion regalis</i> .
Black Bass, <i>Micropterus salmoides</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
<i>M. nigricans</i> .	Spanish Mackerel, <i>Cybius maculatum</i> .
Masacouche, <i>Esox nobilior</i> .	Cero, <i>Cybius regalis</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Bonito, <i>Sarda sarda</i> .
Yellow Perch, <i>Perca flavescens</i> .	Kingfish, <i>Menticirrhus nebulosus</i> .

For list of seasonable trout flies for September see our issue of July 27th.

FISH IN MARKET.—All kinds continue rather scarce. Quotations give striped bass as selling at 16 to 25 cents per pound; bluefish, 10 cents; salmon, frozen, 40 cents; mackerel, 10 to 20 cents each; weakfish, 15 cents per pound; white perch, 15 cents; Spanish mackerel, 30 cents; green turtle, 15 cents; terrapin, \$12 per dozen; halibut, 18 cents per pound; haddock, 8 cents; king fish, 25 cents; codfish, 10 cents; blackfish, 15 cents; flounders 10 cents; porgies, 10 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 8 to 10 cents; sheepshead, 25 cents; scollops, per gallon, \$1.50; salmon trout, 18 cents; brook trout, \$1; soft clams, 40 to 60 cents per hundred; soft crabs, \$1.25 per dozen; hard crabs, \$3.00 per 100.

—In the last *Spirit of the Times* Mr. Genio C. Scott, the chief apostle among striped bass fishermen, gives the fraternity information which they are asking for. He says:—

"Now commences the season for striped bass fishing. Already several fine messes have been taken from waters in the immediate vicinity of the city, and with a good rushing shower with some wind to drive away the innumerable sand-porgies, after the waters settle, and with a goodly northern breeze and neap tides, angling will be first-rate above Hell Gate, in the Kills, Harlem River, and along the shores and about the Islands of Long Island Sound, also at the English Neighborhood Bridge, on Chesapeake Creek, four miles south of Amboy, at the bridge and lighthouse at the south end of Newark Bay, in Kull Von Kull, at the bar above Fort Wausworth, and, for small bass, at King's Bridge. Two anglers took on Thursday, August 24th, twenty-seven striped bass, with shedder crab bait, along the shores of the island above Hell Gate, the largest weighed nine pounds, and there was not one under a pound in weight. It was elegant sport with their light tackle, and the rather rapid and sparkling waters of the sound approach toward the Gate. At the Long Bridge, between Bergen and Elizabeth Points, there have recently been several messes taken, twelve pounds having been the largest bass reported, though several persons have had their tackle ranted, and the stately-striped beauties went on their way rejoicing. Angling on the bays about New York is greatly interrupted by the innumerable shoals of sand porgies, to the great disgust of the angler who pays over a dollar a dozen for shedder crabs, and fishes up several dollars worth without capturing a fish worth saving. But this is not the case around the islands belonging to bassing clubs, where the surf is continually "rushing and roaring."

Those of our readers who make frequent inquiries for good fishing near New York are respectfully referred to the above.

—H. H. Thompson, Esq., the piscatorial cashier of the Erie Railroad, along whose picturesque route dozens of lim-

pid trout brooks tumble, has just returned from a trip to the North Woods, where he has had such a good time that, in his generous spirit, he wishes everyone else had it also. He writes to us saying:—

"If any of your friends want to camp in September or October, on the most beautiful lake in the Tract, away from beaten routes, and with a faultless guide, send them, for full particulars, to me."

—Messrs. John Parks and Heber Arnold, of St. Johns, New Brunswick, returned home on August 31st after a fortnight on the Restigouche river, where they killed fifty four salmon. The salmon season in New Brunswick is now over for netting, it having been extended to September 1st by special enactment, on account of the late season; nevertheless the catch has been but a little over two-thirds of the average of the past five years, and following, as it does, the poor catch of last season, it will bear especially hard on the fishermen of the North Shore. The catch of 1873 was above the average; that of 1874 nearly double the average; that of 1875, less than two-thirds average, and this year's not much better. The catch has been in about the same proportions at the Islands of Miramichi Bay and up the river.

—A large sized eel story comes from Voluntown, Conn. It is said that an eel weighing eleven pounds and six ounces, was caught by one of a party of fishermen at Voluntown, Conn., lately. Porgies are quoted at eight cents a pound in our market reports, but at New London, in the Thames river, they are so plentiful, that all you have to do is to bait your hook, throw in, and pull up—that is, if you admire the sport, but to the poor of that city it must be a great blessing.

MASSACHUSETTS—Milton, Aug. 29th.—A salmon has just been taken in the pool below the dam by W. S. Thayer, (with an eel spear). It was two feet long and weighed five and three-quarter pounds. GEO. S. ESTLY.

—The Irish salmon fishery has been an unprecedented success in all the rivers this year. In one of them 1,117 salmon were caught with one shot of net.

FISHING MOVEMENTS.—The past week has been characterized by a little quietness in the movements of the fleet, there having been but 54 arrivals against 84 of the week previous. Of the 54, 27 were from mackereling, 17 from Georges, and 10 from the Banks. The receipts have been 4,700 barrels mackerel, 238,000 pounds Georges codfish, 1,500,000 pounds of Bank codfish, and 5,100 pounds of halibut. The mackerel brought in have not been of first quality; these will come a little later. The market is well sustained, and good fish of all kinds are wanted on orders direct from western houses.—*Cape Ann Advertiser, September 2d.*

NEW JERSEY.—Kirsey's Ashley House, Barnegat Inlet, September 4th.—Weakfish dull; striped bass biting fair, and some good catches made; blackfish and sea bass plenty, and from 40 to 60 per boat taken by our local fishermen; sheepshead scarce, few were taken off the stone piles on the 1-1; bluefish, small size, quite plentiful. J. H. Tingley, of N. Y., took 23 to day, and still catching them at time of writing. B.

SALMON FISHERIES OF SCOTLAND.—Notwithstanding that rod fishing for salmon in the north of Scotland is almost at a stand still on account of the lack of water in the streams, net fishing at the mouths of the rivers and along the coast has been eminently successful. The salmon fishings on the Sutherlandshire coasts have been prosecuted with great success of late. Two smacks are regularly employed in conveying the fish for despatch by train either to Sirome or Thurso, as the wind favors. One cargo, which did not include the entire week's catch, amounted to over seventy boxes, containing nearly two thousand salmon. On Friday one of the smacks landed at Scrabster thirty-one boxes, containing eight hundred salmon, which were despatched by train for the London market. On one day a haul of eighty fair-sized salmon was obtained at one of the stations near Thurso. The season's total catch is greatly in advance of that of last year at the corresponding date. A most favorable state of the fishings at the Duke of Richmond and Gordon's station at Lossiemouth is also to be reported, some of the takes being really extraordinary. In addition to a heavy haul of over five hundred fish with one net, the crews had one day last week about two hundred fish, and on Tuesday morning they landed some three hundred fish of heavy weight and prime quality. The part of these same fishings at Port Gordon, managed by Mr. James Norrie, produced an unusually large sized salmon last Wednesday, a fish measuring 52 in. in length, 28 in. in girth, and weighing 56 lbs., was found in the nets. Another salmon weighing 41 lbs., was caught the same day, and the general takes have been otherwise good.

RICHARDSON LAKE.

UPPER DAM CAMP,
LAKE MOHONK MOUNTAIN August 30th.

EDITOR FOREST AND STREAM:—

Knowing your wish to keep posted on all that appertains to sporting I send you a few lines from this famous fishing resort that may be of interest to your many readers some of whom I have no doubt are even now packing their valises and fishing rods for the September fishing. Within the past ten days the fishing has markedly improved, there have been several cool, frosty nights that have brought the trout from the deep parts of the lakes, and sent them into the inlets and up to the dam. Two five-pounders and some ten or twelve fish weighing from one and a half to three pounds each have been taken from the apron of the dam, the trout rising to a fly very handsomely. The long spell of warm weather here seems to have broken up, and the water is growing cooler and the fishing better with each day.

In coming here this year I tried a new route, which I would recommend to your readers, as it is remarkably pleasant, and has some advantages over the Farmington route, the way I have always come before. There has been a new steamer—the Henry B. Simmons, a fine screw propeller 42 feet long and 10 feet beam, with nice roomy cabins and standing rooms—placed on the lake, and it makes daily trips from here to the south arm of the lake, where it meets the teams from Andover. It stops each way at the Middle Dam, giving passengers an opportunity to get on or off. Persons who have crossed the Rangeley Lake, exposed to a driving rain in the boat that runs on it, will appreciate the warm cabin of the Simmons. By this route one leaves Boston over the Eastern or Boston and Maine Railroads, changing to Grand Trunk at Portland, by which they are carried to Bryant's Pond, and from there to Andover by stage, arriving at 8:30 in the evening. Stop here the first night, and in the morning take Thomas's teams for a 12-mile ride through the woods,

reaching the Arm of the lake in three hours and a half. The steamer is at the Arm in waiting and leaves on arrival of the teams, reaching this place at 3 o'clock. The scenery between Andover and the lake is wild and picturesque, and is well worth seeing. There are several places of special interest on the way, such as Silver Ripple Cascade, the Devil's Den, Hermit Falls, Black Brook Notch, the Devil's Oven, etc.

There are quite a number of people stopping about here now. At this camp there are six, at the Middle Dam camp there are six, and about the shores of the lake five or six camping parties are scattered, all enjoying themselves, and all obtaining a new lease of life, from pure air, good food and healthy exercise. At Camp Bellevue (private) are Mr. Betton, one of the proprietors, and a party of his friends, numbering five; at J. P. Whitney's camp (private) at Mosquito Brook are Mr. and Mrs. Whitney and other ladies and gentlemen, numbering a dozen in all.

Game seems to be more plenty here this season than ever before, and quite a number of deer and caribou have already fallen before the guns of the Nimrods who have been here, in spite of the law, which does not allow shooting until October. Of partridges and ducks there is really no end, and I have counted 15 coveys in a day. The weather here now is delightful—the days warm and pleasant with cool nights and mornings. If any of your readers have not yet had their vacation, let them come down here if they are fond of fishing and gunning and appreciate mountain and lake scenery. This camp is now in first-rate shape, good rooms and clean beds, and if a man can't sleep here it is no fault but his own. The cuisine is excellent, and is under the charge of Mr. Joseph Cumming, for whose cooking I have the greatest respect, and whose call, "Dinner is ready, gentlemen, dinner," is one of the *bon mots* of the English language. More anon. FISHER.

Natural History.

SCIENCE AT BUFFALO.

CLOSE OF THE SCIENCE ASSOCIATION—SKETCH OF RESULTS.

MUCH to our regret we have found it impossible to print the remainder of the letters of our correspondent at the American Science Association meeting in Buffalo. The accumulation of matters connected with the Centennial has crowded out everything less precisely within our limits. It would be quite impossible, at any rate, for us to give anything but brief notes of the immense mass of papers introduced to the Association in the section of Natural History and Geology and its subsections of Anthropology, Microscopy and Entomology. The more obscure subjects of the processes of generation and embryonic growth, alternated with the plain phenomena of surface geology, or were succeeded in rapid succession by papers on anatomy, development, botany and paleontology. The papers in general did not exceed 15 minutes in length, and were all listened to with close attention, while the brief and racy discussions brought out by them were often of quite as much value as the papers themselves, but unfortunately are not preserved on the records of the Association. One feature of the meeting has been the number of essays read by younger members, some of which have attracted marked attention, while others have been met with merited disapproval from the older members. On the other hand, the presence, if not the contributions, of many of the oldest of American scientific laborers, has been noticeable. This year, more than ever before, the adherents to the Evolution Theory have preponderated, and there really was no one of sufficient calibre and pluck to combat the idea, so that there was scarcely an appearance of opposition to it, while the idea, no doubt, received additional confirmation in the minds of all from the accounts of investigations and discoveries during the year supporting the theory—particularly those of Prof. O. C. Marsh, who, Prof. Huxley said, had made certainty of what was before hypothesis. There is no denying the deep hold this progressive idea has taken upon science in this country.

The newly organized subsection of Anthropology were very busy during the whole week, and accomplished a vast amount of work, but were somewhat discouraged, for though the papers read were of the highest order, and the audiences were good, only a small group of the special students of man's early existence attended. The questions they seek to answer are, the origin and constitution of man, physical and spiritual, his geographical origin, primitive condition, and antiquity; the unity or plurality of the race, the mental and physical peculiarities of races, and the natural causes affecting them; the motives, the guides, the barriers, and the bounds of migration, especially on this continent; progress, degradation, simultaneity and sequence of culture; the influence of heredity, hybridizing, endogamy, and other customs upon progress of civilization; the origin, transformation, and affinities of language; the rationale of beliefs, rites, and cults; the history of morality, of laws and government. This is a broad prospect, but the immense amount of material for it in America is just beginning to be appreciated.

This meeting will therefore be a memorable one in many particulars; not only for the large attendance and unruffled harmony, the new developments, and the presence of distinguished and revered visitors, but for the lavish hospitality and boundless good will which Buffalo and her great-hearted citizens manifested from first to last.

The meeting closed on Thursday, and most of the members and their friends went to Philadelphia, partly for the Exhibition, and especially to attend the International Convention of Archaeologists on the 4th instant.

NEW LAND SHELLS FROM COLORADO.

NEW YORK, Sept. 1.

EDITOR FOREST AND STREAM:—

Mrs. M. A. Maxwell is now exhibiting at the Centennial Exhibition a large number of specimens of natural history from Colorado. Her home is at Boulder, which is at the head of Boulder canon, in the high mountains west of Denver. Among other things she brought with her a quantity of land and fresh water mollusks, collected in the vicinity of Boulder. They are of particular interest as being the first lot which have been brought east, to my knowledge, from Colorado, since I made the collection reported upon in the Report of the Hayden Surveys for 1874, which comprised the whole of the then known molluscan fauna of the State. Mrs. Maxwell's shells are of further interest as coming from the eastern slope of the

Range, where I succeeded in finding almost nothing at all near Berthoud Pass or at Colorado Springs. It has therefore occurred to me to give your readers a brief account of this collection, as follows:—

Zonites arboreus, Say. A few specimens.

Zonites fulvus, Drap. Several examples.

Patula Cooperi, W. G. B. Among the large number of specimens several are marked very distinctly from all the rest with "broader longitudinal and spiral patches of reddish brown," or burnt umber, as is mentioned in Binney's original description, but which I never before saw so marked. They are difficult to distinguish from *P. solitaria*. As usual nearly all of the shells were found dead. The species seem to be dying out.

Patula striatella, Anth. Four specimens.

Helix pulchella, Müll. Abundant.

Cionella subcylindrica, L. A few.

Vertigo—? An exceedingly minute *Vertigo* with toothed aperture is represented by three specimens, but I cannot yet determine it. I procured none so small.

Succinea lineata, W. G. B. Several specimens.

Succinea Nuttalliana, Lea. Two examples.

The Linneas I am not now in position to pronounce upon at sight, but they are numerous and all small. If any prove to be different from *L. desidiosa* they will probably be found to be *L. humilis*, or *Traski*, or both. I obtained all three in Colorado in 1874. To the apices of three specimens "from an alum spring" are attached long beards deposited by the water.

Physa heterostrophica, Say. There are many specimens of different sizes, shapes and degrees of fragility. It is hard to draw the boundary of variation here. Some of the specimens are thickly coated with rust from the iron-waters in which they have lived, and others with a white deposition from accumulated water. I got them in great abundance everywhere among the mountains.

Physa ampullacea, Gould. A dozen specimens as near typical as can be expected. I did not obtain it, but it has been recorded from Oregon, Washington Territory and Northern California.

Physa ancillaria, Say. One specimen. Hitherto found only in Ruby Valley, Nev.

Physa mexicana, Philippi. I have had no chance to compare the shell before me with an authentic *mexicana*, but the description in Bland and Binney's work fits as precisely as can be. It has been quoted only from Mexico.

Panorbis tumens, Cp. This I have identified also from description and figure, but feel very confident of it; it also is a Mexican species, but extends up the Pacific coast. One specimen only.

Panorbis (Helisoma) plexata, Ing. Three examples of this species first described from my specimens, are among this lot, the largest and oldest one showing the twisted appearance very plainly.

Panorbis bicarinatus, Say. This well-known shell is now first reported from Colorado, but has been found on the Yellowstone. They are of average size; the common *P. trivialis* is not included.

Gyrulus parvus, Say. Vast quantities of this shell, very common in Colorado.

Ancylus caurinus, Cooper. Three specimens, very small, and possibly the same as *parallelus* which Mr. E. A. Barber found in Colorado in 1874.

Lioplax subcarinata, Say. A dozen very fine specimens, now first reported from the west. There are also several thick and heavy paludinas which I do not recognize. Their spires are entirely eroded.

Sphærium striatulum, Lam. Two fine specimens. Occurs at several points in the mountains, but not hitherto reported from Colorado.

Pisidium abditum, Hald. A large quantity with many young ones. I found it abundant throughout the State in 1874.

There are two anodons also which I have not identified; one is brown, with a blue, lustrous interior, and the other clay-color, thin, and almost diaphanous. The unios and anodons are very rare in the southern Rocky Mountains. ERNEST INGERSOLL.

CATS AND CHOLERA.—The *Lancet* not long ago had an interesting article on an epidemic resembling cholera which appeared among the cats in Delhi last year. The disease was not known to extend beyond the walls of the city, nor was it confined to any quarter; and it gradually declined and fully disappeared about Sept. 20th, although the cholera did not cease till near the end of November. The number of cats carried off by the disease was estimated at 500; and the symptoms were, in almost every respect, identical with those of cholera. Experiments were made with cholera virus, which was found to communicate an analogous disease to the cats, resulting in death in the usual choleric way.

A PROVIDENT WOODPECKER.—The California woodpecker (*Melanerpes formicivorus*) stores its food in the following curious manner: It picks out a big tree (a yellow pine is liked best), and with its hard, sharp beak bores a deep hole in the bark. It then flies away and returns with an acorn, which it fixes into the hole, and with its beak hammers it in tight—so tight, indeed, that the bark would have to be cut away to get it out. In Californian forests scores of trees may be seen with their trunks dotted with acorns, put there by the woodpeckers. The next winter the acorn is still fixed in the tree, but becomes decayed, when it is attacked by maggots. The ground being covered with snow, the woodpecker is thus provided with food through its foresight and thoughtfulness.

BLUE LOBSTER.—A few days ago Robt. T. Morris, of New Haven, received a lobster the color of which was a beautiful sky-blue with the usual markings a shade or two darker on the back. The under sides of the large claws were creamy white. He killed it, and before it had time to assume the red color which appears soon after death, had taken out all the fleshy parts. Mounting it and drying quickly he succeeded in preserving the blue color with the exception of slight fading. Only one fisherman had ever seen a similar variety, which is in the nature of an albino.

ELEVATED NESTS.—Old plates represent the flamingoes as mounted astride of nests which were perched on a mound of sticks two or three feet high. There was much of fable in this, but Dr. Kidder, who visited Kerguelen

Island with the transit of Venus Expedition last year, found there a cormorant which builds its nest on rocky shelves, constructing a pedestal sometimes two feet high of mud and vegetable matter, upon which a bed of grass is placed for the eggs. It would seem that these pedestals grow in height from use during many successive years.

ENDURANCE OF A SNAKE.—Upon opening a bale of jute received from Calcutta in October, 1872, and which had been lying at the Atlantic Docks, Brooklyn, undisturbed until last week, a snake belonging to the genus *Ophiobolus* was found alive, and was presented to the Central Park Menagerie by W. Tobin of this city.

MUSIC FROM A SNAKE'S TAIL.

CENTURY CLUB, NEW YORK, August 22d.

EDITOR FOREST AND STREAM:—

I have just read in the FOREST AND STREAM of Aug. 17th a letter from Robert Ridgway on the black snake, and am particularly interested in the habit of the reptile of vibrating his tail so as to imitate the rattle of the rattlesnake. Some two weeks ago, walking through a swampy road, I heard a noise which I mistook at first for the whirring of a bevy of quail. On looking closer I saw through the brush about two inches of a black snake's tail which was vibrating rapidly, and making the noise I heard. I made out about two feet of him by looking carefully, and after throwing a stick at him, he went off rapidly, rattling as he went. Having passed many days in the woods with rod and gun, and never having met such a musical snake, I was much interested to know if my ears could have deceived me, or if others had observed the same phenomenon, but could get no information on the subject, and my inquiries rather contributed to the hilarity of my listeners. WALTER DEF. DAY.

[In this case no notion of defense seems to have possessed the snake, and it is possible this musical sound was intended to attract within reach mice or other prey by exciting their curiosity. Prof. Shaler, a good authority, considers the rattle of the rattlesnake to be for the purpose of imitating the sound of the cicada and other insects that form the food of many birds, and so to attract the latter within reach of the serpent. We have much yet to learn about our serpents, which are the victims too often of mere heedless prejudice.—ED.]

A MALFORMED HEN'S EGG.

ERIE, Pa., August 28th.

EDITOR FOREST AND STREAM:—

This morning among the boiled eggs on the breakfast table I noticed that one was flattened on the side like some rolled pebbles. Both ends were alike, but one side was depressed. Its length was 2½ inches; its longest transverse diameter, 1½ inches, and its shortest 1.13 inches. There was nothing peculiar about the egg except its form, which was at first supposed to have been produced by pressure in packing for market. But on examination the shell was found to be without a crack and of the usual thickness. May not the form of this egg have been produced by pressure in the oviduct against a mature egg delayed in passing, beyond the usual time? or by pressure of hardened excrement against the walls of the oviduct? This may perhaps be regarded as too small a matter to write about, but attention to little things sometimes has considerably increased our knowledge of nature. T. D. I.

LOCAL NAMES OF BAY-BIRDS.

NEW YORK, September 1st.

EDITOR FOREST AND STREAM:—

In answer to your inquiry as to the different names of our shore birds, I would say that I have just returned from the Jersey coast where bay-birds, pretty girls, huckleberries, and other nice things flourish, and herewith give you the names of the bay-birds (not the girls) as they are known along that beach:—

Charadrius helveticus, Bull-head; black-breast.
Charadrius hiaticula, Beach-bird.
Streptopelia interpres, Calico-back and brant-bird.
Tringa rufa, Robin snipe.
Tringa hiaticula, Ring-neck.
Tringa himanopus, Frost snipe.
Tringa pectoralis, Creeper; meadow-snipe.
Tringa semipalmata and *T. pusilla*, Ox-eye or bumblebee.
Totanus semipalmatus, Willet.
Totanus vociferus, Yelper.
Totanus flavipes, Yellow-leg.
Limosa fedoa, Marlin.
Scolopax noveboracensis, Dowitch.
Numenius hudsonicus, Jack curlew.

The above are all the varieties I shot, but several are met with that I have not mentioned. The silt sandpiper is common this season, but is generally considered scarce. W. HOLBERTON.

MORE LONG TAPE-WORMS.

SEDALIA, Mo., August 28th.

EDITOR FOREST AND STREAM:—

I notice in your issue of August 24th a communication from M. Harvey, St. John, N. F., in regard to a tape worm in a salmon measuring 62 feet 4 inches. I took from a young prairie chicken 1st Saturday what was evidently a tape-worm (*Tenia solium*) of considerable length, occupying the entire alimentary canal. It was torn into numerous fragments before I discovered its presence. The chicken was shot that morning in southern Kansas, and was apparently healthy. Mr. Harvey thinks his the longest tape-worm yet discovered. We have record of one 600 feet long, and a broken specimen has been obtained 60 yards long. JOHN W. TRADER.

ARRIVALS AT THE CENTRAL PARK MENAGERIE AUG. 19 TO SEPT. 4.—One moose (*Alces melchior*) female; one camel (*Camelus dromedarius*); one West India sheep (*Ovis aries*) presented by Capt. John P. Rohl, of the bark Tereza; one zebu (*Bos indicus*), bred in the menagerie; one snake (*Ophiobolus*—?), from Calcutta, presented by Mr. W. Tobin, New York City; one rattlesnake (*Crotalus durissus*), from Berkshire Mountains, Mass., presented by Fred Law Olmstead, New York City; one little grebe (*Podilymbus podiceps*) captured at East River Park; one Carolina rail (*Porzana carolina*), captured in Central Park. W. A. CONKLIN, Director.

ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN, AUG. 6 TO SEPT. 4.—Four horned frogs (*Phrynosa cornuta*), one presented by Hugh Dugan, one by John Seddinger, and two by Wm. Wm G Seddinger of Philadelphia; two brown capuchin (*Cebus fatusellus*) one presented by Chas. Bassett, Philadelphia, and one purchased; one cat-bird (*Mimus carolinensis*), one yellow breasted chat (*Icteria virens*), one indigo bird (*Cyanus cyaneus*), one Wilson's thrush (*Turdus fuscescens*) presented by John Peasall, Philadelphia; one young Alligator (*A. Mississippiensis*), presented by James MacIntyre, Philadelphia; one banded rattlesnake (*Crotalus durissus*), presented by Howard A. Kelly, Philadelphia. ARTHUR E. BROWN, Superintendent.

The Kennel.

THE CENTENNIAL BENCH SHOW.

[From our Special Correspondent.]

UP to Saturday evening when I reached here but few dogs had arrived, but on Monday morning they began to come in in numbers. Among the first to arrive were Mr. J. H. Whitman's, of Chicago, Irish water spaniels Sinbad and Bridget; also his red Irish setter Ranger. Mr. F. A. How from Chicago, has here his fine retrieving spaniel Snyder. Mr. John E. Develin, of New York, his splendid imported red Irish setter bitch with six pups by Plunket, all deep red, and now, although these pups are only three months old, some of them weigh fully 25 pounds. Mr. Strong, of West Meriden, is on hand with his splendid black pointer Pete, which dog has already taken three first prizes. Mr. L. H. Smith, of Strathroy, Canada, is here, too, with his splendid kennel of field trial setters, and our venerable neighbor, Col. F. G. Skinner, Field Editor of the *Turf, Field and Farm*, who has wisely been selected as one of the judges of hounds, is here, and the managers of this great show avail themselves of his large experience in the arrangement of his pets. While inspecting the extensive arrangements of the Bureau of Agriculture for the comfort and safe keeping of the animals, it gratified us to see the elastic step of the Colonel, and the sparkle of his eye when he found that his favorites, the hounds, had been so suitably provided for. The Bismarck strain of setters will be largely represented at this exhibition. Already a delegation of eight fine youngsters, all of one litter from the kennel of Mr. Shipman, of State Center, Iowa, have arrived. These are the last of the old dog's get before he was destroyed on his passage home. They are about eight months old, and in color and form very like the old dog "Biz."

—We are pleased to learn that Mr. Charles Lincoln has been appointed Superintendent of the St. Louis Bench Show. With the experience he has had at the Chicago Bench Shows and is now having with the International Bench Show at Philadelphia, St. Louis has done well to secure his services.

—A quantity of interesting Kennel matter, including a report of the "National" Kennel Club at Chicago is unavoidably left over until our next issue.

—In Dublin, Ireland, last month, a jury awarded to a plaintiff, whose valuable dog was shot, a verdict of £15 damages. It was charged that the dog had killed poultry belonging to the defendant, but the charge was not proven, and the well-known habitual good behavior of the dog was taken in evidence.

A DECORATED DOG.—There is a native dog in Newfoundland now 16 years old. He is gray, and his fangs have fallen out; but he is provided with a cozy kennel and food that does not need much mastication. Around his neck is a glazed collar bearing three medals, one of silver and two of gold. One of the latter is from the Royal Humane Society of England, the other is the gift of an American captain, and the silver medal is from a former Mother Superior of St. Michael's Convent in St. Johns. All three testimonials are in recognition of the animal's sagacity in saving lives.

FOR CANKER.—A correspondent at Edina, Mo., writes as follows:—

"In your paper of the 24th I notice the inquiry, 'What is good for canker of the ear in the dog?' Will your correspondent please try this and report the result: Pound up two ounces of alum and put it into a pint of good whisky; shake, and let stand overnight, when it will be ready for use. Bathe the parts affected thoroughly twice a day, and in two or three days you will at least see a change for the better. I have used sulphate of zinc twelve grains to the ounce of rose water with good results; also diluted carbolic acid, but the whisky and alum I think is the best thing that I have ever tried for this disease, as the sores need no previous washing; the preparation, it appears, cleans and heals at the same time.—JAMES HENNESSEY."

CURING A BAD HABIT.—A correspondent—"H."—writes: "In reply to 'Lenox, Conn.' in the last number of *FOREST AND STREAM*, I would say that I once owned a cocker spaniel that had a perfect passion for killing chickens, and by the advice of a friend broke him of the habit by beating him with the dead chicken and then tying it by the legs to his neck, and compelling him to carry it around a couple of days."

BISMARCK AND HIS GET.

DELAWARE CITY, August 24th, 1876.

EDITOR FOREST AND STREAM:—In your issue of the above date Mr. Joseph J. Snellenburg, of New Brighton, Pa., sends me a challenge upon my assertion that the celebrated Bismarck had not one worthy representative, which assertion I repeat, and add that to be a worthy successor (in my opinion) the son must be the equal, if not the superior, of the sire. I think Mr. S. will not claim so much for Sam, but should he (or anyone) do so, a private trial between his dog and mine could not prove or disprove the assertion. If Mr. S. and you, Mr. Editor, wish to refute my argument bring on your dozen Bismarck pups to the Memphis field trial in November next, the blue blood will be there thick, and probably some of my training. The question at issue is Blue-Blood vs. Mongrels, or Breeding by Rule vs. Breeding by Guess. Let us suppose for argument sake that Mr. S.'s Sam is the equal of "Biz" in the field, one swallow does not make a summer, how about the other 199 of his get? Can "Biz" show entire litters of dogs which are his equal? Such is the record of blue bloods, such as Mr. Burges's Rob Roy, Mr. Llewellyn's Dan and Prince, and Mr. Laverack's Dash; and they are superiors of their progenitors. I mentioned Bismarck as an illustration because of his notoriety, and that I happened to know of the performance of some of his get,

The best dogs of his blood which I have seen are those the furthest removed from him, who have had a chance of good blood on the dam's side. I own no blue-blood of proper age to run with Mr. S.'s dog, and did it would be looked upon by the fraternity as ignorance or presumption in me to assume the responsibility of a test of merit of their strain of dogs as well as mine. We have a public dog court at Memphis for settling these vexed questions, and if Mr. S.'s Sam is a worthy representative of "Biz," and "Biz" was the superior of the blue-bloods, what a nice little harvest of cups and prize-money Mr. S. can reap. M. VON CULIN.

[Mr. Von Culin is begging the question entirely, and his assertion that a young dog must be the equal or superior of his sire to be a "worthy representative" is simply absurd. Bismarck was almost a phenomenal dog, and to expect all of his get to equal him would be asking for an impossibility. Are all the get of Lexington "mongrels" because they have not beaten his four-mile time? or if Goldsmith Maid dropped a foal would it be an "unworthy representative" if it did not trot in 2.14½?—ED.]

KENNEL PRODUCE.—Mr. Miller Ketchum of Westport, Ct., informs us that his red setter bitch, Beauty on the 28th inst. dropped nine fine healthy pups, four dogs and five gyps, the result of her visit to Robinson's Jack.

Rifle.

THE TEAM PRACTICE.—Tuesday and Wednesday, of last week, witnessed some of the most remarkable shooting which has ever been made even at Creedmoor, all previous records being wiped out and the "possible" as nearly reached as it may ever be. Mr. Isaac L. Allen's score of 212 points out of a possible 225 is remarkable shooting, particularly considering the fact that 72 points was made out of 75 at the 1,000 yards range. Major Fulton's string of 15 bullseyes at 900 yards is equally remarkable. The scores were as follows:—

Name.	800 Yds.	900 Yds.	1000 Yds.	Total.	Tuesday's Total.
I. L. Allen.....	70	70	72	212	204
Maj. H. S. Jewell.....	71	68	69	208	187
L. C. Bruce.....	70	70	61	201	188
Maj. Henry Fulton.....	69	75	57	201	195
N. Washburn.....	70	64	65	199	192
F. Hyde.....	73	66	60	199	177
C. E. Blydenburgh.....	74	63	61	198	192
Col. J. A. Shaffer.....	71	65	59	195	189
Lieut. A. Anderson.....	72	71	52	195	196
R. Rathbone.....	72	65	57	194	189
L. Weber.....	71	66	53	190	199
Gen. T. S. Dakin.....	68	70	51	189	206
C. E. Overbaugh.....	67	62	56	185	193
Lieut. Col. W. B. Farwell.....	61	59	58	178	191
G. W. Yale.....	70	62	44	176	176

After the shooting on Wednesday the members of the team met at headquarters and proceeded to make the final selection of a team in the manner agreed upon, being governed in the choice not so much by the actual scores made during practice as by the known personal qualities of the men, their nerve in match shooting and general reliability when the pinch comes. Messrs. Dakin, Farwell, Weber, and Fulton were first drawn by the team at large, and these four selected a fifth and so on by successive selection until the other four, viz: Messrs. Yale, Bruce, Rathbone, and Allen, had been chosen. These eight gentlemen therefore will constitute the team to shoot on behalf of the United States in the International Match, with Messrs. Hyde, Jewell, Shaffer, Washburn, Blydenburgh, Anderson, and Overbaugh, as reserves. In the open long range matches during the meeting some of these gentlemen will be heard from. The averages made by the eight selected men in the six competitions are as follows:—

Name.	Total.	Average.	Name.	Total.	Average.
Fulton.....	1,190	198.33	Dakin.....	1,157	192.83
Allen.....	1,186	197.66	Farwell.....	1,156	192.66
Rathbone.....	1,185	197.50	Bruce.....	1,144	190.66
Weber.....	1,159	193.16	Yale.....	1,072	178.83
General average.....					192.7

These totals are in excess of any ever made in England, and as the general shooting has never been equalled elsewhere we have every reason to be sanguine of success.

CREEDMOOR.—Two matches were in progress at Creedmoor on Saturday. That for the Hepburn Trophy shot at under the same conditions as the long-range interaction match gave an opportunity to those of the newly formed American team who were not disqualified from having been in last year's team, to participate. The weather was most unfavorable for good shooting, giving the Australian and Scotch riflemen who were practicing at the same time an opportunity of seeing how the wind can blow at Creedmoor. Nevertheless the shooting was very fair, Mr. Weber of "the team," taking the trophy for the month, with a score of 195 points. The full scores are as follows:—

Name.	800 Yds.	900 Yds.	1000 Yds.	Total
L. Weber.....	70	61	64	195
W. B. Farwell.....	62	65	61	188
C. E. Blydenburgh.....	61	68	54	183
William Hayes.....	68	54	55	177
Frank Hyde.....	63	60	52	175
H. S. Jewell.....	61	58	55	174
R. Rathbone.....	62	67	45	174
Isaac L. Allen.....	65	60	41	166
G. L. Morse.....	59	60	41	160
H. Fisher.....	64	51	39	153
E. Ray.....	60	64	26	150
John Trageser.....	69	35	45	149
James Buckley.....	30	48	47	125

The second match was for the *Spirit of the Times* badge, shot at 200 yards, 10 shots. The scores were as follows:—

Name.	Total.	Name.	Total.
John Le Boutillier.....	33	J. L. Price.....	25
Col. P. D. Scott.....	31	Adj. W. H. Murphy.....	24
Maj. Henry Fulton.....	31	Capt. W. C. Reedy.....	24
D. C. Pinney.....	31	W. Robertson.....	21

CONNECTICUT.—The Norwich Rifle Club held their regular practice match on Wednesday the 30th ulto.; 15 shots each and fired at 500 yards under Creedmoor rules and targets, and the following scores made:—

Name.	Score.	Total.
Cassidy.....	5 5 4 5 3 5 5 5 5 5 5 5 5 5 5	70
Colburn.....	4 2 5 5 5 5 5 5 5 5 5 5 4 5 5	69
Duggan.....	5 5 5 5 5 5 5 5 5 5 5 5 5 5 5	73
Clapp.....	4 5 5 5 4 5 5 5 5 5 5 5 5 5 5	70
Parish.....	4 4 5 5 5 5 5 5 5 5 5 5 4 5 5 5	71
Average 70 3.5.		

THE VISITING TEAMS.—The Scotch rifle team arrived in the steamer Bothnia on Wednesday of last week. They were received by a delegation from the Scottish American Rifle Club, who conducted them to their headquarters and afterwards to Creedmoor. The party in all comprises 16 gentlemen as follows: Captain, Lieut. Col. J. H. A. MacDonald, Martin Boyd, W. Clark, Robert Luke, Dr. J. Mitchell, Robert McVittie, Lieut. Archy Menzies, Sergt.

P. Rae, Capt. Wm. Thornburn, Thos. Whitelaw and Sergt. Wm. Paton. They are a remarkably fine looking body of men and attract attention at Creedmoor in their, to us, quaint shooting costume. This consists of a tunic belted at the waist with knee-breeches or "Knickerbockers" of gray flannel and stout brown stockings, with a pith helmet or "solar topee," as they are called in the East, wrapped with a "puggarer," or scarf. On Friday the Scotch team practiced for the first time, and again on Saturday, making the following scores:—

Name.	800 Yds.	900 Yds.	1,000 Yds.	Total.	Saturday's Total.
M. Boyd.....	67	71	63	201	177
T. Whitelaw.....	67	64	65	196	177
Dr. Mitchell.....	66	65	61	192	182
Capt. W. Thornburn.....	66	67	53	186	182
R. Luke.....	65	58	62	185	162
Lieut. A. Menzies.....	63	65	57	185	177
W. Clarke.....	64	65	56	185	191
R. McVittie.....	59	63	59	181	174
P. Rae.....	55	57	60	172	163
D. Fraser.....	64	56	52	172	183
	70	56	40	166	164

On the same days the Australian riflemen made scores as follows:—

Name.	800 Yds.	900 Yds.	1,000 Yds.	Total.	Saturday's Total.
Maj. J. T. Sleep.....	71	61	61	193	175
J. J. Slade.....	69	63	59	191	160
Capt. J. S. Lynch.....	63	64	63	190	171
Capt. J. M. Smith.....	70	60	60	190	181
Lieut. T. T. Draper.....	66	61	62	189	178
Capt. Greenfield.....	65	61	61	187	164
Lieut. Maddocks.....	65	61	60	186	174
D. Gee.....	68	63	55	186	196
Capt. H. J. King.....	66	58	58	182	176
Capt. B. J. Wardill.....	59	57	61	177	176

The falling off in Saturday's scores was owing to the trying weather which prevailed, the wind blowing strongly across the range, rendering an allowance of 15 points sometimes necessary.

The Irish team arrived on Sunday in the Steamer City of Berlin, and proceeded immediately to Philadelphia, having with them a number of dogs intended for the Bench Show. The party comprises Major A. B. Leech, Captain; Lieut. G. Fenton, Adjutant; Mr. Edmond Johnson, Honorary Secretary; Mr. R. S. Greenhill, Mr. Henry Dyas, Mr. W. G. Goff, Mr. Joshua K. Milner, Mr. James G. Pollock, Mr. Alexander Ward, Mr. W. Russell Joynt, Mr. W. Rigby, Mr. Henry Thynne. Mrs. Goff, Mrs. Ward, Mrs. Greenhill and Mrs. Thynne, accompany their husbands, and Mr. W. G. Brady, Solicitor, Dublin; Mr. H. S. Evans, London, and Mr. Fred Gallaher, special correspondent of the *Freeman's Journal*, Dublin, are also with the marksmen. Of them Messrs. Leech, Johnson, Milner, and Pollock, are old friends, having visited us as members of the Irish team two years ago.

On Monday the members of the Scotch, Irish, Australian, and American Rifle Teams were entertained at the Fifth Avenue Hotel by Gen. Joseph R. Hawley, President of the U. S. Centennial Commission; and in the evening the Scotch Team was given a reception by the Scottish American Rifle Club at the Caledonian Club Rooms.

—Mr. Douglass Taylor has been added to the joint committee, and will replace General McMahon as general manager of the international matches. . . . The programme at Creedmoor this week, comprises the match for the Poppenhausen badge, to be shot to-day, instead of on Saturday's as heretofore. On Saturday the contests for the Seventh Regiment "Shells" and "Diamond" badges, and practice by the American and foreign long-range teams every week day. . . . Col. Bodine has been shooting at Creedmoor during the past week, showing all his old skill. On Wednesday he scored 200 points out of a possible 225 at the long-range. . . . On Wednesday Mr. Lamé scored at Creedmoor 207 points out of a possible 225, at 800, 900, and 1,000 yards, with a Ballard sporting rifle. . . . Creedmoor presents the appearance of a camp of troops at present, long ranges of tents occupying the left of the range, and affording shelter to the regimental teams who are practicing for the coming meeting. Before the opening tents will be provided for the visiting teams by the N. K.'s, and applications have already been received from the Jamaica (L. I.) Rod and Rifle Association for three tents; from the Jackson (Mich.) Rifle Club for one tent; the Leatherstocking Rifle Club, Goshen, N. Y., one tent; the Yonkers Rifle Association, two tents; the Middletown (Conn.) Rifle Association, one tent, and the Saratoga Rifle Club, one tent. . . . Col. Crofton has offered the Joint Committee the use of the Governor's Island band when required, and the Joint Committee have resolved to invite Col. Crofton and the other officers of the Island to a banquet. This is a great age; we eat only at "banquets," and ride in "palace" cars. . . . The Long Island Railroad Company have put down additional switches and side tracks at Creedmoor, and are erecting a new depot in anticipation of the rush of visitors to the matches. Tickets may be purchased in New York at \$1, good for the ferriage, car fare, admission to the ground and return to the city.

GLEN DRAKE RANGE.—All-comers match, 200 yards, off hand; subscription; shot September 2d. Best scores are as follows:—

Name.	Total.	Name.	Total.
D. F. Davids, 1st prize.....	22	H. Blakemore, 3d, prize.....	21
H. Blakemore, 2d prize.....	21	D. Felt.....	21
H. Blakemore, 3d prize.....	21	J. W. Todd.....	20
D. Felt.....	20	F. D. Harvey.....	20
J. W. Todd.....	20	F. D. Harvey.....	20
Geo. Ferguson.....	19	Col. J. T. Underhill.....	19
Geo. Jones.....	18	H. Moreton.....	19
Lieut. Jas. Jarvis.....	18	Geo. Jones.....	19
D. F. Davids, 1st prize.....	23	J. J. Reade.....	18
Geo. Ferguson, 2d prize.....	21		

The next regular match is on Saturday, Sept. 16th, two matches at 500 yards; shooting begins at 3 o'clock p. m. A stage runs from Pelhamville, on the N. Y. & N. H. Railroad, to the range on arrival of the 2:20 and 3:55 train out of New York. J. W. COBURN, Sec'y. A. R. A.

NEW YORK.—The weekly competition for the challenge badge of the Jamaica Rod and Rifle Association took place on their range on Saturday last, 2d inst. Distance 200 yards off-hand, ten shots to each competitor, Creedmoor rules. There were nine entries for the match, and the following scores were made, Mr. Crane winning with 44 out of a possible 50 points; wind strong from north-west:—

Name.	Total.	Name.	Total.
John M. Crane.....	44	Chas. J. Stewart.....	41
G. W. Damon.....	42	Geo. H. Creed.....	36
G. A. Hicks.....	42	Geo. H. Lott.....	33
Theo. Rogers.....	42	A. J. Wilkinson.....	32
John Fleming.....	41		

CONNECTICUT—*Willowbrook Rifle Range, August 26th.*—Mr. Chas. O. Judd, son of Orange Judd, of Middletown, in the contest to-day with seventeen competitors for the long-range bullseye badge, made the best score of the day, capturing the badge with nine bullseyes. He had an advantage in shooting after the wind had died away, and when the light on the targets was most favorable. The winner is only eighteen years old, and is a student of Wellesley university. The badge has now been won a single time by three different members and twice by Mr. Orange Judd.

—A correspondent calls to our notice a remarkable feat that was performed at that place on July 4th by J. Otis Fellows, who brought down a balloon by a rifle shot from a height of 2,000 feet. He has only one arm, and used a rifle with an 18-inch barrel, manufactured by J. Stevens & Co., Chicopee Falls, Mass. Last week he killed a woodcock on the wing with a 12-inch pocket rifle.

—In the last contest for the marksmen's badge, by the Yates Dragons, of Syracuse, Mr. M. B. Nicholson was the winner, his score being 39 points made in 5 shots at 200 and 300 yards each, the weapon used being a carbine.

CANADA.—The Dominion has been having some brilliant rifle meetings during the past week. One, the New Brunswick Wimbledon, was had at Sussex, N. B., and lasted four days. The Association cup was won by Corporal Longstreet, with a score of 42 points out of a possible 50 at 500 and 600 yards. The All-comers match, 7 shots at 500 and 600 yards was won by Lieut. Hartt, with a score of 56 points. Capt. Bixby won the National silver medal, and Lieut. Worden, the Governor General's medal. The Ladies' Cup, shot under the same conditions as the first match, was won by Sergt. Hunter with a score of 43 points. The Prince of Wales cup, 5 shots at 200, 300, and 400 yards, was won by Sergt. Weyman, with a score of 65 points. A number of other matches were shot, and some excellent practice made at the long ranges, notably Ensign Loggins's score of 32 out of a possible 35 at 900 yards. The meeting was in every way a success.

The Ontario Rifle Association met at Toronto on the 30th and 31st ult. The first prize in the Affiliated Associations match was won by the Governor General's Foot Guards team from Ottawa; the Queen's Own, of Toronto, taking second money. The first prize for individual scores was won by Sergt. Bradley, of Clinton. In the Ontario match, 500 yards, Sergt. J. Mitchell, 13th Battery, led the list with 32 out of a possible 35. The All-comers match, 7 shots at 200 yards was won by F. Evan, with 33 points. Lieut. Thorn won the maiden stakes for "Snider" at 400 yards.

Game Bag and Gun.

GAME NOW IN SEASON.

Moose, *Alces macotis*.
Caribou, *Tarandus rangifer*.
Elk or wapiti, *Cervus canadensis*.
Red or Virginia deer, *C. virginianus*.
Squirrels, red, black and gray.
Hares, brown and gray.
Reed or rice-bird, *Doichonyx oryzivorus*.
Wild turkey, *Meleagris gallopavo*.
Pinnated grouse or prairie chicken, *Cupaniua cupido*.
Ruffed grouse or pheasant, *Bonasa umbellus*.
Quail or partridge, *Oriya virginianus*.
Black-bellied plover or ox-eye, *Squatarola helvetica*.
Ring plover, *Egialitis semipalmatus*.
Silt, or long-shanks, *Himantopus nigricollis*.
Woodcock, *Philohela minor*.
Red-breasted snipe or dowitcher, *Macrorhynchus griseus*.
Red-backed sandpiper, or ox-bird, *Tringa americana*.
Gr. at marbled godwit, or marlin, *Limosa fedoa*.
Willet, *Totanus semipalmatus*.
Tattler, *Totanus melanoleucus*.
Yellow-shanks, *Totanus flavipes*.

"Bay-birds" generally, including various species of plover, sand-pipers, snipe, curlews, oyster-catchers, surf-birds, phalaropes, avocets, etc., coming under the group *Limicolæ* or Shore Birds.

Correspondents and subscribers will oblige us and serve the cause by sending four-line reports of the shooting in their respective localities.

GAME IN MARKET.—For the first time this season there is a fair display in the market, both for abundance and variety. We quote prices as follows:—Ruffed grouse, \$1.25 and \$1.50 per pair; pinnated grouse or prairie fowl, \$1 and \$1.25 per pair; woodcock, \$1 and \$1.25 per pair; reed birds, 50 cents to \$1 per dozen; snipe, \$1 and \$1.75 per dozen; ox-eyed snipe, 50 cents and 75 cents per dozen; wild pigeons stall fed, \$2 and \$3 per dozen; mallard ducks, 75 cents and \$1 per pair; teal, 62 cents and 75 cents per pair; summer duck, 75 cents and \$1 per pair; squabs, \$2.75 and \$3 per dozen.

—The grouse shooting in Great Britain opened on the 12th of August with better promise than for four years past. The birds are reported healthy and strong, and the disease which played such havoc in their numbers in 1873 and 1874, now seems to have entirely died out. All papers agree that these facts afford a strong argument in favor of the cycle theory, which explains the periodical return of the pest, on the principle that overstocking necessarily leads to decimation from disease as soon as a certain stock has been reached, beyond which there is a deficiency in the material needful for insuring perfect health. The best birds are naturally shot, and the leaving of too many late birds on the ground to breed is certain to result in a large proportion being small, weak, and unhealthy. It would seem, then, that while protection to a certain limit of numbers is requisite, it is equally important that numbers should not be so multiplied as to permit an excess or superabundance. The rule applies to fish ponds, deer paddocks, and poultry yards, alike. The number of grouse in the London market on the 14th, was far larger than it is has been for years, there being considerably over 10,000 head, the prices being very moderate, viz., from 2s. to 5s.

THE GROUSE LAW IN PENNSYLVANIA.—J. G., Jr., of Philadelphia, wishes us to call attention to the letter of correspondent "Milford," in last week's paper, which, he says, would lead persons to suppose that the law for partridges expires on October 1st. Such is not the case, as the law says the 15th of October.

MAINE—*Machias August 31st.*—Bears are plenty, and many have been seen and caught in Washington County during the two months just passed. Do not as yet hear of grouse being abundant. Both the ruffed and the Canada grouse are found here. A few woodcock have bred here. ROAMER.

MASSACHUSETTS—*Cohasset, Aug. 31st.*—Bay-bird shooting as a general thing this year has not been good, by reason of the mild and warm days with a prevailing northwest wind during the whole month. The large flight of birds went on the 26th and 27th, but they were wild and high, not paying much attention to decoys. The best bag I know of was 70 yellow-legs and chickens to two guns on the 26th at North Scituate. Should we get a northeaster during the next two weeks splendid sport may be had while it lasts, as lots of birds are yet to come. Ducks are coming slowly; a few teal and coots have been taken this week. Smelt fishing commencing good, but will be better next week. S. K., JR.

Salem, September 4th.—Notwithstanding the very dry weather there have been quite a lot of birds shot in one or two small places near here that would often be passed by. Advices from the adjoining places give things dry and birds scarce; from Chatham the same. We do sadly need rain. Matters generally remain as last week. TEAL.

NEW YORK—*New Dorp, Staten Island, September 1st.*—It is very dry. Snipe scarce; have seen a few yellow legs, very wild; plenty of rabbits; close season for them from January 1st until November 1st. Woodcock have been very scarce. There is an abundance of quail; close season for them from January 1st until October 1st. GUS. WOODCOCK.

Meacham Lake, September 4th.—Our shooting has begun in good style. Partridges plenty. Ducks coming in; also yellow legs, plover and sand pipers. Deer plenty and fat. Trout and salmon trout have started for their spawning beds. I shall clear out my hatching boxes this week and begin putting in the spawn as soon as possible. A. R. FULLER.

NEW JERSEY.—*Rumson, Sept. 1st.*—Woodcock scarce, owing to a great deal of shooting done before the 4th of July by market gunners. Plenty of plover on the meadows, but very wild. A flock of ducks (kind unknown) seen off Seabright yesterday. Quail seem scarce, but there will be fine rabbit shooting here in November. See them in the bushes most every day. Bay snipe occasionally alight on the south Shrewsbury meadows. F. C. MOLLER.

KANSAS, *Brookville, Saline County, August 30th.*—Chickens were never so plenty as this year. No quail were killed last year, and they are doing finely now, with a fair prospect of plenty of them, but not much chance for sportsmen, as farmers seem to be "dead set" against having them killed. L. C. M.

—An auction sale of guns made by the well known house of J. W. Tolley, of Birmingham, England, was held in this city last week, at the auction rooms of Mr. Tunis Johnson, No. 37 Nassau street. The guns comprising the "Challenge," "National," "Standard," and other brands, brought very fair prices considering the times, selling for from \$50 to \$175. In fact we should consider this a very excellent way for dealers to get rid of their surplus stock. Good guns will always command fair prices in this city, even at auction.

DETERIORATION IN LOADED SHELLS.—A correspondent writes from Duluth, Minnesota, as follows:—

"Alfred," in your issue of August 10th, asks if any of your readers have discovered any deterioration in shells left filled from one season to another. I find the loaded metallic shells which I have kept over are so uncertain that I manage to have none left; or should there be a few left over after the last shoot of the season, I reload them before attempting to use them the next season. So large a portion of them fail entirely, or hang fire, I cannot use them with any confidence. On the contrary, the paper shells seem to be as reliable after having been loaded a year as freshly filled ones. I have not had one of the latter miss or hang. CHICK.

[We have been using in bay-bird shooting paper shells loaded last summer and exposed to salt air and dampness without yet having a miss-fire or observing any difference in their effectiveness. When felt or Eley's best prepared wads are used, and the powder is first class, shells should keep from year to year.—ED.]

The regular monthly shoot of the Long Island Shooting Club, for their champion cup, occurred on Tuesday of last week. The cup was won by Mr. West, who was the only one out of seventeen competitors who killed his seven birds, the number shot at.

MINNESOTA.—The Lake Pepin Sportsmen's Club, of Lake City, held their tournament last week. We have not received the scores, but the Club badge was won by Mr. S. M. Simpson, who was immediately challenged by Mayor Van Vleet.

MISSOURI, *Lexington, August 29th.*—Monthly shoot of the Sportsmen's Club for silver medal, 15 entries, 10 birds, 26 yards. Won by M. E. B. McKee in a score of 9.

THE YALE AND LONDON ROWING CLUBS.—The Greenwood Lake Sportsman's Club have sent the following letter through their Secretary, to the Yale and London Rowing Clubs, inviting them to row on the waters of their delightful lake, which offers the best three-mile straight-away course in the country:—

GREENWOOD LAKE, Aug. 30.

TO THE CAPTAIN OF YALE FOUR:—

Everybody wants another race between your crew and the London Rowing Club. The Greenwood Lake Sportsman's Club have the finest straightaway course, four miles or under, in America, only 40 miles from New York, and offer a \$500 cup. Make date to suit yourselves in September. The club also guarantees free transportation for contestants and boats to and from New York city. Answer.

W. O. McDOWELL.

We understand that the London crew will positively not row again in this country. A very pretty regatta, however, is advertised for Greenwood Lake early in October, which may prove quite as attractive.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

EASTERN YACHT CLUB.—The annual regatta of this Club was sailed off Swampscott on the 29th inst. Only seven yachts contested, and the breeze was light and unsteady, and the time allowance—five knots per hour—was nearly run out before the leading boat returned to the starting point. The schooner America, Benj. F. Butler, was not a competitor for the prizes, but she sailed the entire course, and even in the light air would have stood a good chance of taking the laurels from the schooners, had she belonged to the Club. The yachts Julia and Fleur de Lis also accompanied the fleet. The wind was light throughout the rain. The Halcyon rounded the buoy first, followed by the Foam, sloops Wayward and Shadow, and schooner America, Magic, Fearless and Latona, in the order named. The run home was made with sheets started, the Halcyon continuing to hold the lead. The wind was too light for the America to distinguish herself, but she held the Magic very well. The home stake boat was passed in the same order, with the exception that the sloops fell to the rear. The prizes were awarded as follows: Schooners—first prize, \$200, to Halcyon; 2d, \$160, Foam. Sloops—first prizes, \$125, Wayward; 2d, \$75, to the Shadow.

PHILADELPHIA YACHT CLUB REGATTA.—A regatta, under the auspices of the Philadelphia Yacht Club, came off on the Delaware to day. It was one of the largest, if not the largest, ever sailed on the river, fifty yachts being entered. The cruise was from Creedmoor Park to a ten mile point and return, each boat going twice over the course. The leading prizes were won by the Willie Kleinz, Minerva and Ball, Jr.

THE INTERNATIONAL REGATTA.

OUR reports in full are up to Tuesday, August 29th. We continue the letters of our correspondent:—

PHILADELPHIA, Tuesday, August 29th.

The programme for the second day was arranged for three trial heats of singles and three second trial heats of fours, winners in yesterday's races. The races began promptly at 2 o'clock and followed at regular intervals of 45 minutes. The single races were almost without interest, but the four proved better, the last heat being the greatest race of the regatta up to this time. About 4 o'clock every available space for the last half mile was packed.

FIRST TRIAL HEATS—SINGLES.

FIRST HEAT.

- 1—James McCartney... Friendship Boat Club... New York.
- 2—Frank Henderson... Vesper Boat Club... Philadelphia.
- 3—G. E. Man... Argonauta Row. Asso. Bergen Point.
- 4—Geo. W. Yong... Malta Boat Club... Philadelphia.

The heat at once resolved itself into a race between McCartney and Man. The finish was as follows:—

Name	M.	S.
1—McCartney.....	11	01½
2—Man.....	11	13
3—Young.....	11	26
4—Henderson.....	11	23

SECOND HEAT.

- 1—J. B. Leibert... Vesper Boat Club... Philadelphia.
- 2—Ed Mills, Jr... Atlanta Boat Club... New York.
- 3—J. M. Holman... University Boat Club... Philadelphia.

W. B. Curtis, who was drawn for fourth position, withdrew.

Leibert, sculling nicely, soon went to a lead, steering close along the wall, Mills close to him, and Holman badly to the rear. The Vesper man rather looked the winner, but Mills began to close up the gap off the Willows, when Leibert stopped suddenly as the Atlanta boat collared him, calling to the umpire that he had a stitch in the side, to attacks of which, by the way, he is subject:—

Name	M.	S.
1—Mills.....	10	59½
2—Holman.....	11	40½

THIRD HEAT.

1. R. A. Robinson, Union Springs; 2. S. Gormley, Quaker City; 3. O. P. Tasker, Crescent.

The two first named soon got away from Tasker, and a close race was pulled between them clear home—Gormley working well and hard, Robinson, to his shame, be it said, evidently allowing himself to be beaten, the only case where the influence of the pool-rooms has shown itself in the regatta:—

Name	M.	S.	Name	M.	S.
1—Gormley.....	10	52½	3—Tasker.....	11	15½
2—Robinson.....	10	56			

SECOND TRIAL HEATS—FOURS.

FIRST HEAT.

- 1, Eureka Boat Club; 2, Beaverwyck Boat Club.
- Won by the Beavers by two lengths; time, 9m. 7s.; Eureka, 9m. 13s.

SECOND HEAT.

1, First Trinity, Cambridge; 2, Watkins Boat Club. The Columbia College, after having backed to the stake boat, were, owing to sickness in the waist, compelled to withdraw. Trinity cracked away at above 41 strokes, but a half length was all they could get from the Watkins men. As soon as the boats had cleared the curve and were pointed for the finish, Watkins, with a long swing, began to go past. Trinity was pulling nicely, but No. 2 seemed to be getting very shaky. Half-way down the Willows they stopped, Mr. Close being too sick to warrant going on. Watkins, who at this time were just clear, kept on at about the same pace, finishing in 9:01½.

THIRD HEAT.

1 London Rowing Club; 2, Yale College Boat Club. Away went the London crew first as they did in their heat yesterday like a machine, their bodies rising and falling as one man. Yale was slow coming after them, and it looked as though they might never find the leaders. The steering was not good in either boat, and off the bend Yale

went well to the east, London following her out. Yale soon began to show that there would be desperate work on the last reach. Each time the boats are headed straight down, Yale shows closer, until at the head of the Island things looked desperate for the visitors. For some time London has been doing 40½ to Yale's 35½. Up Howell drives his stroke to 44, and the form is not shaken—in perfect time, no splash, no flurry, no lugging, scarcely an apparent increase of effort, every man pulling as at the very start, except that Gulston's head drops now and then. Yale's hope seems gone. At last Kennedy spurts—only to 38—and amid such a shout as few of us have ever heard his boat is seen to draw closer, the lap is more and more. Down goes the judges' flag and then up again. London has won by only five feet in the best time ever made on the course—8:51½.

Wednesday, Aug. 30th.—Six heats had been arranged: First two trial heats for singles, the final heat for fours, and then three more trials for singles. The singles were almost devoid of interest. The drawings have resulted in so mis-matching the men that even where the withdrawals did not leave next to a walk over, there was little real racing. The fourth heat was between C. E. Courtney, Union Springs, 1, and P. C. Ackerman, Atalanta, 2. Courtney, won as he pleased in 11m. 29½s. The fifth race was between—

1, J. D. McBeath, Quaker City Boat Club; 2, F. E. Yates, Union Springs Rowing Club; 3, C. Megargee, College Boat Club; 4, Horace Young, Malta Boat Club.

Except for second place for the first half mile between McBeath and Megargee, there was no race; the rest was a procession:—

Name.	M.	N.	Name.	M.	N.
Yates.....	12	05½	Megargee.....	12	15½
McBeath.....	13	7½	Young.....	13	10

BEAVERWYCK BOAT CLUB—ALBANY, N. Y.

Name.	Age.	Weight.	Height.
[1] J. T. McCormack (bow).....	24	147 lbs.	5ft. 7in.
J. H. McIntee.....	26	148 lbs.	5ft. 10in.
R. T. Gorman.....	25	163 lbs.	5ft. 11½
T. J. Gorman (stroke).....	27	168 lbs.	5ft. 10in.

Time, 9:06.

LONDON ROWING CLUB.

Name.	Age.	Weight.	Height.
[2] R. Labat (bow).....	28	147 lbs.	5ft. 9in.
F. S. Gulston.....	33	160 lbs.	5ft. 10in.
A. Trower.....	28	165 lbs.	5ft.
J. Howell (stroke).....	23	147 lbs.	5ft. 9in.

Time, 9:06½.

WATKINS CLUB—WATKINS, N. Y.

Name.	Age.	Weight.	Height.
[3] A. McLafferty (bow).....	22	137 lbs.	5ft. 6in.
F. Stoll.....	21	140 lbs.	5ft. 11in.
A. Tyrrell.....	19	130 lbs.	5ft. 9in.
F. Wakeman (stroke).....	23	130 lbs.	5ft. 10in.

Time, 9:16.

That London would win the final fours was conceded by everyone, the only hope being little Watkins, and surely they looked a frail barrier to stand between America and defeat. If Yale could not win, certainly Beaverwyck's stood no earthly chance; but races are won when the line is crossed.

When the boats drew into position the excitement was intense. All seemed anxious to get at it, and the umpire kept them waiting but a few seconds. "Go!" Look at London off again at away above 40, with not quite the snap that lead them away yesterday from this point, but neither Watkins nor the Beavers are ready to call it quits yet, Watkins pulling 40, keeping well out in the river, steady, strong (if such men can have strength) and undaunted. Sweeping around the curve London leads them a bare half length, and the Beaverwycks are no worse off than level, slashing away at two or three less to the minute than the others, every man on his own hook, but the oars take and leave the water together, and their boat kept steadily and evenly on. The half-mile was passed and no one's lead was worth a ha'penny. These Watkins boys must be gotten rid of, and Gulston began to come over towards them. Yesterday we were charitable enough to think, or at least to hope, that he crowded Yale unintentionally. This time there can be no mistake. Outside of that curve is the long course, and the farther out a boat is driven the less her chances are. The Watkins went as far as she should and farther. In coming back it looked as though she intended going under London's stern and taking the middle, but she found the Londoners right there again. Their oars lapped for a couple of strokes, the latter giving way a little, while Watkins, turning short out lost a clear length or more. In the meantime the Beavers, by attention to business, were leading the London, and were coming well out into the river, evidently hoping to give them a wash. London refused, and these two got into close quarters, but the Beaverwycks gave way, going to the west and the boat from the Thames was soon leading almost clear. All three were abreast the island—nearly half way past it—when a shout arose like to that which greeted London and Yale yesterday. The Beaverwycks, by a mighty spurt, are in front, only half a length, but still there they are, and yelling like fiends. The work in the London boat had begun to tell. Howell's spurt was not answered with the fire they had shown before, although they crept up; the Beavers crossed just by "a foot and a half." The time as given: Beaverwyck first, 9m. 6s.; London second, 9m. 6½s.; Watkins, third, 9m. 16s.

So close was it that for some time no one off the judges' stand could say who was first, and a great "hush" was heard," followed by a scene that cannot be described nor imagined; it can only be remembered.

The London crew looking pretty well done up, paddled to the umpire's boat, claiming a foul from both competitors, but the umpire, having seen no contact, was forced to disallow the claim.

Sixth Heat—Singles.—1, Geo. W. Parker, Quaker City Boat Club; 2, W. G. Thomas, Pennsylvania Boat Club. They made a good race for half a mile, when Thomas went to the fore and won by several lengths in 11m. 38½s.

Seventh Heat.—Walk over for J. B. Mingus, Vesper Boat Club.

Eighth Heat.—Walk over for F. Pleasanton, Quaker City Boat Club.

FOURTH DAY—Thursday, Aug. 31st—Second Trial Heats—Singles.—First heat, walk over for C. E. Courtney.

Second Heat.—1, J. B. Mingus; 2, James McCartney; 3, Ed Mills, Jr. McCartney, 10m. 33½s.; Mills, 10m. 44s.; Mingus, 10m. 53s.

TRIAL HEATS—PAIRS.

First Heat.—1, Nautilus Boat Club, New York; Wm. Walshe, stroke; David Kouchie, bow. 2, Atalanta Boat Club, New York, J. E. Hustie, stroke; W. H. Downs, bow.

The London and Argonauta crew withdrew.

The Nautilus crew were badly overmatched, and stayed with the winner only to the half-mile. Atalanta, 9m. 45s.; Nautilus, 9m. 58s.

Second Heat.—1, Northwestern Rowing Association, W. B. Curtis bow; Charles T. Corning stroke. 2, Northwestern Rowing Association, Henry Smith, bow; John Kelloren, stroke.

Time.—Smith's crew, 10m. 2½s.; Curtis crew, 10m. 8½s. Then followed the paddle over for the Dublin crew for the Graduate's race. This was placed on the original programme in hope that some entries would be made by American graduates. None appeared, however, the only approach being the Atalanta crew, who are all Wesleyan men; but Downs never completed his course. The neat uniforms and fine rowing of the Irishmen lent some interest to the walk over, but not much. Time, 10m. 39s.

FIFTH DAY, FRIDAY, SEPT. 1—TRIAL HEATS FOR DOUBLES.

First Trial.—1, Atalanta, Hen Rodger, stroke; P. C. Ackerman, bow. 2, Northwestern, F. Montgomery, stroke; W. B. Curtis, bow. 3, Oneida, Burlington, N. J., R. K. Rodgers, stroke; D. G. Walker, bow. 4, Vesper, H. McMillan, stroke; J. B. Mingus, bow.

At first the Atalantas and Northwestern held well together, and more racing between the two last named. At the half mile the Atalantas were half a dozen lengths ahead of Curtis's crew, they being hurried by the Vesper, and the Oneida away behind. The Vesper pushed up to second place, the finish being: Atalanta, 10m. 29½s.; Vesper, 10m. 43s.; Northwestern, 10m. 56s.

Second Heat.—1, Crescent Boat Club, C. P. Tasker, stroke; G. W. Young, bow. 2, Union Springs Rowing Association, C. E. Courtney, stroke; F. E. Yates, bow. 3, Vesper Boat Club, F. Henderson, stroke; J. B. Leibert, bow.

This was another procession, Union Spring 1, 10m. 17s.; Crescent 2, 10m. 34s.; Vesper 3, 10m. 52s.

Final Heat—Pairs.—1, Northwestern Rowing Association; 2, Atalanta Boat Club. Time of Northwestern, 10m. 2s.; Atalanta, 10m. 10½s.

INTER COLLEGIATE RACE.

1, Yale College Boat Club, New Haven, Conn., Julian Kennedy stroke; 3, —; 2, —; R. J. Cook, bow. 2, Columbia College Boat Club, New York City, Goodwin, stroke; 3, —; Griswold, 2; E. E. Saxe, bow. First Trinity Boat Club, Cambridge, England, Penrose, stroke; G. L. N. Mann, 3; W. B. Close, 2; Jameson, bow.

Columbia led at the jump and was nearly clear of Trinity at the quarter, Yale pulling a much slower stroke than either of the others, seemed late getting away, but she soon led the lot and had the race well in hand at half mile.

Just before grass is reached, Columbia leading Trinity by a length, the latter pulling gallantly, but keeping too far to the east. Suddenly her port oars strike the flag that marks the grass and Trinity is at a standstill; her hopes gone. With a stroke or two they came out from the grass and spurred magnificently. The work took it out of the men too fast, and Close, who has been out of condition all along, fainted in his bowman's arms.

Columbia's course was from here down, as eccentric as ever, going from one side to the other, either from their broken rudder line, or their sick man at 2. They hunted hard for Yale, but came only within about 4 lengths. Time, Yale 1, 9m. 10½s.; Columbia 2, 9m. 21s.

Final Heat—Doubles.—1, Atalanta Boat Club; 2, Union Springs Rowing Club.

Courtney and Yates make too strong a team for any double scullers that started here, and without being pushed won in 9m. 52½s.; Atalanta (Rogers and Ackerman), 9m. 54s. So ended the Amateur Regatta.

Answers To Correspondents.

G. D. C., Boonton, N. J., and W. S. M., Knoxville, Tenn.—No book on the construction of small boats, skiffs, etc.

Mr. J. MORTIMER MURPHY.—There are Limerick papers for you at this office.

R. L. ODEN, Esq., of San Francisco, supposed to be now in Maine, will be kind enough, if this meets his eye, to send us his present address as we wish to communicate with him.

F. O. B., Watertown, Ct.—Will you please give me the name of some farmer in Berkeley Springs, W. Va.? I am desirous of obtaining board in some farm-house while hunting. Ans. See P. Clayton Pendleton's letter in our Shot Gun column.

W. and M., New York.—Please give us the new features of the latest amendments to our game laws, or inform us where we can procure a copy of the last law. Ans. The proposed amendments to the game laws of this State were not passed at the last session of the Legislature; so everything remains as in 1875.

FLEISCH.—I am the owner of a valuable dog which has either been stolen or strayed; if found can I reclaim him by proving property? Did the fact of his having no collar prevent me from claiming him? Ans. If you have not paid a tax on your dog there is no law by which you can recover him from one who should have him in charge.

INQUIRER.—Colvin's Adirondack Reports are not for sale. The price is \$3. We have two copies. You had better apply to Wm. H. Rollins, Boston, himself, for the boat measurements, etc., which you require. We cannot learn that Evan's Magazine Rifle is manufactured anywhere now.

DEXTER, Albany.—Where can I get a reliable chart of Lake Ontario? What would be the probable cost of a good English muzzle-loading double shot gun, 12-gauge, 30-inch? Ans. Buy your chart of James Campbell & Son, Toronto. You can buy such a gun as you speak of from \$35 to \$60.

J. E. S., Philadelphia.—I learn that Greener is publishing a work on choke bores. Is it a revision of his "Modern Breech Loaders," or an entirely new work? If the latter, please state price and where it can be purchased. Ans. It is a new work on choke-bores; price \$3.50. Can send you a copy when published.

W. P. M., Boston.—Would you please inform me in regard to the tapered line for throwing a fly? Is it preferable to a line without any taper? Also, is it better to have a waterproofed line than one without waterproofing for fly-fishing? Ans. Tapered lines are cast with more accuracy, and waterproofing not only preserves them, but makes them render easily through the rings of the rod.

NOAH, Elizabeth, N. J.—1. Is the latter part of September and first, part of October a good time for black bass in Greenwood Lake, N. J.? Ans. Excellent. 2. Will bass take flies there at that time? Ans. They do at other times and probably will then. 3. How are artificial insects used, in the same manner as bait, or like flies? Ans. Small insects are used either as surface or deep-water lures, while grasshoppers, crickets, and the like would cut a sorry "wake" at the funeral of most fish.

W. S. D., Providence, R. I.—I would like to have your opinion as to the qualities of a W. W. Greener muzzle-loading gun, 12 bore, 30-inch barrels. I made a target 80 inches in diameter at 30 yards (measured by steel tape) No. 9 shot, 1½ ozs. telegraph powder, and put 563 pellets inside of the circle. And in one square of 6 inches I put in 106 pellets. Do you not think that the gun shoots full thick for brush shooting, and would it not do as well and be a handier gun out to 26-inch barrels? Ans. The target made by your gun should be quite satisfactory, but we would advise you not to shorten the barrels.

BILLY BRECKIN, Inwood.—Will you oblige an old reader of your very valuable paper by stating in your next issue, if I will find good sport (quail or grouse) in Central Indiana near the State line of Illinois, or can you recommend some other section not beyond Illinois? Also what road going west gives best treatment to dogs? Ans. You will find excellent quail shooting and some "chickens." Your dog will be well treated on the Erie Railway and connections.

G. C. P., Harrison, N. Y.—Will you have the goodness to inform me how I ought to charge my breech-loader, of 11 pounds, 32-inch barrels, and 10-gauge for duck shooting, and also the size of shot best adapted for that kind of sport? Ans. We should advise a charge of four drachms powder and 1½ oz. No. 4 shot as being the customary charge for such a gun as your's, although the charge of powder could readily be increased to 5 drachms if desired.

O. E. W., Boston.—Would you kindly inform me what you consider the best book on dog training, where it can be obtained and the price? Ans. Dinks, Mayhew & Hutchinson, price \$3. We can furnish it. 2. Can a good strong article of snow-shoes be procured in New York for less money than \$7, the price charged in Boston? Ans. We think you would be better suited to send to Quebec (say to F. Dugal, dealer in curiosities). We know of no one in this city who sells snow-shoes.

W. G. W., Huntsville, Ala.—The grasshoppers you sent were so much injured that we could not surely determine the species. You probably observed the moulting from the pupa to the imago state. The larval pupa and adult forms are much alike, increasing in size, and the partial transformations succeed each other at intervals of two or three weeks. The fact of the eating of the discarded coat we do not remember to have heard before. Please confirm it by further observations if possible.

H. A., Uhrichsville, Ohio.—What will it cost from New York or Philadelphia by steamer to Florida? and what would it cost to take a dog along? Have Ward & Sons any reputation as gunmakers? Ans. Ferdinand Line from New York to Jacksonville, \$22.50; via Charleston connecting with Dictator, \$27.50, state room and meals included. Excursion tickets were sold last winter at \$10 and \$50 respectively. About \$5 for the dog. No such gunmakers known here.

J. Z. J., New York.—1. Will you kindly inform me in your next issue of FOREST AND STREAM the best adapted charge of powder and shot for a muzzle-loader of eight pounds, 13-gauge, and 30 inch barrel. 2. Where can I find the best squirrel shooting; and what size shot are the most desirable? Ans. 1. Use three drachms of powder and 1½ ounces shot. 2d. You will find some squirrel shooting in the vicinity of Tenally, Bergen County, N. J., and No. 7 shot is the proper size to use.

J. M.—1. Will you please let me know in next week's paper, where is the best squirrel shooting within 80 miles of New York? 2. What shooting and fishing is there in Middletown, New Jersey, in September and October? 3. What shooting is there at Clinton, Conn.? 4. Do you know of a second-hand single barrel breech-loading shot gun and at what price? Ans. 1. At Tenally, Bergen Co. 2. Woodcock and ruffed grouse in October. Some pickerel fishing in September and October. 3. Cannot say. 4. Have a good one for sale at this office; price \$15.

W. H. T., Hannibal, Mo.—I have a fine W. & C. Scott & Sons' premier quality breech-loading gun, upon which I wish to have some repairing done. There is a small dent in one barrel just where the choke begins. I wish also to have a good sight put on, the original one is gone, and a new spring governing the top snap, which is broken. Can you have these repairs made or me? Ans. We should think that the repairs to your gun might be made in St. Louis; if not, send it to us and we will have them made by Hayden.

W. H. C., Ludlow, Pa.—Will you please inform me what sized wire, size of mesh, &c., is required for hatching trays, and where I can obtain it. Also of whom I can get paradise' arnish in New York City? Ans. For illustrated articles on Hatching Houses, Trays, &c., see FOREST AND STREAM October 7th and October 14th, 1875. These articles give all the information you desire, and are of great utility to fish culturists.

J. K., Jr., Fishkill.—In your issue of August 17th, in answer to correspondent "E. O. K.," Fishkill on Hudson, you state that ruffed grouse can be shot September 1st in this State. The Sportsman's Association for Dutchess, Ulster and Orange Counties have published a notice in which they state that they cannot be shot until October 1st. Please give the phraseology of the section of the latest law in relation to this matter. Ans. The text reads as follows: "No person shall kill, &c., any ruffed grouse, commonly called partridge, between the 1st day of January and the 1st day of September, under a penalty of \$25 for each bird." [Sec. 2, chap. 183, laws of 1875]. The law was not changed by the last Legislature.

G. F. M., New York.—As I propose taking a canoe trip down the Delaware river some time in September or October, I ask information as to what kind of shooting and fishing I can expect. Will start from Hancock, and so on down to Philadelphia; also the right kind of fishing tackle and bait to use. Ans. If the water does not rise you will have no fishing at all, to say nothing of floating your skiff. There are bass in the river and trout in the streams that empty into it. Good woodcock and snipe shooting along shore, with ruffed grouse and rabbits on the wooded side hills, and squirrels in the nut groves. Take a good stiff rod with reel and line, with worms or grasshoppers for the trout, and live minnows or frog for the bass. You will catch the trout at the mouths of the brooks and the bass where the water is rough.

MONTAGNI, Montreal. Would you kindly answer the following questions in your next issue: 1. Is a cat-rigged boat considered more effective in going to windward than a sloop? 2. Which is the safer, a cat-rigged or a sloop? 3. What size of sail for cat-rigged boat, 20 feet keel, 8 feet beam, boom, gaff and hoist? 4. Should the model of cat-rigged be different from sloop? 5. A boat with full sail set, going free before the wind, is struck by a squall. What is the proper thing to do? Ans. 1. No. 2. For a beginner a cat-rigged is the safer, because there are less ropes to manage. 3. A good easy sail would be 22 feet boom, 15 feet hoist, 10 feet gaff. 4. No. 5. Put your helm hard down and slack your main sheet.

F. L. R., Longwood, Fla.—The insect you send is a female of the praying mantis, belonging to the orthopteran genus *Mantis*, and is related to the walking-stick and leaf insects. It derives its name from its habit of sitting with its long and flattened fore-legs held up and joined in the attitude of prayer. It is the subject of many religious fables and superstitions on this account; but its attitude is really one of readiness to seize its prey or defend itself. It feeds chiefly upon other insects, but is often overpowered and consumed by ants. Their pugnacity and endurance is so great that the Chinese keep them caged, and match them in pitched battles. It is found common in the Southern States and West Indies. The "flag-staff" which you broke off was the insect's egg-depositor, laying her eggs in the ground through this tube like the grasshopper.

C. F., Boston.—In your paper of April 6th you say: "A law has recently been passed in New Brunswick, prohibiting the killing of moose deer and caribou for three years." And in your issue of August 17th you say: "We know of no law to prohibit the killing of moose in New Brunswick;" and also give some directions for getting to the best hunting grounds. Will you be kind enough to inform me which of these items is correct? I have heard from other parties that the former is the correct statement. Ans. The statement in FOREST AND STREAM of April 6th, 1876, to the effect that a law had been passed in New Brunswick prohibiting the killing of moose, deer, caribou, etc., for three years, was both correct and incorrect. Dr. Dow of Fredericton, introduced a bill last session to that effect, which passed the Assembly without a dissenting voice and was sent to the Upper House. There, however, it was thrown out, or killed. Later in the session a bill was sent down to the Assembly from the Upper House extending the close season for moose from December 1st to September 1st—to nine months—but Dr. Dow and others defeated it because it did not include caribou. This bill also was killed by progress being reported on it, after which it was not brought up again. There is, therefore, no law in this Province against killing moose between this time and the 1st of February, and the statement to that effect in FOREST AND STREAM of August 17th was correct. No person, however, is permitted to kill more than two moose within any one year under a penalty of \$2, and the killing of moose for other purposes than using the flesh for food, is punishable by a fine of \$20. The close season for deer and caribou is between March 1st and September 1st.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK.

[POST OFFICE BOX 2832.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 20 cents per line; outside page, 30 cents. Special rates for three, six, and twelve months. Notices in editorial columns, 50 cents per line.

NEW YORK, THURSDAY, SEPTEMBER 7, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,

Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, Sept. 7.—Central New York Fair, Utica, N. Y. Yachting: at College Point, L. I.; Royal Canadian Yacht Club Regatta at Toronto. Trotting: Dubuque, Ia.; Davenport, Ia.; Penn Yan, N. Y.; Springfield, Mass.; Macomb, Ill.; Montgomery City, Mo. Rifle: Poppenhusen Badge, Match and Long-range practice at Creedmoor. Base Ball: Mutual of New York vs. Volunteer, at Poughkeepsie; Alpha of S. I. vs. Montgomery of N. Y., at Brooklyn; Mutual of New York vs. Volunteer, at Poughkeepsie; Rhode Island vs. Louisville, at Providence, R. I.; Chicago vs. St. Louis, at Brooklyn.

FRIDAY, Sept. 8.—Central New York Fair. Royal Canadian Yacht Club Regatta at Toronto. Trotting as above except at Penn Yan, N. Y. Rifle: Long-range practice at Creedmoor. Base Ball: Monticello vs. Press, at Jersey City; Enterprise vs. Resolute of Elizabeth, at Jersey City; Star of Syracuse vs. Cricket, at Binghamton N. Y.; Mutual vs. Chicago, at Brooklyn, E. D.; Boston vs. Louisville, at Boston; Hartford vs. Cincinnati, at Hartford; Athletic vs. St. Louis at Philadelphia.

SATURDAY, SEPT. 9.—Trotting: As on Friday. Rifle: Seventh regiment Diamond badge and Shells matches at Creedmoor. Cricket: St. George vs. Staten Islands at Hoboken, N. J. Base ball: Contest vs. Athletics, of East N. Y., at Prospect Park, Brooklyn; Enterprise vs. New York, at Jersey City; Arlington vs. Resolute, at Stapleton Flats, S. I.; Mutual vs. Hoboken, at Jersey City; Witoka vs. Crescent, at Brooklyn; Staten Island vs. Olympic, at Staten Island; Osceola vs. Nameless, at Brooklyn; Winona vs. Hudson, at Brooklyn; Mutual vs. Chicago, at Brooklyn, E. D.; Boston vs. Louisville, at Boston; Hartford vs. Cincinnati, at Hartford; Athletics vs. St. Louis, at Philadelphia.

MONDAY, SEPT. 11.—Regatta Boston Yacht Club. Base ball: Elizabeth vs. Our Boys, at Elizabeth, N. I.

TUESDAY, SEPT. 12.—Rifle: Centennial matches and fourth annual prize meeting National Rifle Association at Creedmoor. Trotting: Point Breeze Park, Philadelphia; Mystic Park, Boston; Peoria, Ill.; Albany, N. Y.; Cleveland, Ohio; Syracuse, N. Y. Base ball: Mutual vs. Louisville, at Brooklyn, E. D.; Boston vs. St. Louis, at Boston; Hartford vs. Chicago, at Hartford; Athletic vs. Cincinnati, at Philadelphia.

The subscription price of FOREST AND STREAM has been reduced to \$4. Twenty-five per cent. off for Clubs of Three or more.

THE AUDUBON CLUB.—We beg to tender our sincere thanks to the members of the Audubon Club, of Chicago, for the many kind attentions extended to our representative during the recent National Convention in that city. The pleasure enjoyed in the society of these gentlemen will long be remembered, and, when possible, reciprocated. We tender them all the courtesies of our office when they visit New York.

—Any gentleman having a general shooting ground, shore and upland, to lease or sell, is referred to the advertisement elsewhere.

THE CENTENNIAL AQUARIUM.

THE Centennial Aquarium, which it was announced with something of a flourish would be a prominent attraction of the Exhibition at Philadelphia, has proved worse than a failure. It is a failure *per se*; and worse than a failure, because the parties into whose charge it was placed had every facility and requisite for making it what it ought to have been, and what they promised it should be. In the latter part of June we visited the Agricultural Hall to inspect what we had promised ourselves would prove a source of delight, and to our surprise and chagrin found nearly all the tanks untenanted, and the Aquarium Superintendent, Mr. Fred Mather, who had set his heart upon having a rare show, standing like Napoleon at St. Helena, in mournful attitude and brass-mounted uniform, bewailing the culmination of a series of catastrophes which could never be repaired, and which placed his golden dream of success forever beyond his reach. What was the matter? Why nothing had gone right from the first. Some fish had died *intransitu* and some from neglect after they had reached the tanks; his requisitions, which required a prompt compliance that red tape could never fill, had met with habitual delay; and now, to cap the climax of his woes, that very morning the pumping engine had failed, and left the fish to gasp for their requisite supply of sea water. He had rescued what he could and hurried them to the central fountains, and all that remained were a few turtles and an unfortunate "Hell-bender!" "Hell-bender" is what Mather called it—a sort of slimy hermaphrodite, half leech, half lizard, with a large square mouth like a catfish; and when Fred in his affliction attempted to fondle it, the vile thing actually bit him! The look of pity more than of anger that the injured Superintendent dropped on him was too much for our sympathizing heart, and we hastily withdrew to Machinery Hall to drown our reflections in the crash and hum of material forces.

A few days ago a thin, spare figure, clad in gray, glided into our office and deposited a mildewed card upon our desk. It was printed, "Fred Mather, Superintendent Centennial Aquarium;" but across the face of it were written in black the words "*Never more.*" More ominous than the utterances of the "Raven!" We looked up furtively, just as Poe's fellow did at the chamber door. It was Mather! but it was not the Mather of early Centennial days. The gilt buttons had gone as the sunshine fades behind the leaden cloud. The expression of his face looked like Macbeth's when he groaned "Thou canst not say I did it!" By that token we realized all. We comprehended the situation instantly. All was lost, and the Grand Centennial Aquarium was a grand tetotal failure! It was all up with it. We had hoped that the perseverance of our friend would have wrought success, despite all obstacles, but the shadow had fallen at last. "I am going back," he said, "to my native heath. I want to see my mother. I could—alas!—I could have stood it all; but that ungrateful 'hell-bender!' It was the unkindest cut of all."

With this utterance he vanished and left us to reflect upon the uncertainty of Centennial Commissions, and the indifference and maladministration of some from whom great things were expected. The Centennial Aquarium is not a *fait accompli*, but we may congratulate the public that, however dark it may look on this side of the Atlantic, on the other they have a Brighton.

GREENWOOD LAKE OUR FUTURE REGATTA GROUND.

THE Greenwood Lake Sportsman's Club is the "livest" association that our attention has ever been directed to. Organized primarily to protect the bass fishing in the beautiful lake in Orange county where it makes its headquarters, it has drawn to it by a natural attraction the several railroad and hotel interests that center there, and enlisted in its behalf the active services and coöperation of all concerned. Old sportsmen to whom Greenwood Lake has been chosen and familiar hunting and fishing ground for 50 years, are pleased with the easy access thereto which the recently completed Montclair and Greenwood Lake Railroad affords, and while they may deprecate the opening of their hitherto exclusive resort to the public, they feel that the protective restrictions thrown over the territory will not only preserve it, but make it even more fruitful in game to be shot at and fish to be angled for. Wherefore, not only they but their sons, now grown to full estate, lend helpful aid to the enterprise, and old Peter Cooper, Abram S. Hewitt, and Peter Gilsey's sons and sons-in-law, and all the large holders of wilderness lands that border on the lake have joined the club. The officers of the railroad have swelled the long list of honorable names, and the Brandons, mine host Waterstone of old fame, the proprietor of the Windermere, and the other hotel keepers have joined, and Mr. Brandon has offered a site for the new Club House, which is to cost \$12,000, a sum quite munificent in itself, but which any one of fifty of the wealthiest of the club members could spare from his individual exchequer. So that, from small beginnings the Greenwood Lake Club has suddenly assumed a potential growth, and promises to afford to those living within a hundred miles of the lake one of the most attractive resorts in the country. Six years ago a few gentlemen who formed the nucleus of the club put black bass into the lake, and they now take great quantities with hook and line, that run up to three pounds in weight and over. There are woodcock and ruffed grouse over the hills in considerable quantity, and a few ducks in the fall, which

may be multiplied by inducements to tarry, in the shape of wild rice sown at advantageous points. With the facilities and attractions named the conveyances and hotels have been run to their fullest capacity ever since the railroad was opened on the 1st of July. Hundreds of the residents along the line who had been cut off from the lake by an intervening wilderness tract 12 miles across, and had never seen it, now embrace the opportunity to pay it frequent visits; picnic parties ramble by hundreds, and visitors from the city are numerous. Everyone seems happy and enthusiastic, and everybody—railroads, hotels, and all—are making money. To go up into that section is like sliding out from financial darkness and distress into the light and activity of flush times.

Our especial object, however, in writing this article, was not to give a general sketch of the place and its belongings. As we began to say, the Club was primarily organized to protect the fish in the lake and enjoy the fishing; but among the numerous added attractions since then, that of boating is perhaps even the greatest. There is a very fine passenger steamboat that runs from the railroad terminus to all points on the lake (which is eight miles long, and we forgot to say, christened by Frank Forester, with its beautiful name); there are two little steam excursion yachts, and quite a number of rowboats, duckboats, shells and canoes belonging to club members, besides skiffs innumerable to let. It has been ascertained by constant tests that Greenwood Lake is one of the finest sheets of water in the country for rowing. Inclosed by hills that are almost mountainous, it is not subject to serious flaws of wind to lump and roughen the water. It offers the finest four-mile straightaway course we have; and with the conditions we have mentioned—its easy access from New York by rail of only 40 miles; its seven large and well-kept hotels, with one to be enlarged and another to be added next season; its club of well organized, wealthy and influential members, with a commodious club house; its steamers, already on the lake, for regatta uses—we may safely predict that it will be eventually selected as the favorite Regatta Course for all regattas to be rowed within 100 miles of New York. This prediction is not a random shot at hap-hazard chances. All that is needed is for the Club to induce the officers of our rowing clubs to visit the place, and we would respectfully suggest that it would prove a good investment if the Club would arrange for a regatta on the lake on some balmy October day, when the air is still and the leaves are golden, and give free transportation to the shells and boats of all clubs signifying their willingness to enter. This would bring all the boat clubs together in one grand reunion, and at once establish the lake in favor as a rowing curriculum. It will be seen by reference to our boating column that the Club has already invited the Yale and London Rowing Clubs to a joust on its waters this month, and offered the magnificent prize of a \$500 cup to the winner. Yale has accepted, and we trust that the acquiescence of the London Club will assure the event and establish Greenwood Lake henceforth as the chosen Regatta Ground for New England and the Middle States.

CULTIVATING WILD RICE TO ATTRACT FOWL.

IT is a fact generally conceded that, all things being equal, birds will be found in greatest abundance and regularity where they best can obtain their favorite food. It thus happens that many birds have been largely influenced in habits by civilization, and the changes which the presence of man has occasioned in their native haunts. Travelers in the almost illimitable wilds of northern Asia say that they feel sure they are approaching the vicinity of settlements when they begin to see birds in the bushes, for the few in the wilderness gather about such places. John Burroughs, when he went into the far Adirondacks for birds, was disappointed and only secured them near the towns. We ourselves have noticed the same thing in the Rocky Mountains, and in the Canadian forests. The birds do not seek the company of man for sympathy alone, but because his operations and his cattle let in the sunlight, and induce increased quantities of insects, and protection from hawks and owls. With the game-birds, however, although attracted in a somewhat similar way and degree the result is usually different, and the constant pursuit of them is likely to soon produce extermination or extreme scarcity. This is especially the case with the water-fowl, whose breeding haunts once disturbed are not likely to be continued or re-established. In some places, however, circumstances are so favorable that despite an annual fusillade from hunters for a century or more, the geese, ducks, rails, and gallinules, have come back year after year, and still return in large numbers to breed, or to feed on their vernal and autumnal flights. Instances of such well-kept shooting grounds are the lakes of Minnesota and Wisconsin, the extensive marshes along Lake Erie from Sandusky to Detroit,—particularly at Monroe,—and the reedy swamps of Canada. In all these the shore, and in many cases the whole surface, is choked with a dense growth of tall reeds of the *Zizania aquatica*, known as wild rice, Indian rice and water oats, which last comes nearer the botanical truth. Upon the ripened seeds, and perhaps, succulent young shoots of this reed the water-fowl all feed with great avidity; and also find where it grows an abundance of other vegetable food, and many small insects, larvæ and mollusks highly to their taste.

It would therefore seem to be an experiment worth trying to introduce into our lakes and sluggish streams where

it does not now exist the growth of this wild "rice" in expectation of its attracting the ducks flying fast to stop there and feed, thus affording many a shot to the gunner where he could never hope for one before; while, under proper protection, many species might be induced to remain and rear their young. New York seedsmen say they never heard of any seed being sold in New York, but we have a letter from D. T. Curtis & Co., seedsmen at Boston, saying that they have a call for it, and if possible, propose to keep a supply. The seed, we know, can be obtained from Richard Valentine, of Janesville, Wis., T. P. Cantwell, of Brainerd, Minnesota, and of Henry Merriam, Harwood P. O., Rice Lake, Peterborough, Canada, and we hope the venture of our Boston friends will meet with success. The expense would be small for any farmer to try it on his waste swamp land, and in a few years it might result in the possession of a duck-shooting preserve, the sale of privileges for which would yield a handsome income. An excellent way to plant it would be to roll up the seed in little balls of clay and drop the balls in the water in the fall, to germinate the next spring. The proper way, however, when the condition of the water renders it practicable, is to chop with a hoe a strip of earth ten feet wide along the margin where there are wet flats, and then sow broadcast. Raise the water so as to cover the seed to the depth of half an inch, and draw off when the seeds have sprouted. When the blades have grown three or four inches, flood again. When it is well rooted it will grow well in deep water. A bushel of seed to an acre is sufficient. It will not spread to the upland. Wild rice sows itself and grows rapidly whenever established. It ripens in September. Seed should be sown in the spring. To ensure, it would be well to sow both in spring and fall. Rice readily adapts itself, in time, to great changes of soil and temperature.

We earnestly beg all sporting clubs to take up this matter. Let the food be distributed all over the country, so that our birds may not only tarry here and there and everywhere, on their migrations, but having partaken of the succulent food, wax fat and delicious to the taste. When ducks cannot get vegetable food, they will eat fish, and fish-flavor destroys them for the table. We will render all the assistance we can to promote the work we have assigned to our friends.

THE INTERNATIONAL REGATTAS.

SO far as the amateur contests go the International Regatta at Philadelphia was finished on Friday afternoon last. Throughout little fault has been or can be found with the management. The great number of entries made it a difficult matter to handle. At this time we can of course see mistakes that could not have been easily foreseen. The Committee held off fixing a programme in hopes that the heats for scullers, single and double, might be real races, and that by withdrawals they would not have been walks-over. Herein a great mistake was made. No new sculler has come to the front; Riley was not qualified, and the field left to Courtney. Between him and the rest of the field was Yates, enough better than the field to take the prize had his big friend been away. The rest were frightened off.

The intense interest in the fours on Monday, Tuesday and Wednesday threw a damper on the minor races, and the only exciting feature of the last days was the Inter-collegiate race on Friday. From beginning to end no obstruction to the course occurred. With two very minor exceptions all the many races were started with the punctuality of a railroad train. The races were singularly free from fouls or even claims of fouls. Some heart-burning and hot language grew out of the London-Yale race, and the final heat of fours, but both these races had better be discussed when the excitement of the moment has passed and a cooler judgment arrived at. On Monday the professional races began with the trial heats for fours, the whale boat races, and the trials for singles, of which there are fifteen. Reports will be found in our Boating column.

CREDIT.—Our Natural History Editor was highly complimented by Prof. Ed. S. Morse in his recent address before the American Association for the Advancement of Science, on the discoveries which he made in the Rocky Mountains, two years ago, and which contributed not a few facts of importance to science, pointing toward an unsuspected survival of past forms among the lower animals existing at present, through the superior facility they possessed of adapting themselves to changed surroundings. One example of this is the case of the living salt-water crabs which he found to inhabit a pent-up lake on the northern end of the Arizona deserts, where, no doubt, had once been a salt-water pool left by the retreating waters of the ocean, which, as is well known, once covered that whole region. Prof. Morse was reviewing the work done by American students toward the building up of the doctrines of evolution, especially by natural selection.

FRED BEVERLY AT THE HUNTER'S CAMP.—Any person who has curiosity to see "Fred Beverly," the hero of Okechobee, can see him now in full bloom at the Hunter's Camp, Centennial Grounds, Philadelphia, where he will remain in charge until the close of the Exhibition. He can easily be recognized by his buckskin suit and "pal-meeter" hat.

—The attention of our readers is called to Dudley & Co.'s advertisement in another column. Their Recapper is cheap, light and strong, adapted to paper or metallic shells, and very convenient for sportsmen.

NATIONAL SPORTSMEN'S CONVENTION

TO say that the meeting of the National Sportsmen's Association, which was held in Chicago on Aug. 29th was an enthusiastic or successful one would be to say what was not true. With the exception of the able and interesting address of the President, Hon. John V. Le Moyne, of Chicago, which we printed last week, and some few unimportant alterations in the by-laws, there was positively nothing done beyond electing officers for the ensuing year and naming the place at which the next Convention shall be held. The attendance was smaller than at any previous Convention, the Committee on Nomenclature was not prepared with any report, and had it not been for the wisdom displayed in selecting Syracuse in this State as the location of the next Convention, we candidly believe that within two or three years the National Association would either have ceased to exist, or have been reduced to the mere skeleton of an organization without vigor or usefulness.

The apathy of those most interested in this Association is extraordinary, and it is a fact worthy of comment that in this Convention, held in a western city, the East was represented by a larger number of delegates than the West. Those who have the game of the country now on their lands, are apparently the least interested in preserving or increasing it.

Much of this indifference doubtless arises from the difficulty under which the various State associations labor in endeavoring to convince their Legislatures of the importance of the subject. President Le Moyne, in his address, very pertinently figures up the value of the game to the farmer individually as well as the State at large, but the granger is unable to see anything in the possession of a few birds, beyond trampled corn or broken fences; and while willing to make the most stringent trespass laws, he is unwilling to do anything towards his own game interests or those of the sportsman. But this is a cause in which indifference must not be permitted to exist. Constant washing will wear away a stone, and so will persistent and continued effort finally accomplish the end sought.

We deem the selection of Syracuse as the place of holding the next meeting a wise one, inasmuch as it will be possible to procure a larger attendance than at any previous convention. The Eastern and Middle States, at least such of them as belong to the National Association, and those which do not, (New Jersey for instance) may in the meantime be induced to unite. If they will send full delegations, the West will do likewise. The date fixed, the first Tuesday in June, is much more auspicious than the present. Sportsman will not then be scattered to their various shooting grounds but the traveling season will just have opened. The meeting of the New York State Association will be held at about the same time and if the pigeon shooting can only be kept distinct from the more important matters, the National Association will be infused with new life and perhaps enter upon that career of usefulness, promised, but long delayed.

THE PROCEEDINGS.

The spacious "ladies ordinary" of the Grand Pacific Hotel was kindly given by the proprietors for the uses of the Convention, and at 8 o'clock when President Le Moyne took the chair and called the Convention to order there were found to be delegates from nine States present, as follows:—

New York—J. J. Flanagan, Utica; John A. Nichols, Syracuse; W. M. Tileston, Long Island; T. C. Banks, New York; Greene Smith, Peterboro.

Massachusetts—Luther Adams, Boston; A. F. Copeland, Boston; E. H. Lathrop; S. T. Hammond, Springfield; Jerome Marble, Worcester.

Ohio—H. A. Harvey, Cleveland.

Indiana—A. B. Wade.

Illinois—C. E. Felton, Chicago; J. L. Pratt, and John Syne, Sycamore; E. C. Waller, Chicago; W. B. Hauworth, Pennsylvania—Charles C. Cadman.

Missouri—E. C. Sterling, and C. H. Turner, St. Louis. Michigan—Hon. Robert P. Tomes, J. E. Long, and A. J. Kellogg, Detroit; Dr. E. S. Holmes, Grand Rapids; E. C. Nichols.

Tennessee—P. H. Bryson, Memphis.

Honorary Members—Judge J. B. Caton, Illinois, and Hon. A. T. Brinsmade, of Ohio.

The Secretary of the Association being absent, Hon. E. H. Lathrop, of Springfield, Mass., was selected to fill the position. The President of the Association, Hon. John V. Le Moyne, then read his annual address. [See FOREST AND STREAM of last week].

The Treasurer's report showed a balance of funds belonging to the Association of \$123.50. A communication from Mr. Fred Pond, of Montello, Wis., was read. After a little unimportant routine business the Convention adjourned to meet at the rooms of the Audubon Club in the evening, at the appointed time. The Secretary's report of the last convention was then read.

The committee on by-laws reported an order of business, which will be used in the conventions of the Association hereafter. It was adopted.

A resolution declaring the Hon. J. V. Le Moyne to be an honorary member of the Association was then adopted.

The committee appointed to name the place and time of the next meeting reported two places from which to choose, viz: Detroit, Mich., and Syracuse, N. Y., and recommended the first Tuesday in June as the time. The question of place was decided by ballot, Syracuse being selected by a vote of 11 to 8. The date recommended by the committee was concurred in.

The election of officers was next proceeded with. It resulted as follows: President, Greene Smith, Portsmouth, N. Y.; first Vice President, Dr. Rowe, Chicago; second Vice President, Dr. E. S. Holmes, Grand Rapids, Mich.; Recording Secretary, John A. Nichols, Syracuse; Corresponding Secretary, T. C. Banks, of New York; Treasurer, Jerome Marble, Worcester, Mass.

The President announced that the Audubon Club had tendered the Association an invitation to meet with its members at the Grand Pacific Hotel that evening for a season of sociability around a banquet table. Votes of thanks were passed to the proprietors of the Grand Pacific Hotel, the Audubon Club, and the retiring presiding officer.

The newly-elected President, upon taking the chair, announced the following standing committees:—

Finance—C. C. Cadman, Chicago; P. H. Bryson, Memphis; M. M. Clay, Buffalo; E. H. Lathrop, Springfield, Mass.; R. R. Clark, Chicago.

By-laws—J. J. Flanagan, Utica, N. Y.; Luther Adams, Boston; A. J. Kellogg, Detroit.

Law—A. T. Brinsmade, Cleveland; J. V. Le Moyne, Chicago; H. Barclay, Monroeville, N. Y.; E. C. Sterling, St. Louis; E. C. Nichols, Battle Creek, Mich.

The Convention then adjourned.

At half past 8 o'clock the delegates to the Convention assembled at the Grand Pacific Hotel to partake of the hospitality extended to them by the members of the Audubon Club. The Hon. J. V. Le Moyne presided. After partaking of a bounteous repast, speeches were made by the following gentlemen:—Messrs. Greene Smith, Ed. Gilman, J. J. Flanagan, the Hon. A. T. Brinsmade, the Hon. J. V. Le Moyne, the Hon. J. L. Pratt, the Hon. E. H. Lathrop, Dr. E. S. Holmes, E. C. Sterling, John Syne, Chas. E. Felton, Arnold Burges, W. M. Tileston, T. C. Banks, Col. Noyes; after which the guests were entertained with songs by Messrs. Gilman, Paine, and John Syne.

AMERICAN FORESTRY.

THE NATIONAL FOREST CONVENTION—PRESERVATION AND CULTIVATION OF AMERICAN WOODS.

THE importance of the subject of arboriculture is sufficiently shown by the fact of the above convention being about to assemble at Sea Grove, Cape May Point, New Jersey, on September 7th and 8th, under the auspices of the American Forest Council. The necessity of investigating the subject of the denudation of the forest lands of America is conceded on all hands. Calculations have already been made and published of the number of years yet to elapse before the pine forests of Maine, Michigan and the West are exhausted. Forests have been regarded as growing for the sole purpose of being cut down. The whole question has assumed the form of a calculation of the annual lumber supply. We have already discovered, and the truth should be generally known, that forests represent more than lumber. They directly influence the climate and water supply. It was no mere poetical fancy which led Bryant to put into the mouth of the Indian at the burying place of his fathers the following words:—

"Before these fields were shorn and till'd
Full to the brim our rivers flowed;
The melody of waters filled
The fresh and boundless wood,
And torrents dashed and rivulets played,
And fountains spouted in the shade.

"Those grateful sounds are heard no more,
The springs are silent in the sun,
The rivers by the blackened shore
With lessening current run,
The realm our tribes are crushed to get
May be a barren desert yet."

Let us look at the vast expanse of treeless country to be seen in almost any direction, let us then think of the long parching droughts from which the country suffers and we will find that the poetical and the practical have, for once, been united. The British Government has discovered the utility of this view in reference to its gigantic dominions in the East. A knowledge of forestry is one of the prime qualifications of candidates for that branch of its service. They are sent to Scotland or the Continent of Europe to study the science under conditions and instructions of the most practical kind. If such knowledge were more generally diffused here, the results we have deprecated might have been avoided, and their further extension be stopped.

The meeting of the National Forest Convention cannot be productive of anything but benefit. It will draw the public attention to an important subject, and few when the necessary information is laid before them, will differ from the expressed opinion of the gentlemen calling the convention that, "as concerning climatic influences for the benefit of the life and health of the people forests are of such importance that, irrespective of the vast material and more tangible interests involved, that we cannot afford longer to delay thorough, general and systematic investigation of the subject."

The question may be looked at from three points of view, climate, beauty and supply. In regard to the first we are confronted by a problem involving not merely the moderately healthy habitation of large districts of the country, but their occupation under any circumstances whatever. Trees attract and diffuse moisture; they equalize the rainfall and the temperature. Remove them and not only does the atmosphere become parched, but the ground becomes barren, and vegetation dies out for want of water. Of the springs nothing is left but a dry basin, of the streams nothing but a rocky bed. America has received many warnings of this kind from other countries. Many districts around the Mediterranean, and once parts of the Roman Empire, present now an aspect totally different from that they wore when the power of Rome was at its height. Provinces most celebrated for beauty and profusion are either deserted or repulsive, and desolation has taken the place of fertility. The trees which crowned the ridges and hills were felled without prudence or regard to results, and chiefly through that agency the country was converted into a barren desert. Many portions of Italy and Asia Minor exemplify what has been said. The question very naturally arises: If such results have ensued

elsewhere, why may they not do so here also? As to the supply of timber, if the United States exhaust her own resources, if the forests upon which such inroads have been made should, as they certainly will, become depleted, in what direction shall we turn? We have been lavish and extravagant, and have unfortunately helped to reduce Canada to almost our own condition, and cannot, therefore, look to our Hyperborean neighbor. The question will soon demand an answer.

In considering how far trees add to the beauty of a country, we must have regard not only to their place in expansive landscape, but to the beautifying of our homes and cities. There are places for them in all public squares, and in most, if not all streets. In the country and around country houses they should be reared on all sides, near the homestead and in the fields. Health and comfort alike demand their presence. Should it be said that "trees take a long time to grow, why should I plant them for others to sit under?" a sentiment is given expression to which is not only selfish, but stupid. There is, in the first place, a pleasure in the culture of trees which would alone amply repay any trouble bestowed upon them. In the next place, they are at almost any age beneficial to the soil and climate, and in a few years will afford both shade and shelter from the wind. Lastly, a few years more will bring them to such a condition that their timber can be applied to many uses and so be made a source of profit. It is said by one writer, speaking in general terms, that "groves and belts of woodland will in twenty years from planting—perhaps in less time—afford shade, protection, fencing, fuel and material for many other purposes." They protect, beautify and profit. The value of a country-seat or farm upon which thriving trees are being reared is vastly enhanced by their presence, and to an extent altogether out of proportion to their value as mere timber. Thus, a house and its grounds may, from location and extent, be worth \$10,000, although the entire absence of trees gives the place an unattractive appearance. The same grounds, properly shaded and planted with trees worth \$1,000, would in all likelihood sell at \$15,000, so that \$4,000 would represent the value not their own otherwise than as it represents the value of the beauty imparted by the trees to the property. This is a point worthy of the consideration of those who have constitutional objections to benefit posterity.

In making a choice of the kinds to set their special purpose must be considered. For lawn and grounds the leading qualifications will in all probability be rapidity of growth and density of foliage. The tree combining both these requisites to the greatest extent will be regarded as the best. For other purposes the quality of the timber will be the prime consideration. Upon these various points only a few hints can here be given. The following results of an experiment made a few years ago in Illinois afford some valuable information regarding the rate of growth of the forest trees enumerated. All the plants when set out were between six and twelve inches high. At the end of twelve years the height of each was taken. European larch had reached a height of 30 feet; white pine 35 feet; American larch 25 feet; silver maple 25 feet; Norway spruce and Scotch pine each 20 feet; white ash, chestnut, white elm, Scotch elm, Austrian pine and balsam fir each 16 feet; black walnut and European birch 14 feet; sugar maple 12 feet, and European beech 10 feet. In taking the above as a guide allowance must be made for the fact that all were grown in the same soil which would necessarily be better adapted for some than for others. The first mentioned, the European larch, although not reared to any great extent in this country, has many qualities to recommend it to the planters. Its appearance is exceedingly beautiful, its growth rapid, and its timber valuable. One great characteristic of the latter is its durability, in which respect it far exceeds the oak. It is, therefore, well adapted for shipbuilding, for any purpose in answering which timber is exposed to the continual action of water, such as piles, or of the weather, such as fences or props. At present, however, the favorite tree of America for ornament and shade is the maple. Of it there are nine species, which go under the following names: silver, red, sugar, black sugar, striped, mountain, Norway, sycamore, and ash-leaved, or box elder. Although of slower growth than the silver the sugar maple is the most valuable of the different species, and to compensate for its tardiness it ultimately attains a greater altitude than its principal rival. It possesses great beauty of appearance, its timber ranks next to hickory for fuel, and is largely devoted to many well-known purposes in cabinet-making. The production of sugar from its sap is an additional and peculiar advantage. Notwithstanding the possession by the sugar maple of these good qualities many prefer the silver variety. The beautiful silvery foliage, the greater rapidity of its growth and graceful appearance have made it a prime favorite among arboriculturists when ornament and shade are desired. Its timber is excellent for fuel, but, although sometimes used for furniture and flooring, it is not very valuable. It grows best in a dry soil. Under ordinary circumstances it will grow from twelve to twenty four inches the first year, and where the conditions are very favorable the rate will be doubled. The black-sugar maple resembles that first noticed too closely to demand separate notice. Of the other species several, although their timber is sometimes used for exceptional purposes, such as gunstocks, are only raised for the sake of ornament. All the varieties are propagated from seeds. In many places in the country young trees can be had for almost nothing. In this city young silver-leaved maples

can be had, from ten to twelve feet high, at one dollar each. Assuming that, according to the rates previously given, the latter rise two feet per annum, it will be seen that in a very few years a maple grove giving abundance of shade may be had at comparatively little expense. The value of black walnut, taken in connection with its rapid disappearance, affords one of the most striking commentaries upon the folly of cutting down trees in the prevalent wholesale fashion. It has now almost entirely disappeared from the western forest, where it was once most abundant. It grows very rapidly, is easily obtained, its timber is valuable and in constant demand, and it is, therefore, one of the trees best deserving the care of the planter. There are many varieties of poplar, the greater number of which grow very quickly, and are for that reason planted for the ornamentation of grounds. The white variety is more valuable than any of those of native production. As an ornamental tree on lawns it has the objection of throwing up suckers from its roots, but it is one of the best adapted for the streets of a city. The oak is slow of growth, but, when arrived at maturity, its majestic beauty is by many thought to be unsurpassed by any other tree. The elm also is slow, but it is, when of sufficient size, a very desirable shade tree. The white species is particularly attractive in appearance, and like the poplar is exceptionally well adapted for city life. As screens for sheltering horses, and for the purpose of relieving landscapes of the dreary monotony of the wintry leaflessness of deciduous trees evergreens are in every way preferable. In respect of rapidity of growth, density of foliage and beauty the horn of spruce is the best for shelter.

It is, however, impossible to exhaust this subject. What has been said may inspire a few to take an active interest in arboriculture, and help in guiding their first efforts. Governmental measures ought, no doubt, to be taken to insure both the planting of new forests and the preservation of what remains of the old. But every individual who perceives the necessity we are endeavoring to urge, and who has even the most limited opportunity can help in the attainment of the objects had in view by the National Forest Convention.

OUR CENTENNIAL LETTERS—NO. 10.

THE Mineral Annex to the Main Building is a strange place to look for animals, but here Mt. Union College, Alliance, Ohio, has deposited a late contribution of half a dozen extremely interesting quadrupeds. The most prominent among them is a great gorilla, standing upright, and baring a chest which measures 54 inches around. This is the fellow which Du Chaillu had so hard a battle with in the forests of the Gaboon River, Western Africa, and killed, only after the gorilla had used up at least one rifle by bending the barrel as if it were made of licorice. Du Chaillu sent this one to Paris, whence it came to America, and a second one to the London Zoological Gardens. It is a male, is in perfect order, is well mounted, and is of great value. Oberlin College has a skin and skeleton (mounted) of a female, also from the Gaboon, and these two are all that I now remember in American museums. This college claims to have a cabinet of natural history and geology worth \$500,000, but it is mostly packed up. A new building, however, is soon to be devoted to science at the College, when the collection will be properly arranged. The other animals they exhibit here are worthy of almost equal attention. One is the flying lemur, of the Philippines, which is a sort of link connecting the bats and monkeys; between its limbs, and extending in a triangle to the tip of the tail, is a parachute, or fold of skin, covered with hair, as in our flying-squirrel. In size the lemur about equals a gray squirrel, and the color is a soft pearly gray, but the young one clinging to its mother's bosom is reddish-brown. From Australia hails a bright and nimble looking little creature, which is a curious compound; it has the plantigrade hind feet of a bear, the short fore-arms of a kangaroo, with "hands" suited to grasping the branches of trees, along the under side of which it often travels like a sloth; its head is shaped much like that of a bear, but with large incisor teeth like a rodent; the ears are large and adorned with heavy tufts of hair; finally it is pouched, and is, therefore, a marsupial, as is everything else in Australia except the wild dog. Its native name is koala, and its scientific, *Phascolarctos cinereus* or the ash-colored pouched-bear—a very expressive title. It represents the transit from the cuscus and other phalangeine animals to the kangaroos, filling a gap among the macropode families. Its food is of a vegetable nature, chiefly gathered at night in the flowering trees. When the young koala is able to leave the pouch, the mother places it upon her back, where it clings for some time. Another Australian animal is the pretty little brown and gray kangaroo-rat. It is said to be very lively in its movements, but not to use its long hind legs for leaping as do its larger brethren, but to gallop along much like our deer mouse.

Representing South America is a magnificent specimen of the ant-eater, known in Brazil, its home, as *tamandaria bandeira*, from the structure of the tail, which it holds over its back like an awning, or spreads over itself like a robe. It is four or five feet long, brownish gray, marked with black on the back, throat and shoulders, and is covered with coarse, long hair, which on the tail forms a heavy plume, under which its owner is content to rest instead of constructing a burrow. This is an improvement on "your own vine and fig tree," for these will not bear a constant transplanting. The ant-eater has no teeth in its elongated, tapering head, but a very long tongue coated with a viscid fluid, with which it laps up the ants, upon which it lives, as one would sweep them up with a muckilage brush.

Another very notable collection of animals, and, except the Smithsonian's, the best array of our mammals on the Grounds, comes from Colorado, and is the work of a woman—Mrs. M. A. Maxwell, of Boulder, Col. Naturally it

is in the Kansas and Colorado Building, occupying half of one wing. It might be asked, why space in the Women's Pavilion was not chosen? I do not know, but it is possible that the talented artist preferred to put her work in competition with that of the men who are wrestling wealth and comfort from the stubborn rocks and soils of the new West, rather than with the embroideries, painting, bed-quilts and scrap-books of feminine exhibitors. But, although her work is masculine, I should be sorry to imply that its author is, except in the noble way of ability to take care of herself if need be. It was my good fortune to secure an introduction, and thus have pointed out to me many interesting features which a cursory glance might have overlooked.

Mrs. Maxwell having a corner, she has filled it with a rude pile of dry-goods boxes, over which has been thrown canvas painted and sanded, so as to make a very good pile of weather-beaten rocks, broad and high enough to leave space for a large closet underneath, which Mrs. Maxwell calls her "den," and whither she escapes from the innumerable bores whose tiresome curiosity can only thus be evaded. Upon this rocky bluff, over which a torrent leaps and falls into a basin below, the animals are arranged in natural attitudes; and one might believe a deluge had drawn them in a crowd to this last resort, and terror had made them friends. The top of the ledge is crowned with a forest of evergreens, among which the dusky forms of several grizzly, cinnamon, and black bears are discovered standing upright or moving about; on a projecting pinnacle stands erect a mountain sheep—a leader of the flock—ready in an instant to do battle with those great horns of his for his charge hidden behind the rocks; on another pinnacle is a goat, almost as white as the snow-banks along the edges of which he seeks the newest blades of grass. Then there are the deer of the mountains—the mule and white-tailed, and strangely, a red deer, which is extremely rare so far west. Upon one of the deer, which with wide-open mouth, panting nostrils and flying feet, leaps a chasm in a wild race for life, a cougar is just in the act of springing, and we cannot resist the impression that a real tragedy has thus suddenly been arrested. In the little corner of gravelly plain left on the floor an elk, holds high his splendid antlers, and a prong-horn antelope stands alert, almost on tip-toe, ready for instant flight. There is also a huge buffalo, most excellently mounted. Besides these are grouped about wolves, coyotes, wild-cats, badgers, beavers, (with the stump of a cottonwood three feet through, which they have chiseled off); several foxes, porcupines, the rare black-footed ferret; a common skunk with its young, and the little striped skunk; a family of minks, and a full series of the rodents, including some peculiar rats and mice and a shrew, which remain to be certainly identified. There are also a pair of live prairie dogs, which are as lively as possible, and of great strength, tugging at the large wires of their cage until they have pulled several out of place or broken them in two. They are very tame, will come at the call of their mistress, and answer her petting by fine, sharp little barks. They were very interesting. There are a pair of live rattlesnakes under a glass cover also, that Mrs. Maxwell has much to say about, which I have not space to repeat.

The whole display is a remarkable one, only the main features of which I have indicated. It is a typical representation of the fauna of the Rocky Mountains, and is nearly full. The gathering and taxidermy and arrangement of the whole, is the unaided work of this lady, who, herself, shot the majority of the smaller animals. Mrs. Maxwell, when a little girl, lived with her father on the frontier of civilization, in southern Wisconsin, and her father was an ardent sportsman. With abundant opportunity for exciting practice, Mrs. Maxwell became an excellent shot and close observer, delighting more in the beauties and novelties of nature than in the nonsense which occupies the attention of most young ladies. This was not carried to an extreme, however, and studies, disciplinary and refining, were thoroughly mastered, completed by graduation at Oberlin College. When, having married, she moved to Boulder, Colorado, the desire to explore the zoology of the new region was carried out in the making of this, and a much larger series at home, and a vast collection of birds, nests and eggs, shells, etc., which I am reserving for a future notice. Mrs. Maxwell is under the medium height, about 35 years old, and, in a face somewhat tanned by exposure, retains a youthful beauty, supplemented by a keen, eager eye, and a countenance full of animation and intelligence.

I repeat, that the series of animals shown here is remarkable, and that it is a remarkable woman who has brought it together.

THE "PACIFIC LIFE."—We have received the first number of the *Pacific Life*, a journal issued in San Francisco, to be devoted to field sports, game protection, and particularly to National Guard matters. To the Editor, Col. H. G. Shaw, President of the National Rifle Association, our own columns have been indebted for much interesting rifle matter from the Pacific slope. The newspaper in its first issue presents a large variety of interesting matter, and while it could doubtless be improved upon, it has before it a field ripe for such an enterprise.

—Wm. Milliken of St. Cloud, Minn., informs the *Rod and Gun* that he can sell wild rice at the end of next month at \$2.50 per bushel. It can also be bought of Richard Valentine, Janesville, Wis., or T. P. Cantwell, Brainerd, Minn.

"MODERN JOSEPHS."—On Monday evening, Sept. 4th, the Rev. Henry Morgan of Boston, delivered the above lecture in Steinway Hall for the benefit of the Ladies' Aid Society of the M. E. Church of Hunter's Point. It is a hit at political parties and the grabbing at spoils, and is full of rollicking fun, as well as keen satire.

—The Providence and Stonington Steamship Company's new steamer Massachusetts (3,000 tons) was launched from the ship-yard of Mr. Henry W. Steers, Greenpoint, L. I., on Wednesday the 6th inst. She is a noble vessel and will be a most valuable acquisition to the vessels of this popular line.

—They have an active Polo Club in San Francisco.

National Pastimes.

BASE BALL—THE PROFESSIONAL ARENA.

This week the work of the fall campaign of the clubs of the League Association begins, and it promises to be an exciting series of meetings. Up to Sept. 4th inclusive the record of games won and lost stood as follows:—

Clubs.	Games won.	Games lost.
Chicago.....	12	12
St. Louis.....	35	17
Hartford.....	33	15
Boston.....	30	22
Louisville.....	25	29
Mutual.....	20	27
Athletic.....	13	38
Cincinnati.....	7	45
Total.....	205	205

The lead obtained by the Chicago is one which almost ensures them the possession of the pennant, but the game is so uncertain that it is not safe to put down any nine as sure to win until the goal is actually reached. There is no such surety in regard to the possession of second place in the race, for the St. Louis, Hartford, and Boston clubs are too close to each other to make any calculation safe as to which will be the winner of second place. Thus far St. Louis leads with Hartford close behind. But Boston has now got her team in better working order than she has yet had them and they are playing a strong game. The late improvement in the Cincinnati nine may lead to a change in their position and they may throw the Athletics into the last place. This week four interesting games take place in Brooklyn between the St. Louis, Chicago, and Mutual clubs, and for the next three the eastern and western nines will be busy playing their last games together this season on eastern fields.

The League nines last week realized the fact that the crowd of "outside" professional clubs had worked up some strong nines as the records of defeats sustained by League club nines by the outside teams fully shows. The St. Louis nine were twice whipped in Canada, and were actually clobbered by the Stars of Syracuse, a nine the Chicago afterwards defeated by 8 to 4. The Boston Club had to succumb to the Stars in one game by 4 to 1, though they defeated the same nine the day afterwards by 5 to 2. Here in the Metropolis the Mutuals sustained their second defeat at the hands of an outside nine; the Resolute of Elizabeth whipped them by 3 to 1. Outside of the League Association there are now about 20 regular professional clubs having strong nines, hailing from Indianapolis, Columbus, St. Louis, Wheeling, Pittsburg, Memphis, London, and Guelph, Canada; Elizabeth, New York, Brooklyn, Ithaca, Auburn, Syracuse, Binghamton, Bridgeport, New Haven, Providence, Fall River, and Lowell.

Among the model games since our last may be named the following in which the scores did not exceed five runs:—

August 29—Hoboken vs. Enterprise, at Jersey City (10 innings).....	5 to 4
August 29—Riverside vs. Empire, at St. Louis.....	5 to 3
August 29—Omario vs. Rochester, at Rochester.....	5 to 2
August 29—Boston vs. Star, at Syracuse.....	5 to 2
August 30—Alleghany vs. Cincinnati, at Pittsburg.....	2 to 1
August 31—Bloomington vs. Springfield, at Bloomington.....	4 to 4
August 31—Hartford vs. Rhode Island, at Providence.....	4 to 0
August 31—Red Cap vs. Oakwood, at La Crosse.....	5 to 3
September 1—Red Cap vs. Fall River, at Fall River.....	4 to 2
September 1—Boston vs. Cricket, at Binghamton, (5 ins.).....	2 to 2
September 2—Hudson vs. Nameless, at Prospect Park, (11 innings).....	4 to 2
September 2—Resolute vs. Mutual, at Elizabeth.....	3 to 1
September 2—Orchard vs. Cricket, at Prospect Park.....	5 to 4

Among the noteworthy contests of the past week are the following in which League nines were defeated:—

August 23—Tecumseh vs. St. Louis, at London.....	10 to 9
August 23—Star vs. Boston, at Syracuse.....	4 to 1
August 23—Buckeye vs. Cincinnati, at Columbus, (10 ins.).....	3 to 3
August 29—Standard vs. Cincinnati, at Wheeling.....	11 to 7
August 29—Maple Leaf vs. St. Louis, at Guelph.....	9 to 8
August 30—Alleghany vs. Cincinnati, at Pittsburg.....	2 to 1
August 31—Star vs. St. Louis, at Syracuse.....	7 to 0
September 2—Resolute vs. Mutual, at Elizabeth.....	3 to 1
September 2—Chicago vs. Star, at Syracuse.....	8 to 4

CRICKET.

ENGLISH VS. AMERICAN.—The Philadelphians in the absence of any foreign teams to play with are getting up a series of very interesting local contests, the most important being the meeting between teams of twelve representing native-born English and American citizens. This match will take place at the Germantown Club cricket grounds on Sept. 14th and 15th, and the twelve will be selected from the following list of players:—

ENGLISH.	Club.	AMERICAN.	Club.
Bance, of St. George Club, N. Y.		Geo. Newhall, of Young Americas.	
Whitman, of St. George Club, N. Y.		Joan Newhall, of Young Americas.	
Jones, of St. George Club, N. Y.		Joan Newhall, of Young Americas.	
Tee, of St. George Club, N. Y.		Joan Newhall, of Young Americas.	
Bainfield, of Manhattan Club, N. Y.		Joan Newhall, of Young Americas.	
Greig, of Manhattan Club, N. Y.		Joan Newhall, of Young Americas.	
Joe. Hargreaves, of Germantowns.		Joan Newhall, of Young Americas.	
Tom Hargreaves, of Germantowns.		Joan Newhall, of Young Americas.	
John Hargreaves, of Germantowns.		Joan Newhall, of Young Americas.	
Whit Hargreaves, of Detroit.		Joan Newhall, of Young Americas.	
Haich, of Boston.		Joan Newhall, of Young Americas.	
Brewster, Professional.		Joan Newhall, of Young Americas.	
Giles, Professional.		Joan Newhall, of Young Americas.	
Knoades, Professional.		Joan Newhall, of Young Americas.	
Norley, Professional.		Joan Newhall, of Young Americas.	
Berrington, Professional.		Joan Newhall, of Young Americas.	
Pearson, Professional.		Joan Newhall, of Young Americas.	
Eastward, Professional.		Joan Newhall, of Young Americas.	

A committee of the Philadelphia clubs will select the American team, and Mr. Bance the English. Play will be called each day at 12 o'clock, dinner at 2:30 p. m., and stumps drawn at 6 p. m. The admission to the field will be 25 cents, and to reserved seats 50 cents. Ladies free, except to reserved seats.

On September 6th and 7th a match will take place on the Germantown Club Grounds, between an eleven of the Germantown and Philadelphia Clubs and eleven resident cricketers of Virginia, now visiting the Centennial Exhibition. The following are the names of the English eleven, and the clubs to which they formerly belonged in England:—The Hon. H. H. A'Court, A. G. Bradley, A. T. Manning, and W. N. Powys, of Cambridge University; C. T. Highton, of Rugby School; W. G. Thompson, Marlborough College; H. S. D. Vidal, Westminster College; A. Davenport, Olenester R. A. College; T. Lynes, I. Zingari, and C. A. Mac Neale. Play will begin each morning on the arrival of the ten o'clock train from Ninth and Green streets.

—A few drops of carbolic acid in a pint of water will clean house plants of lice in a very short time.

—A Connecticut correspondent, "Von G.," complains that New Haven restaurants or hotels have been serving ruffed grouse before the open season begins, and remarks that "it does seem as though the true sportsmen of New Haven would attend to it and prosecute the offenders." New Haven sportsmen, it will be remembered, drew up the petition addressed to our Legislature changing the woodcock law so that summer shooting would be allowed, and they succeeded, but too well. And now some of them see what a mess they have made of it. The sportsmen of South Windham are after some parties who have been shooting ruffed grouse there two weeks ago."

MONUMENT TO IZAAK WALTON.—It is proposed to replace the stone in the cathedral at Winchester, England, marking the grave of the "Father of Anglers" by a suitable sculpture of marble in the form of a medallion portrait surrounded by a wreath and device of fish, rods and river rushes, and some simple inscription, the whole to cost about \$500.

—Speaking of rail shooting, the Germantown (Pa.) Telegraph says that the shooting which commenced on the first of September will continue until the end of November. Very few birds, if any, however, are shot after October; and one rail shot in that month is worth two shot in September. Reed birds are also now in order.

—Grasshoppers have appeared in some parts of South Australia in alarming numbers, and the worst consequences are feared.

COLUMBIA BOAT CLUB.—The annual fall regatta of the Columbia Boat Club, of Brooklyn, took place on Saturday, September 2d, at the foot of Court st, with the following results. The first race was for the four oared gigs Dixie and Dandy, manned as follows:—Dixie.—1, H. Boyd; 2, Oakley; 3, Chapman; 4, Barnes; coxswain, H. T. Dunham; starter, C. O. Lewis. Dandy.—1, Leavens; 2, Hazard; 3, F. Boyd; 4, Stokes; coxswain, R. Bleeker; judge at finish, C. Sanderson. Dandy won by about four lengths. The next entry was for double-sculls, Hazard and Lippett in the Gypsie, and Dunham and Harrison in the Louise, the latter being the winners after a hard tussle. The last race was the closest and most exciting, it being almost a dead heat, but was won by a few feet by the eight-oared barge Constitution, against the four-oared barge Volante.

New Publications.

BOOKS RECEIVED.

QUEBEC, PAST AND PRESENT, a history of Quebec, 1808-1876; by J. M. LeMoine, Quebec: Augustin Cote & Co.

Mr. LeMoine, whose charming books are well known throughout Canada and the Northern States, tells us that the history of Quebec for the past two centuries may be said to be that of Canada; and he has written the first part at least of this work of 450 pages as a condensed history of the Dominion which saw in its youth so many vicissitudes of government. This is divided into ten chapters representing as many epochs in the old city's history, and bringing its chronicles down to the end of 1875. This, supplemented by the historical sketches taken from the "Maple Leaves" for 1865 and the new series for 1876, affords a tolerably full retrospect of Quebec events. None of these events were without excitement, and Mr. LeMoine has caught the spirit and carried us back with no effort of our imagination to the old days of Indian ambushes, or the later days of English victories over the French. The second part of the book is filled with plans for the improvement of the city, as suggested by Lord Dufferin, and a sketch of the educational and benevolent establishments, the public buildings, institutions, business interests, &c., many of which are shown in sub-page illustrations. This adds the practical character of a trustworthy guide-book to the entertainment of a library volume.

THE TOURISTS' NOTE BOOK; by J. M. Le Moine, 2d edition; Quebec, F. X. Garant & Co.

Within the paper covers of this little Note-book Mr. Le Moine has compressed a great deal of information not to be found in guide books which, he tells us, he does not intend it to supersede. It is rather a pretty essay eulogistic of Quebec, which the author evidently loves ardently, and the plan has been to accomplish this largely by quotations from writers who during two centuries have recorded their impressions of the ancient town and its citadels. The number of asterisks inserted throughout the quotations, however, make us suspicious that anything derogatory to the city has been left out by the editor; and there are unfortunate printers' blunders on almost every page. The very many illustrations given, also, while useful as memoranda to the sightseer, are not as well executed as might be. Besides the touches of history, descriptions of points of interest, public buildings, etc., from Mr. Le Moine's and other pens, there are chapters on "Hints to Tourists," "Lord Nelson," "Quebec, and Lord Dufferin's proposed Rehabilitation of it," and the "River Saguenay and its Salmon Fishing." The book is pleasant reading.

The September number of Lippincott's opens with the ninth article of the illustrated series entitled "The Century; its Fruits and its Festival," treating ably of the exhibits in Machinery Hall. It will be found one of the most instructive and interesting of the series. In the illustrated sketch of "Lapland" the writer presents a realistic picture of the life of the Laps, their industries and modes of trading, with some notes on the phenomena of the seasons in their wild region. "On a Housetop in Capri," by Robert McLeod, is a graphic description of the many picturesque and beautiful points of interest that can be seen in and from that romantic island. "The Queen of Spades," from the Russian of Pushkin, is founded on an episode in connection with the gaming tables of St. Petersburg. The second installment of "Love in Idleness," by Ellen W. Olney, more than fulfills the promise of the commencement. It is a charming serial. The third paper of Robert Wilson's "Eastern Shores of Maryland" is chiefly devoted to an account of the land industries of that peninsula. Poetry, the continuation of Lady Barker's interesting Letters, and the concluding chapters on "George Sand," by R. Davey, with the usual Monthly Gossip, and Literature of the Day make up a very bright number.

That excellent monthly, the Eclectic, is especially good this month. A steel portrait of that deep thinker, the Duke of Argyll, forms the frontispiece, facing a critique of another deep thinker and extensive writer, Sainte-Beuve. "African Weather and African Scenery" is the title of a very pleasant chat by Lady Barker, upon her experiences in Kafir-land. She says she does not like a climate which produces a thunder-storm every afternoon. The "Autobiography of a Vegetarian" is a defoe-like sketch well worth reading apart from questions of diet, and "International Prejudices" is a curious discussion of the whims of nations with respect to themselves and their neighbors. It is from that excellent magazine, Cornhill, "A Lady's Visit to the Herzegovinian In-

surgen's" is an addition to our knowledge of those brave people. Lieut. Cameron continues the narrative of his journey across Africa, and there are several other papers—geographical, scientific, biographical, political and critical. The continued story—Mrs. Alexander's "Her Dearest Foe," among the prettiest if it does not equal the best, of that talented author's stories—is continued at length, and there is some poetry. The Eclectic is certainly not fading.

A portrait of Mr. James Aytoun, "a distinguished amateur," faces the title page of the August Westminster Papers which is the magazine of chessmen and card-players. Mr. Aytoun is widely known and liked in London. The opening paper is an obituary notice of Herr Lowenthal, whose name has been intimately associated with every public incident of chess in England for the last 25 years. He died at the age of 67, and had been a voluminous contributor to the literature of the game. The current events of interest to chess players throughout the world; a sketch of Japanese chess; remarks upon innovations in the game; and the usual problems, scores and miscellany make up a valuable number.

The Aquatic Monthly for July contains editorial articles on the sinking of the Mohawk and upon Mr. Garner; correspondence upon this lamentable disaster, and boating in various parts of the country. Regattas at Rockaway, Boston, Providence, R. I., and of the colleges are described, and the Boatswain's Locker contains a lively article on that lively craft the flying proa of the Malays, copied from the New York Times.

The September number of Scribner contains three complete old fashioned stories, viz: "The Ghostly Rental," by Henry James, Jr.; "The Voyage of the America," a dialect story of a shipwreck (with the doubtful fascination of being true), by Elizabeth Stuart Phelps; and "Princess Ilse," a charming fairy story from the German, with dainty illustrations by Fredericks. Other illustrated papers are: the third instalment of Col. Waring's account of his picturesque boat ride down the Mosel, called the "Bride of the Rhine," and this month dealing with the vineyards and folk-life of this little-visited region; a paper on "Insanity," by Charles D. Robinson, with some curious illustrations of the brain during the progress of the malady; Prof. William North Rice's papers on "Wesleyan University;" "Something about Birds," by Ernest Ingersoll; and the second instalment of Fanny Hodgson Burnett's promising serial story of mining life, "That Lass o' Lowrie's," which succeeds Mr. Harte's "Gabriel Conroy." Donald G. Mitchell writes of the picturesque aspects of the great Fair, and Dr. Blauvelt has a discussion of "Protestant Vaticanism." "California Housekeepers and Chinese Servants" gives the results of the experience of the author, Mrs. Sarah E. Henshaw, and that of many others in the employment of the "China-boys." This paper will be followed by one in October from another hand which will deal with another phase of this vexed question. In "Topics of the Time" Dr. Holland gives information of the "Harvard Examination for Women," and has a good word for "Village Improvement Societies;" "The Old Cabinet" discusses "The Literary Feller and the Politician," and quotes from the "Quarterly" review of Tennyson's volume of 1833; "Home and Society" has "Practical Hints about the Exhibition," Mr. Quinn's "Rural Topics," dealing with September work on the farm, some more "Paris Fashions" and a talk about "Girl's Names." The other departments are well kept up; "Brio-a-Brac" being especially entertaining.

Is it because all American children are such good children that St. Nicholas comes to them every month instead of only once a year? And what a load he brings with him! This time he has a sketch of the great Medici family who made Florence the most beautiful city in the world. "How the Children Cruised in the Water Witch," by E. W. Olney; "The Races at Shark Bay," by Rebecca Harding Davis; and "Roxy," by Mary L. B. Branch, are all admirable stories. "A Child's Party," contains some practical hints on a very good way to be benevolent; and the number abounds in poems, of which Bessie Hill's "My Ship on the Ocean" and Carrie W. Thompson's "Two of Them" are very sweet and dainty bits of verse. Then, too, there are several excellent pictures scattered through the pages, such as "A September Evening" and "By the Brookside," and the very comical sketches of "Little Johnny and the Mosquito" and "Whitewashing the Baby."

The Galaxy places as its leader a further installment of Gen. Custer's "War Memoirs." In this paper Gen. Custer recounts the demoralization which followed the defeat at Bull Run, and the difficulties which beset General-in-chief McClellan. He wished to operate upon a certain plan, but was partially overruled and impeded by President Lincoln, who decided the plan of operations which was finally adopted, and which resulted in the second battle at Bull Run. Gen. Custer accords the highest wisdom and zeal to President Lincoln, but thinks his action in this respect injudicious and harmful. The concluding paragraphs detail the writer's first experience with cavalry advance guards. A few pages further on Frederick Whitaker writes an enthusiastic account of Custer's army life, familiar now to every one. He lived in an atmosphere of war and died a hero's death. Another article of this series is promised. Ex-Secretary Gideon Welles begins a series of articles upon the nomination and election of Lincoln, in which the turbulence and dissensions of those dark days of 1860 and 1861 are reviewed; and the influences which led to the adoption of various political measures, are stated. Mr. Black's story "Madcap Violet" is continued. For us the most charming article in the number is "Touches of Nature," by John Burroughs, whom Nature has touched with a rare inspiration. It is a series of sixteen brief sketches on all sorts of out-door matters; and it is not difficult to imagine that we are taking a walk with the genial author about the fields of Esopus and listening to his conversation. Mr. Burroughs is a second Thoreau without the Diogenes-like affectation of the poet of Walden Pond. The question "Shall we drink Wine?" is discussed by Albert Rhodes, and, with restrictions, an affirmative answer arrived at. A philological dissertation by Richard Grant White on "The Bones of Speech," and various stories and essays complete the body of the number, which ends with the usual full departments.

The Atlantic is much as usual—strong and temperate. It is a part of steady Boston. The leading chapter is by Edward Wheelwright: Personal Recollections of Juan Francois Millet, the French painter. "If you Love Me" is a dainty poem, followed by a farce entitled "The Parlor Car," by W. D. Howells; bright descriptions of the "Holy Places of the Holy City," by Charles Dudley Warner; another capital chapter of Mrs. Kemble's "Old Woman's Gossip;" a pleasant account of "Deephaven Excursions," by Sarah O. Jewett; more "Characteristics of the International Fair;" three chapters of "The American," by Henry James, Jr.; and poems by Aldrich and H. H. The reviews of recent books and the articles under Art and Music are well worth reading, and the discussion of "College Education for Women" will receive especial attention.

The Naturalist fulfills its promise excellently, and the Departments of paragraphic information at the end of each number are of increasing interest. The most interesting and important article in the September number is upon the "Progress of Ornithology in the United States during the last Century," by Mr. J. A. Allen. It should almost be committed to memory by practical ornithologists. Prof. J. D. Whitney discusses the alarming question, "Are we Dying up?" and concludes that a slow but certain diminution of the moisture on the earth's surface is going on. Mr. Scudder elaborately describes with illustrations, "How Cockroaches and Earwigs feed their Wings," and Mr. Barber gives an account of Helix Cooperi in Colorado, figuring a sinistral form. He had never known of any being found on the eastern slope of the Range, but our account of Mrs. Maxwell's shells elsewhere given, shows that they do occur there. Mr. John Nichols furnishes a notice of the microscopical at the Loan Collection of scientific apparatus now on exhibition in London, and there is a sketch of Fritz Muller's studies on mimicry in butterflies as explained by natural selection. As we remarked before, the miscellany is full, interesting and of value.

Breeding Kennel

OF

M. P. McKOON, Franklin, Delaware
County, N. Y.

Having spared neither money nor time in procuring the best of imported and thoroughbred cocker spaniel stock, I feel confident I can suit the most particular with young stock. For ruffed grouse, woodcock shooting and common retrieving, beauty and intelligence, no other sporting dogs are their equal. My prices are low, my stock the best, and satisfaction and safe delivery guaranteed to every customer. Sep7-4t

St. Louis Bench Show.

The St. Louis Bench Show for Pointers and Setters will be held at St. Louis, Mo., October 4th, 5th and 6th, at the time of the great Agricultural and Mechanical Fair, and on the grounds of the St. Louis Fair Association. TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMP'Y

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROT, ING PARKS and RAC. COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of The Pennsylvania Railroad Company also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOVIA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for Trout Fishing, Wing Shooting, and Still Hunting.

Also, to TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for ALT WATER SPORT AFTER FIN AND FEATHER.

D. M. BOYD, Jr., Gen'l Pass. Agent.
FRANK THOMPSON, Gen'l Manager. feb17-tf

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road radiating from Chicago. Like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Nagannee and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and, via the Illinois Central, reaches Warren, Galena and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction, to Council Bluffs and Omaha. This last named is the "GREAT TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento, San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEESE, AND BRANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by any in the West.

THE "FISHING LINE."

Brook Trout and Grayling Fisheries
OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.
(Mackinaw, Grand Rapids & Cincinnati Short Line.)

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equalled, in the great abundance and variety of fish contained.

Brook Trout abound in the streams, and the famous American Grayling is found only in these waters.

Brook Trout Season opens May 1st.
Grayling season opens June 1st.

Black Bass, Pike, Pickerel, and Muscalonge are also found in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his "friends" or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities offered to tourists and sportsmen; also on and after July 1st Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, Send to Forest and Stream office, or address

THE

"Boston Shooting Suit."

(NAME COPYRIGHTED).

MANUFACTURED ONLY BY

G. W. SIMMONS & SON,
Boston, Mass.

Sold everywhere in the U. S. by all first-class dealers in

SPORTSMEN'S GOODS.

EACH GARMENT DISTINCTLY MARKED

"BOSTON SHOOTING SUIT,"
made by
G. W. Simmons & Son.

This new design of WATERPROOF SHOOTING SUIT, made from extra quality duck, has acquired quick celebrity. Advertised for the first time in April last in the FOREST AND STREAM, in five months it has attained such popularity as to be called for from all parts of the country, and even from England.

"Shipping clothing to England strikes us very much like sending 'Coals to Newcastle,' but the merits of the 'BOSTON SHOOTING SUITS' have been heard of in the Old Country, and that land of sportsmen has sent an order to Messrs. Simmons & Son, which will doubtless be followed by many others. Our Editor-in-Chief, who knows something about a sportsman's requirements, is using this same equipment in the Adirondacks."—Boston Paper.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at \$13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloon.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the *Golden Rule* (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skillfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, water-proof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Bust Measure, Waist Measure, Inside Seam Coat Sleeve, Inside Seam Pantaloon; Mention Height and Weight.

W. H. HOLABIRD

Would most respectfully announce to his patrons and friends that he is prepared to make

Shooting and Fishing Suits

at the above prices. The ten dollar suit is better made than any competitor can offer for the same money. My original design having been appropriated by other manufacturers I have been compelled to make many changes in the arrangement of pockets, &c., for which I have to thank the fraternity at large for suggestions. I believe that I have the

BEST SHOOTING AND FISHING COATS IN THE WORLD,

and respectfully solicit your orders. I send my new

Illustrated Catalogue, 16 pages, free on application.

Dealers will find it to their advantage to handle my goods. They are better known and more highly esteemed than any other make.

Address

W. H. Holabird,

VALPARAISO, IND.

N. Y. Office: No. 1 COURTLAND ST.

The Hazard Powder Co., MANUFACTURERS OF Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarsest sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.G., FF.G., FFF.G., the last being the finest. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less recoil than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired. The powder is also well adapted for shot guns. Inquire for the "Dittmar Powder" of your dealer at address the DITTMAR POWDER MANFG CO., NARCESSET, MASS.

Paper and Metallic Shells

FOR

Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dee23 tf

New Paper Shell Conical Base. WILLIAMS' PATENT.

WILLIAMS' PAT. CONICAL BASE PAPER SHELL. ST. LOUIS SHELL MFG CO.

Shells are not available. Sample 100 will be sent by express on receipt of \$1.30 for 10s or \$1.15 for 12s ang24-9t

Manufactured by the ST. LOUIS PATENT SHELL MFG CO., office 209 North Fourth street. The advantages claimed for these shells are: Cheapness, a saving of 25 per cent. in the use of powder, less recoil. These shells are equal to the best English, and 3 1/2 drachms of powder will do the work of 5 drachms in any other shell. The sizes made are No. 10, 2 1/2 inches; No. 12, 2 1/4 inches. Longer shells made to order at extra cost. Ask your gunmakers for them and use no others.

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the
 extreme SIMPLICITY, STRENGTH and DURABIL-
 ITY of their New Patent "SIMPLEX" Breech loader
 and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,)
 its mechanical soundness so thorough, and the
 strength and simplicity of the action so great, that
 W. & P. feel sure it will supercede all the complicated
 and manifold grips now in use, its one powerful grip
 being far stronger than any double, treble or quadruple
 grip now used. In this new action LEVER and GRIP
 ARE ONE SOLID PIECE OF STEEL and the AN-
 GLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on ap-
 plication, and orders may be forwarded through any
 of the best houses in the States for execution in the
 Spring.

Guns guaranteed to make patterns of from 160 to
 330 with No. 6 SHOT AT 40 YARDS, as desired.

Coast Range Rough Notes.

FROM A MOUNTAINEER'S PORTFOLIO.

OH yes, the orange, the olive, and the vine, shady lanes, paved streets, and restaurant livin is fine, but who'd want to live here all the time? Way up, you call it? 'Taint half so fur up ez my place is. Where is my place, eh? Just you come out from under that orange tree, here where there ain't no durn house in the way, here where the sun kin strike you a minit. Now look thar! No, don't waste your eye-sight on that first range, them ain't nothin' but foot-hills to what's beyond. Clouds? no stranger, I guess not; that's "flat Baldy," and sure nuff, snow on top ov him! Now wipe the sweat out'n your eyes and look along to the left. See that 'ere kind of a notch in the main range, eh? Darker, eh? Well, yes, I should think so. Old Baldy ain't got nothin' on him but snow and rocks, but that "darker" is just the biggest kind ov pine and cedar, with the lovingist little creeks and homiest camping places, kinder sprinkled round loose like, you ever saw. I like Los Angeles first rate. There's plenty of most every thing, and its middlin easy to get, but for a home for keeps, to live in, a fellow like me wants mountains, big timber, running water, out'n the trails ov money-gettin people. I tell you what 'tis: bizsiness spiles heaps ov good livin', and bright and early some good morning, me and Boze is going to lite out ov this ranche and be happy. Ole Boze 'n me is lcts ov company for each other.

Don't know Boze? Why, that's him. What! grizzly and ugly, eh? Look here, stranger, Boze'n me'r friends, and you'd orter speak more respectfull like of a dog, you don't know nothing about, if he don't pretty much on the outside. Well, no, ov course, ef you didn't mean no offense, only that there dog's got the biggest kind ov a heart, just plum full ov clean grit and he just does the square thing every time, you bet. Thank you! I ginerally does, about this time o' day. You totes good likker, mister man, in that little jug, but you looks kinder pale and soft-like. You'd orter take a little trip. Mountain air and water, briled deer meat, trout, and sich would do you heaps of good. Beans too, fried beans is powerfull nourishing in camp.

Want to know somethin' about Pine Flat and the Prairie Fork, do you? Why, there's where I live when I'm at home, only I aint generally there much now.

Oh! excuse me, Mister Edditur, I sot down here to write you about hunting, but Tom, he kep foolin' aroun', and talkin', and I jest wrote somethin' I sed to a feller the other day in Guadalupe's orchard, and I think I'd orter tear it up; but Tom (he's my pardner) sez 'no, send her along; 'sides, what do you keer? ef he don't want it, he kin throw it away. Just go right along and tell him something about Pine Flat and the North Fork; but don't tell nobody nothin' about Prairie Fork nur the Picacho. Ef you do, you get Doc Shorb ov Frisco arter you, shore." So, here goes:—

Last fall Tom and two burros and me left Los Angeles one foggy mornin' for a sure-enuff hunt. For three miles we walked through rolling hills dry enuff but covered with good alfileria and burr clover hay. As we raised the last hills the fog lifted and I though I'd never saw a prettier or more enticing sight than the valley of the San Gabriel offered to a civilized white man—a low brown valley streaked as far as we could see, with the green ov orchards, vineyards, and willows. We stood on hills sloping eastward, and as the burros poked down the road kinder slow, like, we leaned on our rifles and looked up the valley. On the north side, and fur to the front, the coast range, rough and rugged, scarred with bald slopes, gashed and seamed with cañons, strong and honest looking (Tom said, like the valley was a young girl and they was thar to protect her); along the base of the mountains and clost in their shadow lay the foot-hills and mesa lands, brown and somewhat oneven, but with green spots in the mouths of the cañons and at the

springs where the bee-ranchers live. Next on the line ov mesas and reaching far out in the valley, with green nearly filling the valley, lay the orchards and vineyards, fruit from the pear to pomegranite, and grapes ov all classes. Where this green met the brown of the plains stood the white walls of the Mission, and far to the right with much brown intervening were the fields and homes of El Monte, the river San Gabriel, the pasture lands and smooth hills of La Puente. Far from the east came the shadow of good San Antonio, shading the rocks of Azusa but falling back fast in the sun-light which now streamed from the white top of the mountain. The view and the fresh air of the morning was pleasant and happy-making, and as we followed the pack-animals down into the valley our Hawkins rifles felt as light in our hands as alder sticks. Through the valley, past the Mission and Duarte, our way led 20 miles to the mouth of San Gabriel river, where it leaves the mountains for the valley. Here we camped in good time to kill a couple of rabbits and catch a few trout, rather small, for supper; sleeping that night as no one ever sleeps in walled-in beds, and rising the next morning with a happy sense of freedom I had'nt felt for months. How good coffee tastes in camp.

Our road now lay for ten miles up the rocky bed of the San Gabriel river, through steep brushy mountains. At Spanish Camp I killed a wild cat much to Boze's disappointment. He wanted to kill that cat himself, but we had too far to go to let him chance getting chawed up. At the North Fork we left the main river, eat dinner at the *Piedra Pintada* (painted rock,) and turning up the Lake Fork, camped that night on Sycamore Flat, only four miles from the lake and Pine Flat, our journey's end. The trails was bad, burros walked slow, and we made camp, after a 20-mile tramp, too late to either fish or hunt, eating for supper a couple of grey squirrels Tom killed on the trail. That night a cinnamon bear came within 20 feet of our blankets but was run off by the dog. Soon after sun-up the next morning Tom killed a small buck on a point overlooking camp. I caught a good string of fish and our hunt had finally begun. Sycamore Flat covers about 20 acres of nearly level land on the highest fishing water of the Lake Fork, and takes its name from two very large sycamore trees near its center. The stream, which although small, is well stocked with brook trout, cuts it nearly in half; long cañons full of acorn-oak and wild plum enter the flat from both sides, while at its head is the continuation of the Lake Fork from here on—a steep cañon with many precipices full of boulders and timber almost impassible for man, but in its bed and on both mountain sides having large *ciénegas*, furnishing much feed for bear and deer. That day we rested and loafed. Loafing is a heap pleasanter in camp than any where else. In the evening a doe came down to water, but we had meat and didn't want her. We killed two birds, however, out of a band of mountain quail and caught what fish we could eat. Tom made a splendid shot with his rifle at a blue-tailed hawk sailing over camp, and after swearing that he could do it again every time, missed its mate twice in succession.

We found the camp so pleasant that we loafed away two more days eating fish, smoking and sleeping. Meat getting short, I started up the Pine Flat trail, on the west side of the cañon, about day one morning, leaving Boze in camp with Tom. Bear sign was plenty and I went slow and careful. At the third *ciénega* near the head of the canon I came suddenly on two bucks feeding in high grass below me and not more than 20 steps off. A light breeze was blowing down the canon and they didn't wind me. As I raised the rifle both saw me, but not quick enough, and I shot the biggest in the sticking place, dropping him where he stood. The other ran off about a hundred yards and stopped. Reloading the rifle, I was about to pull on him when he walked off, but stopping again near the ridge, I shot, the ball striking too high for life but bleeding him badly. I went over to where he was standing and finding plenty of lung-blood concluded to let him lay down while I hung up the other, a fine black-tail buck weighing dressed, I should think, about 130 or 135 pounds. After getting him up

to the trail, I took the track of the wounded deer and about a quarter of a mile up the ridge found him lying in thick brush so thick that I killed him easily with my knife. While taking out his insides, I heard the brush break several times just above me on the ridge, but thinking it was another deer I didn't at first look up. A little whiff of wind brought a smell to my nose that made me grab for my gun, like a cat for a quail. Jumping on a fallen log, I saw my bear just waddling off up the ridge, I was just too late to shoot. His belly was full, or he would have come for that meat and me. He was hog-fat and I wanted him bad. Supposing I knew where he'd stop, I followed for three miles on the ridge, but the wind changed, as it generally does, blowing down the canon at night and early morning, and up all day, and I lost him. Upon returning to the little buck, I cut off his head, skinned his legs down to his knees and hams, cut off the feet and shin-bones, tied the skin of each fore-leg to that of a hind-leg on the opposite side, put my arms through, and packed him, knapsack-fashion, down to the trail where I found that Tom, attracted by the firing, had come up and taken the other deer same fashion to camp. This is the way we always pack deer into camp in rough country where a horse can't travel, and nearly always I pack in this way in preference to going for a horse, even in comparatively smooth range. This meat we "jerked" in the open air without smoke and as soon as it was dried moved camp to Pine Flat, from which place I want to tell you something about Big Horn hunting.

Los Angeles, Aug. 23, 1876.

EL CAZADOR.

For Forest and Stream.

DUCKING IN THE MONROE MARSHES.

It being now about the time when the business man, feeling the need of a respite from his labor, is in search of a quiet place to rest his over-tasked and wearied system; when the sportsman, with his shooting paraphernalia in readiness, is looking about in quest of the resort of his favorite game, I thought that, perhaps, a description of Monroe, Mich., and vicinity, might favorably arrest the attention of such as desire the invigorating western air, and where, moreover, one may be supplied with the comforts and luxuries necessary for the enjoyment of a pleasure trip.

Monroe, or the "Floral City," as it is often called, is situated on the River Rasin, a short distance from Lake Erie. The river has its source near the middle of the southern part of the State, and when it reaches the city it assumes very decent proportions, although shallow. Within the shallows black bass and pickerel seem to have taken their especial abode; fly-fishing, consequently, has been of late in high repute, and the strings of shining backs displayed by the enraptured angler, well attest to the abundance of the finny tribe. For those that enjoy more quiet fishing, the numerous creeks afford the lurking places of the smaller bass and perch; while for those who want the excitement of traveling, the usually placid lake hides beneath its surface myriads of the various bass tribe and others. Along either bank of the river are seen the favorite haunts of the woodcock, the thick stubble and rich peat lands to which they are so partial. By going a short distance into the country, you come upon the stubble and thicket, the resorts of quail and ruffed grouse.

But, though the river may be teeming with bass, the shores lined with woodcocks, and the stubble alive with quails, the great paradise of the sportsmen is to be found in the marshes and bayous, at the mouth of the river. Here it is that the native ducks breed in great number, and where those from the North rest their wearied pinions in their migrating flights. The marsh is not particularly extensive, but so beautifully situated, with the lake bordering its eastern side, and so interspersed with creeks and openings as to make any point easily accessible. This is also one of the very few places where the lotus, the most stately water flower in the world, grows in great numbers; acre after acre of their tall blossoms may be seen rising above

the water, presenting a picture at once grand and subdued. I shall never forget my first sight of it, as I sat in my boat, surrounded on all sides as far, almost, as the eye could reach, with their blooming and magnificent crests lit up by the last rays of a superb sunset, and as I drank in long draughts of the air redolent with their fragrance. Here, also, grows in vast abundance the wild rice, of which the mallard and widgeon are so fond, and which annually attracts great numbers of ducks. As you row along the river, a short distance to the south, you suddenly enter a bay, which is only a portion of the lake cut off from the violence of the waves and wind by a break-water, it formerly having been used as a harbor. Here during every October and November may be seen immense flocks of canvas-backs, attracted by the abundance of their favorite food—*Vallisneria*, or water celery. This world-renowned duck has only of late become aware of the quantity of his favorite food, here in the western waters of Lake Erie, but the fact seems now to be generally known among them, if one may judge from the numbers that come sweeping and whirling down every autumn. The place is becoming better known to sportsmen, and now as you paddle along the bay, during the fall, you may see frequent puffs of smoke issuing from many a carefully concealed hiding place, and hear the frequent boom of the heavy duck gun come rolling across the water, while the long strings of glossy brown heads, hanging from bodies as plump as their favorite food can make them, attest the success of the day's sport. Occasionally among the prizes of the bay hunters you may see the shining green head of the mallard, or the lithe, graceful body of the sprigtail, but not often; the bay is the place for red-heads and canvas-backs, but if one has a turn for mallard shooting, teals or widgeons, all that is necessary is to push off with your boat and decoys, and seek a puddle or opening adjoining their feeding grounds; and it requires but a medium shot to secure a goodly sized bag. Like every other shooting vicinity, Monroe has its share of greedy pot-hunters, but, although a great number of ducks are killed in this way before the permitted time, they consist mostly of the smaller and more insignificant species, and it only slightly affects the prime October and November shooting.

Such is duck hunting about Monroe; quail and grouse are nearly as numerous, and snipe and plover make us yearly visitations during October. Altogether it makes a very pleasant place both for the one in search of rest and quiet, and for the sportsman not wishing to confine him self to the narrow limits of pursuing but one kind of game.

TROUT FISHING IN WESTERN NORTH CAROLINA.

THE TRIALS AND TRIBULATIONS OF "THE TROUT EXPEDITION INTO THE LAUREL COUNTRY"—SCENES, INCIDENTS, ETC.

LEAVING Greenville, Tennessee, in a two-horse wagon, on the morning of August 14th, we traveled south-east fifteen miles, striking the North Carolina State line three miles from Hayesville, and ten miles further, arrived at our intended rendezvous about dark of the same day. The trip out was not without its disappointments and troubles, such as all expeditions of the kind encounter, like rain, breaking down, turning over, wading streams, bruised and sore limbs, &c.; but our pleasures so greatly predominated that these small casualties ought not to be noticed. The roughness of the road was a serious drawback, it being through mountain defiles, the beds of creeks, and gullies widened by the spring freshets. The scenery all along from the Tennessee side to the place of our principal camp was grand beyond description, especially from the top of the mountain beyond Hayesville, where we could stand and gaze at the grand old peak beyond, and look back at the broad and fertile valleys of Tennessee, with their beautiful waters extending in the distance like so many silvery threads. This country is justly called the Switzerland of America, and to those unaccustomed to such sights would prove of sufficient interest to repay for any trouble in reaching it. This scope of country is sparsely settled, a house sometimes not appearing for ten or twelve miles, but when found, the people, though rough and plain, are as kind and obliging as could possibly be desired.

Being belated we could make no preparations for our camp the first night, so we were received and entertained by Mr. George W. Gabagan, a prince of good fellows, and his excellent mother, who gave us a good supper and breakfast, and splendid beds. Next morning we were directed to Hurricane Branch, where we were to make our first cast for the "speckled beauties." This stream is a tributary of Laurel proper, or Big Laurel, as it is commonly called, and joins it about half a mile below the confluence of Big and Little Laurel, which, after uniting and flowing six miles, empty into the French Broad River. Our outfit was complete, consisting of eight-ounce fly-rods, artificial flies, &c.,—all that goes to make fishing easy, and ordinarily, one of the exact sciences; but our first day's experience proved that there was an eternal fitness and unfitness of things, and that these modern appliances were not only unfit for use in such streams, but positively unwieldy and unmanageable. This is true because of the roughness of the country and streams, and the density of the laurels which overhang the banks, meet overhead, and even prevent the possibility of walking in some places, let alone casting the fly. Considering these difficulties, and our inexperience of the country and stream our success for the first day was not so ordinary, as we basketed thirty-six, averaging eight inches. We will not particularize about our camp first trout supper and appetites, for these things would create the envy of the least admiring and enthusiastic of Father Izaak Walton's disciples.

Our second day's sport was on a grander scale, having met and engaged the guides—Jack Banks, and Jim Bridwell—hardy mountaineers, rough, and appearing as if acquainted with rough things. After examining our accoutrements critically, they advised us to discard "them flies and town poles, and they would show us how to trout." We did as directed—cut rods six or seven feet in length—and adjusted lines only three or four feet in accordance. During this time our arenas were in Big Laurel, turning over flat stones, and procuring what they called "suck-bait"—that is, small water-worms—that surround themselves with a tube of little sticks, which they glue together for a covering, and then fasten to the stones. After all was

ready, we started towards the source of the stream, wading up about three miles, walking on dry land being impossible because of the density of the laurel thickets. We then reversed our course, and the guides having muddled the stream we commenced fishing in earnest, and soon discovered the superiority of the stick-bait over "them flies," and the advantage of having the water slightly muddy, as we counted from our baskets 84 of the beauties as against 36 on the first day. We will say nothing of the dinner of that day; it would be unkind generally. This day we fished no more, as we had more than we could possibly use, and no means of carrying them back to Tennessee.

The third day we fished what is called Little Hurricane, and why it has this name we know not, for it is as large as the one we had previously fished, and runs parallel with it, and empties into the same stream (Big Laurel) half a mile lower down. Here we encountered the same difficulties, but having laid aside "them flies and town poles," and being a little wiser generally, from experience, we overcame them with greater ease, or, we might say, with less torture. This stream is the embodiment of all the beauty that could be wished for by the most exacting anglers. Here are the well shaded holes; here the long series of rapids, terminating in the deep blue pools; here the cataracts, with waters trembling and foaming and roaring and separating for an instant only, to be united at the foot in a sparkling home for the savory monarchs, where they await the descent of some unfortunate insect, or, perhaps, an untimely end at the hands of the wary angler. We followed the instructions of our guides of the previous day, waded up as far as we could go, muddled and fished down, bringing in by three o'clock 132 fine fellows, the seven largest measuring 11 inches. This dinner must also be unmentioned, leaving it to the imagination of those who remember the hungriest period of their lives and the first meal thereafter. Here were as many fine fish as we could consume, and really more, so we gave away a large number to our benefactors. This finished the trout fishing.

The fourth day we were after larger game; had a deer drive, but in this we were not successful, as the mountains had been thoroughly "driven" for a week previous. There is an abundance of game of all descriptions, from the hare to the black bear, and from the partridge to the wild turkey. The fifth day we visited a centenarian, one Solomon Stanton, who is 105 years old. He was in the war of 1812, and of course draws a pension. His hair is not entirely white, and he looks as if he had twenty years of life yet. This man is a specimen of the healthfulness of the climate of western North Carolina. There is not a section of country on the continent that can equal this for purity of atmosphere and water, or that offers more general inducements or assurance to the average invalid. We visited a spring near Mr. Gabagan's, that has a temperature of 50° the year round. The fifth day was finished in fishing for black bass, called here, as in Tennessee, "black perch," and we made a respectable catch. Returning on Sunday, the seventh day out, we met a party of four mountaineers, with their guns and dogs, who told us that they were going bear hunting. The day previous they had killed two young bears and wounded the old one, and were going back to hunt for her. They supposed she was so badly hurt as to be not far distant from their former conflict.

MINNIX.

For Forest and Stream.

ARTIST-LIFE IN THE ADIRONDACKS.

THIS season finds me camped upon this beautiful Round Pond, near Rainbow Pond, in the Adirondacks. Round, indeed, as its name implies, though numerous cosy little bays with jutting headlands relieve the monotony of its circular shores. Our camp is situated on a bluff which commands a fine view of the pond, and affords likewise an admirable spot from which to watch for deer. I have in my large marquee tent a platform raised from the ground, and covered with balsam-fir boughs which forms a fine resting place far from the dampness incidental to sleeping close to the ground. A table with seat, and protected from sun and rain by a bark roof, affords one a comfortable shelter to take dinner in, and to read and write. The guides have a separate hut built of logs and boards, and are snug enough. I believe in comfort and plenty of equipage when we are in a permanent camp, and so we brought everything needful in the way of outfit and cooking utensils. A goodly store of provisions and supplies, and plenty of blankets and wraps to keep warm these cold nights. The other night, a cold, frosty one, we were hugging the fire and watching the flame shoot up its forked tongues, licking around the huge birch logs, causing them to crackle and sputter, and occasionally leap up in some long sheet of flame, illuminating the dark arches of the forest, sending out in bold relief branch and tree trunk, reddening the faces of the guides, lighting up dark places where the hounds lie crouched, gleaming up the barrels of our rifles and dancing off into the bush in long grotesque shadows. Suddenly, some hundred rods in the woods, arose a long mournful howl resembling that of a dog, then another, another, and still another! Says Hank, laying his hand softly on my shoulder, "Wolves!" and again down the forest, but farther off, the same wild, thrilling sounds. A few minutes more and again, but so far away that they are barely heard. "T was thrilling! this mournful howl of the wolf in the stillness of the forest, but all in unison with the night and the voices of its dark depths—the hoot of the owl, the sigh of the wind through the pines, the flash of the wavelets against the beach, the wild, weird note of the loon which floats in the silvery wake of the moon out on the gleaming waters of the pond. What stories are told, what jests are cracked! Stories of bear and deer hunts, wolf and panther yarns, which the uninited swallow greedily. How such a bear was killed and such a panther slain—"put thirteen balls right through him and he never stirred!" Tough panther that! And, that bear carried trap, log and all right off and ran faster than I could. "That deer had thirteen prongs on one side and twelve on the other, by golly; 'et you'd only seen that ar bear's track; as big as George's foot." "Thunder! Must have been a big one," and George draws in his number twelve modestly; and so the stories go on, and the moon mounts higher. Then the fire grows dim, and we turn in, and, with the hoot of the owl in our ears, are soon lost in slumber.

This pond was formerly a great fishing and hunting locality. Great fishing of great fish truly, for here it was where the 52 pound trout was caught, incredible as the weight may seem but which has been vouched for by several, and of which more anon. Hank Sweeney, my guide,

says: "Nine years ago my brother Ed. and I were down here night hunting. We killed one deer and drove out 23 more from the pond to the bridge," about two miles. Last fall the deer were plenty also. During the few days I camped here we could drive a deer at any time, but this season they are scarce, having been killed last winter, and driven during May and June by guides who should have had more sense. What men with the true feelings of the hunter will drive does before they have had their fawns? I do not blame the sportsman who comes to pass a few weeks late in the summer among the wilderness, and who to supply his camp with venison when jacking fails, lets loose the hounds; or the poor settler who with sick wife or children, meat high-priced and venison at his door, kills deer out of season; but the men who often kill but for the sake of killing to boast the number of deer they have slain, or those who prosper by the sale of their hides, should have the law applied to them in full force.

As we were sitting around our bark-covered table partaking of our afternoon meal and enjoying both it and the beauties of the sunset filling the west with glory and gilding cloud and mountain peak with crimson and gold, Washburn drew his boat up to shore and we asked him to "fall to and have a bite." He agreed at once, and knew how to do it, too. I ask Washburn to tell us about that "big trout" that was caught here. "Wall," he says, "I was with that party camped down at yonder camp, and we were out looking to see what was on our set-line, which was strung across that ere bay and we were taking up the hooks one after another, when I happened to look ahead and I see an all-fired big fish lying on top of the water, and we pulled for him and found he was not only hooked through the mouth but through the back, and every time he tried to get away it flopped him over on his side. We got him into the boat somehow or other, and the two fellers that was with me set down on him and told me to row for shore quick's I could, and I did, and we landed him and he was a whopper! Now I kin hold out a 50-pound meal bag at arm's length, but I couldn't that ere fish; it jest pulled my arm right down. He measured 3 feet and 8 inches and was 32 inches around him." "Some fish!" we exclaimed. "Biggest fish ever caught up here!" "Why," says Hank, "I hev took fish off the spawning beds up in Big Clear four or five years ago, pretty big fellers; one weighed jest 37½ pounds, and I hev known lots of 'em taken there to weigh 25 pounds and over. They say old Hinkson took one there once which weighed jest 62 pounds down on the scales in Titus's store, and he sed, 'I'm a poor man, but I wouldn't take \$100 for that ere fish,' he was so proud of it." Some people may think these are fish stories, but I know the first can be vouched for by several, and there are stories of very large lake trout being taken in these waters.

The twilight is deepening, the purple shadows are creeping up the hills and have filled the valleys already with deep violet, and now the mountain peaks wear a warm blush of purplish crimson, the west is barred with streaks of violet and red, a broad plain of pink is reflected in the east, and now over old Hay Stack twinkles the evening star. Oh! How I wish I had my paints and canvas ready that I might sketch this lovely scene! We pile more heavy logs on the fire and more stories are told of adventure. Some one says they are bound to put pickerel in these ponds and rivers. Think of putting in that slimy, greedy shark! Polluting the waters with their presence, driving off the delicious trout. Many wooden-headed people prefer pickerel to trout because it "makes plenty of fish." Compare a pickerel to a trout! as well pork to a quail or woodcock. Those are the men who do the sporting country harm, whose tastes are so coarse that they care little for quality "long's there's plenty of it." Can not there be some law and have it put in force to save all these streams and ponds from being filled in a short time as Long Lake and Racquette are, with pickerel?

Sept. 12th, 1876.

C. C. MARKHAM.

For Forest and Stream.

SALMON FISHING ON McCLOUD RIVER.

A JOURNEY to California under the direction of the U. S. Fish Commission, with a shipment of shad for the Sacramento river was the introduction to a series of pleasures, one of which was a visit to the U. S. Fishery on the McCloud river. After planting the fry at Tehama, our party, consisting of Mr. B. B. Redding, Land Commissioner of the Central Pacific Railroad and member of the California Fish Commission; Mr. Livingston Stone, of the U. S. Commission; Mr. F. N. Clark, and your correspondent traveled by rail to Redding, the terminus of the Oregon Division of the Central Pacific Railroad, and thence by stage 22 miles to the Fishery.

The weird and lonely hour of 1 a. m. has come, and it is announced that the six-in-hand is about to plunge into the Sierra Nevadas. The start might well excite the envy of our best amateur four-oar crew, for at the word go, six eager heads stretch forward and twelve pairs of eager hoofs clatter on the moonlit road. The Knight of the Ribbon has thrice felt the wind of brigand's bullets, and has even granted little mementoes in the shape of locks of hair in reply, while guarding the Wells-Fargo box and other treasures, yet his voice and arm are as steady in the deep shadows as they were in the crowded station. We are now laboriously climbing a sudden steep, now thundering down a decline as sudden, now whirling round an abrupt curve and skimming the edge of a precipice, our teeth meanwhile chattering and our limbs stiffened from cold, and our bones aching from contact with the numerous "thank you mam's" that lie in wait. But why elaborate? The joy and fears of mountain travel by stage have been well understood since the time of Greeley's famous attempt to hurry up the Jehu who got him "there in time." The relay of horses is reached, and we are again speeding on. The inevitable rut, like time, "but the impression deeper makes;" dusty moonlit streams flit by us; the fortunate outrider enjoys nature's wildness and our discomfort, until with a parting bump and a rasping of brakes, at the somnolent hour of 4:30 we shake off the dust from our unicolor garments and stand at the post-office of the McCloud River U. S. Fishery.

Shall we go to bed? Sleep was banished from our eyes on the way as effectually as dust was introduced into them and some of us have averaged only three hours' sleep out of 24 during the past week. To sleep or not to sleep is the question, which is decided for us by sundry splashing sounds from the river. It is salmon vs. sleep with odds in favor of salmon. Here are three rods, all fitted for the Waltonian pastime, and yonder is a jar of salted salmon roe with which to lure the noble prey. See that magnificent fellow throw his painted side free from the rushing

water, as if he meant to store up a few more tints to charm the eye and tempt the skill of us modern Izaaks! What an imitable flourish of that powerful tail! What coquetry of motion! We are no longer sleepy. Splash after splash is heard, one after another and sometimes all together, 10, 15 and 20-pounds cleave the air. Out go three lines on the bosom of the current. Three pairs of hands direct the movements of the rich, golden lure, and in three manly breasts hope is fully kindled. Splash! splash! We are getting cold. Hope smoulders. Strike! It is Mr. Redding; bait gone, salmon gone! Strike! It is Mr. Clark; salmon went off alone to enjoy a feast. As history repeats itself, so a fisherman's luck often repeats itself, particularly when it is bad, and with this morsel of history let us obey the summons of that horn which offers a dead certainty in exchange for a pleasurable uncertainty; after breakfast we shall go to "a better place" below, where success spends the most of its time. Just now we must do justice to the trophies of more fortunate rods. Yes, we've baited the quinat salmon in his native waters, and now we'll test his genuine flavor before the processes of freezing and transportation have robbed him of his delicacy. Our thoughtful host subdues our keen appetites just as he did the McCloud river Indians—by kindness. The choicest of salmon served in tempting style, and the almost incomparable trout of the McCloud, with accompaniment of toothsome bread and butter, fresh vegetables, chocolate and coffee fortify us for the encounters which are certain to come. A few words of direction and we are off courting the luck which our friends bespeak for us. We will not ask you, kind reader, to share the discomforts of standing in the sun while the mercury runs up as high as possible, to find a cool spot and to wait for an audience of sportive salmon which are really not looking for food, and play their little game of fast and loose with your bait of salmon eggs only because it is pretty. There is a shady nook within 20 yards of us, from which you can try the game qualities of the trout; indeed you may take the rare "Dolly Varden" trout (*salmo Cambellii*), and if you have no objection one of us will accompany you. Time flies as if he were jealous of our enjoyment and meant to let down the curtain of night in the middle of the finest act. The dinner hour comes, and we reluctantly reel up, although we guess the good cheer that awaits us. Dinner ended and cigars in ashes, we are again at our post. The fun grows intensely exciting. An exulting shout here, energetic words of disappointment there, followed by accents of commiseration so soothing (?) to the ear of the unlucky fisherman, a flourish of landing nets, a ringing caution, "keep him out of the current," words of congratulation after a hard fight of an hour and a half, in which every charge and retreat has its appropriate music on the clicking reel, and we seek quarters at the close of a memorable day to reckon up the spoils. We despair of describing the beauties of the "Dolly Varden" which you were fortunate enough to hook, and which will appear in imitable style on to-morrow's breakfast table; let us simply note in passing that our eastern brook trout (*Salmo fontinalis*, Mich.) does not compare with it. There is a fine showing of mountain trout (*Salmo iridea*, Gibbons) whose merits we universally acknowledged at breakfast, and "noblest Roman of them all," we have a magnificent display of California salmon (*Salmo quinnat*, Rich.)—one of 10 pounds, one of 15, one of 20, and, for a goodly central figure, one that tips the beam at 24 pounds.

Now let the graceful water angel skim the edges of the spray-washed rocks; let the roaring, rushing, noisy, foam-flecked river speed away from its mountain birthplace; let the nuptial dresses of leaping salmon gleam in the twilight and fair luna begin her love's glances at the Sierra Nevada while we seek our grateful couches and endure the coquetry of slumber until dreams of rods, reels, and landing-net treasures fade into a monotone of oblivion. One day's work is duplicated and surpassed in the next until we have feasted to our heart's content and set aside the elements of a feast for distant friends. The second night is upon us. A familiar rumbling is heard far up the mountain. Farewells are reluctantly spoken and we again give ourselves up to the tender (?) mercies of the Oregon stage, fully satisfied that neither the wonders of Woodward's Gardens, nor the famous habitues of Seal Rocks, nor the glories of the Golden Gate, nor, indeed, the flight of time can make us forget the hospitality of our entertainer, nor the enjoyment of salmon fishing on the McCloud. Now, with these straggling lines, more cumbersome than the six brief lines in which the poet of the Sierras described his familiar haunts, we wish you an intimate acquaintance with the same scenes. T. H. B.

New York, September 1, 1876.

Fish Culture.

CALIFORNIA SHAD.—Numbers of full-grown shad of those brought by Seth Green and Livingston Stone have been caught during the present season. In a very few years the Pacific coast rivers will be stocked with shad. The shad that have been imported were all placed in the Sacramento river, but contrary to the received theory that they will all return to the river in which they were hatched to deposit their spawn, some have been taken in all the important streams from Wilmington (San Pedro) on the south to the Columbia on the north. This would thus show that after going to the ocean they on their return either strike the coast or wander up and down the coast during a distance of 12° of latitude.

We are indebted to Livingston Stone, Esq., for the following statement of salmon hatching at the Government Reservation on the McCloud river, California:—

September 2d.—The spawning season of the Sacramento salmon is nine days earlier than usual this year. The daily yield of eggs this season has been as follows:—

August 22.....	36,000	August 29.....	246,750
August 23.....	118,000	August 30.....	337,750
August 24.....	186,750	August 31.....	419,000
August 25.....	153,750	September 1.....	657,000
August 26.....	213,000		
August 27.....	160,500	Total to date.....	2,761,500
August 28.....	232,500		

—A correspondent who signs himself "Dexter," sends the following line from Albany:—

"In the recent numbers of your paper have appeared a quantity of articles in relation to the effect different water

has on the same varieties of fish. While at Dexter, Jefferson Co., a couple of weeks ago, our party took a trip to Stony Island, situated about twelve miles northwest of Sacketts Harbor. The water here is very clear, the bottom being visible at the depth of thirty feet. A marked difference existed between the fish taken here and those in the vicinity of the Black river. The former being lighter colored and much thicker than the latter. In the sunfish the difference was not quite similar though more striking, those taken at the Island being slimmer than their brethren of the Black river, and so light colored as to be nearly transparent. I regret very much not keeping some of the former to see if they would mottle as the latter do after being caught, in this respect resembling the black bass. This was my first experience in this vicinity, and it was owing to the letter of Mr. G. Sweet, that I went. The fishing was not as good as I expected, owing partly to the intense heat driving the fish out in the deep water; still I advise my brethren of the rod and reel to go to Dexter for a good time, and a variety of fishing.

THE NEW YORK AQUARIUM.

It is not only apparent that as a people, we are behind the world in a general knowledge of plain history, but that this city is behind her neighbors of lesser size and pretensions in the interest which the public take in it. It is a great lack in the education of our young folks, and the question is being repeatedly asked, How can it be supplied? In Europe the popular dissemination of a rudimentary knowledge of nature was secured by the opening of museums, scientific lecture courses, and mainly by great aquariums in inland towns, exhibiting the beginnings of life. These aquariums sprung up rapidly. Fishes and marine life of every sort were carried thousand of miles by skillful hands, and to-day, in England, the Yorkshire man, or the North of Ireland man, can in Manchester or Brighton study the habits and constitution of animals from every sea and almost every river in the world. This is practical instruction, and arouses immediate interest. Our Yorkshire friend might work over the report of Prof. Jones, F. R. S., F. L. S., F. Z. S., etc., on the "Amyloid albuminous proportionates of protoplasm" for years, and still remain in darkness and doubt the sanity of the proposer of the term; but in the aquarium he is shown a cell, and informed in the plain and understandable English of the guide book the meaning and uses of the many curious forms that originate from a single or a group of cells, and comes out feeling that a new world has been opened to him.

Such is to be the work of the new aquarium at Thirty-fourth street and Broadway, founded by W. C. Coup and Charles Reiche and Bro., with Prof. H. D. Butler as General Superintendent. It ought to introduce a reform in education. It has been greeted with great satisfaction by both scientists and amateurs, and the projectors of the new institution deserve the support and thanks of the entire community. So much of a necessity does its full operation seem to be that the projectors are encouraged to larger efforts, and hope to ultimately present the best exhibition of aquatic life in the world. Their arrangements are certainly far-seeing and careful, and that not only an instructive but a very attractive place will result is evident from the plans. At present all is unfinished, and it will be some time yet before the tanks will receive their first occupants. Even then it would not be fair to judge the aquarium by its first week's appearance or success, for it takes time and patience to bring the delicate animals into proper and healthy adjustment with their new surroundings. The general plan may even now be seen by a visitor at the building.

The main entrance is at the Broadway corner, and is intended to be highly ornamental. The passage thence into the hall where the tanks are will be through a grotto of rock work, tumbling waters and growing plants. As one enters a prominent object will be a whale tank of iron and glass occupying the center of the space. Near it will be seen the basin of cement for the seals, and beyond another large basin for sea-lions and sea-elephants, with a mass of rocks behind rising to a height of 55 feet for them to climb up upon, as they would upon the rocky shores of the islands of their native seas. This naturally attractive object will be made a source of additional pleasure to guests by various devices. The opposite or Broadway end of the building will be taken up by a very large glass and iron tank for fishes, large turtles, etc., and a fountain will take up the remaining space on the ground under the main roof. On the left wall will be found a long line of small tanks, containing all the available forms of tropical marine animals, from the beautiful sea anemones and corals to the huge ray. This department, though not notable for the extreme size of its inhabitants, will undoubtedly be the most attractive on account of the rarity and wonderful variety of form and color of the specimens.

One of the most instructing of these creatures is the sea anemone. In it we find the highest form of the true zoophyte. The anemones occur in shapes of great variety, and with wonderfully colored and fantastic arms. Although they seem delicate, they are extremely voracious and feed eagerly. They have even been known to capture an eel six and a half inches long. The graceful arms are not so harmless as one would suppose, for if we examine their surfaces when excited we find them covered with cells, which in time of danger or attack throw out millions of minute poisoned darts, piercing the unfortunate object of their fury through and through. Then the victim is rolled into the huge stomach, the delicate parts are digested, and the hard parts ejected by a reverse process. One here is a giant among the anemones, measuring over 14 inches across the disk. It has an unusual number of large tubercles with delicate carmine tips and yellowish bases, gathered around the center into a number of large groups or lobes. Another curious form, and a gross parasite at that, is the *Cancerisocia expansa*. It is invariably found perched upon the back of a certain crab, which accepts the load

with extreme good grace, and carries its rider wherever chance leads. Numerous other forms equally curious will find their home here. Among the fishes we find the richly arrayed angel-fish, or *Chætodon*, completely dazzling the eye with its innumerable hues. Prominent in the family we find the beaked angelfish, a native of the Chinese seas. Its mouth is greatly elongated, forming a tube not unlike the chamber of a blow-gun. This it pushes up above the surface of the water, and if an unwary fly or bug trust himself within sight, he is sure to fall a victim to the drop of water that the fish shoots with rarely failing certainty of aim. Equally peculiar in its method of procuring food is the frogfish (*Lophius piscatorius*). The first dorsal fin is almost wholly wanting, its place being supplied by three long spines. Upon the tip of the first, which is moved by certain muscles and bends forward like a rod, dangles a shining tip of membrane that forms a tempting bait to the smaller fry. The "frog's" manner of procuring food is to conceal its ugly body in the mud at the bottom and slowly move about the shining bait that hangs just above the terrible mouth. As an unwary fish opens its mouth to seize it, the bait disappears and so does the "victim of misplaced confidence." Of fishes, including many curious forms, there will be over a thousand; every known species is intended to be represented if it is possible to secure them.

On the west side the rock-crevices of the ocean bottom will be imitated, and with the marvelous abundance of submarine life around him, the visitor can well think himself down among the mermaids. At the extreme end of this series of tanks will be a large one devoted to trout. On the north side are to be the larger tanks intended for the population of the deep water of the ocean. They will hold the large white shark moving about with its constant companion the suckingfish; the swordfish, the largest of the mackerel family; and the sawfish—all interesting forms that few have opportunity to observe in an agreeable manner. Here will be the familiar forms of the market. The tanks containing the cuttle-fishes will attract many, for these are the "Devil-fishes" of Victor Hugo. About Newfoundland they have been killed with limbs twenty feet long, and able to make a desperate resistance. If possible one of these huge creatures will be secured, but whether one so large could be managed is an open question.

Immediately over the entrance will be fitted up a handsome reading-room and library. Here the naturalist or person interested can consult the library relating to the collection below, or read the various journals of science and natural history. The work room will be well lighted, and fitted with small aquaria for experiment and study. This will enable zoologists to make use of duplicates or compare the internal structure of the preserved specimen to the corresponding movements in the live subject. It will be an immense advantage to every student of science in New York if it is carried out in the generous way in which its proposed. Everyone may here have a summer and winter school of natural history at his own door. An opportunity will also be given for occasional lectures illustrated by the microscope, and for much popular instruction.

The management of such an institution requires large experience; and the choice of Prof. Butler as Superintendent is a fortunate one. He has had a life-long experience in the handling of marine animals. The first great difficulty, of course, after the tanks have been made sufficiently tight is to keep the water pure and wholesome. There are two ways of doing this: by aeration, and by circulation. The former, first introduced by Dr. Ball, of Dublin, is used at the Brighton Aquarium, and consists in introducing oxygen by forcing bubbles of air up through the water. When the latter method, which is the most natural one, is carried on the water is forced by a pump to flow into and out of all the tanks in succession until it returns to the reservoir as fresh, and at the same temperature as where it started. This process has been adopted by the New York Aquarium, the machinery, which has just been put in position, having been made in Europe on the most approved plans. The water in this aquarium will be changed entirely once in about twenty-four hours, and the reservoir will contain twice or three times as much water as the entire volume of the tanks. The gigantic pump is able to force out 7,000 tons per minute.

Such is New York's first aquarium at its beginning, and we look forward to the time as not far distant when very near perfection shall have been attained. The educational and elevating efforts of such a constant exhibition of Nature's handicraft cannot but be of the highest benefit to the people of this busy city. F. H.

✓ AMERICAN SALMON IN NEW ZEALAND.—Mr. Livingston Stone has kindly favored us with the following letter, which contains information that is altogether encouraging to those who have attempted to introduce the Pacific salmon into New Zealand. It will be seen that a second shipment of the ova is soon to be made:—

SAN FRANCISCO, Cal., May 19th, 1876.

Livingston Stone, Esq.:

DEAR SIR—Last year, by the kind assistance of my friend Mr. Keating, I was fortunate enough to obtain from your establishment 50 M. sal ova, which I shipped to New Zealand, intending them for the province of Napier. The steamer taking them from here touched only at Auckland, and as no ice could be procured there Mr. Ormond, Superintendent of the province of Napier, donated one box to the Acclimatization Society at Auckland. In a letter received from Mr. Ormond per steamer Zealand, he says: "Will you be kind enough to convey our acknowledgements to the gentlemen who superintended the packing of the ova received? Nothing could be better than the manner in which it was packed, and the box opened at Auckland was in splendid order, although the supply of ice had run out some days before the big steamer reached that port. You will be glad to hear that the ova left at Auckland succeeded admirably, and that in fact it has started, and started well, salmon in the Auckland rivers.

Now Auckland climate is warmer than at Hawkes Bay, and they have not the same facilities for hatching ova; also their rivers are not as suitable as our's, which are fed by water from snowy ranges. Seeing all this I am quite confident that if we can get another shipment from the same source as the last we shall succeed thoroughly, as the California mail service, now that the new line is gradually getting into working order, gives great facilities for getting the ova to Napier."

As my friend Mr. Keating is now in Europe, I now write to ask if I can procure from your establishment a duplicate of last year's shipment, say 50 M. ova. I write this soon because I understand from Mr. K. that permission had to be obtained from Washington, and it might perhaps save some trouble to make the application in time. As soon as I know what amount it is necessary to send you, or pay here, I will at once attend to that on receipt of advices from you.

Yours respectfully, ROBT. P. R. DUFF.

SUCCESSFUL CULTURE OF GOLDFISH.—Two years ago Mrs. Ford, of Melrose Villa, Red Lodge, near Southampton, purchased of Mr. John Robson, the well-known dealer in game, fish, and other seasonable delicacies in that town, four gold-fish, taken promiscuously from a small aquarium which ornaments his marble slab. Having safely deposited them in a pond, freshly dug for the convenience of supplying water to the garden, they were left without further attention to their fate, but with the very natural desire that they might "go forth and multiply." Mrs. Ford's wishes in that respect have certainly been gratified to a most extraordinary extent. The pond is at present literally swarming with them; units have multiplied into thousands upon thousands, and Mr. Robson himself has on several occasions been supplied with considerable quantities of them, all bred from the original stock of four in this remarkably short period. This fortunate lady's "private adventure" in pisciculture, in well deserving the careful consideration of all who have the means of "doing likewise," as I need scarcely add that it is a most remunerative and interesting amusement. Mr. Robson's gold-fish came from Havre, in France; whether they are a peculiar species he cannot say; they are very beautiful in color, but small. —*Land and Water.*

ENGLISH SALMON OVA IN AUSTRALIA.—The Melbourne correspondent of the *London Times* says: "One salmon has been safely hatched at Ercildoun, near Ballarat, the only result of the shipment of 30,000 eggs, which arrived in the Durham two months ago. Acclimatization is costly work when this little fish is all we have to show for £1,000 (\$5,000), but Sir Samuel Wilson, who supplied the money, is going to make another experiment later in the winter. He does not attribute the failure of the last to oscillation on board the steamship, or concussion from careless handling of the boxes in which the ova was packed, but to the warmth of the weather when the boxes were opened. In differing from the opinions which have been expressed upon these points, he is supported by the success of a shipment to New Zealand, which was packed with ours, came out with ours, and was subject to precisely the same conditions as ours in its carriage up to the time of its transshipments. The only difference in its favor being that it was opened out in a little colder climate later in the year."

Natural History.

THE MIGRATIONS OF BIRDS.

What a wonderful perception is that which teaches them to migrate; tells them just the day to set out, the proper course to take, and keeps them true to it over ocean and prairie, and monotonous forests, and often in the night! That the young, learning the route from the parent, remember it, would be no less remarkable were it true, which it probably is not; for many species seem to go north by one route, as along the coast, and return by another west of the Alleghanies, or *vice versa*. In proceeding northward, the males go ahead of the females a week or so; returning in the fall, the males again take the lead, and the young bring up the rear. Yet there are many exceptions to this rule, for with not a few birds, the males and females travel together; and with some, old and fully plumaged males are the last to arrive. All birds migrate more or less, even such, like the crow and song-sparrow, as stay with us through the year; for we probably do not see the same individuals both winter and summer. Even tropical birds move a little way from the equator and back again with the season; and in mountainous regions most of the birds, and many small animals, have a vertical migration only, descending to the valleys in winter, and ascending to the summits in summer—difference in altitude accomplishing the same results as difference in latitude. We can see various causes of these migrations, some of which have already been suggested, but the chief cause seems to be the necessity of their accustomed food. We find that those birds which make the longest and most complete migrations, are insect and honey eaters; while the granivorous and omnivorous birds, and such, like the titmouse and nut-hatch, as subsist on the young of insects to be found under the bark of trees, go but a short distance to escape inclement weather, or do not migrate at all. Sportsmen recognize the fact that the snipe and woodcock have returned, not because the rigorous winter days are wholly passed, but because the frost is sufficiently out of the ground to allow the worms to come to the surface; and know that in warm, springy meadows, these birds may often be found all through the year. Man no doubt influences the migratory habits of birds. To many he offers inducements in the shelter, and in the abundance of insects which his industry occasions, to linger later in the fall than was their wont, and return earlier in the spring. While, on the contrary, the persecution which the shy wildfowl have received, has caused them generally to repair to secluded breeding places, far north of their haunts of fifty years ago. But the migrations of most birds are somewhat irregular, and we have so few reliable data that we can hardly yet fully determine the laws which govern their seasonal movement.

The true home of a bird, then, is where it rears its young, even though it be not there more than a third of the year, and everywhere else it is merely a traveler or migrant. Should you then, after say two years of observation, want to write down a list of the birds inhabiting your district—and you would thus be doing a real service to science—it is important that you mention whether each bird breeds there, passes through spring and autumn, or is only a winter visitor.—ERNEST INGERSOLL, in *Scribner's Magazine*.

BIRDS OF CENTRAL NEW YORK.

[Concluded from page 52.]

Fulica americana. Coot. Breeds, but is not very common.
Cygnus buccinator. Trumpeter swan. Very rare. It has been taken on Cayuga Lake.
Branta canadensis. Wild goose. A common spring and autumn migrant.
Anas boschas. Mallard. Not very common even in the spring and autumn migrations.
Anas obscura. Dusky, or black duck. It arrives in March, breeds and departs in November. A few may remain all winter.
Dafila acuta. Pin-tail. Found in the spring and fall migrations.

Chaulelasmus streperus. Gadwall; gray duck. Spring and autumn migrant.

Querquedula carolinensis. Green-winged teal. Common in spring and autumn.

Querquedula discors. Blue-winged teal. Migrating abundantly in spring and autumn. A few remain and breed.

Querquedula cyanoptera. Cinnamon teal. This teal is a rare visitor, but has been taken on the Seneca River.

Aix sponsa. Wood duck. Common in summer, and breeds. It arrives in April and departs in October.

Fuligula marila. Blue-bill. Common spring and autumn migrant.

Fuligula ferina. Redhead. Common in the spring and fall migrations.

Fuligula vallisneria. Canvas-back. A rare spring and autumn migrant.

Bucephala clangula. Golden-eyed duck. A winter resident, common in the spring.

Bucephala albeola. Buffle-headed duck. Rare in winter; common in the spring and autumn.

Harelda glacialis. Long-tailed duck. A rare spring and autumn passenger.

Erismatura rubida. Ruddy duck. Rare, and seen only in spring and autumn.

Mergus Merganser. Goosander. Common in winter.

Mergus serrator. Red-breasted merganser. A common spring and fall migrant.

Mergus cucullatus. Hooded merganser. Not common, and only in the spring and fall migrations.

Larus argentatus. Herring gull. Common in the spring.

Sterna superciliosa. Least Tern. Occurs rarely, and in the spring.

Colymbus torquatus. Loon. Spring and autumn; not very common.

Podiceps griseigena. Red-necked grebe. A rare spring and fall passenger.

Podilymbus podiceps. Pied-billed dabchick. A summer visitor. Breeds.

Auburn, New York. H. G. FOWLER.

A PRIZE.—Our Chatham, New Brunswick, correspondent, D. E. Smith, Esq., writes us that he killed a double crested cormorant in Miramichi river in May last. It is a very handsome bird, about as large as a brant and has been mounted by Carnell of St. John, who now has it in his collection at Mount Pleasant. This bird is very rare in the maritime Provinces.

—The largest alligator killed in Florida for many years, was shot last spring by Dr. De Marmon, of Kingsbridge, N. Y. The animal measured 12 feet 6 inches in length when spread on the dock. It was 6 feet 10 inches round the body, 5 feet 10 inches around the jaws, and weighed about 700 pounds. The head, which is now in the Doctor's possession, is 30 inches long. It was killed on the Homosassa river, about two miles from Alfred Jones's grove.

WHEN DO SNAKES SHED THEIR SKINS?

MORGANTON, N. C., August 30, 1876.

EDITOR FOREST AND STREAM:—

I should be glad to know from you, or some reader of FOREST AND STREAM, if snakes shed their skins more than once a year; or whether the disposition to do so is increased by captivity. I have two snakes in a box, one a rattlesnake (*Crotalus horridus*), the other a kingsnake (*Ophibolus dohatus*). Both have shed their skins twice since July 1st. The rattlesnake appearing in a new coat for the second time to-day. They both seem to be in fine condition, and are freely supplied with water.

G. H. MORAN, M. D.

[We really know very little of this or the other habits of our snakes. It is generally supposed that the wild rattlesnake sloughs its coat only once a year, just before going into its winter sleep. At any rate the shedding is at tolerably regular intervals. There is no doubt that in captivity the likelihood of their shedding their coats more frequently is increased. We hope to learn something from our readers on this topic.—ED.]

CROWS DISPOILING HERONRIES.

INDIANAPOLIS, Ind., September 2d.

EDITOR FOREST AND STREAM:—

It is generally conceded that "Jim Crow" does pillage the corn fields in various parts of the country. In fact, it is admitted by the bird himself in the old lines:—

"Says the blackbird to the crow,

What makes the white man hate us so?"

To which the crow replied:—

"Ever since the days that Adam was made

Picking up corn has been our trade."

How often when a schoolboy I endeavored to secure the liberal bounties offered by the farmers of the Nashua Valley, in the old Bay State, for a scalp of these black rascals. But invariably the ambling thieves discovered my position, either from the smell of powder in that old Continental horn behind the stone wall, or were warned by the *caw* of a mate in the top of a distant chestnut.

While the crow is so hungry for corn in the New England and Middle States, I have never known a field to be molested by them either in Indiana or Illinois. In the latter State I have seen them by thousands winging their lazy flight across the prairie to some grove where they roost both summer and winter. They observe the same line of flight as they near their roost. They go miles away, dropping down upon the open prairie, and seem to feed on grubs and insects. I have never seen them eating carrion either here or in the South. In the years of 1874 and 1875 a party of us made two round trips to Lake Okeechobee, Florida, by way of the Kissimmee river. We also took a third hunt as far as Fort Kissimmee. In these voyages it was very interesting to observe the habits of the crow. All the herons and water turkeys (darters or snake-birds) had built in the hammock adjoining the water. Whenever our boat, the "Forest and Stream," suddenly rounded a point there was a great stir in the "rookeries," and a lively time for the crows. The latter birds seemed to know our movements; for they were ever on the alert at every disturbance, and began actively to plunder the nests; robbing them of both eggs and young birds. When we came to a rookery of plume-birds our guns created great confusion among the herons; but the crows seemed to take in the situation, and apparently understood our intention, for they paid no attention to the noise of our guns, but plied their work of destruction upon the eggs and young as mercilessly as did we upon the old birds. As long as we continued shooting they made havoc among the nests. We saw no crows in the islands of Okeechobee. We were greatly amused one day at a pair of crows endeavoring to induce a Brazilian eagle (vulgarily called Mexican buzzard) to leave its nest. The crows tormented the eagle by turns, one

always remaining above the nest to pounce upon the eggs the moment they were exposed.

J. F.

ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN, SEPT. 4 TO SEPT. 11.—Four reed-birds (*Dolichonyx oryzivorus*), one chewink (*Pipilo erythrophthalmus*), one brown thrush (*Harporhynchus rufus*) and one olive-backed thrush (*Turdus Swainsoni*), presented by Parsall and Snyder, Philadelphia; one copperhead snake (*Agkistrodon contortrix*), presented by A. W. Mitchell, Elkton, Md.; one pair of flying squirrels (*Pteromys volucella*) and one rabbit (*Lepus cuniculus*), presented by Miss Fannie H. Bryan, Vincentown, N. J.; two raccoons (*Procyon lotor*), presented by George H. Johnson, Philadelphia; one green snake (*Chlorosoma terrilis*), presented by Howard A. Kelly, Philadelphia.

ARTHUR E. BROWN, Superintendent.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Sciaenops ocellatus</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Archosargus probatocephalus</i> .
Salmon Trout, <i>Salmo confinis</i> .	Striped Bass, <i>Morone lineatus</i> .
Land-locked Salmon, <i>Salmo Gloveri</i> .	White Perch, <i>Morone americana</i> .
Grayling, <i>Thymallus tricolor</i> .	Weakfish, <i>Cynoscion regalis</i> .
Black Bass, <i>Micropterus salmoides</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
<i>M. nigricans</i> .	Spanish Mackerel, <i>Cybinus maculatus</i> .
<i>M. nobilior</i> .	Cero, <i>Cybinus regale</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Bonito, <i>Sarda pelamys</i> .
Yellow Perch, <i>Perca flavescens</i> .	Kingfish, <i>Menticistrus nebulosus</i> .

For list of seasonable trout flies for September see our issue of July 27th.

FISH IN MARKET.—Fish of all kinds continue scarce and prices high. The best fishermen are doing but very little, and in the Great South Bay the pound nets have stopped work. We quote:—Striped bass 25 cents per pound; bluefish, 12 cents; salmon, frozen, 50 cents; mackerel, 15 to 25 cents each, according to size; weakfish, 15 cents per pound; white perch, 15 cents; Spanish mackerel, 25 cents; green turtle, 15 cents; halibut, 18 cents; haddock, 8 cents; kingfish, 25 cents; codfish, 10 cents; blackfish, 15 cents; flounders 10 cents; porgies, 12 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 12 cents; sheepshead, 20 cents; whitefish, 18 cents; black-bass, 18 cents; pompano, 50 cents; frogs legs, 50 cents; terrapin, \$12 per dozen; soft clams, 40 to 50 cents per hundred; scollops, \$1.50 per gallon; hard-shell crabs, \$3.50 per 100; soft do., \$1.25 per dozen.

—Quite recently, a brother of "Fred Beverly," while engaged in fishing off the east end of Long Island, in a small boat, got lost in a fog, and passed eight days at sea without his daily bread and water. Fred Beverly was the Florida correspondent of this paper—Mr. F. A. Ober.

—A pickerel was caught at Silver Lake, N. Y., last week which weighed 15½ lbs., the largest caught there this season.

MASSACHUSETTS—New Bedford, Sept. 8th.—Sea fishing has somewhat improved here the past week. The Cuttyhunk Club caught 32 striped bass this week, some of good size. Bluefish, tautog, cod, etc., are found in our markets in goodly numbers. CONCHA.

Cohasset, Sept. 11th.—Smelts are now plenty, and as high as 40 dozen to a boat have been taken at Black Rock. One man took this week alone 175 mackerel with his smelt line. Would like to hear from our friends at Chatham. S. K. Jr.

FISHING MOVEMENTS.—The past week has shown a decided activity in the movements of the fleet which has been pleasing to witness. One hundred sail have arrived against 54 of last week, as follows: 54 from Georges, 38 from mackereling and 8 from the Banks. The receipts have been, 972,000 pounds Georges codfish, 640,000 pounds of Bank codfish, 65,000 pounds of Georges halibut and 9,740 barrels of mackerel. Prices are well sustained and goods ready for shipment find a ready sale on accumulated orders. The demand for the best qualities of mackerel is much in excess of the supply.—*Cape Ann Advertiser, September 8th.*

VIRGINIA—Lcesburgh, Sept. 9th.—Fishing improving; river clear, Goose creek clearing; fishing with minnow in river has given moderately good returns in numbers and fair in weight. Takes per fishermen have been from 10 to 34; weight from half a pound to two and a half pounds. T. W.

Norfolk, September 5th.—The seines have commenced hauling again, and old ocean is yielding rich stores of food to us poor fish-hungry mortals. It would do your heart good to see the piles of fish daily brought in. In these days of hard times, one good thing is that fish have expanded in size, and contracted in price. Fishing has been poor through the season until now. DRAKE.

—A large sea turtle, weighing 900 pounds, was captured the other day at Wood's Hole, Vineyard Sound. It is said to be the largest one ever seen in northern waters.

—Mr. George Jelliffe, the efficient superintendent of the fish hatching establishment at Westport, Conn., is quite an artist. He has just completed a fine copy of "Comedy" after the original bronze.

—A large number of dead fish have come to the surface at Long Pond, Providence, R. I., within a day or two, and the same is true of one or two smaller ponds near by. The cause is as yet unknown. In a pond in Newport the dead and decaying fish have become so great a nuisance that the authorities have been obliged to remove them.

A correspondent of large experience, writing from his camp on Rangeley Lakes, speaks as follows on the subject of insect pests:—

"Many a man has been deterred from entering the wilderness by the thoughts of black flies. Now the black fly is, after all, not such a bad fellow, and hasn't half the impudent brass of the mosquito—leaves you at sunset or thereabouts—and never routs you at night by the everlasting 'here he is' of his congener. Unquestionably, however, the fly will occasionally poison a person, so that the face or hands will be extremely bloated, the lobes of the ear swollen—as large as a pigeon's egg. All this is accompanied by great irritation and slight fever. A man came to Maine last year with a patent preparation to keep off the flies, went into their midst daubed in it from head to foot,

and got so frightfully bitten by the digusted flies that his guide (securely smeared with tar) feared he might die before they could reach a settlement. It is unnecessary to state that that species of fly-oil was a drug in the market thenceforth. There are two ways of keeping free from fly-bites. One is by getting inoculated. It is a well-known fact that inoculation by bees prevents their poison from taking any effect upon man. So it seems to me it is with black flies. The new-comer is dreadfully troubled with them; they bite and poison him perhaps in spite of oil, but after he has been among the pests a few weeks he will probably scarcely notice them, their bite being only marked by a small red blotch, which leaves no irritation behind. A friend was quite struck by observing a party of guides fast asleep and unvailed, yet unbitten by flies, while their employers were kept awake vigorously scratching by the tormentors. There has always been much disputation about the relative merits of several kinds of fly-oil. The two best, undoubtedly, are tar or oil of cade, mixed with sweet oil; and, second, camphor, sweet oil and penneroyal. Having been where the flies swarmed, and given both a thorough trial, I unhesitatingly pronounce in favor of the last mentioned, which will effectually keep off the flies. Fly-oil is generally considered a disagreeable thing to use, and the oil is of course oily, but it keeps the skin in an excellent state, prevents it from peeling off, and lends it that envied brown. The proper way to use fly-oil is to apply it several times to the features, letting it fill all the pores of the skin, as, if my information is correct, it is through these the flies draw blood. If this is properly attended to the black flies become a mere bagatelle. [Here let me address those whom are troubled by sun-burn, never to wash their faces at night, after the day's exposure to the sun, but to wait until morning to perform ablutions.] Mosquitoes are easily disposed of by a smudge (or smoke) before the tent-door. After the 1st of August flies or mosquitoes seldom trouble one; nominally, the flies are supposed to disappear entirely by that date, but the writer never was so badly bitten as in an unguarded, unveiled moment, late in September, while engaged in pulling trout out two at a time from a beautiful stream.

A PLEASANT FISHING EPISODE.

CHICAGO, Ill., August 8th.

EDITOR FOREST AND STREAM:—

We were fishing in the Pike (or Ocosibee) river, a tributary of the Menominee in Northern Wisconsin. The river was too deep for wading so we fished from the bow of a "dug-out" canoe with an Indian in the stern to manage it. I was throwing a fly, or rather flies, on the edge of the rapids, and letting them swing over into the eddy with little success. Behind me was a large patch of foam about ten feet square and an inch thick in among some rocks. In swinging back my rod carelessly my lower fly touched the foam, when instantly a trout "went for it" right up through the foam, making it fly and leaving a bare place on the water about as big as your hand, which of course at once closed over again. To back the canoe around where I could get a chance was the work of a few seconds, and throwing the flies on the foam I was surprised to see the fish go for them. I took three good-sized trout, about 6 to 10 ozs., and on another occasion three more. When the flies struck they did not go through the foam at once, but the fish struck right up through, and in drawing the flies across it each fly with the foam on it looked as large as a walnut. The weather was very warm, and the mosquitoes very bad. We did not fish hard for we could not utilize the fish; so one morning I took the canoe, and dropping down a long reach just below the camp, fishing under the banks I took 24 as nice trout as you would wish (from 4 to 12 ozs.) in about an hour, and could have taken more but did not want them. They rose beautifully. Of course I have taken more fish in other places, but for comfort in having a clear river and getting all we wanted I never struck a better place. A thorough fisher like yourself would have enjoyed it.

J. L. S.

ANGLING FOR WHITING AND SEA TROUT IN SCOTLAND.

LIVERPOOL, Eng., August 16th.

EDITOR FOREST AND STREAM:—

Being over here on business I took advantage of the opportunity to pay a visit to my old home in Scotland, from whence I have just returned, having had a pleasant time among my native forests and streams. Langholm, my native place, is situated in a beautiful valley at the junction of three streams, the principal one being the Esk, into which the others flow, and which empties itself into the Solway Firth. All three abound with trout. The town is about seven or eight miles from the English border and 20 from Carlisle, one of England's ancient strongholds, which still retains the old castle crowning a height overlooking the river Eden, a fine salmon river, which you cross by a long and substantial stone bridge entering the town from the north. I had some delightful days on the Esk, which at this season of the year, if a favorable flood comes to allow them to ascend, and which happily occurred while I was there, is full of sea trout and waiting, or as it is sometimes called "herling," both, I believe, local names, and I do not know but that the whiting is peculiar to waters emptying into the Solway; but I may be wrong, as I have no positive information on the subject. Of one thing I am sure, and that is that for its weight, running from a half to one and one-half pounds, it is the gamiest fish that enters fresh water. The sport with a light fly rod is something fine, and worth going a good ways to enjoy. The moment you strike you witness two or three leaps in rapid succession—so rapid you can hardly count them—which leaves no doubt as to which family he belongs; then the wheel whirls with his rush to be free. You finally bring him to, game to the last gasp, and his silver sides glisten on the gravelly shore. He has the real salmon lustre, blue back, and silvery sides, with dark specks over the upper parts. The sea trout runs in weight from one and one-half to four pounds and sometimes heavier, and is also a very game fish, but not so beautiful in shape and coloring as the whiting, having a dingy, brown back and dull, white sides, although part of this may occur from being some time in fresh water, they being usually brighter when fresh run from the sea. The Tarras, one of the tributaries of the Esk, into which it flows, about three miles below Langholm, is also a famous trout stream—a genuine mountain stream, flowing over a rough, rocky bed and through a wild moorland district, almost entirely devoted to sheep raising. It takes its rise in the moors, famous from the time, Mary, Queen of Scots, rode across them, and in which she nearly lost her life (which would have been a little more romantic than her real end) to visit Bothwell, lying ill at Hermitage Castle. In the old days when the Borderers

"Stole the beaves that made their broth
From England and from Scotland both,"

this Tarras was a famous retreat for the Scotch mossroopers returning from a raid over the English border, as no foe unacquainted with its moss holes and devious paths dared follow into its wild fastnesses. But now the scene is all changed, possibly excepting its brown crags rearing their bare heads from out their covering of blooming heather. Have you ever visited Scotland? If not do so in July and August, when the heather is in full bloom, and with rod in hand with some favorite stream as your goal, wander at will through its flowering depths, and if you don't think it the very acme of bliss then, I won't believe you the Editor of FOREST AND STREAM. I think now I see a smile at my exaggeration. Well, I had a nice day at Tarras; walked over the hill in the forenoon and fished about three miles up stream, which is very hard work, the

rapid current carrying the line down stream very quickly, thereby causing a great many casts; the water was also very clear, adding considerably to the difficulty, and the trout are very wild, requiring great caution and long casts to secure them. However, I managed to obtain a nice mess, and reached an old friend's about dark, well tired and well pleased with my day's enjoyment. After 14 years' separation a hearty shake of the hand and a good supper and talk over old times, enlivened with a little of the real "mountain dew" are very enjoyable. Now, dear Editor, I will bring my rambling letter to a close by saying that I have often wished I could make some slight return for all the many good things enjoyed in FOREST AND STREAM, and if there is anything here which you think will interest your readers you have it at command.

I inclose a couple of flies such as I have been using, and which I know are good and low in price (about 50 cents per dozen), made by an old friend in the business, and if you or any friends would like any dressed to pattern I shall be glad to take care of them and bring on my return.

ESK.

[We thank our correspondent for the flies, which are beautifully made. They are smaller than most flies used in this country, and are dressed on gut so fine that none but an expert could hope to land a sizeable fish that happened to fasten himself to them. We shall look for another letter with interest.—Ed.]

SPECKLED TROUT IN TENNESSEE.

KNOXVILLE, Tenn., September 5th.

EDITOR FOREST AND STREAM:—

I herewith inclose you some notes relative to the localities in East Tennessee for speckled trout. The head of Coxby's creek some 35 miles south of Morristown, and on the west side of Smoky Mountain is the nearest point to Morristown. The fishing here is not so good as across the mountain, in Big creek, another tributary of Big Pigeon river from the west side. This latter creek is just over the North Carolina line; 12 miles higher up the Pigeon is Catalonche creek, and eight miles from Catalonche is Jonathan's creek, both tributaries of Pigeon, and both said to be splendid for *Salmo fontinalis*. The best mode of reaching this locality is from Morristown, on the East Tennessee and Virginia Railroad. Take cars for Clifton (Newport) on Cincinnati Cumberland Gap and Charle town Railroad, and from this point 20 miles by good road to Cosby's creek (central fork) and thence by good turnpike to Big creek, 14 miles to B. P. Hopkins, Mt. Sterling, Haywood county, N. C. I spent one day and night at Mr. Hopkins's for 50 cents. The fishing was not good, as the water was very low, but I should not wonder if an expert could not take as many as he wished. The "Tar Heels" use "stick bait," an insect sticking to the under surface of rocks in the creek to take the "speckled beauties" with.

SEAWANHAKA YACHT CLUB.—The fifth annual regatta of the Seawanhaka Yacht Club will be sailed on Saturday, September 16th, over their home course in the Sound. The yachts of the fleet will be classified in the following order: First and second class schooners, first and second class cabin sloops, and first and second class open sloops. The smaller yachts will be started at half-past ten, the schooners and both classes of cabin sloops about half an hour later. Ten minutes will be allowed for the larger yachts to cross the line, and any vessel failing to start within the stipulated time will not be ruled out, but will be timed at the expiration of the time allowed for crossing. The course for first and second class open sloops will be from the starting-point, in Oyster Bay, to and around Red Buoy No. 2, on Middle Ground; thence to and around Hog Island Buoy, Lloyd's Neck Buoy, Red Buoy No. 2, thence a second time to and around the buoys off Hog Island. All entries must be made in writing to Mr. M. Roosevelt Schuyler, 54 William street, and will be received until noon to-morrow.

DORCHESTER YACHT CLUB.—The fourth in the series of regattas of the Dorchester Club for the present season was very finely contested last Saturday afternoon. The regatta was for first class center-boards, measuring 25 feet, and upward; second class center-boards, from 25 to 18 feet in length; third class center boards, under 18 feet, and for keel yachts; and the course for all was a distance of nine and a half miles.

The Eva, W. H. Bangs, Jr., won the prize in the first class, but no prizes were awarded in the second class, for the reason that the crew of the Niagara claimed that the boom of the Wanderer struck buoy No. 6 as she turned. The race among the keels was a one-sided affair throughout, the Maraquita, Mr. P. Dexter, obtaining at the outset a splendid advantage over the Hornet and the Johnny Sands, and won the prize—a large silver castor—easily. The Johnny Sands carried away her topmast off Sculpin ledge. The race between the Tulip and the Virginia, of the third class, over the five and a half mile course was very exciting, the former winning the prize—a salad castor—in the remarkably short time, in such rough weather, of 48 minutes and 35 seconds. The judges were W. H. Bangs, Jr., Coolidge Barnard, Col. Nathaniel Wales, Henry S. Mann and W. F. Halsall.

QUINCY YACHT CLUB.—The tie race for the third class championship of the Quincy Yacht Club was decided on Friday last in favor of the Rocket by the following summary:—

Name.	Owner.	Length.	Actual Time.	Corrected Time.
		Ft. In.	H. M. S.	H. M. S.
Rocket—B. F. Bass.....		16 5	1 27 31	1 23 34
Annie—P. B. Turner.....		16 8	1 27 44	1 24 08
Fannie—A. Cleverly.....		16 7½	1 38 00	1 34 19

CANADA.—The regatta of the Royal Canadian Yacht Club was sailed at Toronto on the 8th inst. The following are the names of the competing boats: Oriole, owned by W. C. Campbell and others; Vixen, owned by M. P. Hayes; Brunette, owned by H. Stinson; Gorilla, owned by Vice Commodore Gifford; Geraldine, owned by A. Bos-

well. There were four prizes to be awarded in this race. The first was the Prince of Wales' Cup, presented to the club by H. R. H. the Prince of Wales, on the occasion of his visit to this country in 1866. The second prize a purse of \$50, presented by the club. The third and fourth prizes were two cups of equal value presented by Commodore Hodder. The course was 32 miles in length, and there was no restriction for time in the race. The Brunette won the Prince of Wales Cup and the center-board prize, the Oriole won the \$50 prize, and the Vixen the Commodore cup for keel boats.

THE SCHOONER THAT A NEW BRUNSWICK FARMER BUILT FOR A VOYAGE TO AUSTRALIA.—We have examined a queer craft now lying at the foot of Beekman street, this city, built and owned by James Draper, who lives at St. John, N. B. He formed a desire to go to Australia and try cattle farming, but his means were limited. Some of the neighbors wished to go, too, and he conceived the idea of building a vessel which would accommodate about 20 persons on the voyage. Although he had never seen a vessel on the stocks, six years ago he commenced building his boat. His farm was on the river about 140 miles above St. John, and there he began work. He felled the trees himself, shaped them, put them together, and completed the boat alone. We take the following quaint description from the *Sun*:—

"On the outside she looks like something between Noah's ark and a log house. The bow is fairly sharp, but the stern looks, as one of the sailors expressed it, 'as if she had been made by the mile and cut off in lengths to suit.' She is schooner rigged, 55 ft. keel, 18 ft. beam, and 8 ft. depth of hold. Rough wooden steps lead below, and the hatchway is almost large enough to drive a horse and wagon through. She registers 61 tons, but her timbers are strong enough for a vessel of 500 tons. She is built entirely of juniper wood; her sides are 22 inches thick at the keel, tapering off gradually to 12 inches at the rail. The mainmast is 40 feet high, the foremast 38 feet, and she carries no topmasts. Her main beam is 30 feet, and her bowsprit 12 feet. She carries a house on deck which looks like a sportsman's cabin in the woods, and is fitted up inside in a manner to correspond.

"Coming from Providence here, with everything in her favor, the vessel made five knots an hour. Capt. W. H. Moody, an old seaman, has charge of her as sailing master. He says that she is the queerest boat he ever managed, but that she is one of the strongest boats he ever saw. On board one is puzzled to know whether he is in an old-fashioned farm house or on a vessel, so curiously are the peculiarities of the two mixed. She will remain in this port about two weeks, then go to Philadelphia for exhibition. From thence she will return to New Brunswick, there take in stores, and then start for Australia.

CRUISING ALONG THE FLORIDA COAST.

ST. AUGUSTINE, Fla.

EDITOR FOREST AND STREAM:—

Some time ago two of us started on a trip to South Florida to hunt fish and see the scenery. We fitted up a 27-foot boat with provisions and sailed from here on May 24th, reaching Mantanzas in a few hours, and came to an anchor to await a favorable wind. On the morning of the 26th we ventured into the broad Atlantic coasting to Mosquito Inlet. When we had gone about half the distance we encountered three devil-fish, two of them close together and directly ahead of us. As we neared them they parted, allowing the boat to pass between them at a distance of about 15 feet, and no sooner had the boat cleared them than they closed in and followed us for nearly 100 yards, keeping about 25 feet astern of us. We considered them bad company and were quite rejoiced when they disappeared from view.

Early on the morning of the 27th we entered Mosquito Inlet. About 30 miles south of the bar we reached the canal where boats pass from Mosquito Lagoon into Indian river. It will admit a boat of about eight feet beam, but of very light draft, say ten or fifteen inches. There is no current except that made by the wind, consequently one always finds plenty of water on one side and very little on the other. It is but a short distance through the canal—only a quarter of a mile. Indian river is broad and beautiful (with the exception of the narrows, which is only 100 yards wide). It is from three to ten miles broad and about 200 in length. At Jupiter we went outside to Lake Worth, 12 miles. The ocean there is very smooth; the Gulf Stream runs within a mile of the coast; steamships running between New York and New Orleans pass very near the shore. We saw them three times a week regular. Lake Worth is about 25 miles long, and from one-half to two miles wide. It is but a short walk from the beach. On its shores are some very fine places, and especially Mr. Moore's, on which we saw some 20 cocoanut trees, each said to yield about 300 nuts annually. They had at the time we saw them the blossom, half-ripe and ripe fruit on their branches. Mr. Moore had also a large grove of banana trees. Sugar cane and potatoes grow here the whole year, and in many cases are planted but once in ten or twelve years. Two crops of corn can be raised per annum.

Sportsmen can find game in great number from Cape Canaveral south, consisting of bears, deer, panthers, and smaller game. Fish are in great quantities from Mosquito Inlet to Lake Worth; drum, sheepshead, trout, bass, etc., can be seen and caught at any time feeding in shoal water. At Fort Capron there were two manatees—a cow and calf; they were caught by a Mr. Esters at the mouth of the St. Lucie river; the cow was said to weigh fifteen and the calf six hundred pounds. Mr. Estes expects to realize \$1,500 from them.

The great drawbacks here are the mosquitoes and the mail communications, which are very poor, especially as one goes south. Papers were sent to us every week, also some letters; out of the whole we only received one letter. Parties visiting South Florida can obtain good board at Fort Capron, Capt. Payne having prepared everything in his house for the convenience of tourists. His terms are reasonable—very much so when one takes into consideration the inconvenience in obtaining provisions. Mr. Moore has built himself a new residence on Lake Worth, and will be prepared to accommodate a few boarders by next winter. Those wishing to see a fine collection of tropical trees and fruit should visit Mr. Moore's place.

L. C. C.

COLUMBIAN BOAT CLUB.—The Columbian Boat Club, of Brooklyn, held the continuation of their fall regattas on Wednesday evening, 6th inst. There were two races on the boards, the first for senior sculls, the other for juniors, both of these having been "laid over" from regatta day on account of rough water. Both races were one mile straightaway. The entries for the senior sculls were Messrs. Purss, Bleeker, Butler and Lippett. They crossed the line in the order named, after a prettily rowed race, Purss winning by about one-half length, Butler a good third. The entries for the junior sculls were Messrs. Boyd, Harrison, O'Connor and Oakley. Boyd won by about three lengths, Harrison second, the others in the order named. The prizes in both races were cups, appropriately en-

graved and decorated, and in order to keep "the thing a'goin'," are to be rowed for every Saturday during the season.

"STRETCHER."

BRITISH CREWS ON THE POTOMAC.—The rowing regatta of the Anolotan Boat Club, of Washington, in honor of the visiting Trinity College, Cambridge, and Dublin University crews, took place on the 7th inst. on the Potomac river. The first race was a four-oared shell race between the visiting crews, of one mile straightaway. Shortly before 5 o'clock both crews pulled to the starting point. The Cambridge crew got away first, but was closely followed by the Dublin. Being unacquainted with the boats, both crews steered completely out of the course, but pulling in again, the Dublin crew began to close up the gap, and at the half-mile overhauled and passed the Cambridge crew, who then spurted and came alongside of the Dublin. They kept well together to the three-quarter mile, when the Cambridge boat refused to obey the rudder, and the boats fouled. The umpire ordered them to go on, and the Dublin crew took the lead, but was soon overtaken by the Cambridge. At this point another foul was caused by a sail-boat which crossed the course and forced the Cambridge boat upon that of the Dublin. After another start a tugboat got in the way, and the umpire stopped the race and declared it a draw. The crew rowed in boats belonging to the Anolotan Club. The second race was over the same course by two picked crews from the Anolotan Club, the winning crew making the mile in 7m. 35s.

THE CENTENNIAL REGATTA.

PHILADELPHIA, August 26th.

EDITOR FOREST AND STREAM:—

On Monday the 4th inst. the Centennial regatta resumed its way, the professional races being yet to be rowed off. After such events the mistakes are apparent. This part of the regatta would have been a much more decided success had the committee held the entries open until the last moment. Their object in closing them was to make proper provision for those who did enter, and that seemed at the time to be the proper thing to do. There were crews, two at least, the Ward's and a New London crew, which would have entered if they could have done so, at the eleventh hour. As it was the committee would not have been justified in making the gross blunder of repudiating its pledges, to correct a mistake which was after all of small moment. The excluded crews have themselves alone to blame.

The interest in the professional races was not so great as in the previous contests and what their was of it, was of a different kind. The so-called "sporting element" being largely in the ascendant. Mr. W. B. Curtis of Chicago was umpire. The first race was between the New York crew—Plaisted, bow, Flanrie, Mahoney, and Maxwell, stroke, on the east, and the Thames crew—Spencer, bow, Thomas, Higgins, and Green, stroke, on the west. All the professional races were from Rockland up one and a half miles and return. The Londoners rattled away at nearly 48, and of course at such a stroke were quick starters, but the New Yorkers at under 40 just drew up and then passed their neighbors, and that in the first quarter. So on to the mile when the work began to tell. London behind but fast closing in. The stake boats were turned with London ahead (in 8:22) and the race was over. At the finish it was London, 18m. 20s.; New York, 18m. 34s. The second heat was between the famous Paris crew of St. John, and the Halifax four. The only interest in this race centered in the fact that the Paris crew was the only one of the over 20 four-oared crews, that used the old stationary seat, and proved—well it failed to prove that sliding seats were not an improvement. The St. John crew rowed clear up to 48, the Halifax not getting above 42, and dropping away below that later in the race. They finished at their ease, several hundred yards to the good in 17:58.

The next race was between three whale boats. The 6th Ward of Boston, the Vesta, and Centennial of New Bedford. The boats were rowed by all hands; two port, three star-board oars and a steersman. It was an amusing and interesting novelty; besides the race possessed that exciting feature, closeness. All together up, around the boats and back, when just at the finish the Vesta glides across the line a bare winner in 25.51. The others close after, and close together.

The first single scull heat was between Thomas, of London, east, Coulter, of Pittsburgh, center, and Hanlon of Toronto, west. Thomas had had a hard race in the four and was soon out. Hanlon was not long disposing of the Pittsburgh man and won in 21:34. Coulter came in about 16 seconds later. The second heat was practically a row over for Brayley, of St. John, in 22m. 10s. The third was between Ellis Ward, Spencer, and Robt. Peel. Ellis won easily in 22:18. Louther of Pittsburgh, west, Higgins, center, and Evans Morris, also of Pittsburgh, east, fell together for the fourth heat. Morris was never in the race. Higgins and Louther fouled and were ordered to row over at 10 o'clock on Tuesday. From the fifth Warren Smith, of Halifax, withdrew leaving Plaisted and McKill to row it out, but the latter made a bad foul, was disqualified and Plaisted without an effort found himself eligible for the final. At 10 o'clock on Tuesday morning Luther had a walk over for his chance in the finals. Higgins not being willing to row in a country where he couldn't have every thing his own way.

The second trial heats began with Ellis, Ward and Brayley. Brayley followed Ellis to the turn and led him home, winning in 22m. 6½s.; Ward, 22m. 23½s. For the next heat Hanlon, Plaisted, and Louther, started. Hanlon winning easily in 21m. 54½s. Plaisted second, 22m. 27½s., and Louther nowhere.

The first heat of pairs was between the two crews of the Thames crew, Green and Thomas, and Higgins and Spencer. This was of course a walk over, the winners being certain of either first or second money, there was no object in making a race of it, and a great object of keeping one crew fresh for the final. Green and Thomas won in 21m. 44½s. The second trial heat, pairs, was between Josh and Gil Ward, Cornwall, N. Y., Faulkner and Regan, Boston. The Boston crew rowing with much dash at 42, had the race in hand from the turn home, winning in 20m. 28s.

Third and last day.—The first race was between the Halifax and London four. The latter went away at a terrible stroke, 48 again, Halifax holding them at about 40—turn first and come for home. The Londoners turned almost as soon, and in a few seconds Halifax was passing them, the

oars clash, a foul is claimed and both start again for the finish, Halifax ahead. The umpire decided in favor of the London crew, who thus get the first prize, Time, 18m. 6½s.

The final heat for singles was between Hanlon and Brayley, was won by the former easily in 21m. 9s. Brayley following him a couple lengths latter.

The wind up of the regatta was the final for pairs. The Thames men had been punished enough in the four, and made no fight for first place, being content with cash already secure, although not earned, and the second money in this race. Faulkner and Regan won in 21m. 20s.

SCULLS.

—A telegram has been sent from Halifax to a representative at Philadelphia to challenge the English crew for a three-mile race for \$4,000, or five-mile race for \$6,000, to be rowed at St. John or Halifax.

National Pastimes.

CENTENNIAL CRICKET MATCH.—A match of cricket has been arranged to take place on the 14th and 15th of September, on the Germantown Cricket Ground, North Philadelphia, between "twelve" British born and "twelve" American born cricketers (including professionals). The British team will be selected from the following well-known cricketers: Joe, Tom and John Hargreaves, Rhoades, Norley, Errington, Pearson, and Braithwaite, of Philadelphia; Bousfield, Richardson, Jones, Giles, Wetham, Bance, Gibbes, Greigg, Tee, and Brewster, of New York; Eastwood, Harry Wright, Haight, and Shaw, of Boston; Armstrong, White, and Bamford, of Detroit.

The American team will probably be chosen from the following: Geo. M., Robt S., Dan'l S. Chas. A., and Harry Newhall, Meade, John Large, Baird, S. Welsh, Hoffman, Magee, Ashbridge, Fox, Bussier, Brewster, Caldwell, Law, Comfort, and Wright, Jr., all of Philadelphia. Several cricketers from New York, Boston and Detroit, are expected to go on to witness the match, which, in all probability, will be a very interesting one, as the Philadelphians are making great preparations, and are advertising it extensively. The last time a match of this kind was played was in 1870, when the Americans were defeated by 9 wickets, so it is hoped that they will win this "Centennial match."

The return game will be played next fall, in New York, probably on the St. Georges Grounds, and after that let us hope it will be an annual contest. Although rather late in the day, it is better that this match should be played now than not be played at all, and it is a little remarkable that our cricketers, who are so ready to play Englishmen from England and Canada, and to go to Canada themselves to play, should not have arranged it sooner. More "enterprise" is needed, gentlemen, if you desire to have cricket rank as one of our "institutions." To Mr. Bance, of the St. Georges Club, is due all the credit of having originated the present match.

The St. George Club played a first eleven match with the Staten Island Club, at the Island field, September 19th, and being short the services of Messrs. Souther, Gibbes, Cashman and Mortyn, they were defeated by a score of 58 to 57, with ten wickets to spare. Giles led the St. George score, going in first, and carrying his bat out for 16, Moore, an old St. George player, leading on the Staten Island side. Brewster's bowling was very effective, as was that of Giles on the other side.

The same day the second eleven of the two clubs played at Hoboken, and in this match the St. George side won by a score of 128 to 127, with seven wickets to spare. Geo. Giles' 37 was the feature of the batting on the St. George side, and Peter's 33, not out on the other. Whitlock and Wyatt led in the bowling.

In the match at Philadelphia, on September 6th, the Philadelphia American team defeated the English cricketer of Virginia by 810 to 63. Bradley's 24 was the best score on the Virginia side, Law scoring 59, Hopkinson, 49, Magee, 33, Baird, 23, Sartore, 32, and "Extras" 58, on the other side, the fielding being wretched by the English team.

BASE BALL—THE PROFESSIONAL ARENA.

The past week's play of the last eastern tour of the western nines closed on September 9th, and the record left the western teams in the van by a majority of one in the victories scored as follows:—

West	Won.	Lost.	East.	Won.	Lost.
Chicago.....	4	0	Hartford.....	4	0
St. Louis.....	4	0	Boston.....	3	0
Louisville.....	0	3	Mutual.....	0	4
Cincinnati.....	0	4	Athletic.....	0	4
Total.....	8	7	Total.....	7	8

The scores of the League club contests up to September 12th are as follows:—

Sept 5.—Hartford vs. Louisville, at Hartford.....	3 to 1
Sept 5.—Boston vs. Cincinnati, at Boston.....	17 to 1
Sept 5.—Chicago vs. Athletic, at Philadelphia.....	11 to 5
Sept 5.—St. Louis vs. Mutual, at Brooklyn.....	9 to 0
Sept 6.—Hartford vs. Louisville, at Hartford.....	6 to 3
Sept 6.—Boston vs. Cincinnati, at Boston.....	7 to 3
Sept 6.—Chicago vs. Athletic, at Philadelphia.....	15 to 3
Sept 6.—St. Louis vs. Mutual, at Brooklyn (10 ins).....	4 to 3
Sept 8.—Boston vs. Louisville, at Boston (5 ins).....	6 to 3
Sept 8.—Chicago vs. Mutual, at Brooklyn.....	16 to 0
Sept 8.—St. Louis vs. Athletic, at Philadelphia.....	20 to 5
Sept 9.—Hartford vs. Cincinnati, at Hartford.....	14 to 4
Sept 9.—Hartford vs. Cincinnati, at Hartford.....	8 to 4
Sept 9.—Chicago vs. Mutual at Brooklyn.....	13 to 4
Sept 9.—St. Louis vs. Athletic, at Philadelphia.....	15 to 2
Sept 11.—Boston vs. Louisville, at Boston.....	8 to 0

The grand match between the St. Louis and Chicago Clubs, which was to have taken place in Brooklyn on September 11th, was postponed on account of rain, to Monday September 18th, when it will be played on the Union grounds. It will be the first of a new series for the Western championship.

A summary of the record of the pennant contests up to September inclusive, shows the clubs occupying the following relative positions in the struggle for the pennant:—

	Won.	Lost.		Won.	Lost.
Chicago.....	49	12	Mutual.....	20	31
St. Louis.....	39	17	Athletic.....	13	42
Hartford.....	37	15	Cincinnati....	7	49
Boston.....	34	22			
Louisville.....	25	33	Totals.....	221	221

—The Hornellsville Base Ball Club opened their new grounds last week on the 5th, and beat the Sooners of Friendship by a score of 10 to 4, and the Monitors, of Corning, 24 to 4.

CALEDONIAN GAMES AT JONES' WOOD.—For twenty years past, the games of the Caledonian Club, of New York, have been the occasion of an annual holiday among the Scottish residents of this and neighboring cities. On Thursday last, the celebration came off with no perceptible diminution of spirit and enthusiasm. Although the morning was dull and damp, the Scotsmen appeared bent upon earning anew their claim to be called "Sons of the Mist," and did not for a moment contemplate postponement. The preliminaries in no essential particular, differed from those of former years. The members and clansmen from other societies paraded the streets at some length, and presented the usual combination of picturesque attractiveness and amusing singularity. The pipers skirled most melodiously, and yet it may be questioned if even the American disciple of Wagner can discern wherein their sweetness lies. The parade over, the Highlanders took the cars for the Wood, and after the opening reel, the game commenced.

Among the athletes Canada was represented by McKinnow and Reid, of Hamilton; Johnston, of Toronto, and Irvine, of Ottawa. For the State there were Anderson, McKay, Robertson, Rennie and others. The chief event of the day was a two-mile race for a silver cup, presented by Mr. Robert Gordon. The running was good throughout, and at the finish there was a distance of only four inches between the two surviving competitors. The last two laps were magnificently run, amidst great excitement and loud cheering on the part of the spectators. The mile race was, too evidently within the reach of Irvine to create an interest. The hammer and stone competitions were all won by McKinnow, who distinguished himself pre-eminently. Fifteen first prizes went to the Canadians, and when it is remembered that of the remaining twelve games three were for boys, one for old men, and one for members only it will be seen that the Scotsmen within the Union made rather a poor appearance compared with their brethren from the North.

BARNUM'S TATTOOED NOBLEMAN—A FULL DESCRIPTION OF THE WONDER.—The following full description, from the Bridgeport (Conn.) *Daily Standard*, of Capt. Costentenus, the wonderfully-tattooed Albanian Greek, with P. T. Barnum's great show, will be very interesting to our readers: "We saw at ex-Mayor Barnum's residence, this morning, a wonder of tattooing on the person of Capt. George Costentenus, a descendant of a noble Greek family, from the province of Albania. His statement is that while he, together with an American and a Spaniard, were mining in Chinese Tartary, in 1867, a rebellion arose, and the three joined the insurgents. Ill luck coming to their cause, they were taken prisoners, and subjected to the tattooing process for three months, as a punishment in lieu of having their heads cut off. He says that process causes such terrible pain that it required six men to hold him while one performed the operation. After it was completed, all three escaped from prison, but the American only survived five or six months. The Spaniard lost his eyesight, and died in Morilla; but Capt. Costentenus survives and is in good health. The tattooing was done with indigo and cinnabar, producing blue and red colors; and there is not a single point on his body which is not covered with these colors, so that it is impossible to discover what was the natural color of his skin except by his ears and the soles of his feet, which are the only parts they did not tattoo. He appeared at first sight as though he was clothed with very close-fitting tights, made of a shawl or of very soft, fine druggett. Upon a close inspection, however, it is seen that he is entirely naked, and that the apparent tights are an illusion. Moreover, his whole person is found to be covered with a great variety of animal figures, with their names, most ingeniously and skillfully printed into the cuticle. On the forehead are animals and inscriptions, and on the face star-like figures. On the hands are numerous red points and figures resembling sculptures, as well as long-tailed panther-like shapes. On the neck, chest, abdomen, back, and extremities, the skin is a mass of symmetrically arranged and admirably executed figures of monkeys, tigers, lions, elephants, peacocks, storks, swans, snakes, crocodiles, lizards, mingled with bows, arrows, leaves, flowers and fruits; on the palms of the hands are indescribable figures, and little figures on the inside of the fingers. On the back and sides of both feet to the toes are blue points, and from the toes to the nails red lines. Altogether, there are 388 tattooed pictures on the entire body—on the forehead, two; neck, 8; chest, 50; back, 37; abdomen, 52; upper extremities, 101; lower extremities, 137. He is certainly one of the greatest human curiosities ever seen. He has traveled in all countries except America, and is attracted here by the Centennial Exhibition. He spoke English, French, Spanish and Italian, this morning, and he understands the Arabic, Persian, and several other languages. He is about five feet ten inches high, has a superb physique; his hair is straight, jet black and glossy. To the touch his skin has a very soft, velvety feeling; and it has so much the appearance of being clothed, that he might walk through the public streets without any one suspecting that he was not dressed in tights."

—The exhibition of horses was conducted at Philadelphia at the same time as the Bench Show of dogs. There were about 275 entries in all, including Leamington as a representative of the racing, and Thos. Jefferson of the trotting classes. The display of brood mares was very fine, and Canada was largely represented.

—One reason why dead birds or animals are so rarely found is, that on the approach of death, their instinct prompts them to creep away in some hole or under some cover, where they would be least liable to fall a prey to their natural enemies.

Truth crushed to earth shall rise again,
And waste its sweetness on the desert air,
In thunder, lightning, or in rain,
None but the brave deserve the fair.
There was a sound of revelry by night;
On Linden, when the sun was low,
A voice replied, far up the height,
Tall oaks from little acorns grow.
A change came o'er the spirit of my dream,
Whatever is, is right;
Things are not always what they seem;
My native land, good night!

COACHING.—The coaching fever which has been raging in New York, has reached Chicago. A four-in-hand coach leaves the Palmer House every day at 10 a. m. and 5 p. m., for Hyde Park, and leaves Hyde Park at 8 a. m. and 3 p. m. It is run by Mr. Benjamin Ransom a la Delancey Kane, and is as well patronized as Mr. Kane's coach.—*Field.*

HOOKING A WHALE.—A singular incident occurred recently on the coast of Scotland. One James Green, a fisherman, while angling at Portgordon for cod with a herring for bait, actually hooked a whale. Feeling unequal to the unusual strain upon his line, the fisherman gave it a turn or two around his boat's mast, when the monster, which measured nearly thirty feet in length, snapped the line and went off. Both whales and seals have been very abundant on the north coast of Scotland this summer, the former in many instances passing through and destroying the fishing nets.

New Publications.

MAGAZINES.

The third *Bulletin of the Nuttall Ornithological Club of Cambridge*, contains an extremely interesting article on the Decrease of Birds in Massachusetts, by the editor, Mr. J. A. Allen, in which a vast amount of instructive information is brought out showing the effect of man's influence on the feathered inhabitants of well-settled countries. Dr. Coues has been studying the number of primaries in the *Oscines* as to their taxonomic value, and finds that in all *Oscines* those with nine primaries have two little feathers, distinct from the general series, at the base of the supposed first primary, while 10-primaried birds have only one of these little feathers. He concludes: "A gradual reduction in the number of remiges seems to be directly correlated with that progressive consolidation or compaction of the distal osseous segments of the fore limb, which reaches its climax in the wing of the most highly organized birds of the present epoch." William Brewster contributes a full and sprightly account of the yellow-bellied woodpecker. We are very glad to see that he is disposed to publish more out of his large experience in the Maine woods. The department of Recent Literature reviews several late publications, and includes a searching critique of Dr. T. M. Brewer's last list of New England Birds. General notes of lively interest conclude the present number of this quarterly, which is keeping its high position, and we hope it may soon be published more frequently.

"The Cricketer's Guide."—Cricket, in Canada at least, is indebted to a very large extent for its success, to the encouragement afforded it, not only of a personal nature, but through the medium of the "Guide," to the Rev. T. D. Phillips, a gentleman who is also well known to American cricketers and who has lately favored us with a visit. It is cricket, as a manly pastime, has one recommendation greater than another, it is in the fact that it receives the approbation and countenance of the most conservative people, and here we have a reverend gentleman acting as the "guide philosopher and friend," to all young cricketers, giving them excellent advice and instructions as well as plain directions as to the mode of playing the game. We write this meagre notice of the "Cricketer's Guide," in the hopes that it will be in the hands of every lover of the game who reads our paper. The book is not only a guide, but a reference, as it contains a record of the playing of all clubs in Canada and the United States last season. The laws of cricket as revised by the Marylibone Club in 1870 are given, by which new clubs will be able to guide themselves in their play if necessary. The price of the book is but 30 cents and it can be had of Messrs Dawson & Co., Quebec, or almost any of the Montreal book dealers, or we will procure copies.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

JEHU.—When you tell us you can "hold your own," are we to infer that your roan is so fractious as to make such a feat worthy of note?

F. L. R., Longwood, Fla.—What will keep my Parker from rusting? I have used every device I know of. Ans. Kigg's Belmont oil, and mercurial ointment.

J. V., Brooklyn.—Please let me know when robin and high-holder shooting commences in Kings and Queens counties? Ans. Robins, October 1st. It is forbidden to kill any of the woodpecker family.

SHELL, Verona Springs, Pa.—Any practical gunsmith can, by examining your gun, explain the difficulty and rectify it. If you have no one there to do it send it to us and we will have it made to shoot right.

R. C. T., Monroe.—My dog Rap, bought of the "Squire," has a sore in one ear. The ear seems to be closing up, can you suggest a remedy? Ans. Have mailed to you a remedy for your dog's sore ear.

D. A. H., Ashby'sburg, Ky.—What is the meaning of the slang term "slop over"? Ans. To go off at half-cock; to "gush" over much; to put nine quarts of "talk" in an eight quart pail.

W. H. A., Rochester, N. Y.—Where can I get a well-bred spaniel which is thoroughly broken to retrieve ducks in swamp shooting, and for what price? Ans. We cannot inform you. By advertising in our columns you could probably secure one.

J. W. P., Milbury, Mass.—Will you be so kind as to inform me how long the rail shooting lasts, and when the law is off on ducks? Ans. Rail shooting from 1st September to 1st of December. You can shoot ducks now.

CONCHA.—What is the best bait for black bass? I have tried minnows, shrimps, &c.? How would grasshoppers do? Ans. Grasshoppers and crabs are always an attractive bait for black bass. So are fresh water mussels.

A. D. H., Cleveland, Ohio.—Can you inform me where I can obtain a canoe of the Rob Roy pattern and probable price of same, to be used in Florida waters? Ans. Address I. F. West, East Orange, N. J., who will give you all information.

W. H. S., New York.—Please inform me the proper time to go shooting on Long Island? I would like to know if Kings county is good? Also tell me what kinds of birds can be shot in that neighborhood? Ans. No shooting until after October 1st unless you go to the marshes above Rockaway where you will find some bay birds.

F. J. S., Pittsburgh, Pa.—I have a very fine bred setter bitch, but she will not breed. What can be the cause of it as she has had two litters before in Ohio? Can her food be the cause of it? She is very fat. Ans. The reason your bitch will not breed is, no doubt, in consequence of her being over fat.

J. A., Brooklyn.—1. Is Parker a reliable gunsmith? 2. Can you mention a good place for small birds on Staten or Long Island? Ans. If you mean Parker Bros., they rank among the best of our American manufacturers. 2. Good Ground, L. I., is an excellent place for bay bird shooting. Go to Wm. Lane's.

J. C. H., Chicago.—Can you inform me if brook trout can be caught in Northwestern Texas, and about the hunting there? Ans. They are caught in the headwaters of the Canadian river, that rise in the Raton Mountains. Hunting is excellent and in great variety, but we wouldn't like to take chances with the Indians thereabouts.

C. V. B., Long Branch.—Is there a line of steamers from New York to Philadelphia? If so, from what pier and on what days do they sail? Also price of passage? Ans. None from New York to Philadelphia that carry passengers. The Old Dominion Line of steamers which runs to Lewes, Delaware, is good. They leave here on Monday, Wednesday, and Friday, at 3 p. m., from pier 37, North river, foot of Beach street. Fare \$3.

G. C. P., Harrison, N. Y.—Please advise me whether I can use the Ely wire cartridge to an advantage in my breech-loader, as W. W. Greener in his work on "Modern Breech-Loaders," says: "The wire frame containing the shot is destroyed by passing from the cartridge case through the taper into the barrels." Ans. We should recommend the Kay concentrating cartridge, or the Ely concentrator (not wire cartridge) as best adapted for breech-loaders.

INQUIRER, Laconia.—Please inform me, through your valuable paper, if a pup from an Irish setter bitch, by a spaniel dog will be likely to ever make a good hunting dog for any game, and if so, what kind? The pup is red, with tail and ears well feathered; in fact, shows no spaniel at all. Ans. A dog bred as yours is, if properly broken, will make a good, servicable dog for any game for which a setter or spaniel is used; and as yours takes after the setter he may become staunch on all game; at all events, he could be made a good retriever, and be useful as such.

SUBSCRIBER, Sturgis, Mich.—I have a very fine pointer dog which is very sensitive about the roots of his tail. Flies annoy him by lighting there, so much as to cause him to bark savagely and run and throw himself in a way to make strangers think he is mad. He is very clever except when touched about the tail. Parties here say it is worms. Do you think it is, and if so, will you send me a remedy? Ans. After washing with Castile or carbolic soap, anoint the parts with oil of tar, and give the powdered areca nut which we have mailed to you as directed.

F. B. F., Frankfurt.—1. I would like to purchase a good spaniel dog at a fair price, one particularly adapted to partridge shooting? 2. What do you think of attaching a bell to a cocker in cover shooting? Ans. 1. You will have to advertise for a spaniel. We shall not hereafter recommend either dogs or dealers. 2. In thick cover shooting the bell is a great advantage as you are kept aware of the whereabouts of your dog. Not so necessary however for a cocker as a setter, as the former give tongue when they flush a bird, and with the setter or pointer the silence of the bell indicates a point.

FOXALL, Boonton, N. J.—1. What is the best way to keep young frogs and crawfish alive for some days, and can it be done successfully? 2. What is the proper dose of areca nut for a horse, if good? I tried some for worms in my setter, and I only wonder that they had not eaten the poor thing up the way she voided them. 3. What is considered the best pattern and penetration for perfect cylinder-bored gun? No. 6 shot, 40 yards, 30 inches? Ans. 1. Pack them in wet moss. 2. For a horse troubled with worms give one-half ounce of powdered areca nut every two hours—three doses—four hours after give a purgative. 3. 150 pellets.

B. N. H., Washington, D. C.—There is a fine stream in this vicinity which I think is well adapted for trout. If I knew how, and the expense not too heavy, I should like to stock it. Please state how I should proceed; whether I should get the eggs or young fry, and what to do with them after I get them; also the probable cost per 1,000? Ans. Your surest and best method is to employ the services of a good fish culturist, who will stock your water and care for it at moderate expense. Fry from \$8 to \$10 per 1,000; eggs \$5 or less. Communicate with W. H. Crowell, Ludlow, McKean Co., Pa., or Milton P. Pierce, Wenonah Gloucester Co., N. J.

A. H. W., New York.—A short time ago I saw in your paper that "no game was allowed to be shipped out of the State of Iowa. Is this a State law, or does it apply only to some counties? If so, what is the penalty? Ans. It is a general State law, and the penalty for violation is \$10 for each bird.

G. O. G., Danville, P. Q.—Kindly inform me where I can find good woodcock shooting on the line of the Intercolonial railway (either New Brunswick or Province Quebec); also snipe and wild fowl shooting? Ans. You will find the best snipe and duck shooting on the small islands in the St. Lawrence below Quebec, between Orleans and Goose Islands. For woodcock Cumberland Co., N. S. is said to be an excellent ground.

JOHN McC., Philadelphia.—Can you inform me where I can get R. G. Wood's book on Swimming and Skating? What is the cost? Ans. Prof. Wm. Wood, of the N. Y. Young Men's Christian Association, on 23d street and 4th avenue, has edited a work entitled "Wood's Physical Exercise," published by Harper's. We think the third edition is just out. In this work swimming and skating are very fully treated. This Mr. Wood is quite sure there is no work on that by any R. G. Wood.

C. H. W., Danbury, Conn.—I have a setter dog that has been troubled for some time with a thick yellowish discharge from his eyes; his coat is rough and he looks bad; appetite good; works well, and has plenty of ambition. Have tried lotions of different kinds without any success. I am of the opinion that he has worms. I have tried to get some areca nut, but our druggists do not keep it. Please give me your opinion. Ans. Your dog is in all probability afflicted with worms; but even if not the areca nut we have mailed to you will put him in condition if given as directed.

W. H. S., Philadelphia.—My setter dog, four years old, is troubled with something in his ears; he shakes his head kind of sideways, and if you touch it it seems to hurt him. I can't see anything by looking in his ear; but he likes to have it rubbed gently. Can I do anything for him? Ans. Your dog has canker. Make a solution of blue vitrol, 30 grains to 4 ounces of water, and before applying it wash the ears out thoroughly with Castile soap and warm water; then pour in the solution twice a day for two or three days. Feed the dog sparingly—no meat—and give him regular exercise daily.

W. E. C., Buffalo, N. Y.—I have a skye terrier dog who has for some months been afflicted with what I have supposed to be mange; he continually bites and scratches himself, so much so as to take the hair off in spots. I have used a preparation I saw given in your valuable paper, viz: oil tar, lac sulphur, etc., with very little effect. Can you give me an idea as to the nature of the disorder, and state what will be necessary for me to give him in order to relieve him? Ans. In addition to the remedy you are using give your terrier four drops of Fowler's solution of arsenic twice a day for a week.

INQUIRER, Philadelphia.—Will you please inform an amateur fisherman, through the columns of your valuable paper, if there is a book published giving instructions and all information how to make artificial flies, the price, and where the same can be purchased? Also where I can buy material for making flies, and how much, and how should I order same sufficient to make a fair book? Ans. No book treating solely of fly-making. In Mr. Cholmondeley Pennell's "Modern Practical Angler," published by Scribner, price \$3, you will find some hints; also in our issues of March 16th and July 6th.

B. L. B., San Francisco.—I have a setter dog nine months old who had the distemper last April, but ever since the running of the eyes has continued. He has an enormous appetite, but remains very lean. Some days he is very feverish, and other days not at all. Can you judge from these symptoms what the disease is? If so, by sending the necessary medicine C. O. D., and an answer in your column of Answers to Correspondents you will greatly oblige an old subscriber. Ans. Have mailed to you a remedy for your setter, with directions for its use.

G. B. B., Worcester, Mass.—Can you give me any information regarding a good hunting or fishing locality—more particularly hunting, say shore shooting—where I and a friend, can spend a week in September? Do not want to go where there is much walking to be done, as my friend is lame. Do you know of any place in this State (Massachusetts) Maine, or the Canadas that might be reached in a day and a half from

here or sooner, if possible? Ans. Write to John H. Thompson, P. O. box 440 New Bedford, who will fit you out with yacht, etc., and give you both shooting and fishing among the islands in Buzzard's Bay on your coast. There are some birds at Rye Beach, N. H.

SWEET SPRINGS, W. Va.—Will you kindly inform me if I am not right in stating that there was a trout (*gennine Salmo fontinalis*) taken of eight pounds and exhibited in New York two or three years ago? Also tell me the largest weight of *Salmo fontinalis*, and if the trout of Moosehead and Rangeley lakes is the *Salmo fontinalis* or *Salmo confinis*? Ans. Yes. One weighing ten pounds is now to be seen, stuffed, at the office of Page, Kiefer & Co., 10 Warren street. The heaviest veritable *Salmo fontinalis* that we have personal knowledge of weighed 17 pounds and was caught in one of the streams (the Anamoosa) emptying into Nepigon Lake north shore of Lake Superior. Both the *confinis* and *fontinalis* are taken at Rangeley and Moosehead.

PIGEON, York, Pa.—1. Can Ely's wire cartridges be safely used in a breech loader? (by safety I mean without danger). If so, do they give better results than loose charges? 2. Please give best manner for loading metal shells for a 12-gauge Greener choke-bored, in order to make it scatter for field shooting, giving size and thickness of wads? 3. Give a recipe for preparing dog bread or food? Ans. 1. There would be no danger in using Ely's wire cartridges in breech-loaders, but we doubt if they would shoot better than loose shot. 2. We know of no way to load shells for a choke-bored gun so as to make the shot scatter except by increasing the charge of powder. 3. Take beef's heads or any kind of rough meat and boil it to rags, then with corn meal make a well boiled mush, adding some salt to the mess while cooking.

W. H. S., Philadelphia.—1. In purchasing a breech-loading gun for all kinds of shooting would you consider a pattern of 200 at 40 yards with number 6 shot too close, and if so what would you consider about right? I am speaking of a 12-bore. 2. Which do you consider the best for breech-loading guns Damascus or Laminated steel? 3. In ordering a gun for all kinds of shooting is not about 8 pounds to 8½ a good weight for a gun? Ans. 1. We consider that 200 pellets at 40 yards number 6 shot, 30-inch circle rather too close for ordinary upland shooting. We prefer a gun that would throw about 160 pellets evenly spread. 2. There is very little difference between Damascus and Laminated steel barrels, either are good enough. 3. Yes.

NORFOLK.—1. What number of grouse a day would you consider fair shooting in southern or middle Illinois? Ans. Ten pair per day in September. 2. Name two localities in southern or middle Illinois, and the same in Missouri and Arkansas, where you have good reasons for believing such shooting may be had. Ans. There is excellent shooting along the M., K. and Texas Railroad. 3. Would it be worth the trouble and expense to take my own dog or take the chance of hiring some apology for a dog where I may hope to find my shooting? Ans. Take your own dog. 4. Can you state the probable cost of a ten days' trip for one man from Richmond, Ky., to Cairo, Ill., to some good grouse or grouse and duck ground in Missouri or Arkansas? Ans. You will get no snipe or duck shooting until late in October.

SHELLEY, Pittsburgh.—A friend of mine has an aquarium containing some goldfish. It holds 18 gallons of water. He wants to know how many fish will thrive in it; also to know if they are ever fed, and if so what is given them; whether you change the water; and in fact wants concisely the *modus operandi* of caring for them? Ans. One of the best informed men on goldfish is T. B. Ferguson, of Baltimore, one of the Maryland Fish Commissioners. Seth Green and Fred Mather are good authority. You can address Mr. Mather at the New York Aquarium, 35th street, corner Broadway. Goldfish are very easy to raise. They like warm water better than very cold, and will stand crowding tolerably well, so long as you have aquatic plants in the tank to aerate the water and give them food. The water should be kept in motion by a little stream running through it, though this is not necessary. Read our illustrated article of July 6th showing how to treat an aquarium.

D. G. S., Brooklyn.—1. Is there any prospect of three young men making a living at sheep or cattle raising in the southern part of California? 2. Which would you advise, sheep or cattle, for a party of three who will have a very small capital to commence on and no experience? 3. As we would like to save all the money we can would it not be cheaper to go by sailing vessel than by railroad? Our object is to go out there and settle. Is the fall season a good time to start? Ans. 1. The sheep business is being overdone in Southern California. We should recommend in preference Colorado or New Mexico. 2. Sheep would be the best. 3. Go by rail and by all means in the spring or summer season, as then you see the country at its worst during the dry season. If satisfied then you will be happy in winter and will not be deluded into settling on land which, while blooming like a garden in winter, may be a barren desert without water for yourself or stock in summer.

A. B. D., New York city.—While fishing in a small mountain brook in Annapolis Co., Nova Scotia, last month, I caught a kind of trout new to me. They were very quick to bite and would only bite at a fly or bait on top of the water when moving quite fast. They were small, none over eight inches in length. Their scales appeared to be larger than the brook trout and looked like specks of gold and silver leaf laying on the fish in the sun. For markings, they had four or five lead colored spots on their sides about the size of small peas, and small splatters of bright red along the side in a straight line? Can you inform me to what species of the salmo family they belong? Ans. Alas! you have been innocently catching the parr or yearling salmon. Never do it again. 2. Can you tell if there is any salmon and trout fishing in the vicinity of Los Angeles, or Santa Barbara, California, and what is the season there for fly fishing? Ans. Plenty of trout in the Coast Range streams, but no salmon. Will take the fly at any time. 3. Please give the address of Thaddens Norris, who wrote the articles on Fly Tying in your paper some time ago? Ans. No. 208 West Logan Square, Philadelphia.

F. L. G., Boston.—1. What is the most satisfactory load for a 7½-lb. Scott gun, 12 bore, length 20 inches, breech-loader, and one inclined to spread the shot? I am using it often on woodcock and shall now on partridge, but it does not kill to my satisfaction. 2. Is there any preference in wads in the loading of shells, and which make is the best? 3. Does the turning in of the shells affect the shooting? Ans. We should advise for general shooting ¾ drachms powder and 1½ oz. shot; but the ways of guns are like those of women, often peculiar, and the only way of determining their best pattern and penetration is by experimenting. We have a gun made by Scott of the same dimensions as your's which came to us with the charge stamped on the barrels—3 drachms powder and 1½ ozs. shot—but it is slightly choked, and Mr. Scott's powder as personally to increase the charge of powder to increase the pattern; the same rule would probably work both ways. 2. Use Ely's felt or plaid-edge wads on powder, without ramming too hard, and Baldwin wad on shot. 3. It depends on the chambering of the gun; try turning your shells, and afterwards some with the wads fastened down with a drop of Spalding's glue and not cut or turned. In the latter case they will fit the chamber, and probably give better results.

L. R., New Haven, Ct.—Please advise me in your next issue how to treat the following trouble with my setter dog: He is boarded almost constantly on chain, but I find it impossible to keep him in good flesh. Nose dry and scaly, coat rough and lack luster, and very poor, also has a sore on the outside base of each ear, which first appeared after hunting in briery cover in July, and have been unable to cure them on account of flies and his constant scratching. Have used tar to keep off flies, but cannot heal them as he has scratched them all raw again? Ans. The trouble with your dog arises from bad keeping. No dog can be kept in good condition if kept chained where fleas and flies abound—or is not freed from his chain for exercise every day. Ballard's flea killer advertised in our paper, will at once destroy those pests, but first give the dog a thorough washing with common soap and water, and then a full dose of purgative medicine—castor oil or pills. Then place him in a clean shaded place. After washing his ears apply a solution of sulphate of blue vitrol to the sores, 10 grains to one ounce water.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,

[Post Office Box 2832.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 20 cents per line; outside page, 30 cents. Special rates for three, six, and twelve months. Notices in editorial columns, 50 cents per line.

NEW YORK, THURSDAY, SEPTEMBER 14, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,

Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, Sept. 14th.—Trotting: Mystic Park, Boston; Point Breeze Park, Philadelphia; Peoria, Ill.; Albany, N. Y.; Cleveland, O.; Syracuse, N. Y.; Sharon, Pa. Rifle: International Long Rang Match at Creedmoor. Base Ball: Olympic vs. Mutual of N. Y., at Paterson, N. J.; Allegheny vs. Erie, at Erie, Pa.; Enterprise vs. Olympic, at Centennial Ground; Alaska vs. Nassau, at Centennial Ground; Greenville vs. Elizabeth, at Elizabeth, N. J.; Resolute of Elizabeth vs. N. Y. Nine, at Elizabeth.

FRIDAY, Sept. 15th.—Trotting as above. Base Ball: Mutual vs. Cincinnati, at Brooklyn, E. D.; Boston vs. Chicago, at Chicago; Hartford vs. St. Louis, at Hartford; Athletic vs. Louisville, at Philadelphia; Our Boys vs. Chelsea at Capitoline Ground; Enterprise vs. Star of Elizabeth, at Centennial Ground.

SATURDAY, Sept. 16th.—Trotting: Sharon, Pa. Regatta, Seawanhaka Yacht Club, Oyster Bay, L. I. N. J. Athletic Association meeting, Ridgewood, N. J. Rifle: Geiger bullseye and other matches, Creedmoor. Base Ball: Mutual vs. Cincinnati, at Brooklyn, E. D.; Boston vs. Chicago, at Boston; Hartford vs. St. Louis, at Hartford; Athletic vs. Louisville, at Philadelphia; Witoka Jr. vs. Oxford, at Capitoline Ground; Our Boys vs. Alaska, at Centennial Ground; Staten Island vs. Osceola, at Prospect Park; Quickstep vs. Montgomery, at Prospect Park; Olympic vs. Chelsea, at Paterson, N. J.

MONDAY, Sept. 18th.—Trotting: Quincy, Ill.; Kansas City, Mo. Rifle: N. R. A. Fall Meeting, Creedmoor. N. J. State Agricultural Society, Newark. Base Ball: St. Louis vs. Chicago, at Brooklyn.

TUESDAY, Sept. 19th.—Trotting as on Monday and at Ambler Park, Pa.; Burlington, Iowa; Elmira, N. Y. Regatta N. Y. Yacht Club. Fall Meeting N. R. A. at Creedmoor. Meeting of Maryland State Association for Protecting Fish and Game at Baltimore.

WEDNESDAY, Sept. 20th.—Racing: Quincy, Ill. Trotting as above. Fall Meeting N. R. A. at Creedmoor. Champion pigeon match, Deerfoot Park, L. I. Regatta Queens Co. Yacht Club, L. I. Sound.

The subscription price of FOREST AND STREAM has been reduced to \$4. Twenty-five per cent. off for Clubs of Three or more.

—The Eighteenth Annual Exhibition of the New Jersey State Agricultural Society will be held at Newark, from the 18th to the 22d of this month.

OFFICE OF THE BLOOMING GROVE PARK ASSOCIATION,
37 PARK ROW, ROOM 23, September 8th.

EDITOR FOREST AND STREAM:—

We learn from Matt, the Superintendent at Blooming Grove Park, that the Park lands happily escaped the ravages of the forest fires, although the Park was almost surrounded by the flames. The sight from the Club House is described as terribly grand, while timber, bark, hay, and fences were being swept away.

By the greatest exertions the employees of the Association assisted by the neighboring farmers succeeded in checking the advance of the fire into the Park, although the line of fire extended many miles.

Black bass fishing and grouse shooting are now in order, also deer hunting after October 1st. A portable fishing boat presented by Mr. Henry Kleinhans, has been placed on Lake Giles.

MODERN IMPROVEMENTS AS APPLIED TO SPORT.

WE have lately read in an English contemporary an article on the effect of modern improvements on sport, and by "modern improvements" are meant the changes in the last few years in shot guns and rifles, in billiard tables, in fishing gear, and even in the preparation of cricket grounds, as aided by the lawn mower and watering cart. Indeed, it is more particularly with regard to the latter sport that our contemporary deals. The recent almost phenomenal batting in England, resulting in unparalleled scores, has raised the question which is now being agitated with much warmth, whether the development of batting has not outstripped the bowling, and whether it is not advisable to make some alterations in the game to meet the emergency. With such batsmen as are now to be found, notably the "three Graces," it seems possible to prolong an innings almost indefinitely, and run up three-figure scores without end. Even on this side of the water, where cricket is but an exotic, but rapidly becoming acclimated, we have had a somewhat similar experience, as witness the, to us, unusual figures made at Philadelphia the other day. A Mr. Fitzgerald, in writing to *Bell's Life* on the subject, claims that all around cricket has deteriorated, owing to the lawn-like turf of the modern cricket field, on which every ball plays true and the experienced batsman fears no sudden surprises, being so different from the old-time rough and lumpy pitches shorn only by sheep and scythe.

The fact is the tendency of the age is towards scientific advancement, even in sport, and cricket follows with the rest. It is claimed that in cricket the actual science of the game is only on the part of the bowler and batsman, a view certainly not taken of our so-called "national" game, base ball, in which the fielders have as many opportunities for the display of science as pitcher, catcher, or batsman. In fact much more attention is paid to the cultivation of the "fielding" portion of our game, which is now so near perfection that we question whether even one of the Messrs. Grace could make a large score against the fielding of one of our professional base ball clubs. If it is true that in cricket the bat has gone ahead of the bowling, more careful fielding may bring things equal.

The contemporary from whom we first quoted thinks that in other branches of sport "modern improvements" have not enhanced their pleasures, and asks if the choke-bore and breech-loader have made shooting more enjoyable than it was in the days of Joe Manton's or flint lock single barrels. We think that they have; certainly in the sense that traveling by rail is more enjoyable than the old-fashioned mode of stage coach or canal boat. If it was enjoyment to have to stop to "pick a flint" or bewail a broken nipple, to break a ramrod, or have one's gun repeatedly missfire, then the breech-loader is a failure; for in shooting nowadays we meet with none of these concomitants. And then the freedom from accident which is one of the marked features of the modern gun, is not, we think, sufficiently appreciated. Of course there always will be accidents so long as careless men take the field; but we venture to say that in nineteen cases out of twenty which now occur the blame rests alone with the shooter.

It is argued also that another result of "modern improvements" is a wholesale slaughter of game. Of course the remark is intended to apply to England, where the battue and drive, backed up by the increased rapidity with which guns can be loaded and fired, does, doubtless, result in the killing of an immense quantity of game. But the birds and beasts can be called game only wherein they figure in the statute books, for they are bred to order and in such quantities as the lord of the manor may desire. In this country, where we have only wild game, the chief cause of destruction, aside from violations of close seasons, is in the impetus given to sport by the pigeon shooting, which is being continually carried on in every direction cultivating a taste therefor. How many men who have never killed a bird in their lives, or ever expected to do so, have attended a pigeon match, and being induced to enter "just for the fun of the thing," have killed a pigeon and been transformed into "sportsmen" on the spot? It is good for the gun trade, but reduces the game most wofully, for the increase in the number of shooters is followed by anything but an increase in the quantity of game. We shall yet come to rearing and individual protection. Our contemporary, the *Sporting Gazette*, says:

"The deer and the grouse and the partridge are heavily handicapped in the race of sport. They can devise no corresponding facilities of outwitting the sportsman to keep pace with the increased range and accuracy of his firearms, and the increased rapidity with which he is able to discharge them. It is a one-sided progressive movement, therefore, and we confess that it is one which we are a little ashamed of at heart. It seems to us that the sportsman of the last generation, with his brace of dogs and his double-barrel muzzle-loader was quite elaborately enough equipped for the slaughter of such game as these islands afford. He had everything that could minister to his sport; all the subsequent improvements in gunnery have only detracted from it. And so far as sport is concerned, we view with supreme contempt all the new fangled paraphernalia of slaughter as a useless waste of scientific ingenuity."

This, we think, is a rather too severe denunciation of "modern improvements," but we heartily join with him in the hope that in the midst of all revolutions and changes the true spirit of sport and the best qualities of the sportsman may remain unchanged and unchangeable.

The noted trotting horse Ethan Allen, died at Lawrence, Kansas, on the 10th inst., aged 27 years.

GAME PROTECTION.

THE MOOSE LAW OF NEW BRUNSWICK.

CHATHAM, N. B., September 8th.

EDITOR FOREST AND STREAM:—

I am not surprised to learn that sportsmen in the United States are not as fully informed as is desirable in respect to our laws for the protection of birds and animals. I have been present in our Provincial Legislature (in an official capacity) during the sessions of the last five years, and witnessed many attempts, judicious and otherwise, to alter and amend existing statutes on the subject, but as all efforts to change or reform have been made by gentlemen not practically acquainted with the subject on which they have offered measures, the good and the bad have, in the main, received the same treatment, and the merest tinkering has been the result. The statement in FOREST AND STREAM of April 6th, 1876, to the effect that a law had been passed in New Brunswick prohibiting the killing of moose, deer, caribou, etc., for three years, was both correct and incorrect. Dr. Dow of Fredericton, introduced a bill last session to that effect, which passed the Assembly without a dissenting voice and was sent to the Upper House. There, however, it was thrown out, or killed. Later in the session a bill was sent down to the Assembly from the Upper House extending the close season for moose from December 1st to September 1st—to nine months—but Dr. Dow and others defeated it because it did not include caribou. This bill also was killed by progress being reported on it, after which it was not brought up again. There is, therefore, no law in this Province against killing moose between this time and the 1st of February, and the statement to that effect in FOREST AND STREAM of August 17th was correct. No person, however, is permitted to kill more than two moose within any one year under a penalty of \$12, and the killing of moose for other purposes than using the flesh for food, is punishable by a fine of \$20. The close season for deer and caribou is between March 1st and September 1st.

I have never heard of penalties having been imposed on any individual or party hunting and killing moose in what the sportsman recognizes as a legitimate manner. Moose and caribou have been shot down by the score by crust hunters in this Province, and after their carcasses were stripped of the skin they were left as food for foxes, jay-birds and other animals, or to rot where they fell. These crust hunters sally out when there is from two to five feet of crusted snow in the woods, and, striking a moose track or yard, soon run the poor animals down. I have known the moose to run from a mile to four miles through crust until their legs were cut through the skin and the blood stained the snow in every track. The dogs can skim over the top of the crust and they often get far in advance of the men and tear and worry the noble and helpless game until the men on snowshoes arrive. These despatch the moose with knife, axe, or gun. It is simply a species of murder, and we have no law by which it can be adequately punished.

The calling season is now at hand, and the sport will be excellent in Northumberland, Gloucester, and Restigouche counties. After that—in December and January, there is capital still-hunting. The latter is the science of moose hunting and none but parties headed by experts can hope for success in it. During the latter part of September and in October the moose hunter sees the game in all its grandeur, and when one brings a bull moose down he feels almost like a conqueror.

D. G. SMITH.

HOW THE LAW IS KEPT IN PENNSYLVANIA.—We happened to sup at the Trans-Continental Hotel at the Centennial Grounds on Monday evening. Prominent on the bill of fare was "Broiled Pheasant," \$1.50; Grouse, \$1.00, and the head waiter informed us they could be had. This nice distinction between the local term of "pheasant" and the general one of "grouse" might be appreciated by the "granger gourmands" who visit the Centennial, but if the West Jersey Game Protective Society, whose members are after all mostly Pennsylvanians, would only extend their attention to the adjoining counties across the Delaware, they would confer a benefit on the sporting community.

—At a meeting of the gunners of Fon du Lac, Wis., a permanent organization was effected, to be known as the "Game Club of Fon du Lac." The special object of the club is to assist in securing a vigorous enforcement of the game laws enacted for the preservation and protection of game and fish. A constitution and by-laws were adopted, and the following named persons elected to fill the offices: S. B. Amory, President; J. W. Carney, Vice President; L. M. Wyatt, Secretary; T. S. Weeks, Treasurer, and O. C. Steenburg, Robert Drummond and Albert Becker, Executive Committee. A large number were in attendance, and judging from the character and ability of the gentlemen who have taken the work in hand, they mean business, and will not hesitate to use all honorable means to secure an observance of the laws governing shooting and fishing.

—A gentleman in one of the larger Michigan cities, writes to us saying: "I am sorry to state that the members of the prominent clubs in this State (those of Detroit notably so) and some in Chicago are the most prominent trespassers of the game laws. Is there no way of preventing this? I can see none except by radically changing the laws and modes of enforcement."

—The Hartford Club have offered a reward of \$100 to any person that will furnish evidence, to convict any party of killing game birds contrary to law.

—A resident of interior Florida sends us the following record of the inland temperature of Longwood, Orange County, for the month of August: Average temperature during the month at 7 a. m., 78 degrees; 12 m., 88; 6 p. m., 77. General average, 81; highest, 94; lowest, 74.

—At new Smyrna, on the coast, latitude 29, the temperature for August as furnished by Major Alden, was as follows:—Means, 7 a. m., 81 degrees; 2 p. m., 87½; 9 p. m., 77½; highest for the month, 93 degrees; lowest, 73.

—Last year the sum of £343,257 was raised in London by the dog tax.

CHEATING AS AN INDUSTRY.—The demand for gamblers' implements of all kinds is so great in this country that several large factories are employed to supply it. The goods made include loaded dice, marked cards, and numerous devices for cheating, and are freely advertised by the manufacturers. One Chicago firm has issued circulars broadcast, in which they boast of having "a large factory with steam power and all the latest improved machinery." They are able, they say, with their increased facilities, "to fill all orders quickly and in a satisfactory manner, and stand to day the leaders in our branch of industry in the United States, if not in the world." Cheating by machinery is one of the advance steps of this progressive age, and we do not see why some enlightened gambler may not invent a steam poker player and double action thimble-rigger, as well as an automatic chess-player or flutist; yea, and put him to more profitable account in his especial vocation.

PORTRAITS FROM VANITY FAIR.—We have received from Wm. S. Kimball & Co., of Rochester, N. Y., a unique advertisement of his noted Vanity Fair tobacco. A series of six very clever cartoons tells the story of "Vanity Fair" as exemplified in the life and adventures of a once happy and respectable frog. We see him first as he sits corpulent and contented smoking his pipe, a purple morning glory under his own vine and toad-stool, with no one to molest him or make him afraid. The demon Alcohol has not yet—but we anticipate. Again we behold him. He is standing by the brookside upon a lily-pad, fresh, young and vigorous as he bends over the pool and gazes at his comely proportions in the reflecting stream. Vanity has entered his heart, the germ which is fated to bring forth such an awful—but we must not reveal. Again we look upon him. This time he is not alone; a fair frogess hangs on his left—fore-leg. She is attired in the most perfect of Mme. Nature's pin-backs, he jauntily chewing his toothpick in approved modern style. All is gladness as yet—he the most blessed of frogs, she the happiest of her sex. But let us hasten on. We see him now for the fourth time. Alas! our fat, sleek-headed frog is a toper. He is drunk now, and leans up against a toad-stool as naturally as if it were a lamp post. We cannot say what he has been drinking. It may have been gin, or the dregs of his own dirty puddle; or it may have been Croton water; in either case the effect is awful. Once more we see him after his debauch. He is a wanderer now. His pure-water friends disown him. He is cast out upon the cold and cruel world and goes it alone with a catkin cudgel over his shoulder, on which is swung a bundle of fern and domestic goods. "He fares him forth" with headache in every look and acrimony in his heart. An unnatural gleam is in his eye. He has made a desperate resolve. Now we come to the last sad scene of all in this strange eventful history. We see this frog standing by the margin of a pool, perhaps the same one where we saw him gazing with innocent vanity. Now he "makes a bock," while two of his companions in vice play "leap-frog" and plunge into the water. He, polite to the last, assists his wicked friends to die before he takes the fatal plunge himself. Soon it may be said of him, "in he plunged boldly, no matter how coldly the rough river ran, made from life's history, glad to death's mystery, soon to be hurled anywhere—anywhere out of the world."

It is not for us to point the moral, to adorn the tale. The tail has gone where the tadpole twineth, but we suppose Wm. S. Kimball & Co.'s is: "Buy Vanity Fair tobacco and be happy."

CITY-GROWN PEACHES.—Mr. Chas. A. Clark, Assistant Secretary of the "North American Life Insurance Company," 17 Warren street, handed us a couple of peaches this week grown at his residence in Brooklyn, as fine in appearance as we ever saw. They measured three inches in diameter and weighed about eight ounces. The tree on which they grew bore forty or more of the same sort.

OBITUARY.—The many friends of M. Mouquin, the well-known restaurateur, will regret to hear of the death of Henrietta, his eldest daughter, aged eleven years and six months, on the 30th ult., after an illness of six days, induced by an attack of diphtheria. The deceased gave promise of being an accomplished and attractive lady, and the blow to the family is severely felt.

CERTAIN HOTELS.—An advertisement of the "Mansion House," at Fernandina, Florida, appears in our columns this week, indicating that our friends of the Sunny South anticipate an early and prosperous season. This hotel is a deservedly popular resort, and we trust that other hotel proprietors, especially those of that section, will see it to be to their advantage to advertise early in this paper, and as often as possible. A great many new improvements in hotels and lines of travel have been made since last winter, which will add much to the comfort of visitors, and to the objects and places of resort. Crescent City will no doubt be the most attractive of these. Some Massachusetts gentlemen are putting up a brick house there four stories high, with every improved appliance for comfort, which, it is claimed, will surpass any hotel south of Washington. Among the rest there will be elevators worked by hydraulic power. This hotel will stand beside a beautiful lake with bold high shores, that lies midway between the St. Johns river and the ocean, at a point some nine miles above Palatka.

The Grand Pacific Hotel of Chicago, is the equal, if not

the superior, of any hotel in this country. In point of size it is only second to the Palace Hotel of San Francisco, and withal conveys to the guest a feeling of perfect comfort and ease. The cuisine is irreproachable, and the whole appointments perfect. To our sportsman friends, who may sojourn in Chicago, on their way further west, we can cheerfully recommend the Grand Pacific. For rates, etc., see advertisement.

Business at Niagara is said to be dull, but we saw no evidence of it at the Clifton House, the other day. The popularity of the hotel itself and its genial proprietors, Messrs. Colburn & McOmber, may in a measure account for it; and then the "Clifton" is so situated as to give a direct view of both falls. We found many well-known New Yorkers there, and also a number of distinguished foreigners who are "doing" this country in the Centennial year.

—The Savannah News, speaking of the alarm caused in that city by the confirmation of rumors that yellow fever was present, says: "Never in our recollection have we witnessed such utter and complete demoralization as made itself apparent on the streets and at the railroad depots, and we think that in few other cities could such a panic be developed upon such short notice."

The Kennel.

THE CENTENNIAL BENCH SHOW.

THE great Centennial Bench Show is a thing of the past, and it is with regret we chronicle the fact that this grand opportunity to increase the interest not only in bench shows but in dogs generally, has been completely wasted. In fact, so wretchedly was it conducted and so much was the dissatisfaction, not only at the miserable arrangements of the show, but with the judging as well, that we question whether any exhibitor at Philadelphia, unless he is a most inveterate "mug hunter," will ever send his dogs to a similar exhibition. The first cause which operated against its success was the breaking through by those in authority of their own regulations in regard to the time of receiving entries. Had they adhered to the date fixed—August 15th—and received no entries afterwards, the dogs would have been all properly arranged in their places and the catalogue would have been of some use. As it was, entries were received until the morning of the opening, and the dogs assigned to the miscellaneous class without regard to breed, so that they were mixed up in the most inextricable confusion to the annoyance of both spectators and judges. The force assigned to take care of the dogs was most wretchedly inadequate. The most efficient superintendent with but one or two men to assist him could do but little toward the care of 600 dogs, and owners who could not be present to lead their dogs into the judging ring were left in a delightful state of uncertainty as to whether they had been judged at all. The office of judge is in itself such a thankless one that it is almost unkind to criticize, and yet we do not remember to have heard so much dissatisfaction expressed before. Unfortunately, also, those coincidences which will occur even at the best regulated bench shows, such as the judges being prize winners, etc., occurred again here, although we would not for a minute even infer that there was any collusion. The delay in judging was the cause of much trouble. The judges had not finished their labors even after the time appointed for the closing of the show, and the great charm, the seeing the winners with their ribbons attached, was entirely lost. We have repeatedly called the attention of managers of bench shows to the fact that, if their object is at all to instruct the general public, the dogs should be judged as they are in England, before the show is opened to the public, and the names of the winners printed in the catalogue. Another thing to which we object is, the constant "chinning" with the judges in which some exhibitors indulge. To say nothing of the bad taste displayed, it leads to comment unfavorable to both.

We have a suggestion to make with regard to future bench shows, which we think will have the effect of doing away with all dissatisfaction: That is, to have no judges at all; to place the names of the dogs entered in the various classes in hats or boxes and have a blind boy draw out the winners. In this way everyone would be satisfied, and the chances of the best dog winning would be quite as great as they are at present.

The judges were Col. Skinner, of New York, on hounds of all kinds; John E. Long, Esq., of Detroit, on pointers and spaniels; John Swan, Esq., of Baltimore, on English setters; Dr. Twaddell, of Philadelphia, on non-sporting classes, and Gustave Doolet, Esq., of Montreal, on Irish and Gordon setters. The list of visitors, although not large, comprised the names of many noted sportsmen from all sections of the country. The catalogue as printed contained the names of 557 dogs, but we were informed that at least 100 entries were received after the catalogue was printed. We have space only for the sporting classes, which were as follows:—

FOX HOUNDS OVER 2 YEARS.—Gen. Grant, Franklin Clayton, Manhattan, Pa.; Foreman, do.; Drive, do.; Gen. Sherman, do.; Rowdy, do.; Lail Clifton, do.; Laivey do.; Lady Fancy, do.; Maria, do.; Norwood, J. J. Hughes & Son, Graf Mills, Pa.; Fly, do.; Daisy, do.; Keeler, Rathen and Trauter, Port Richmond, S. I.; Gypsie, do. **PUPPIES:** Slow Go, J. J. Hughes; Fans, J. Shaner, West Chester, Pa.; Longiellow, Rathen & Trauter.

HARRIERS.—Billrough, Richard Hartley, Philadelphia; Rove, do.; Belle and Rose, Wm. Auren, Philadelphia.

BEAGLES.—Lucy, John E. Diehl, Beverly, N. J.; Ranger and Fannie, H. O. Donnell, Philadelphia. **PUPPIES:** Belle and Frank, J. E. Diehl; Rush and Sport, T. David, Philadelphia.

DACHSHUNDS.—Zankrie, Dr. L. H. Twaddell, Philadelphia; Waldina, do.; Billy Bowlegs, Rathen & Trauter, S. I.; Duke, J. M. Powell, Philadelphia; five puppies by Dr. Twaddell.

IMPORTED ENGLISH SETTER DOGS, OVER 2 YEARS.—Echo, W. W. Colket, Philadelphia; Paris, L. H. Smith, Strathroy, Canada; Leicester, R. E. M. Clenahan, Port Deposit, Md.

IMPORTED ENGLISH SETTER BITCHES, OVER 2 YEARS.—Jesse, E. A. Herzberg, New York; Petrel, L. H. Smith, Strathroy, Canada; Nell, G. H. Vannote, Tuckerton, N. J.

IMPORTED ENGLISH SETTER DOGS, OVER 1 YEAR AND UNDER 2 YEARS.—Pedigree, C. S. Westcott, Philadelphia; Llewellyn, L. H. Smith, Strathroy, Canada.

IMPORTED ENGLISH SETTER BITCHES, OVER 1 YEAR AND UNDER 2 YEARS.—Fairly II., Charles P. Tasker, Philadelphia; Magnet, C. S. Westcott, Philadelphia; Clip and Pearl, L. H. Smith, Strathroy, Canada.

IMPORTED ENGLISH SETTER PUPPIES, DOGS, UNDER TWELVE MONTHS.—Charles P. Tasker, Philadelphia.

NATIVE ENGLISH SETTER DOGS, OVER TWO YEARS.—Dash, C. S. Westcott Philadelphia; Jim, Frank and Dash, Frank Furness, Philadelphia; Buster, G. W. Twaddell, Philadelphia; Jerry, Lawrence Shuster, Jr., Philadelphia; Dash, Justus Von Lengerke, New York; Bismarck II., George C. Settle, Philadelphia; Bruce, J. L. Harrison, Philadelphia; Biz, Frank Kelly, Philadelphia; Dan, Daniel Elmer, Bridgeton, N. J.; Gen. Scott and Don, Mrs. Joseph Hamer, Philadelphia; Rock, John Baird, Philadelphia; Frank, Richard Torpin, Philadelphia; Rake, Sport and Don II., Dr. A. Russell, New York; Duke, T. A. Fowler, Orange, N. J.; Frank, Charles Morrow, Philadelphia; Duke, John C. Johnson, Philadelphia; Sank, George C. Colburn, New York; One-eyed Sancho, T. E. Taylor, Colt's Neck, N. J.; Rake, E. D. Row, Philadelphia; Rock, George C. Morris, Philadelphia; Bluff, Fred Miller, Brook Haven, New York; Don, Harrison Campion, Camden, New Jersey; Rock, John Davidson, Monroe, Mich.; Grouse, James M. Brown, Philadelphia; Rolla, Thomas Cumming, Stamford, Conn.; Glen, James Ayres, Allamuchy, N. J.; Bill, Wm. H. Nugent, Port Richmond, N. Y.; Grouse, Henry Schreiber, Philadelphia; Quail, James M. Nelson, Charleston, S. C.; Rock, Arthur Duane, New York; Shot, Bang and Buff, John E. Royheum, Philadelphia; Beauty, J. B. McNeal, Baltimore; Jack, David Peel, Philadelphia; Ponto, H. W. Gause, Wilmington, Del.; France, Asa L. Sherwood, Skaneateles, N. Y.; Jim, Samuel Scranton, Providence; Dash, Charles P. Tasker, Philadelphia.

NATIVE ENGLISH SETTER BITCHES, OVER 2 YEARS.—Belle, Joseph A. Porter, Camden, N. J.; Fanny, Jesse Starr, Jr., Camden, N. J.; Nell, John Baird, Philadelphia; Belle, A. S. Roberts, Jr., Philadelphia; Fly, Richard Torpin, Jr., Philadelphia; Juno, Harrison Campion, Camden, N. J.; Dora, B. W. Sharp, Philadelphia; Fanny, T. F. Taylor, Colt's Neck, N. J.; Juno, Edward S. Powell, Camden, N. J.; Becky, Jacob Pentz, Newark; Flora, Conrad Schreiber, Philadelphia; Bess, Nisbott Tumbull, Baltimore; Fancy, Asa L. Sherwood, Skaneateles, N. Y.; Stunt, Samuel Scranton, Providence; Pet, E. F. Merrillott, New York; Bet, Thomas S. Inglesby, Charleston, S. C.; Juno, J. E. Long, Detroit.

NATIVE ENGLISH SETTER DOGS, OVER 1 AND UNDER 2 YEARS.—Duke, Joseph A. Porter, Philadelphia; Ned and Walf, Frank Roun, Philadelphia; Phil and Camp, G. W. Twaddell, Philadelphia; Ben, Dr. E. F. Corson, Philadelphia; Jersey Boy, Justus Von Lengerke, New York; Sam, Edward Maher, Philadelphia; Fritz, David Brooks, Philadelphia; Dick, J. G. Pfautz, Lütz, Pa.; John, William H. Nugent, Philadelphia; Fred, A. P. Baldwin, Newark; Guy, Manning, Dudley Olcott, Albany; Roderick Dhu, Charles H. Raymond, Morris Plains, N. J.; Heck II, Charles P. Tasker, Philadelphia; Spunk, Max Hellmich, Philadelphia; Fido, J. B. Settle, Philadelphia; Don, Ward H. Bent, Philadelphia.

NATIVE ENGLISH SETTER BITCHES, OVER 1 AND UNDER 2 YEARS.—Judy, Louis C. McClay, Philadelphia; Orphina, C. S. Westcott, Philadelphia; Nellie, Samuel Barr, Philadelphia; Bess, Harrison Campion, Camden, N. J.; Nellie, A. P. Baldwin, Newark; Don, E. D. Row, Philadelphia; Lill, Charles P. Tasker, Philadelphia; March, Samuel D. Berger, Camden, N. J.

NATIVE ENGLISH SETTER DOG PUPPIES, UNDER 1 YEAR.—Duke, Jesse W. Starr, Jr.; Bryan, Frank Furness, Philadelphia; Frank, Martin Cubbler, Philadelphia; Punch, William Hess Shuster, Philadelphia; Biz, Dom Pedro, Bruce, Jr., Jacko, Carlo, V. J. Shipman, State Centre, Iowa; Bismarck, Joseph McKinney, Philadelphia; Flip, Trim, Ripple, Bob, E. A. Herzberg, N. Y.; Duke, Bob, Vanote, Sport, Alex., Branson, Germantown, Pa.; Fred, George Lore Phila.; Braze, Ocean Boy, Mark, Horace, Charley, C. S. Westcott, Philadelphia; Abe, Dan, Don, B. W. Shary, Philadelphia; Dick, M. J. Herold, Philadelphia; Ned, Thos. M. Aldrich, Providence, R. I.; Mick, E. P. Hewett, Providence, R. I.

NATIVE ENGLISH SETTER BITCH PUPPIES, UNDER 12 MONTHS.—Queen, Martin Cubbler, Philadelphia; Judy, W. Hess Shuster, Philadelphia; Phoebe, Josephine, Snow, V. J. Shipman, State Centre, Iowa; Kate, Juno, John Baird, Philadelphia; Patti, E. A. Herzberg, New York; Fance, G. H. Vannote, Tuckerton, N. J.; France, M. Von Culin, Delaware City, Del.; Jilt, Nancy, Maud Joim, C. S. Westcott, Philadelphia; Lady, Nellie, Kate, B. W. Sharp, Philadelphia; Kate, Wm. H. Nugent, Port Richmond, N. J.; Rose, John Lawrence, Philadelphia; Rose, Geo. Settle, Philadelphia; Smut, Thos. M. Aldrich, Providence, R. I.; Grace, Pearl, E. F. Merrillott, New York; Dell, James Ayres, Allamuchy, N. J.

IMPORTED IRISH SETTER BITCHES, OVER 2 YEARS.—Bunon, A. F. Nuttall, Newtown, Mount Kennedy, Wicklow Co., Ireland; Jack, Max Wenzel, Hoboken, N. J.; Buck, Joe, J. C. Cooper, Limerick, Ireland.

IMPORTED IRISH SETTER BITCHES, OVER 2 YEARS.—Belle, Frank Furness, Philadelphia; Jessie, Walter H. Bryant, Philadelphia; Maybe, Flora, F. Aenas Nuttall, Newtown, Mount Kennedy, Wicklow Co., Ireland.

IMPORTED IRISH SETTER DOGS, OVER 1 YEAR AND UNDER 2 YEARS.—Skip Over The Blue Mountain, E. Sandell, Jr., Peckham, England; Aileen, J. K. Millner, Dublin, Ireland; Yoik, J. C. Cooper, Cooperhill, Limerick, Ireland.

IMPORTED IRISH SETTER DOG PUPPIES, UNDER 1 YEAR.—Czar, Quail II., Joseph T. Bailly, Philadelphia; Pedro, Walter H. Bryant, Philadelphia; Trump III., Six Puppies, four Puppies, A. E. Nuttall, Newtown, Mount Kennedy, Wicklow, Ireland.

IMPORTED IRISH SETTER BITCH PUPPIES, UNDER 1 YEAR.—Loo, III., A. F. Nuttall, Newtown, Mount Kennedy, Wicklow, Ireland.

NATIVE IRISH SETTER DOGS, OVER 2 YEARS.—Ruby, Bruce, Charles P. Tasker, Philadelphia; Glenn, John S. Davis, Philadelphia; Jack, Walter Humphreys, Newark, N. J.; Mick, Jacob Bentz, Newark, N. J.; Guy, Everett Smith, Portland, Maine; Dan Kong, M. W. Biren, Philadelphia; Dash, Nicholas Saltus, Brooklyn; Ranger, J. H. Whitman, Chicago; Jim, Henry Metcalf, Philadelphia; Joe, John Crawford, Philadelphia.

NATIVE IRISH SETTER BITCHES, OVER 2 YEARS.—Belle, Walter Humphrey, Newark; Juno, Thomas Adcock, Providence; Becky II., Nora, Fannie, Belle, Jacob Pentz; Belle, F. S. Underhill, Newark; Dot, Wm. R. Knight, Philadelphia; Belle, Joseph E. Fisher, Brooklyn.

NATIVE IRISH SETTER DOGS, OVER 1 AND UNDER 2 YEARS.—Jake, Stubbs, Jacob Pentz, Newark; Snow, Charles K. Shoemaker, Philadelphia; Max, Bob, Stacy L. Roberts, Philadelphia; Rufus II., M. Von Culin, Delaware City, Del.; Vic, Wm. Honover, Marlboro, N. J.

NATIVE IRISH SETTER BITCHES, OVER 1 AND UNDER 2 YEARS.—Bess, F. A. Diffenderfer, Lancaster; Firt, Dr. A. Strachan, Russell, N. Y.; Fire Fly, M. Von Culin, Delaware City; Biddy, Kathleen, Jacob Pentz, Newark; Cora, Everett Smith, Portland; Kelpie, H. W. Gause, Wilmington, Del.; Dot II., Spot, W. H. Gumbles, Orks, Pa.; Lili III., Nicholas Saltus, Brooklyn; Lady, Oscar Williams, Newark.

NATIVE IRISH SETTER DOG PUPPIES, UNDER 1 YEAR.—Don, Wade II. Marish, Jr., Philadelphia; Bruce, E. A. Diffenderfer, Lancaster; Thomas Adcock, Providence; Pat, Mike, Jacob Pentz, Newark; Duke, Jack, W. Humphries, Newark; Dick, Duke, Nicholas Saltus, Brooklyn; Pedro, Walter H. Bryant, Philadelphia; Count, J. K. Vallance, Beverly, N. J.

NATIVE IRISH SETTER BITCH PUPPIES, UNDER 1 YEAR.—Queen, Belle and Countess, J. E. Fisher, Brooklyn; Nora, Wisner Murray, Goshen, N. Y.; Kate, Nicholas Saltus, Brooklyn; Max and Cora, Walter Bryant, Philadelphia.

IMPORTED GORDON SETTERS OVER 2 YEARS.—Duke, H. N. Munn, New York.

IMPORTED GORDON SETTER BITCHES, OVER 2 YEARS.—Lou, Wm. M. Thelston, New York.

NATIVE GORDON SETTER DOGS, OVER 2 YEARS.—Fritz, Edward Howe, Princeton, N. J.; Dinah, Jacob Pentz, Newark; Frank, Arthur Duane, New York; Ben, L. R. Cassard, Baltimore; Dash II., J. Hand, Howard, West Granby, Conn.; Rascal, James R. Tilley, Locust Valley, L. I.; Dick, S. Fleet Speir, Brooklyn; Dash, Samuel D. Berger, Camden, N. J.; Dinks and Scot, H. N. Munn, New York.

NATIVE GORDON SETTER BITCHES, OVER 2 YEARS.—Daisy and Gypsum, Dr. S. Fleet Speir, Brooklyn; Fly, Edward Howe, Princeton; Belle, W. A. & A. F. Mullin, Mount Holly Springs, Pa.; Kate, Arthur Duane, New York; Die, James K. Tilley, Locust Valley, L. I.

NATIVE GORDON SETTER DOGS, OVER 1 AND UNDER 2 YEARS.—Max, Edward Howe, Princeton; Count, Dr. A. Russell Strachan, New York; Dream, W. A. & A. F. Mullin, Mount Holly Springs, Pa.; King, M. Von Culin, Delaware City, Del.; Pride of the Frontier, W. I. Bickerton, Brooklyn; Duke, Samuel D. Berger, Camden, N. Y.; Duke, Dash and Bob, George C. Colburn, New York.

NATIVE GORDON SETTER BITCHES, OVER 1 AND UNDER 2 YEARS.—Countess, Dr. A. Russell Strachan, New York; Blanche, Lemuel Willey, Baltimore; Bess, A. S. Phillips, Trenton; Border Lily, Joseph E. Fisher, Brooklyn; Dream, W. A. & A. F. Mullin, Mount Holly Springs, Pa.

NATIVE GORDON SETTER PUPPIES, DOGS, UNDER 1 YEAR.—Trump and Pomp, George C. Colburn, New York; Dexter, Samuel D. Berger, Camden, N. J.; Knight, Arthur Duane, New York; Joe, nine puppies, Dr. S. Fleet Speir, Brooklyn; Frank and Ring, James R. Tilley, Locust Valley, L. I.; Dash, T. B. P. Dixey, Philadelphia; Shot, Charles DeRonge, Milburn, N. J.; Twitto and Robin, T. F. Taylor, Colt's Neck, N. J.

NATIVE GORDON SETTER PUPPIES, BITCHES, UNDER 1 YEAR.—Dinah,

George C. Colburn, New York; Bess, Lawrence Curtis, Boston; Jan, Dr. S. Fleet Spier, Brooklyn; Whip, James R. Tilley, Locust Valley, L. I.

POINTER DOGS, OVER 50 LBS. WEIGHT, OVER 2 YEARS.—Nero, D. R. Holmes, Milford, Del.; Tell, Herman C. Berg, Rocky Hill, N. J.; Grouse, A. F. Nuttall, Newtown, Mount Kennedy, Ireland; —, James Schofield, Philadelphia; —, Wm. Ehinger, Philadelphia; Rover, F. A. Tremaine, Philadelphia; Mack, J. Warburton, N. Britain, Ct.; Bob, W. Martin, Philadelphia; Rock, John T. Miller, Philadelphia; Capt., Jas. S. Baer, Baltimore; Jack, Wm. G. Dabbs, Philadelphia; Ned, Abraham C. Smith, Philadelphia; Pete, George A. Strong, West Meriden, Conn.

POINTER BITCHES, OVER 50 LBS. WEIGHT, OVER 2 YEARS.—Belle, E. M. Gillespie, Columbus, Ohio.

POINTER DOGS, UNDER 50 LBS. WEIGHT, OVER 1 AND UNDER 2 YEARS.—Rock, Joseph T. Bailey, Philadelphia.

POINTER DOGS, UNDER 50 LBS. OVER 2 YEARS.—Mack, J. H. Pake, New York; Flake, Edmund Orgill, New York; Dan, Max Hellmich, Philadelphia.

POINTER BITCHES, UNDER 50 LBS. WEIGHT, OVER 2 YEARS.—Forte, Herman C. Berg, Rocky Hill, N. J.; Whisky, Dr. Wm. Seward Webb, New York; Lilly, Edmund Orgill, New York; Kate, Newton B. Beam, New York; Juno, James T. Martin, Port Richmond, Philadelphia; Belle, George C. Colburn, New York; Fannie, Wm. Hanover, Marlboro, N. J.; Fan, E. M. Gillespie, Columbus, Ohio; Effie, Edward R. Worrell, Philadelphia.

POINTER DOGS, UNDER 50 LBS. WEIGHT, OVER 1 AND UNDER 2 YEARS.—Dash, Thomas Dunbar, Philadelphia; Nig, Thomas P. Fardney, Lancaster, Pa.; Nell, James H. Laws, Philadelphia.

POINTER BITCHES, UNDER 50 LBS. OVER 1 YEAR AND UNDER 2.—Fannie, George H. Andrews, New York.

POINTER DOG PUPPIES, UNDER 1 YEAR.—Beau, Herman C. Berg, Rocky Hill, N. J.; Shamrock, Raven, Wash Costa, Snipe, Jim, Joe and Eric, Dr. Wm. Seward Webb, New York; Phil, Jr., Wm. M. Tilston, New York; Dash, Charles K. Williams, Philadelphia; Jim and Fred, James T. Martin, Philadelphia; Guy, Rush and Kap, Edmund Orgill, New York; Sport, Fred Milnes, Philadelphia; Prince, W. H. Mann, Haddonfield, N. J.; Rex, Fisher Howe, New York; Pat, George Grant, Bill, Ned and Mack, E. N. Gillespie, Columbus, Ohio.

POINTER BITCH PUPPIES, UNDER 1 YEAR.—Daisy, Viola, Fannie, and May, Dr. Wm. Seward Webb, New York; Lottie, James T. Martin, Philadelphia; Belle, Pearl, Ruby, Rose and Lillie, Edmund Orgill, New York.

RETRIEVERS AND CHESAPEAKE BAY DOGS, OVER 2 YEARS.—Monday, O. D. Fonks, Chesapeake City, Md.

RETRIEVERS AND CHESAPEAKE BAY DOGS OVER 1 AND UNDER 2 YEARS.—Thron, O. D. Fonks, Chesapeake City; Bob and Sancho, M. Von Culm, Delaware City, Md.

IRISH WATER SPANIEL DOGS, OVER 2 YEARS.—Sinbad, J. H. Whitman, Chicago; Sueider, F. A. Howe, Chicago.

RETRIEVING SPANIELS, OTHER THAN PURE IRISH, DOGS, OVER 2 YEARS.—Toby, J. W. Leigh, Branchtown, Pa.

BITCHES.—Neil, J. M. Aldrich, Providence, R. I.

RETRIEVING SPANIELS, OTHER THAN PURE IRISH, DOGS, OVER 1 AND UNDER 2 YEARS.—Prince, J. H. Whitman, Chicago.

COCKER SPANIELS, DOGS, OVER 2 YEARS.—Snoddy, Harry R. McNeil, Philadelphia; Witch, Fred H. Hoe, Tarrytown, N. Y.; Sam, Henry Smith, Paterson; Da-h, C. A. Page, Philadelphia.

COCKER SPANIELS, BITCHES, OVER 2 YEARS.—Minnie, M. J. Herold, Jr., Philadelphia; Nellie, John C. Darsey, Philadelphia; Cora, Samuel Scranton, Providence; Neil, Wm. H. Nugent, Port Richmond, Philadelphia.

COCKER SPANIELS, DOGS, OVER 1 AND UNDER 2 YEARS.—Rock, John P. R. Polk, Wilmington; Punch, Tip and Toby, Belmont A. Purdy, New York.

COCKER SPANIEL BITCHES, OVER 1 AND UNDER 2 YEARS.—Judy, Belmont A. Purdy, New York.

COCKER SPANIEL PUPPIES, UNDER 1 YEAR.—Snap, T. M. Aldrich, Providence; Ned, G. H. Andrews, New York.

SPRINGER DOGS, OVER 2 YEARS.—Curly, George B. Wood, Jr., Philadelphia; Shot, G. H. Andrews, New York.

The following are the names of the winners of the special prizes:—

C. L. Westcott's of Philadelphia prize, value \$50, for the second best English setter bitch over 1 year old; won by Juno; owned by John E. Long of Detroit, Mich.

Frank Roan's prize, silver cup, value \$50, for the best imported English setter dog over 1 and under 2 years; won by Llewellyn; owned by L. H. Smith, Rathroy, Ontario, Canada.

Silver cup, value \$100, offered by the Philadelphia Sportsmen's Club for the best setter (dog or bitch) over 1 year old in the show; won by Paris; owned by L. H. Smith of Strathroy, Canada.

Silver cup offered by the Philadelphia Sportsmen's Club for the best pointer (dog or bitch) over 1 year old, any weight; won by Pete; owned by Geo. A. Strong, West Meriden, Conn.

John Krider's prize; silver mounted dog whip, for the best native bred setter; won by Glen; owned by James Ayres, Allamuchy, N. J.

Capt. A. H. Clay's prize, silver dog whistle, for the second best native setter; won by Bess; owned by Nesbit Turnbull, Baltimore, Md.

Charles Tucker's silver cup for the best cocker spaniel (dog or bitch) over 1 year old; won by Nell; owned by Wm. H. Nugent, Port Richmond, Philadelphia.

The *Turf, Field and Farm* prize for the best couple of fox hounds bred in the United States (dogs or bitches) over 1 year won by Daudy and Chip; owned by J. L. Laner, West Chester, Pa.

The Chicago *Field* cup for the best Irish setter dog over 1 year old; won by Rufus; owned by M. Von Culm, Delaware City, Del.

The *FOREST AND STREAM* prize, a tea service, for the best Irish Setter bitch over 1 year and under 2; won by Aileen; owned by J. K. Milner, Dublin, Ireland.

Prize offered by Messrs. W. & C. Scott & Son of London, Eng.; a gun, value, \$350, for the best native born setter (dog or bitch); won by Guy Manning; owned by Dudley Olcott, Albany, N. Y.

Frank Roan's prize for the best dachshund; won by Unser Fritz; owned by Dr. L. A. Twaddell, Philadelphia.

The Detroit Gun Club, silver cup, \$100, for the best native setter (dog or bitch) over 1 year old exhibited from the State of Michigan; won by Juno; owned by John E. Long, Detroit, Mich.

And up to the hour of our going to press—Tuesday evening—these are all the awards we were able to obtain, notwithstanding that we have made two trips to Philadelphia for the purpose. The judges' books have gone to the general commission, or the jury of awards, or whatever the name may be, of the red-tape-bound body who, in their thickheadedness, will not see that a bench show of dogs is different from a competition of piano-forte makers, and who propose to keep the information for their own delectation until they get ready to promulgate it. If there was anything wanting to cap the climax of absurdity and mismanagement which has characterized this bench show from the beginning, it would be the withholding the awards beyond all reason. The only recourse we have is to instruct our children to tell their grandchildren that if there is a bench show in 1976 to keep their dogs at home. Not knowing the winners beyond the "specials" it is impossible to criticize the awards; but the general impression is that there are even more surprises in store for us. We are informed that the judge on Gordon and Irish setters deducted five points for every tail docked, notwithstanding that such has not been the custom at any bench show in this country. But the most astonishing performance of this gentleman was his declining to judge Mr. Humphreys (Bob Robinson's) Jack and his (Hamilton Thompson's) Belle, because they had too much feather. Mr. Milner's red Irish setter Aileen was a source of much curiosity, from the fact of her being priced at \$2,500. We think that most of these recently imported Irish dogs look too light in build for this country, and also that they are getting the color too dark for beauty. Our space this week will not permit us to allude to the awarded dogs as we should desire, but when the class awards are announced we shall take the opportunity to do so.

TRANSPORTATION OF DOGS.—We are glad to note that the newly elected President of the National Sportsmen's Association, Greene Smith, Esq., has taken in hand a subject which we have repeatedly ventilated in these columns, viz: the transportation of dogs by railway companies. The General Passenger Agents representing all the principal lines in the country have been in convention in this city this week. The following letter has been addressed to them:—

NEW YORK, September 5th, 1876.

To the General Passenger Agents' Convention:

GENTLEMEN—May I take the liberty of suggesting to your able body the propriety of fixing a tariff on the transportation of dogs over railroad lines? A fixed price from point to point or per 100 miles or more, on dogs, as there is on passengers, would enable sportsmen to know whether to transport their dogs or not, and thus increase the attendance at bench shows, enhance the comfort of sportsmen generally, and probably be of benefit to railroad companies.

T. C. BANKS, Cor. Sec. Nat. Sportsmen's Ass'n.

GREENE SMITH, President.

DEER HOUNDS IN CALIFORNIA.

SAN FRANCISCO, Cal., August 28th.

EDITOR *FOREST AND STREAM*:—

Our deer season commences September 1st. All our sportsmen are cleaning their rifles and taking more interest than usual in their hounds. We have a bad lot of hounds out here. They are usually called fox-hounds, but are all colors, shapes and sizes. I have an idea that a regular bloodhound would be the best dog to track a wounded deer. We want here in California a slow but very sure-scented dog. Our hunting season commences in our hottest and driest season when the hillsides are parched with the burning sun. On such ground and in such weather the deer leave very little scent to guide the dogs, and a fast hound will become exhausted soon in such weather. We therefore want a very long-winded, persevering breed of dogs. I have a black-and-tan hound, cross between fox hound and Cuban bloodhound, a very slow, sure-scented dog, who always takes a deer by the throat and never mutilates any other portion of the deer's body, and will follow a wounded deer all day and night. Please answer through your columns if the regular English bloodhound is obtainable in the United States, if so, where?

There were two or three specimens imported years ago to California at great expense, but the breed has been allowed to die out. I am going on the Walhalla river for deer in a few days. There is no better deer country in the world. I will send you an account of our experiences after deer and black bear. The Walhalla is on the coast in Sonoma county, right in our coast range of mountains.

W. F. S.

[Our correspondent would have difficulty in finding the bloodhound in this country. The most appropriate dog we should think would be the Scotch stag-hound, of which breed it is now possible to procure puppies in this country. Ed.]

—Mr. G. DeF. Grant, one of the members of the Westminster Breeding Kennel, sailed last Saturday in the City of Berlin for England. One of the objects of his visit is to purchase a fine pointer dog of field trial stock to be used as a stud dog in the Westminster Breeding kennel. Mr. Grant is expected back in two months. There are now no puppies for sale in the Westminster Kennel, nor will there be any until spring.

KENNEL PRODUCE.—Theo. Morford's famous orange and white setter bitch, May, whelped seven pups on the 6th inst., five dogs and two gyps, by Col. Valentine's orange and white setter dog, Glen, a prize winner at the recent International Bench Show. It will be remembered that May took first prize at the Springfield Bench Show as the best American bred bitch on exhibition. The pups all have black points.

Mr. A. P. Sandheim's blood-red setter bitch, Fannie, has dropped 13 pups to Walter Humphrey's Jack, better known as Robinson's Jack, six dogs and seven gyps.

—At the Buffalo Park track last week, Francisco Peralto rode 160 miles in eight hours, using twenty mustangs.

Rifle.

THE INTERNATIONAL MATCHES.

As we go to press the International matches are in progress at Creedmoor. Time and space permits us to give but a brief summary of the shooting on the first day. The first match on the programme was the Centennial short-range match, the conditions of which were as follows: Open to all comers; distance, 200 yards; position, standing; rifles, any not exceeding ten pounds weight; minimum pull of trigger, three pounds; ten shots, without sighting shots; entrance fee, \$2. Prizes—First, medal of the United States Centennial Commission, and \$100 cash presented by the National Rifle Association; second, Centennial medal and \$75; third, Centennial medal and \$50; fourth, Centennial medal and \$25; fifth, Centennial medal and \$15; five prizes of \$10 each, and ten prizes of \$5 each; total, four medals and \$365. There were 186 entries for this match and 164 competitors. Mr. F. J. Rabbeth of Providence was the winner with a score of 45 points. The best scores were as follows:—

Name.	Total.	Name.	Total.
F. J. Rabbeth.....	45	Wm. Hayes.....	42
E. T. Osgood.....	45	M. A. Scanl.....	42
G. M. Hand.....	44	J. E. Stetson.....	42
G. W. Davison.....	44	H. J. Quinn.....	42
C. E. Ryder.....	41	D. E. Vannett.....	42
C. J. Stewart.....	42	John Kueger.....	42

Yale was the best of the team men with 41 points.

The second match was the mid-range, the conditions of which were as follows: Open to all comers; rifles, any; distances, military rifles of fifty calibre or over, to be used at 500 yards, other rifles at 600 yards; position, any without artificial rest; ten shots, without sighting shots; entrance fee, \$2 each distance; competitors may enter at both distances. The prizes were precisely the same as in the preceding match at short range. In this match the shooting was excellent but the military rifles at 500 yards had no chance with the small bores at 600. Mr. H. S. Jewell made a clean score of 50 points and the reserves and team were all well up. Mr. Milner of the Irish team being the best of the visitors. The best scores at 600 yards were:—

Name.	Total.	Name.	Total.
H. S. Jewell.....	50	R. C. Coleman.....	47
L. M. Ballard.....	49	A. S. Swan.....	47
J. E. Overbaugh.....	49	H. A. Gildersleeve.....	47
R. Rathbone.....	48	E. H. Sanford.....	47
T. H. Sargent.....	48	Henry Fulton.....	47
I. L. Allen.....	48	B. Parker.....	47
S. G. Perry.....	48	J. K. Milner.....	46
R. J. Haire.....	47	J. Booth.....	46
G. W. Yale.....	47	L. C. Bruce.....	46
C. E. Ryder.....	47	L. Weber.....	46

The best at 500 yards were: W. Paton, 44; F. Backofen, 42; G. Williams, 42; G. D. Hobart, 41; Lieut. A. Menzies, 40; E. H. Sandford, 40; W. Edmonstone, 40; W. L. Candee, 38. There were 158 entries for this match.

PRACTICE BY THE TEAMS.—The American long-range team in its practice last week, for some reason or other, went all to pieces, the totals falling to 1,350 points on Tuesday, and 1,486 on Wednesday. The foreign teams, however, show an improvement, and Mr. Gee, of the Australians, succeeded on Friday in scoring 73 out of a possible 75 at 1,000 yards, beating Mr. Allen's famous score at the same range, and coming within one point of tying his score of 212. The following were the scores made on Friday, the details, considering that the long-range international match will be probably finished to-day, being valueless.

Team.	Total.	Team.	Total.
Irish team (10 men).....	1912	Canadian team (8 men).....	1465
Scotch team (9 men).....	1730	Australian team (4 men).....	796

Mr. Morris, of the Australian Centennial Commission, has been requested to act as Captain of that team.

On Saturday all the teams except the Australian practiced for the last time, and each sent a fair representation. Col. Bodine and Col. Gildersleeve acted as coaches to the Americans. The totals made by each team were as follows:—

Team.	Total.	Team.	Total.
Irish team.....	1559	American team.....	1539
Scottish team.....	1535	Canadian team.....	1512

CHANGES IN THE AMERICAN TEAM.—At the conclusion of Saturday's practice a meeting of the American team was held, and it was decided to invite Col. Gildersleeve and Col. Bodine to enter the team. Although a confession of weakness, in view of the scores recently made, this movement was apparently necessary in order to lessen the chances of defeat. Messrs. Bruce and Yale very gracefully and generously waived the places, and with equal good nature Col. Gildersleeve and Bodine consented to assume them. This undoubtedly strengthens the team, although with little or no practice of late, Col. Gildersleeve could hardly be expected to make his usually fine scores.

CREEDMOOR.—The marksman's badge presented by H. C. Poppenhausen, Esq., was shot for on Thursday last for the seventh time. The conditions are open to members of the N. R. A. Distances, 200 and 500 yards; position, standing, at 200, and any without artificial rest at 500 yards; five shots and two sighting shots at each distance; weapon, Remington rifle, State model; entrance fee, fifty cents. There were fifty-six entries. The badge was won by Captain A. G. Brown, of the Forty seventh regiment, on a score of 19 at 200 and 23 points at 500 yards—a total of 42 out of a possible 50.

THE CANADIAN TEAM.—The riflemen representing the Dominion, who are to participate in the international rifle matches now in progress at Creedmoor, arrived here on Friday last, and took up their quarters at the Sturtevant House, their headquarters. The members of the team are as follows: Capt. J. J. Mason, acting Captain of the team; A. Bell, George Murison, Capt. James Adams, Major J. M. Gibson, George Disher, W. Cruit, Major W. H. Cotton, and William H. Cooper. Joseph Mason will form the reserve. Major O'Reilly, who had been chosen Captain, did not accompany the team, but followed them the next day. As we have given short sketches of the other visiting riflemen, a similar courtesy, even at this late day, is due the Canadians.

Capt. J. J. Mason, of Hamilton, shot at Wimbledon in 1874, and in the match with the American team, when he made the score of 181 out of a possible 225 points. He holds the championship as a small-bore shot in Quebec and Ontario.

Mr. A. Bell, the second in order, is a resident of Toronto, and a native of Scotland. He was a prize winner at Wimbledon in 1875.

Mr. George Murison is also of Scotch descent, and shot at Wimbledon in 1871, and made the highest score in his team in the American-Canadian match last year—189 out of a possible 225 points.

Capt. James Adams is a Scotch Highlander, and has shot at Creedmoor in the fall prize meetings of the National Rifle Association ever since its opening. He was a member of the Canadian team last year, but scored only 160 out of a possible 225 points.

Major J. M. Gibson is a Canadian by birth, and shot at Wimbledon with his team in 1874. He has been shooting two years with a small-bore rifle.

Mr. George Disher is a resident of St. Catharine's, shot at Wimbledon in 1874, and was a member of the Canadian team in the American-Canadian match last year, and made a score of 167 out of a possible 225 points.

Mr. W. Cruit is an Englishman by birth, and shot at Wimbledon in 1875, and has never shot at Creedmoor.

Major W. H. Cotton is from Hamilton, and considered an expert rifleman.

Mr. William M. Cooper is Vice-President of the Any Rifle Association of Ontario, and an excellent small-bore shot.

Mr. Joseph Mason is a resident of Hamilton, and a good small-bore shot. He has attended several of the fall prize-meetings at Creedmoor.

RIFLE NOTES.—The visiting teams have been taken about the harbor and to West Point, and shown the mode of manipulating the fire department. Strange to say, the members of the American team accompanied them on their first trip, and the want of courtesy is severely commented upon. . . . The Police Board, at the request of Col. Wingate, has detached thirty New York policemen for duty at Creedmoor during the international matches. . . . The project of making a show of the visiting teams at Gilmore's Garden, at so much a head, on the occasion of the presentation of the international trophy, appears to have fallen through. . . . Mr. Sheridan Shook, proprietor of the Garden, was only willing to give the Joint Committee \$500 for the privilege of exhibiting them, whereas the Committee think they ought to net \$3,000 or \$4,000. . . . Col. Gildersleeve, and "Old Reliable," will shoot on the American team in place of Yale and Bruce. . . . Gen. Dakin entertained the members of the Irish team in his tent on Saturday. Major Leech spoke in his usual felicitous strain. . . . Trains leave Long Island City (Hunter's Point) for Creedmoor during the international matches, at 7:32, 9:05, 11:03, a. m., and 1, 2:03, and 3:06 p. m. Returning, trains will leave Creedmoor at 5:05, 5:16, 5:30, 5:48, 6, 6:42, 6:50, 7:12, and 7:34 p. m. . . . The German Forsters Verein held their annual meeting at Eisenach, Saxony, on the 3d, 4th, and 5th of September. . . . Steele & Son, jewelers, of Hartford, Conn., are having a beautiful prize cup made, to be presented by them for competition at Willowbrook range. The cup is 16 inches in height, beautifully chased on the cover and base with rifles and other emblems of the sport.

On the body of the cup is the inscription, and an engraving of a Creedmoor target with two riflemen in reclining positions.

NEW YORK.—The Rochester Amateur Rifle Association held a meeting on their range last week. The first day's match was at 200 and 500 yards, 10 shots at each range. There were 23 entries. Dr. C. E. Rider and Geo. F. Stillson tied for first prize, but the former having made the best score at the longest range, it was awarded to him. The following are the scores:—

Name.	200 yds.	500 yds.	T'l.	Name.	200 yds.	500 yds.	T'l.
Dr. C. E. Rider....	38	48	87	J. J. McGowan....	25	w	w
Geo. F. Stillson....	39	48	87	S. S. Eddy.....	37	20	57
A. B. Smith.....	37	46	83	G. W. Fish.....	31	45	76
S. A. Servis.....	39	44	83	D. D. Knapp.....	35	36	71
Henry Allen.....	42	41	83	E. F. Wells.....	25	42	67
Wm. J. Babcock....	39	25	64	T. O. Klase.....	28	44	72
H. T. Hart.....	35	38	73	A. Hilderbrand....	34	44	78
E. O. Sage.....	26	w	w	W. B. Campbell....	17	32	49
J. H. Brown.....	43	w	w	P. H. Stafford....	30	12	42
R. B. Yates.....	33	42	75	Cyrus Bradley....	38	35	73
Adolph Rhoda.....	23	23	46	A. H. Bruman.....	27	29	56
E. S. Combs.....	57	39	76				

On the following day a match was shot between teams of six men each from the Rochester Amateur Rifle Club and the Waverley Club. The conditions were 10 shots each, at six and 1,000 yards, and the following are the scores:—

800 YARDS.				1000 YARDS.			
WAVERLEY TEAM.		ROCHESTER TEAM.		WAVERLEY TEAM.		ROCHESTER TEAM.	
Knapp.....	23	Smith.....	33	Knapp.....	38	Smith.....	35
Wells.....	34	Stillson.....	32	Wells.....	39	Stillson.....	40
Klase.....	39	Combs.....	36	Klase.....	34	Combs.....	32

Total for Waverley Team.....		Total for Rochester Team.....		Total for Waverley Team.....		Total for Rochester Team.....	
				437		437	

The result it will be seen was a tie, but the Waverley team won on the best score at the longest range.

MASSACHUSETTS.—The eleventh competition for the gold badge of the Taunton Sportsman's Club, was shot at that place on the 6th inst. The badge has been won once each by Dr. Hayward, A. P. Clark, B. B. Kelley, and Wm. P. Parmlee; twice each by A. B. Hodges and Henry D. Atwood; three times by T. R. Breed. The shooting shows much improvement at each time. The following are the scores, each competitor having 10 shots, 200 yards off-hand.

Name.	Total.	Name.	Total.
Thomas Breed.....	45	J. M. Cushman.....	40
W. H. Bent.....	43	B. B. Kelley.....	40
W. P. Parmlee.....	42	J. S. Williams.....	40
H. P. Copeland.....	42	A. B. Hodges.....	40
J. A. Woodward.....	4		

—The Holyoke Rifle Club held their prize shoot on Saturday week, with the following result, the range being, we presume, 200 yards, seven shots each:—

Name.	Score.	Total.
H. White.....	2 3 3 3 4 4	23
J. Chase.....	0 3 3 0 4 4	16
J. P. Franklin.....	3 4 2 2 5 5	24
D. H. Smith.....	4 5 3 3 3 0	21
E. C. Smith.....	4 3 3 5 3 4	26
R. McDonald.....	2 3 3 4 2 3	21
R. Rhodes.....	4 3 2 3 2 0	16

As will be seen by the above scores E. C. Smith took the first prize, J. P. Franklin the second, and H. White the third. In shooting for the badge the members only had time to shoot three times each, owing to the lateness of the hour, and made the following scores: H. White, 13; J. Chase, 11; D. H. Smith, 10; J. P. Franklin, 9; E. C. Smith, 12. The two previous weeks the badge was won by H. White with scores of 28 and 29.

WISCONSIN—Milwaukee, September 5th.—The eighth and last contest at 1,000 yards for the Remington revolver prize, was shot on the 2d inst. Chas. Turner won the prize the third time, by a score of 38 out of possible 50. The scores were as follows:—

Name.	Total.	Name.	Total.
Charles Turner.....	38	John C. Wells.....	32
J. M. Arnold.....	31	John Mennier.....	33
John Johnston.....	37	Frank Hawley.....	32
E. D. Bangs.....	35	E. Fielding.....	26

The first annual meeting of the Milwaukee Rifle Club was held in the evening, at the rooms of E. D. Bangs, a large number of the members being present. After the usual business was transacted the following officers were re-elected the ensuing year: President, John Nazro; Vice-President, Gen. E. W. Hincks; Secretary, D. B. Frankenburg; Treasurer, John Johnston; Executive Committee, John Nazro, D. B. Frankenburg, Charley Turner, John Alison, Jr., John R. Goodrich; Finance Committee, C. T. Hawley, O. K. Hopkins, E. Fielding; Range Committee, Col. J. M. Arnold, John C. Wells, Chauncey Simonds.

CANADA.—The annual matches under the auspices of the Dominion Rifle Association of Canada, were begun on the 5th inst., at the Rideau Range, Ottawa. There were nine matches in all, with good prizes, and a large number of competitors. Seven of the latter came from Prince Edward Island, it being the first time the Province has been represented in the Dominion matches. There were 118 competitors in the all-comers match, and all the others were equally well filled. Our space will not allow us to give details of the match.

PAWTUCKET, R. I., September 2d.

EDITOR FOREST AND STREAM:—

Would it not be a good idea that in connection with the Centennial matches or during the fall meeting at Creedmoor, there should be a match specially arranged to test the absolute accuracy of rifles at sporting ranges? Nearly all game killed with the rifle is killed at ranges between 50 and 300 yards. And as all the best makes of rifles would be represented and could be shot by the best marksmen in the world it would be a splendid opportunity to test accuracy at sporting distances. In order to make such a test the most reliable it would seem to me that a medium distance should be chosen, say 200 yards. That the marksman should be allowed any rifle within the rules and any position with a rest for head if preferred. That the targets should be of card board, one for each competition, and that a group of at least ten shots should be fired by each without special regard to the center of target, but to make as small a group as possible. The marksman making the smallest group, or a group measuring the least from a common center to win.

Some such an arrangement would simplify the problem as much as possible and give a pretty reliable test. This would be a match which every sportsman in the world would be interested in. We want to know which kind of rifle will shoot every time the nearest the same spot at a sporting distance. And I appeal to you on behalf of my fellow sportsmen to use your potent influence with the "powers that be," to have some such match arranged for the coming fall meeting. Of course the time is short and the programme is out but I should think a supplementary match of that kind might be arranged.

F. T. RABBETH.

[Several of our leading matches are shot at Creedmoor with any rifle and at 200 yards range. To be sure they are shot "off-hand," as seems eminently proper at such short range. If the match our correspondent proposes was merely to be a test of rifles it would answer better to use a vice or gunmakers rest, as in the other case very much depends upon the skill of the marksman, and the possession of the most accurate rifle will not make a good shot. We present the subject, however, for consideration. Since the above was placed in type Mr. Rabbeth, if we mistake not, has won the 200 yards international championship at Creedmoor. He certainly, should be satisfied with his rifle, and his own skill as well.—Ed.]

Game Bag and Gun.

GAME NOW IN SEASON.

Moose, *Alces machis*. Black-bellied plover or ox-eye, *Squatarola helvetica*.
Caribou, *Tarandus rangifer*. Ring plover, *Egialitis semipalmatus*.
Elk or wapiti, *Cervus canadensis*. Silt, or long-shanks, *Himantopus*.
Red or Virginia deer, *C. virginianus*. Silt, or long-shanks, *Himantopus*.
Squirrels, red, black and gray. Woodcock, *Philohela minor*.
Hares, brown and gray. Red-breasted snipe or dowitcher, *Macrorhynchus griseus*.
Keed or rice-bird, *Doichonyx oryzivorus*. Red-backed sandpiper, or ox-bird, *Tringa americana*.
Wild turkey, *Meleagris gallopavo*. Great marbled godwit, or marlin, *Limosa fedoa*.
Pinnated grouse or prairie chicken, *Cupidonia cupido*.
Ruffed grouse or pheasant, *Bonasa umbellus*.
Quail or partridge, *Oryz virginianus*. Yellow-shanks, *Totanus flavipes*.

"Bay-birds" generally, including various species of plover, sand-pipers, snipe, curlews, oyster-catchers, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

Correspondents and subscribers will oblige us and serve the cause by sending four-line reports of the shooting in their respective localities.

GOOD GROUND AGAIN.—Mr. Wm. Lane of Good Ground, L. I., again has our thanks for a bunch of bay birds, comprising jack curlew, yellowlegs, dowitches, etc. The recent storm appears to have driven the birds into Shinnecock Bay, and we hear there is fine sport there. At all events sportsmen desiring this kind of shooting can rely upon having "straight" information by telegraph by addressing Wm. Lane as above.

—Rail were plenty on the 1st of September on the Hackensack, but owing to the meadows all being cut so early they are about shot off, and being little cover we will not have much shooting.

NEW HAMPSHIRE—Rye, September 5th.—Woodcock and partridges continue scarce, partly owing to the moulting, and partly to the long drought. The best bag in this section, thus far, has been made by Dr. Nelson, of Portsmouth. Snipe, yellow-legs and plover, have just commenced to put in an appearance on the marshes, and the first loon (great Northern diver) of the season was killed off Foss' Beach yesterday morning. The southward flight of coots has not as yet commenced.

NEW HAMPSHIRE—Tamworth, September 8th.—Ruffed grouse are going to be very plenty this season. Bears are getting very numerous. Charles Knox has shot three the past month (August) on Chicorua Mount, and seen several others. A young fellow shot a young eagle that measured 5 feet 4 inches from tip to tip.

Laconia, September 11th.—Ruffed grouse are plenty, and good shooting may be expected as we have at last had a good rain. No large bags have been made as yet. Ducks are beginning to come into Lake Winnepesaukee.

Y. R. G.

MASSACHUSETTS—Salem, September 11th.—Of the game taken and seen during the past week there have been a pretty good quantity. A party of four just returned from Eagle Hill, Ipswich, say they count up some 400 birds of different kinds—yellow-legs, plover, rail, etc. We had some northeast weather yesterday, but it backed in wrong for birds. There have been a considerable number of the rarer shore birds taken this season, including phalaropes, white-rump peeps, curlew, piping-plover, the yellow rail, and one bird, I think the white rump, a Bonaparte's sandpiper, but am not certain. Partridges are in order, a fair number having been shot. Woodcock are things that used to be. Twenty-three loons were counted flying over Boar's Head, N. H., last Sunday, and a flock of 40 white-wing coots were seen off shore. Some good rail shooting has been had about the Merrimac and its tributaries, and I think more may be expected if the weather gets not too cold. Two bald-head eagles were shot near Middleton lately; 12 summers and 2 jack-curlew, and 10 summers and 1 dough-bird; by one gun in two days, at Swampscott, last week. I shot the first uplander taken on the Neck this season last Saturday. There have been a few blue winged teal shot, but no black ducks yet. Sanderling are quite scarce this fall, and of late the ring-necks also.

Cohasset, September 11th.—Bay-birds coming along now first rate. No fault can be found with the gunning during the last few days. The best bag was 15 uplands, 6 beetle-heads, 7 doe-birds, and a dozen small ones to one man. Expect a good flight in a day or two, as they are now about Portland, moving slowly, mostly black-breasts. No ducks as yet to speak of, excepting a few blue-wings.

S. K., JR.

NEW YORK—Hornellsville, September 10th.—I have not heard of any very large bags being made yet. Four members of the Canister Valley Club have just returned from their annual hunt at Silver Lake. A party from Mount Morris were ahead of them on their usual shooting grounds. They had to drive 12 miles every day. The best afternoon was 16 grouse to 4 guns.

STUBEN.

Louisburgh-on-Hudson, September 11th.—Woodcock are scarce. I think partridges will be more plenty this season, with a few quail. I have been out three times, and killed six woodcock out of seven. The other day, while out with my setter-dog Duke (he's A. 1), I killed two woodcock, and while expecting a partridge to fly out, out jumped a fine dog-fox, which I killed with a charge of No. 6 shot.

PHILIP CLAYTON ROGERS.

VIRGINIA—Norfolk, September 7th.—Saw on yesterday, one-half mile from town, a perfectly white blackbird, and one about half white. Saw also two fine coveys of quail, one covey about half grown, and the other nearly full grown. In the last covey the hen led the flights, and when the whole covey was just cleverly in cover, the cock rose and covered the retreat. The bull-bats (night-hawks) seem to have given us the go-by this season. Bonnot, the florist and nursery-man here, states, that yesterday, he saw on a field on the edge of town, a fox run up a tree to escape a couple of dogs, and that having his gun with him he fired to make the fox jump out. Instead of descending he went higher, so he shot again, and the fox jumped out, but the distance was too great for Mr. Fox, for he broke his neck.

DRAKE.

WISCONSIN—Montello, September 8th.—The season for water-fowl shooting in Wisconsin opened quite propitiously on the 1st inst. Ducks were found more abundant than usual at the beginning of the season in this locality, though comparatively small numbers were bagged by those out on the first. The recent heavy and frequent rains have overflowed the marshes and low-lands, and out on these shallows the wary foul will be perched, at present safe and secure from harm. As the water subsides and the ducks are forced to seek their wonted resorts—the sloughs and rice fields bordering the lakes and streams—the sport will doubtless be excellent. Wood-ducks are very plentiful, and mallards and teal are coming in rapidly. A few snipe have put in an appearance, but they have not arrived in sufficient numbers to afford sport in shooting "long-bills" as yet. Ruffed grouse are quite scarce in this locality, though farther north they are reported abundant.

FRED.

NORTH CAROLINA—Morgantown, September 7th.—The prospect for good quail shooting is excellent. I hear of numerous bevys near this place.

M.

CONCENTRATING CARTRIDGES.

NEWARK, August, 1876.

EDITOR FOREST AND STREAM:—

In looking over a recent issue of your spirited paper, we notice another communication from "Old Sportsman," relative to the merits of our make of cartridge concentrator. Permit us to use your valuable columns to respond to "Old Sportsman." In his communication he begs the question on loading the particular shells that he described in his original letter. No man, be he sportsman or otherwise, can load those shells in the manner he described, with two wads, and our concentrator cartridge without damaging the roll at the end of the cartridge, and so destroying a part at least of its actual merits.

Again, every sportsman does know, or should know, that all guns of the same gauge are not bored exactly alike. Take the 12-gauge gun that "Old Sportsman" speaks of, the chances are that it is not a 12-gauge exactly—he may, and doubtless does think, that it is, but the test of the gunsmith's callipers, would in all probability convince, even "Old Sportsman" that the gun he speaks of, no doubt a good one, is not a true 12 gauge.

In this age of so-called improvements we have the choke-bore, the modified choke, the so-called true cylinder or parallel bore, which like the Dutchman's canal boat, is apt to be wider in the bore at either end—than it is in the middle. And again, we have the open muzzle—all these different varieties and no two of which are alike, or will bear the test of a first class mechanical investigation. We have seen dozens of fine guns, so called 10 or 12 gauges, that would vary from one-thirty-second of an inch to three-thirty-seconds, and this, even in what are called parallel bores or true cylinders. We write this to show the want of exactness in boring-guns is a very common occurrence and as before said every sportsman should know of it, as every gunmaker certainly does.

To return to our cartridge, we have this to say, that one of them properly loaded into a shell will give better and more certain results than shooting plain shot. We have commendatory letters from friends of the shot gun, all over the country, that fully endorse all and more than we claim for our cartridge concentrator. Whether these gentlemen are novices or otherwise, we are unable to say. All we can mention on the subject is, that each and all of their compliments on the efficacy of our cartridge concentrator are voluntary.

There is no doubt they vary somewhat in their results. The variation in the boring of the guns sometimes causes this or, some people like "Old Sportsman," who are "not novices," may destroy their good quality by bad or improper loading, and then cry out in the columns of your spirited paper that these cartridges are not what they ought to be, &c. In conclusion, permit us to say, that our "cartridge concentrators" are made in one of the most elegant and exact machines that ever was devised. Each and every one of them passes through exactly the same treatment and it is a mechanical impossibility for them to vary in any essential particular.

We cannot finish this communication without saying how much we are indebted to the FOREST AND STREAM for our success in placing our cartridge concentrator among the sportsmen of the country. Our advertisement in your columns has gone the length and breadth of the land, and as a result we have sold them in quantities—getting letters of praise by the hundred from parties who had ordered and tried them. Wishing your valuable paper continued success, we remain yours, &c.,

ALLAN B. KAY & Co.

NEVADA.—The third quarterly shoot of the Virginia (Nev.) Shooting Club, for their gold medal, was held at the race track, north of the city, on Saturday, August 26th, at 12 o'clock sharp. Conditions, 12 single rises, 21 yards rise, 80 yards bounds, H. and T. plunge traps, 1½ ounce shot, 80 yards bounds, 3 minutes to retrieve.

HOW TO CARRY A DEER'S CARCASE.—In the last paragraph of "Cuzador's" letter in another column the writer describes a very ingenious mode of "packing" a deer, much in vogue in California, which our readers would do well to read and remember. A man ought to carry a hundred pounds in this fashion easier than fifty pounds in any other way that we ever heard of.

The Kennel.

Breeding Kennel

OF

M. P. McKOON, Franklin, Delaware
County, N. Y.

Having spared neither money nor time in procuring the best of imported and thoroughbred cocker spaniel stock, I feel confident I can suit the most particular with young stock. For ruff-d grouse, woodcock shooting and common retrieving, beauty and intelligence, no other sporting dogs are their equal. My prices are low, my stock the best, and satisfaction and safe delivery guaranteed to every customer. Sep7-4t

St. Louis Bench Show.

The St. Louis Bench Show for Pointers and Setters will be held at St. Louis, Mo., October 4th, 5th and 6th, at the time of the great Agricultural and Mechanical Fair, and on the grounds of the St. Louis Fair Association. Entries close September 28th. For premium list, rules and entry blanks address

L. O. KALB, Secretary,
St. Louis, Missouri.

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMP'Y

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROT-ING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of The Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOV, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing shooting, and Still Hunting.

Also, to TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

D. M. BOYD, Jr., Gen'l Pass. Agent.
FRANK THOMPSON, Gen'l Manager. feb17 1t

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road, radiating from Chicago. Like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Nagaunee and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and via the Illinois Central, reaches Warren, Galena and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction, to Council Bluffs and Omaha. This last named is the "GREAT TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento, San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEESE, AND BRANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by any in the West.

THE

"Boston Shooting Suit."

(NAME COPYRIGHTED).

MANUFACTURED ONLY BY

G. W. SIMMONS & SON,

Boston, Mass.

SOLD everywhere in the U. S. by all first-class dealers in

SPORTSMEN'S GOODS.

EACH GARMENT DISTINCTLY MARKED

"BOSTON SHOOTING SUIT,"

made by

G. W. Simmons & Son.

This new design of WATERPROOF SHOOTING SUIT, made from extra quality duck, has acquired quick celebrity. Advertised for the first time in April last in the *FOREST AND STREAM*. In five months it has attained such popularity as to be called for from all parts of the country, and even from England.

"Shipping clothing to England strikes us very much like sending 'Coals to Newcastle,' but the merits of the 'BOSTON SHOOTING SUITS' have been heard of in the Old Country, and that land of sportsmen has sent an order to Messrs. Simmons & Son, which will doubtless be followed by many others. Our Editor in-Chief, who knows something about a sportsman's requirements, is using this same equipment in the Adirondacks."—*Boston Paper*.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at \$13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloon.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the *Golden Rule* (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skilfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, water-proof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Bust Measure, Waist Measure, Inside Seam Coat Sleeve, Inside Seam Pantaloon; Mention Height and Weight.

SHOOTING AND FISHING SUITS,

(complete).....\$20

W. H. HOLABIRD

Would most respectfully announce to his patrons and friends that he is prepared to make

Shooting and Fishing Suits

at the above prices. The ten dollar suit is better made than any competitor can offer for the same money. My original design having been appropriated by other manufacturers I have been compelled to make many changes in the arrangement of pockets, &c., for which I have to thank the fraternity at large for suggestions. I believe that I have the

BEST SHOOTING AND FISHING COATS IN THE WORLD,

and respectfully solicit your orders. I send my new Illustrated Catalogue, 10 pages, free on application.

Dealers will find it to their advantage to handle my goods. They are better known and more highly esteemed than any other make.

Address

W. H. Holabird,

VALPARAISO, IND,

N. Y. Office: No. 1 COURTLAND ST.

The Hazard Powder Co., MANUFACTURERS OF Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office

88 Wall Street, New York.

GUNPOWDER.

Dupont's

SPORTING, SHIPPING AND MINING

POWDER.

DUPONT'S GUNPOWDER MILLS

(ESTABLISHED IN 1801).

Have maintained their great reputation for 75 years Manufacture the Celebrated

EAGLE DUCKING, EAGLE RIFLE, AND DIAMOND GRAIN POWDER.

The most Popular Powder in Use. Also,

Sporting, Mining, Shipping and Blasting Powder

Of all kinds and descriptions.

For sale in all parts of the country. Represented by

F. L. Kneeland,

Feb 10-1y 70 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6½ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes FFG, FFG, FFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6½ lbs., and in canisters of 1 lb. and ½ lb. All of the above give high velocities and less resistance than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFIN & RAND POWDER CO.,

26 Murray St., N. Y.

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired. The powder is also well adapted for shot guns. Inquire for the "Dittmar Powder" of your dealer address the
DITTMAR POWDER MANFG CO.,
NEPONSET, MASS.

Thomson's

Oil Finished Grain Leather Shoe-Pack or Moccasin.

With Sole, Price, \$7.50. Without Sole, \$5.50.

Made with heavy sole for land use; also without sole for snow and canoe purposes. All hand sewed and strongly made. Laced in front with hooks (over English style of water-tight tongue), thereby securing PERFECT FIT around ankle, thus preventing all slipping at the heel. Made with broad soles and on scientific principles.

Fills the want long felt by sportsmen for an easy fitting and durable shoe.

In ordering, state size of boot worn. Sent by mail on receipt of price, with 40 cents additional for postage, or by express C. O. D. everywhere. Manufactured by THOMSON & SON, 338 Broadway, New York. ju27-tf

Good's Oil Tanned Moccasins.

Paper and Metallic Shells

FOR

Breech Loading Shot Guns.

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dec23-tf

JUST OUT!

ADIRONDACK GUIDE.

NEW EDITION, WITH MAPS.

BY E. R. WALLACE.

Gives all possible information relative to Routes, Hotels, Resorts, Outfits, Guides, Distances, &c., with amended railway schedules, &c.

The only Complete Guide to the North Woods.

The instructions embrace everything that can be desired. Taking it all in all it is the most complete book that has been published on the Adirondacks, not excepting even my own—Hon. J. T. Headley.

I regard your "Descriptive Guide" and the "Appendix" as a most useful—nay, indispensable, manual for tourists to that wonderful Wilderness. A tour in that region is eminently a practical matter, and for that reason I regard your "Guide" as an important, useful, and timely publication.—Benson J. Lossing.

It is the only thing of the kind that has yet been published—the very thing that has been so long wanted and waited for.—Alfred B. Street, Author of "Woods and Waters."

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the
 extreme SIMPLICITY, STRENGTH and DURABIL-
 ITY of their New Patent "SIMPLEX" Breech loader
 and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,)
 its mechanical soundness so thorough, and the
 strength and simplicity of the action so great, that
 W. & P. feel sure it will supercede all the complicated
 and manifold grips now in use, its one powerful grip
 being far stronger than any double, treble or quadruple
 grip now used. In this new action LEVER and GRIP
 ARE ONE SOLID PIECE OF STEEL and the AN-
 GLE of the BODY is left in its ENTIRE STRENGTH.
 Drawings of action and extractor will be sent on ap-
 plication, and orders may be forwarded through any
 of the best houses in the States for execution in the
 Spring.

Guns guaranteed to make patterns of from 160 to
 230 with No. 6 SHOT AT 40 YARDS, as desired.

THE INTRODUCTION OF MINT.

A LEGEND OF CHICAGO.

IN fair Chicago's earlier days,
From '33 to '5,
Among the various people who
Swarmed in that Western hive;
The Old Dominion sent her share,
And then, as now, were found
Judges and colonels coming from
Kentucky's bloody ground.

These prairie lands were rich in crops,
Corn, wheat, and hogs for slaughter;
Lots doubled every week in price,
And whiskey flowed like water.
One thing was needed—only one,
To make a paradise,
Mint juleps could not be enjoyed
For want of mint and ice.

All other sweet and fragrant herbs
Bloomed on the prairie round,
But *mentha pip*, too cruel fate
Omitted from the ground,
Ice-houses soon appeared, well filled
From the then limpid river;
But what is life bereaved of mint?
Men's nerves ceased to quiver.

From Indiana's treeless plains
The Hoosiers brought their mint,
In far Wisconsin's wooded hills
The Badgers took their hint.
Each steamer from the lower lakes,
Schooners from Erie's shore,
Brought deckloads of the blessed herb,
The cry was still for more.

Now times grew hard, cash disappeared,
And lots began to fall;
Some citizens began to leave,
Milwaukee had the call;
Kentucky and Virginia's sons
Thus sadly prophesy:
"No town can live where mint won't grow,
Chicago 'll surely die!"

What saved the town? few knew the tale.
About this time Death came
To a colonel of Virginia race,
Starbottle was his name;
From these rich ashes, julep quenched,
A crop of mint arose,
Covered the soil, and with that crop
Chicago greenly grows.

S. C. C.

For Forest and Stream.

The Giant Trout of Rangeley Lake.

A chain of six beautiful sheets of water, in the north-western part of Maine, lying among mountains covered with unbroken forests that the lumberman's axe has not disturbed for many a year, constitutes the headwaters of the Androscoggin River, commonly known as the Richardson or Rangeley Lakes, when spoken of collectively, though separately the three uppermost of the chain are called the "Rangeleys," after an Englishman of that name, who settled years ago at the only village upon the lakes, facetiously called Rangeley "city." The lakes are connected with one another by rapid streams, really portions of the Androscoggin, and it is in the rapid water that the best fishing is obtained.

The trout taken from the Rangeley Lakes are on an average larger than those caught elsewhere in the waters of either America or Europe, and it is probable that the largest individual trout taken with artificial flies were captured in the same region. W. C. Prime in his book, "I Go a Fishing," has the following: "In Maine I have seen many brook trout weighing over eight pounds each, and have evidence satisfactory to me, that at least two trout, the veritable *salmo fontinalis*, our speckled brook-trout, were killed in Rangeley Lake, weighing a trifle over eleven pounds each." The largest fish the writer ever saw, was

one day in September, at the famous Trout-cove at the head of the rapid water at Upper Dam. Mr. Shields, of Boston, the well-known fly-tyer, was angling in the cove when a trout rose a few yards from his boat, making a wake as it turned lazily over (as large trout are wont to) like a porpoise. Mr. Shields is an old angler, has taken many a large fish, and can measure them pretty accurately by his eye in the water. The trout gave him an excellent opportunity to judge it, and Mr. Shields unhesitatingly gave its weight at thirteen pounds. There is very little doubt but there are trout in the lakes of an equal, if not of a greater weight. As a rule, the large fish are loth to rise to a fly. When they do, they roll up leisurely to the surface and suck it in, much preferring to feed in deep water. It is often difficult to convince any one who has confined his fishing principally to small brooks, of there being brook-trout weighing seven or eight pounds each; they are rather inclined to believe them a species of lake-trout. But there are no lake-trout in the lakes, or at least none have ever been taken. There is, however, a small blue-trout of curious shape, differing essentially from *salmo fontinalis*, that is now and then seen. The largest trout to my knowledge caught on a fly weighed ten pounds; nothing as large caught in English water in a similar fashion is on record. In the Thames these fish have been taken fifteen or eighteen pounds in weight, but invariably, I believe, with trolling tackle. Every year, in Maine, hundreds of trout are bagged that pull the scale at six pounds, and eight-pounders are by no means rare. The largest brace of trout known to be taken there were hooked at one cast, and successfully netted by Mr. T., of New York, immediately after the equinoctial storm of last September. They weighed nearly five pounds each, and were caught in the brook between the "Big" lake and Molechunkamunk, at the head of rapid water, and with a 10-ounce Conroy rod. That the Rangeley trout attain such a great size, is due no doubt to the immense, undisturbed feeding-ground they possess in the deep lakes, and the tributary streams. Twice a year the trout leave the deep waters of the lakes and ascend the streams. In the spring, when the ice breaks up, and the lumbermen float down the logs from lake to lake, the fish follow them to feed on the insects dislodged from the bark, and also to get a taste of May-flies and other delicacies that are washed from the banks as the water recedes on opening the sluice-dam gates. That they do follow the logs is well known, and the lumbermen may often be seen sitting on the "boom," or outer logs, in a line hauling in fish one after another on hand gear or with the aid of alder poles. Mr. Murray's book on the Adirondacks is calculated to give one the idea that the Maine streams are full of sawdust, and that the lumbermen spoil everything; trees fall right and left, the sound of the axe wakes you at morning to haunt you till night, etc. Now the dams are not for sawing logs, but merely sluice-dams to hold back the water until it be high enough to float the logs over the rapids between the lakes; there are no saw mills, consequently no sawdust; the lumbermen's axe is never heard, nor has it been for years. One never misses a tree in the forest, and if one has never seen the lumbermen sluice their boats through the foaming torrent at the dams at the risk of their lives, or drive the logs over the rapids, I advise him to be sure to time his visit so that he may witness their feats.

While the trout fishing at the lakes is still excellent, it has deteriorated without doubt in the last 20 years. But not so much in June as in September; the fishing a year ago last June I was assured by the native anglers, was as good as they had ever known it. At Upper Dam it was not uncommon for two men to catch a bushel basket full of trout of an afternoon from four or five pounds downward. There were a hue of men on the best days standing on the dam catching two at nearly every cast of their flies. But trout are curious fish in some respects. One day the fishing was excellent, the next miserable, even though the weather on both nights be equally propitious. This change is caused, I presume, by a superabundance of trout food in the stream, the pursuit of which

takes them away from their usual haunts, or perhaps, some peculiarity in air or water. After many fish have been taken out of a pool those that remain will often refuse to bite or look at a bait, even if you sink it under their very noses. They will frequently, too, be made suspicious by seeing a crowd of anglers near them. More than once I have observed a fine trout playing just off the dam, beyond the anglers, merely shaking his tail derisively at their flies as they were offered to him, that I have captured by stealing quietly down while my brother-fishermen had disappeared for their supper, which showed that Mr. Trout was perfectly aware that said anglers were babbling their rods for no good, but when they were gone, he forgot his suspicions and seeing my fly struggling on the water took it like the noble fellow he was. The trout remain in the water of the streams until about the middle or last of July, when they either leave for the deep waters of the lakes or make their home under some cool bank near a deep pool. Bait fishing perhaps takes precedence in June, although one may have excellent sport with the fly. Trolling (with a single hook) is also somewhat in vogue and many large trout are thus caught—the troll being sunk with a heavy weight. But September is the most glorious month of the year at the Rangeley's. The mountain air is inconceivably clear and pure, the maples on the mountain-side are of the deepest red, the birches golden with a dark back ground of firs behind that doubles their richness, and the mountain tops are fringed with snow. The days, too, are deliciously cool and bracing, and the nights so cold that one delights to join the group around the open fire of the camps for a social pipe. If one thing were needed to testify to the popularity of this month at the lakes, it would be the way in which old anglers return year after year to their favorite spots; in fact, one really meets a person there who has not been up before. The fishing in September is better than at any other time and more to be relied on as the fish infallibly ascend the streams to spawn; they are also much larger on an average than in June, and the greater coldness of water makes them much more lively in rising to a fly. September fishing is chiefly along the clear streams between the lakes or the various tributary brooks, and as the water is low, one is able to walk along on the boulders and obtain plenty of room to make long casts of the fly. It is a much mooted question whether trout have any preference for color in flies; to my mind it is clear they have a preference for certain hues, although when they are very hungry they will snap at almost anything. It is when they are not anxious to rise that they may be attracted by certain colors. Genio C. Scott speaks of catching several large trout at Middle Dam out of a pool where hundreds of fish were jumping, but could not be induced to rise to a fly. Scott at length observed they were feeding on grasshoppers, and fastening a couple to his leaders, struck and killed several fine ones. Last season I noticed at the same place that the large trout preferred rather a brilliant, small-sized salmon fly to any thing else. Perhaps the best fly for general use is a Montreal, claret-hackle, turkey or mallard wings; this and guinea hen tail. Next in preference comes brown hackle, with brown wings, which also is very successful. The rods that come to the lakes are usually of the best description, Castle Connell's, Leonard's, Conroy's, Morris's, etc. I think the Leonard split-bamboo—six-splice, is conceded by the majority to be the best rod for casting, playing and general use.

Ah! is there anything more exciting than striking a seven or eight-pound fish in a deep pool along the brook at the head of rapid water where the utmost skill is requisite to save him! this, too, on an eight or ten-ounce rod. There is a prolonged excitement, a sense of glorious uncertainty about it that few sports afford. Your game is not as large as salmon, though to be sure your tackle is lighter, but there is not the fatigue and the tramping there is in salmon fishing that makes it such hard work, delightful though it be. The beginning of the close time in Maine used to be October 15th; two years ago it was for a second time made October 1st. The change was undoubtedly wise as the fish are often ready to spawn by the last of September. I have

caught, in fact, females in the latter part of August with the spawn all but ready to be ejected. In the small streams the females are usually the first to ascend from the lakes, and though they may be in plenty there will often at first be a great paucity of males. Indeed, I have taken at times nothing but the former in a brook, while off its mouth in the lake I have captured nothing but the red-bellied males. As in salmon, the male trout has a hook at the end of the lower jaw, increasing as the fish increases in age. The Rangeley trout are very beautifully marked, are almost unequalled in this respect and for beauty of form. In the different streams the markings and color often vary so that out of a string of fish caught at different localities an experienced guide can tell their habitats by their peculiar distinctions. Upper Dam, situated on the stream between the third and fourth lakes of the chain, is on an average the best fishing locality of the region.

The Upper dam itself is an immense structure some fifteen hundred feet in length, built to hold the water of the upper lake back to gain sufficient water to sluice the logs. "Some years logs to the value of \$2,000,000 are run through this dam and down the Androscoggin to market." The stream on which the dam is located is a very pretty one, and its clear waters rushing through the clean boulders below the dam, making both rapids and deep pools, is unsurpassed for the haunts of trout. But north of the dam at the head of the stream forming a recess in the lake above is the celebrated trout cove from which more large trout have probably been taken than from any similar or equal amount of water in the world. The trout come into the cove out of the "Big" lake to spawn at the head of its outlet, which runs directly out of the cove and through the dam. The fishing is accomplished here both from boats and from the shore. At the dam is a most excellent camp for boarders, where the angler may have a good room to himself, and food prepared by the best cook in the region. When the weather becomes frosty the fish begin to run in from the lakes and up the streams to spawn, usually about the first or middle of September, sometimes not until October. After the equinoctial storm the angling is generally very good. When the trout first come in from the lakes they appear lazy and lie quietly near the bottom of the water in the deep pools and are perfectly indifferent to the angler's wiles. I have counted dozens of great fellows grouped together in the water below the apron of the dam so close to me that I could have reached them with a broom-handle disdaining to notice either one's presence or a bait. This tameness is sometimes taken advantage of by—I was about to say anglers, but will not throw a stain on the name—those who come here to fish. They tie their hooks together (which, by the way is against the law) wrap a lead around them for a sinker, lower them under the fish and jerk them suddenly up into its side or belly. This was done last year to my knowledge by a guide who did so that his employer might have the sport of playing the poor creatures. He was soon warned by indignant anglers to quit, which he did, carrying a wash-tub full of jigged fish with him regardless of all fish wardens. The water is so clear near the upper dam that one can see the females clearing a space in the sand or gravel in the swift water for a nest. I recollect two eight-pound fish that were spawning whose every movement I could watch. There they remained near their nest for several days perfectly oblivious to all lines until a guide "jigged" one of them. Pardon an enthusiast for running on for such length. I wish I could consider this article finished, but I feel constrained to mention a fact that will invariably tend to sadden every lover of the gentle art. It is well known that the pickerel is an inveterate enemy of the trout. The two cannot exist together unless in large rivers where the currents are so swift as to prevent the pickerel, who does not like quick water, from inhabiting them; but even then they will frequent the eddies and devour the young fry. Introduce pickerel into a trout pond, be it ever so well stocked, and in a few years there will be few trout left. Several cases have come under the writer's observation, of which at present it will be unnecessary to mention more than one. About seventeen miles from the second lake of the chain is Roxbury pond, a large sheet of water several miles in extent. Ten years ago it was well filled with fine speckled trout, often taken from it in large quantities, some of the fish weighing several pounds apiece. Some foolish person thinking it would be pleasant to have pickerel also in the pond introduced them forthwith. To day trout are rarely seen there, though pickerel swarm of goodly size. Not only have the trout been "cleaned out" in the pond by this fresh-water shark, but out of its inlet and several miles of its outlet. Some years ago, at no very distant period, pickerel appeared in Umbagog lake, the first of the Rangeley lakes, and now are very abundant in its waters, which are admirably suited from their muddy nature to that fish. One of the oldest guides is firm in the belief that they have found their way into the next lake above Welokennabacook from several signs he has seen of them. The heads of several of this fish were found near upper dam, probably left there by some party. But this statement argues little or nothing, as these fish may have been caught miles away. If they have got into Welo—good-by trout-fishing in a few years, although trout will occasionally be caught for a long period, yet not in sufficient numbers to attract the angler. Having once got into Welo there is nothing to keep them from the next of the chain. Between Welo and Umbagog there is a very rapid stream some five miles in length up which I have often heard anglers declare pickerel could not swim. The pickerel, however, is, when necessary, a fast swimmer and could undoubtedly stem the currents in the spring when the water is high by resting in the eddies which occur every little distance. But allowing that they could not find their way up stream it is no reason to suppose pickerel are not in the upper lakes. The present fishing law allows no fishing from October 1st to February 1st. If memory serves me aright the close time formerly extended until March 1st. Now during the summer and fall the people living in the vicinity, who are mostly farmers, are obliged to work up their crops and have no time to fish, while in the winter they have leisure, but the law forbids any fish-taking during the greater part of that season. It is no doubt tantalizing to see the "city folks" skimming the cream off what they consider their property while they cannot take any share in it, and they have a good deal of feeling about it that does not, however, extend itself to individuals in the East, for the country people around the lakes are very kind and hospitable. A couple of winters ago the fish warden at Andover village near the lakes, heard of some men fishing on one of the chain during close time, and proceeding hence brought the offenders to justice and had them fined. The men swore

vengeance that they would put pickerel into the lake, and went away in terrible anger. If my information is correct it is not the first time similar threats have been made about putting in pickerel. If the latter fish has got into the two beautiful lakes of which I have spoken one of the best trouting regions in the world will be ruined, and then with nothing left but to stock it with black bass. I hear of "fresh-water salmon" (land-locked, I suppose) that have recently been taken in the upper lakes weighing from one to four pounds. They were introduced from Sebago Lake. Trout culture on the big lake or Moosealucmagentic to a considerable extent is engaged in under the direction of several gentlemen, among them Mr. Geo. Sheppard Page, of New Jersey, the President of the Oquossoc Angling Association. They have a hatching house and several breeding ponds. Last year they obtained from spawn some 250,000 young fry. Mr. Henry O. Stanley, Assistant Fish Commissioner of Maine has charge of their culture, and as he has been able to produce 95 to 98 per cent. of the spawn it is unnecessary to speak further of his skill.

BEAR BAITING IN CALIFORNIA.

IN the early days of California when bull and bear fighting was called sport by early settlers, the lassoing of the bear was really sport, apart from the brutal fight afterwards. In the first place a bear was baited by killing a bullock on an open spot near where bears were common; then by taking pieces of meat and dragging them a mile or more in different directions, returning to the starting point. As soon as a bear came to the bait word was sent around to those expert with the lasso, when they would meet at the ranch where the bear was baited, leaving in time to place themselves before night, generally on the full moon, all but two of the party stopping four or five hundred yards away from the bait. Two of the best with the lasso advanced within 200 yards and dismounted to watch, care being taken to have the wind blowing from the direction they expected the bear to come. As soon as a bear came and began to feed, the two men on watch re-mounted, that being the signal for all to be ready for a dash. Only these two would first advance on a slow walk till the bear discovered them, when with a yell they would dash after him at full speed. Then the rest, joining in as quickly as possible, Bruin was his own master but a few minutes, as the first lasso put on him rolled him over, and the others picked up his legs with their lassoes till he was stretched flat on the ground with his legs pointing to the four points of the compass. To keep him alive he had to be secured to a tree. To do this he was dragged backwards to a tree of suitable size, those having the lassos on the hind-legs, going each side of the tree, and dragging the bear until his tail touched the bark. One then dismounted and made a lasso fast to his hind-legs, taking what a sailor calls a close hitch from one leg to the other, till its length was expended, leaving a space of about two feet between; then the lassoes were slackened and the bear was at liberty to walk around the tree, always keeping it behind him. When they wished to have a fight a three-year-old bull was lassoed and brought to the spot near the bear and tied down. The bear was again lassoed by five, one lasso on the neck and one on each leg, and brought to the bull, when they were made fast together by a rope fastened to the bull's fore-leg and the bear's hind-leg, with a space of 20 feet between them. The lassoes were then slackened and quickly cleared of the animals, when they got up to fight for their lives. A young bull with sharp horns stood an even chance with the bear which was generally killed, or often both were left dead on the field.

ARTIST-LIFE IN THE ADIRONDACKS—II.

"**W**HEW! how the wind blows! And how the rain is falling!" I exclaim, as from sleeping soundly in my tent I am awakened by the flapping of the canvas as it sways to and fro and tags at the cords as the wind rises. I think every minute that the cords will part and my tent "go up like a balloon" and leave me very, very wet. But no, the ropes are strong, the wind whistles and shrieks by, the rain pours in torrents upon my canvas walls, and I bless the man who makes good waterproof tents and stout cordage. How nice it seems to be lying snug in warm blankets, knowing you have a good tent over you, and you rather urge on the fury of the gale, for the splash of the rain-tells you to sleep again. Next morning the wind is still blowing and we feel it in its fury, as our camp is situated on high land, with no obstructions to break the beat of the storm. How the waves roll and dash against the shore, their white crests looking like serried rows of teeth! The tall trees bend and crack, and the wind shrieks like the wail of some spirit seeking a resting place. There goes a tin kettle with a guide in full chase! And now some tin pans go sailing off into the lake. Others strew the ground, and the guides skirmish around to capture lost dishes, and we find that we shall have to take our meal in the guide's shanty. So with cup of coffee in hand and plate of beans, fried trout, and hot biscuit we seat ourselves upon a log in the hut, and find things tolerably comfortable, although the gale is howling outside. The hounds eye us askance, as much as to say, "What nice biscuits they are," toss Watch and Zigel each one, and it is gone at a gulp. They put on a satisfied expression which says, "Good sample; we like it, give us another," and thinking kindness won't go unrewarded when they are after a big buck, we toss them each another, and still another, until Hank says "Ef you keep givin' them dogs so many biscuits you'll clean us out of our breakfast, or I'll hev to go to bakin' agin." So we finish—winding up with a huge chunk of maple sugar, and the guides sit down to their meal, and we wend our way to our tent.

It occurs to me that that string of trout caught down at the dam this morning will look nicely painted, and I set to work, soon busy forgetting the wind and rain as the colors of the fish began to appear upon the canvas, the bright golden and crimson spots, the dark hue of the back and head. This will be an addition to my collection of sketches. "By golly! them are nat'ral as life," and I turn and behold Hank looking over my shoulder and praising my work. In the afternoon the wind dies down, the rain stops, and the west is one mass of crimson as the sun sinks in his western bed, and the violet and purple run up the mountains; every wavelet of the pond is tipped with gold. An

eagle poises itself over yonder hill, and we draw close around the fire, for the nights are "cold and chill."

I ask George Skiff to tell us about his adventure with the rebels. George, by-the-way, is a great stutterer: "I was down fighting the rebs in the rifle pi-pi-pits," he begins, "when all re-re retreated and lef-lef-left me and an old not ho-hold man alone; an-an-and the ol-of-old man he-he he stri-stri-strips himself of everything and star starts and ru-runs. Ne-ne-never seen a man ru ru-run so in all my life. I cou-cou-could hear the rebs hol hol-ler to him: 'Ru-ru-run you Yan-Yan-kee! Le-loo-look at the cu-cu-cuss run!' And I thought if an old-old-old man cou-cou-could ge-get away I could. And I up and ge-hets; ne-ver kne-kne-knew I could ru-ru-run so-so-so fast. The rebs hol-hol hol-ered to me-me-me, 'Sto-sto-stop, you Yan-Yan-Yankee you lo-lo long leg-leg-legged de-de-devil! sto-stop, or we we-we'll sho-hoo hoo-shoot!' I ye-hel hel-belled back, 'I ha-ha-hadn't go-got time.'" Well done, George, that was good running. And then he tells about how he was out on picket one day when it was raining hard, and had a shoddy India rubber blanket which wet through every few minutes. He was shivering with cold when an officer left his blanket, a "span nice new one and thick," near George, who was concealed in the bushes, and went into the woods a short distance, leaving his horse and blanket. So George slipped out and picked up the blanket, slipped it into his haversack, walked quickly down the road and was on guard in sight of everyone. By and by the officer came along, tearing mad, the rain spoiling his good clothes and wanting to know of George if he had seen a man pass with a new rubber blanket. "No," says George; "haven't see-see-seen anyone," and the officer went off swearing. "I had a ne-hew blan-blan-blanket tha-tha-that wi-wi-ke-kee-keep me dry instead of that ol-of-old thi-in ting and the officer co-co-could ge het plenty more," says George. Here is another one of his stories: "A man once as-as-asked me how-how-how far it wa-wa-was to Ma-Ma-Ma-Malone, and I begun to-to tell him fo-fo-fo-fo-fo-oh damn it, go a-head, you-you ca-ca-ca-n ge-het there be-fore I can te-te-hell you! and the man nearly fell off the se-se-heat laughing."

The other morning I was watching for deer on a point near camp. It was a lovely, still day, the sky blue, with white drifting clouds, and the shores and mountains clearly reflected in the bright waters of the pond, which lapped the beach at my feet. A kingfisher rattled away—raised his feathery crest, and wondered who was looking at him. An eagle screamed sailing far up in the sky, and now and then a lone duck scudded swiftly past. The roar of the dam below me was heard, as the water plashed over the rocks, and a thrush twittered and jumped on a bush near by. Suddenly I heard the hound's clear note ringing out far up the mountain's side, clear and full as a bell. I am all attention. What is that snapping the twigs coming down the mountain? I stand like a statue until the bushes part, and out leaps a three-year old buck with his horns yet in the velvet, and dashes into the water from yonder point not over ten rods away; but he sees me, and instead of swimming across to the shore where I stand, as he at first intended, he turns hugging the shore, and makes for another point. Waiting until I think him clear of the point he leaped from, I shove off the boat and pull my best. The deer turns again for the shore he has quit, as I was afraid he would, and I strain every muscle for that short distance, but find it is of no use, and reaching for my rifle I aim and fire as he jumps from the water, but like a flash he's up the bank and away. I put the dog on again, but he runs up the Saranac river towards Rainbow, and is safe, while I row back to camp, a "sadder and a wiser man."

C. O. MARKHAM.

Round Pond, Sept; 12th.

Fish Culture.

THAT DAM.—The Massachusetts and New Hampshire Fish Commissioners were to meet at Lawrence about the middle of the month to look over the new fishways at that place, which, in the opinion of Col. Webber, who has seen them, are erected in accordance with the best views on that subject. We hope that Messrs. Brackett & Co., will settle the question finally, so that the public will no longer be annoyed with this dam business.

—The State Fish Commissioner of Iowa is engaged in transferring and propagating choice fish from the Mississippi into other rivers in Iowa.

—The Massachusetts shad fishermen have waked up to a knowledge of the fact that while their Connecticut neighbors have had an unusually abundant catch of shad the past season, they have had rather poor pickings—the result, they think, of the extension of the dam in the Connecticut river at Enfield. Besides checking the course of young fish down the river, this dam is threatening to do considerable damage to the meadows between Enfield and Springfield, and active measures are to be taken for the protection of the endangered interest.—*Ex.*

FISH RAISING.—Dr. G. K. Hitchcock, of this city, and father-in-law of Howard Coit, Esq., at his country residence in the Napa valley, has utilized a picturesque mountain stream, flowing near his door, in the propagation of lake and brook trout, salmon, etc. A portion of the stream has been diverted from its channel, and a series of small ponds constructed beneath the dense shade. The ponds swarm with splendid trout of from six to eighteen inches in length, each pond containing fish of nearly the same size. He feeds them on minced liver, and some of the fish are so tame that they will take food from the hand of their keeper.

Dr. Simms is preparing to enter upon fish culture on his farm near Santa Rosa. He has an abundance of water which will be conducted from the hills back of his residence to ponds which will be provided for carp, California and Eastern trout, and any other rare fish that he may be able to obtain.

Volney Costen and John Leonard, former residents of Healdsburg, are stocking a small lake in Mendocino county with mountain trout. The lake is situated on the summit of the ridge, between the Russian and Big rivers, about eighteen miles north of Ukiah. It is three-fourths of a mile long, and from three to four hundred yards wide.—*Pacific Life, San Francisco.*

BLACK BASS IN CANADA.—A correspondent of the *Canada Farmer*, writing from Paris, Ontario, thus speaks of black bass as found in that part of the Dominion:—

"There is a great diversity in black bass as to shape and weight. Those caught in ponds and lakes in the counties of Brant and Oxford, to which localities the writer's experience is chiefly restricted, are much larger and thicker and 'chunkier' (to use an Americanism), than those found, say in Grand river. Notwithstanding, where there are long, deep, still stretches of water formed by mill dams as at Galt or Paris, bass are often taken averaging in weight those taken in the lakes. The Pine Pond, on the south edge of the township of Blandford and Blenheim, Oxford, is, or was, a favorite fishing place for both black bass and pike. Here bass of three, four, and even six pounds weight are sometimes captured, the most alluring bait being a fresh, half-grown green or yellow frog. The bass here are remarkable for their thickness at the shoulders. So distinct is the figure and general configuration, especially as regards this latter quality, that we are inclined to believe the bass of Pine Pond, and some other ponds, to be nothing else than the 'Oswego bass' of the American over the lines. However, as regards bass, the truth holds the same as to trout and other fish; the feeding ground alone produces remarkable changes in size, color and general condition.

"The dams of the Grand river, with one exception at Caledonia, are now, we believe, all provided with fish slides or ladders. The tributaries, as Smith's and Horner's creeks, are also similarly fixed at nearly all the mills along their courses, one of the most noted exceptions being Iry's mill on Horner's creek, which is about ten or twelve feet deep in perpendicular height. This latter is a famous resort for fish, the deep hole below the dam, about eighteen feet at the deepest, being up till lately furnished with a store of these fish. Black bass spawn naturally, that is, when the state of the river, as to size admits, according to our present law, from the 15th of May to the 15th of June. The natural instinct of the fish would make this limit in the Grand river even later than the 15th June; but we believe the short close times for bass, as well as for pickerel (which is one month later on the list), are as well regulated as could be in a country of such large extent as our Dominion."

Natural History.

TAPE WORM.

U. S. PATENT OFFICE,
WASHINGTON, D. C., Sept. 11th.

EDITOR FOREST AND STREAM:—

The interesting facts related a few weeks since by your correspondent in relation to finding a tape worm in the salmon have attracted the attention of thoughtful anglers and careful observers. Not everyone, however, who has become interested in the matter has the time or inclination to "post up" in the natural history of this parasite, and even if he had, the proper works of reference are not always at command.

In 1862 I made some investigations and experiments with *P. talnia*, the results of which were published in the "Philadelphia Medical and Surgical Reporter," Vol. VIII, No. 4. The numerous questions asked at that time by persons of your general information leads me to think that many of your readers are now familiar with the history of this entozoon, and that they would be pleased to have it furnished them without the trouble of search. The investigations of naturalists which determined the facts on the natural history of the tape worm are of comparatively recent date. It is now, however, positively known that this parasite propagates itself in a cycle; that is to say, the egg of the matured tape worm after a joint has been passed from the body, find their way directly to the stomach of swine, or else are drawn up with the sap into succulent vegetables that are eaten by them. Each egg is a body armed with three pairs of hooklets, by which it burrows its way into the flesh. It is so closely enveloped in a hard substance that its vitality is preserved for an indefinite period. The eggs, after being in one of the two ways mentioned introduced into the bodies of swine, fill the flesh and make what butchers call measly pork. The encysted egg, which is called a *Cysticercus cellulosae*, drops off its hooklets and commences an inward growth, which results in an oval cyst of half an inch in length, with a white globular body in its center. This is made up of two parts, viz: a ventral portion and a neck. This *cysticercus* has no reproductive organs, and it is only when measly pork is eaten by man and it finds its proper nidus that it loses its caudal vesicle, becomes articulated, and forms the *Tenia solium*, or jointed tape worm.

It is a most curious fact that if measly pork is fed to swine it is digested and passed off with no resultant tape worms, while if the eggs of the *tenia* as passed from man are fed to them in swill, the pork at once becomes measly, that is to say, the eggs develop into the *Cysticercus cellulosae*. On the contrary, if the *tenia* eggs are fed back to a man they pass off undeveloped, while eating measly pork produces the perfected tape worm. There would seem to be the same favorable conditions to growth in the one case as in the other; and yet the facts as above stated have been abundantly proved by actual experiment, such as feeding the eggs and also measly pork to condemned criminals. Thus we have the propagation in a cycle, viz: eggs from the human body pass into swine directly, or through vegetables upon which they feed, are developed there into the *cysticercus* which, when eaten by man, produces the perfected animal. Man passes off the eggs in joints of the *tenia*, which again go the same round. By no means, however, does it happen that every time measly pork is eaten tape worms are produced. Persons with strong constitutions, powerful digestion and active bowels pass the *cysticercus* through the intestine before it can manage to hook itself to the walls.

The small rounded portion of the *tenia* near its head develops into joints, and each one of these joints becomes a separate and distinct animal. It is only when these joints are mature and impregnated that they separate from the main body and are passed off in the feces. Upon the sides of each joint are what are called marginal foramina, and each one contains a complete genital apparatus of both

sexes. Immediately adjoining the little depression and orifice which communicates with the ovary, is the male organ, which communicates directly with the semen. This joint or distinct organization naturalists have called a *proglottis*. Why they thus named it would puzzle any accurate scholar. Perhaps they did so on the same principle that in Washington we call a public reservation Lafayette Square because it contains the statue of Jackson.

On each joint are two faint parallel lines, one near each side. They are the continuous canals through which nourishment is conveyed from one mouth through the entire chain of separate individuals. Naturalists long sought for some complicated digestive apparatus, but this superfluity is clearly wanting. It is not at all likely that this lower order of animal could improve upon the operation of 'digestion' first performed by man, the most nearly perfect of animals. If anyone has the opportunity, as I have had several times, let him take a joint of a worm just passed and press the thumb nail along the faint parallel lines, and he will force out a white substance which, if it is not perfected chyle, certainly exactly resembles it. This lazy robber lies in wait for the chyle perfected by man, and seizes it just as it is ready to be taken up by the Thoracic Duct.

The growth of the *tenia* is prodigious. A person who has passed an entire worm save the head and neck frequently passes during the same year some 18 or 20 feet more, which has since grown out. The *Tenia solium* was so named because it was believed that it was never found with any other parasite in the intestine. I have, however, in a single instance seen both the *Tenia solium* and the *Bothriocephalus lata* (the Swiss species) passed at one time from a single individual who had just returned from a protracted tour in Switzerland. Early writers gave views both amusing and interesting in regard to the origin and uses of tape worms. One asserted that "by their motions they cause a gentle irritation in aid of the intestinal functions, which moreover may stimulate the other viscera to the discharge of their duties, and prevent their falling into a state of inactivity favorable to the commencement and increase of organic diseases." Another says, "they drink up the superabundant chyme, chyle, or mucus of the bowels." Again we read that "they were created as a wholesome check on the pride and vanity of man as trials of his patience and other virtues; and finally to secure him an entrance into an inimitable and eternal state of felicity when that of probation is at end, so that the gates of death may be to him the gates of peace and rest." As to the origin and growth of the worm, authors contended for years that it was but the vivified means of the intestinal canal, or else the same worm that was found in water and certain vegetables.

Your correspondent who removed the tape worm from the salmon presumed it to be a *Tenia solium*, and the resemblance must be a close one, as this little incident will show: In 1874 I visited pools at the upper part of one of the rivers at Gaspe Basin, C. E. No anglers had visited that part of the river that season in advance of us, and so finding in slack water near the shore what at a casual glance seemed to be a few matured joints of the tape worm, we said at once: "Poachers have certainly been here before us." Having so often observed and experimented with the *Tenia solium* I only gave a more hasty glance and set these joints down at once as a part of one. The query then arises to be answered by our naturalists, Whether the worm seen by your correspondent was a veritable *Tenia solium*, some other known species, or a new one? and whether it is commonly or only rarely and accidentally found in the salmon? and whether salmon pass off the ripened joints as indicated by finding them in the shallow water of salmon pools? Perhaps, however, they have already done so, and will favor us with the facts as determined.

A. G. WILKINSON.

ZOOLOGICAL ITEMS.—The white-footed mouse (*Mus leucopus*) sometimes takes up its abode in deserted bird's nests. Audubon mentions several cases. Spencer Trotter last year found one of these mice in an old pensile nest of a red-eyed vireo in Monroe county, Pa. The mouse had stopped up the inside with dry grass, leaving just room enough to squeeze into its bed at the bottom. It was in the nest, but escaped rather sluggishly, as it is nocturnal and sleeps during the day. On April 2d, 1876, Detroit was visited by a sudden and great flight of blue-birds. The day was cold, and the frozen ground was covered with snow. The blue-birds, therefore, resorted to the purple fruit of the Virginia creeper which had hung on through the winter, and all day crowded the vines eating the berries voraciously. The next day the weather became milder and the birds disappeared. An instance of mimicry has been observed in the Santa Cruz mts. in the shape of a milk-white spider, the exact counterpart of the flower Medrono.—*Am. Naturalist*.

—A few years ago the only species of humming-bird known with certainty to occur within the limits of the United States were the ruby-crowned of eastern North America, and the Nootkan hummer of the Pacific coast. Since then additions have been made by Mr. Xantus, Capt. Feilner, Dr. Heerman, Mr. Henshaw and others, a number of these being species occurring in Mexico. The most recent addition of the kind is in the discovery by Dr. Merrill, U. S. A., in Texas, of *Pyrrocephalus ruficeps*, taken not far from Brownsville. There are about thirty species of humming-birds known to occur on the table-lands of Mexico, nearly all of which will be found to belong to the fauna of the United States.

—Correspondent "Teal" of Salem, Mass., has received from Austin Whipple of Hamilton, to preserve, a fine partial albino. He thinks it the White-bellied Swallow and says: "It is in its markings much like the feathers of the Houdan fowl, and is the most harlequin looking albino I ever saw."

—A remarkable bird-track slab was recently uncovered at Turner's Falls, Mass. It measures 118 feet square, and contains eight large tracks going in one direction and nine in another. The slab has been sent to Yale College.

—A physician in the Isle of Wight has found the homing pigeon to be of great service to him in his country practice. At every village through which he passes, and when

his last patient therein is seen he writes a list of prescriptions for that village, affixes it to the leg of a homing pigeon, and dispatches it to his house. "By this means, either a country carrier is intercepted starting homeward from our market town, and the medicine is delivered by him on that very evening, or my chemist is enabled hour by hour to see his work ahead of him, and forestall his dispensing necessities." There is something sensible about such a plan as this, and that it has been carried out successfully only shows how many are the ways in which the intelligence and swiftness of the homing pigeon may be put to the use of mankind.

AMPHIBIOUS FISHES.—In the swamps of the Gambia, after they have been dried by the tropical sun, there are to be found here and there beneath the surface clods of earth, uniform in shape and usually about the size of a man's two fists. These clods inclose living animals, which have been led by instinct to hide themselves away towards the close of the rainy season, and before the coming of the season of drought, by burying themselves in the mud while it was yet soft and before it had been hardened by the scorching rays of the sun. On breaking one of these lumps of mud it is found to be a sort of pouch or cocoon, with thin walls, and with projections here and there corresponding to the form of the animal concealed within. Its larger end is rounded, but its narrower end is closed by a slightly convex lid with a narrow opening in the center. If the surface of the cocoon be even gently touched a pretty loud cry is heard, which Natterer has compared to the mewling of a cat.—*Popular Science Monthly for September*.

Rifle.

THE INTERNATIONAL MATCHES.

AMERICA WINS AGAIN.

WEDNESDAY and Thursday of last week were days long to be remembered in the annals of rifle shooting generally and of Creedmoor in particular. No match of similar importance or with competitors from such widely separated habitats has ever been shot. Far away Australia, Scotland, Ireland, Canada and the United States were represented by the very pick of marksmen. Creedmoor never looked lovelier or gayer than on Wednesday, when the match commenced, and the uninitiated observer could scarcely believe that it was anything but a perfect day for rifle shooting. Such, however, was not the case. A rain for twenty-four hours previously had soaked the ground, and the hot sun following drew out again a transparent vapor which had the effect of producing a mild mirage, and somewhat distorting distinct objects. On Thursday the wind blew strongly almost across the range, making a great allowance necessary, and requiring constant care to note and allow for the varying conditions. We think that to this wind, one with which the American team are thoroughly familiar, are they largely indebted for their splendid victory. At the close of the first day's shooting they were nine points behind, the Scotch leading them that number, and the Irish five points. They were confident, however, throughout, and when the weather of the last day was noted and the drawing for places gave them the old targets at the extreme right of the butts, at which much of their practice had been done, the odds at the close of the day before had been reduced to nil. The attendance on the first day was not as large as we had anticipated; but on Thursday the crowd was immense. Two ropes divided the different teams, each with its own awning and appurtenances, from the crowd, the space between being a sort of dress-circle where many ladies had seats. Behind each team a large swinging board was placed, upon which each round of five shots was marked, so that the spectator provided with a score card could keep a pretty accurate record of the match. The prize of the match, the Centennial trophy, made by Messrs. Tiffany & Co., was on exhibition on the grounds and attracted general attention. This magnificent piece of work of which we give a cut and description elsewhere, is nearly eight feet high, the style being that of an old Roman standard of iron inlaid with gold, and the inscription "In the Name of the United States of America to the Riflemen of the World" in silver. The officers supervising were as follows: Chief Executive Officer, Gen. John B. Woodward; Chief Statistical Officer, Capt. Joseph G. Story; Chief Financial Officer, Maj. Daniel G. Wylie; Assistant Secretary and Treasurer, Alfred H. Weston; Executive Committee, Gen. Alexander Shaler, Gen. John B. Woodward, George S. Schermerhorn, Jr., Gen. Martin T. McMahon, Col. Henry A. Gildersleeve, Col. George W. Wingate and Gen. Thomas S. Dakin; Range Committee, Col. G. W. Wingate, Capt. Joseph G. Story, and E. H. Sanford; Prize Committee, Col. John Ward, Capt. Wm. C. Casey and Gen. Kilburn Knox. The Long Island Railroad Company ran special trains every half hour, and their arrangements for carrying the great throng of passengers were excellently conceived and carried out. The shooting on the whole was excellent, particularly on the first day, when every team but the Canadian made a better score than the highest ever made in the Elcho Shield competitions. One of the best scores made in the practice of the American team was 1,576 points, the best eight being selected. The team proper beat this on Wednesday by one point, their score being 1,577. The conditions of the match are probably familiar to most of our readers, but we append them for the sake of reference:—

TEAMS.—Each team shall consist of eight men. Members of the various teams participating must be native born citizens and residents of the countries they respectively represent, except in the case of teams representing a provincial territory of a government, in which case a residence in the province will be sufficient, provided the member is a native born subject of the parent country.

RIFLES.—Any, not exceeding ten pounds weight; minimum point of trigger, three pounds.

DISTANCES.—500, 900 and 1,000 yards.

AT 800 YARDS.

W. B. FARWELL—AMERICAN TEAM.

AT 900 YARDS.

R. RATHBONE—AMERICAN TEAM.

AT 1,000 YARDS.

H. A. GILDERSLEEVE—AMERICAN TEAM.

GEORGE FENTON—IRISH TEAM.

HENRY DYAS—IRISH TEAM.

J. K. MILNER—IRISH TEAM.

N. THORBURN—SCOTCH TEAM.

WILLIAM CLARK—SCOTCH TEAM.

MARTIN BOYD—SCOTCH TEAM.

J. M. GIBSON—CANADIAN TEAM.

G. MURISON—CANADIAN TEAM.

JAMES ADAM—CANADIAN TEAM.

D. GEE—AUSTRALIAN TEAM.

J. McG. SMITH—AUSTRALIAN TEAM.

J. J. SLADE—AUSTRALIAN TEAM.

BEST SCORES ON EACH DAY.—SECOND DAY.

Messrs. Davis and Hall having tied, each making a straight string of centres, shot off, when Davis won. There were 13 other competitors, who each scored 28 points, but with an outer or inner, which threw them behind the two named.

The second event was the regular short-range match, which followed immediately after the first. This was an all-comer's competition, any rifle, 7 shots at 200 yards off-hand. There were 220 entries and 20 prizes, as follows:—

Names.	Total.	Names.	Total.
H. F. Clark.....	30	Otto Scheelock.....	28
G. Fenton.....	29	John C. McCarton.....	28
R. Luke.....	29	Frederick Schilling.....	28
D. F. Vanrett.....	29	John F. Rathjean.....	28
D. F. Davis.....	29	J. O'Connor.....	28
T. E. Royston.....	29	A. Ward.....	28
L. M. Ballard.....	29	M. A. Scull.....	28
J. J. Slade.....	29	W. Gerish.....	28
J. I. C. Clark.....	29	J. L. Mills.....	28
R. S. Gray.....	29	William Hayes.....	28

Fenton, Luke and Vannett shot off on ties. The first round Fenton and Luke tied on centres (four each), Vannett going out on a 3 shot. At the second round Fenton made a bullseye to Luke's centre and won second place, Luke and Vannett coming in for third and fourth respectively.

The third event was the "Lafin & Rand" match for all comers; distance, 500 yards; any military rifle of not less than 45 cal., excluding all special military guns 7 shots. There were 211 entries and 20 prizes, including a gold, silver and bronze medal, all of the value of \$357. The following are the winners' scores:—

Names.	Total.	Names.	Total.
R. C. Coleman.....	32	C. E. Rider.....	29
A. Menzies.....	31	J. E. Horsfall.....	29
Thomas Postley.....	31	M. Hinds.....	29
T. R. Murphy.....	31	W. Robertson.....	29
H. Nott.....	31	G. D. Hobart.....	29
J. J. Slade.....	30	Charles Renant.....	29
S. F. Kneeland.....	30	P. Roe.....	28
F. H. Holton.....	30	James Leonard.....	28
William Bevan.....	30	M. J. Blakely.....	28
W. E. Droge.....	30	W. C. Clarke.....	28

The last event of the day was the Gatling match for

teams of 12 men each from any regiment or battalion of the N. G. S. N. Y.; weapon, Remington rifle, State model; distance, 500 yards; seven rounds; position, any; entrance fee \$1 for each competitor. There were 15 team entries, as follows:—

The Seventh, Eighth, Ninth, Twelfth, Twenty-second, Seventy-first Regiments of New York; the Twenty-third, Thirty-second Fourteenth, Twenty-eighth and Forty-seventh Brooklyn; Forty-ninth, Auburn; Twenty-first, Poughkeepsie; Forty-eighth, Oswego; Forty-fourth, Binghamton.

There were three prizes offered in this match—a Gatling gun, valued at \$3,000; a \$100 and a \$50 trophies, to be given to the three best teams. The Forty-eighth (Oswego) Regiment took the first prize, the Twenty-third (Brooklyn) the second, and the Seventh (New York) the third. The following scores are out of a possible 400 points:—

Names.	Total.	Names.	Total.
Sergeant Barnes.....	30	Charles Coe.....	24
J. L. Wood.....	30	Sergeant C. Barton.....	23
Sergeant Barton.....	28	Capt. Craspey.....	20
George White.....	27	J. P. Hall.....	20
Col. Houghton.....	26	R. G. Post.....	19
George Cowles.....	26		
Capt. Curtis.....	25	Team total.....	297

Names.	Total.	Names.	Total.
W. J. Oliver.....	31	J. L. Thompson.....	21
W. W. Bevan.....	31	E. DeForest.....	21
F. H. Holton.....	30	Julius Fried.....	20
D. C. Pinney.....	29	J. B. Frothingham.....	16
J. H. Stearns.....	26	T. Postley.....	12
W. L. Candee.....	25		
A. G. Weber.....	24	Team total.....	286

Names.	Total.	Names.	Total.
J. W. Gardner.....	31	J. L. Boutellier.....	23
E. H. Sanford.....	29	J. L. Abrams.....	21
C. F. Robbins.....	27	D. Channey, Jr.....	20
George Waterman.....	27	G. F. Merchant.....	16
James P. Burrell.....	26	J. P. M. Richards.....	15
J. L. Price.....	24		
T. W. Linton.....	24	Team total.....	283

The team totals of the other regiments stood as follows:

NATIONAL RIFLE ASSOCIATION.

THE fall meeting of the N. R. A. commenced at Creedmoor on Monday morning. After the excitement of the previous week a large attendance of spectators could not have been expected, but the contestants themselves were in such numbers as to form a very respectable crowd. A good breeze was blowing, but the light was excellent and the off-hand shooting remarkably good. The first event was the "Judd" match, offered annually in commemoration of the services of Hon. D. W. Judd in procuring the range. The conditions were 7 shots by each competitor at 200 yards off-hand, any military rifle. There were 20 prizes, including two medals. The first was won by Mr. F. C. Fullgraff, of the Twenty-second Regiment, with the excellent score of 34 out of a possible 35 points. There were 200 entries in all, but our space permits us only to give the names and scores of the prize winners:—

Names.	Total.	Names.	Total.
F. G. Fullgraff.....	34	A. Menzies.....	29
George Cowles.....	31	C. Van Orden.....	29
W. Gear.....	31	A. Cropsey.....	29
Henry Fulton.....	30	L. Mills.....	29
William Robertson.....	30	D. C. Primey.....	29
S. A. Bates.....	30	T. M. Linton.....	29
D. Channey, Jr.....	30	A. Ward.....	29
J. S. Barton.....	29	G. D. Hobart.....	29
O. C. Hoffman.....	29	D. F. Davis.....	28
J. B. Frothingham.....	29	J. P. Hall.....	28
R. Luke.....	29		

Regiment.	Total.	Regiment.	Total.
Eight	277	Ninth	218
Seventy-first	274	Twenty-first	216
Forty-fourth	260	Thirty-second	214
Twenty-second	260	Twelfth	209
Forty-eighth	248	Fourteenth	162
Forty-ninth	242	Twenty-eighth	138

Among the distinguished long-range marksmen who shot in the short-range competitions were Messrs. Fenton, Ward and Evans, of the Irish team; Messrs. Paton, Rae, Luke, and Menzies, of the Scotch team; Mr. Slade of the Australian team; and Messrs. Dakin, Farwell, Yale, Ballard, Jewell, Anderson and Blydenburgh of the American teams of this and last year.

THE SECOND DAY.

We are obliged to condense our report of the second day's match. The first match was the "cavalry" for teams of five, weapon, carbines, seven rounds at 200 yards. The Yates dragoons, of Syracuse, an organization which has paid much attention to rifle shooting, were the winners. The following is their score:—

Names.	Total.	Names.	Totals.
O. J. Jones	23	W. S. Barrone	21
Major M. Auer	23		
Lieut. P. Auer	23	Team total	116
Lieut. M. B. Nicholson	23		

The Washington Grays, of this city, were second with 99 points, and the Separate troop, Fifth brigade, third with 95. The other contestants and scores were F troop, Third regiment, 90; K troop, Third regiment, 89; H troop, Third regiment, 78; D troop, Third regiment, 75; G troop, Third regiment, 72; Galling battery, Eleventh brigade, 72; Separate troop, First division, 71; Separate troop, Twenty-fourth brigade, 63; Separate troop, Eleventh brigade, 59.

The next event was the New York State National Guard match for teams of 12 men, five shots each at 200 and 500 yards, Remington rifle, State medal. The Forty-eighth regiment, of Oswego, were the winners. The following is the score:—

Names.	Yards.	Names.	Yards.
Chas. Coe	17	J. L. Wood	14
Serjt. C. A. Barton	21	Serjt. L. L. Barnes	13
Serjt. J. S. Barton	21	R. G. Post	13
Capt. A. Curtis	18	J. P. Hall	20
George White	18	Col. Houghton	13
George Cowles	16		
Corpl. Clipsey	14	Team totals	209

The Eighth regiment was second with a total of 389 points, and the Seventh third with 381. The other scores were: Seventy-first, 356; Fourteenth, 346; Ninth, 326; Forty-seventh, 320; Thirty-second, 303; Twenty-first, 296; Twenty-eighth, 226; Twelfth, 348; Twenty-third, 345; Forty-fourth, 324; Thirteenth, 314; Twenty-second, 299; Sixty-ninth, 258.

In the Army and Navy Journal match there were 17 entries of teams of 12 men each, 7 rounds, at 500 yards. The Oswego men were again successful, the totals being as follows:—

Regiment.	Total.	Regiment.	Total.
Forty-eighth (Oswego) regt.	328	Seventy-first regiment	270
Seventh regiment	300	Forty-ninth regiment	253
Twelfth regiment	299	Forty-fourth regiment	250
Eighth regiment	292	Seventy-first regiment	234
Fourteenth regiment	283	Forty-seventh regiment	234
Twenty-third regiment	278	Ninth regiment	206
Twenty-second regiment	273	Thirty-second regiment	181
U. S. Engineers regiment	274	Twenty-eighth regiment	141

The First Division Match, open to teams of 12 men from each regiment in the First Division had seven entries; conditions, five shots each at 200 and 500 yards. The following are the totals:—

Regiment.	Totals.	Regiment.	Totals.
Seventy-first	274	Twenty-second	178
Seventh	230	Ninth	191
Eight	203	Sixty-ninth	189
Twelfth	196		108

The Second Division Match under the same conditions resulted as follows: Twenty-third Regiment, 378; Fourteenth, 352; Thirty-second, 328; Forty-seventh, 309; Thirteenth, 305; Thirty-eighth, 228.

A protest was entered against the team of the Forty-eighth (Oswego) Regiment, on the grounds that the men had used altered sights in their Remington rifles in violation of the rules.

THE MILWAUKEE RIFLE RANGE.—A Milwaukee correspondent, whose identity we do not recognize at present by the simple signature of "K.," and who has sent us frequent western rifle notes which we could not always publish in full, for lack of space, says of this noteworthy range:—

"It would be hard to find a more beautiful spot than the grounds of the National Home, where, through the kindness of Gen. Hincks, the range of the Milwaukee club is located. The 1,000 yard firing point is situated in a lovely grove, while the target is on a hill on the other side of the valley."

In the competitions which took place last August between the Chicago and Milwaukee Rifle Clubs the competitors became so enamored of each other as marksmen, gentlemen and good comrades, that they have not been happy since separation, and will not rest content until the trials are repeated. There are some excellent shots in both clubs, and we shall look for some praiseworthy scores in days to come.

RIFLE NOTES.—Arrangements have been made with the several visiting rifle teams for a three-day's match in Washington during the latter part of this month. The teams will reach there on the 25th, and shoot over the 800-yards range at the Benning's Station race track, on Tuesday, the 26th; over the 900 yard range on Thursday, the 28th; and over the 1,000 yard range on Saturday, the 30th. The shooting of Mr. Adams of the Canadian team in the International match was excellent. He scored 202 points out of a possible 225 the first day, and a total of 392, or within 10 points of the best score made.

—A waterspout burst over the Humane Establishment at St. Paul's Island, Nova Scotia, on the 18th ult. Five buildings were destroyed and one man killed. Only two storehouses and a dwelling house were left standing, and they were much shattered.

THE EVANS RIFLE.—By an error we stated in a recent issue that the Evans Repeating Rifle was not now being manufactured. Messrs. Merwin, Hulbert & Co., of this city are the agents for the Evans Rifle Manufacturing Co.

Game Bag and Gun.

GAME NOW IN SEASON.

Moose, <i>Alces macchis</i> .	Black-bellied plover or ox-eye, <i>Squatarola helvetica</i> .
Caribou, <i>Tarandus rangifer</i> .	Ring plover, <i>Egialitis semipalmatus</i> .
Rik or wapiti, <i>Cervus canadensis</i> .	Stilt, or long-shanks, <i>Himantopus nigricollis</i> .
Red or Virginia deer, <i>C. virginianus</i> .	Woodcock, <i>Philohela minor</i> .
Squirrels, red, black and gray.	Red-breasted snipe or dowitcher, <i>Macrorhamphus griseus</i> .
Hares, brown and gray.	Red-backed sandpiper, or ox-bird, <i>Tringa americana</i> .
Reed or rice-bird, <i>Doichonyx oryzivorus</i> .	Gr. at marbled godwit, or marlin, <i>Limosa fedoa</i> .
Wild turkey, <i>Meleagris gallopavo</i> .	Willet, <i>Totanus semipalmatus</i> .
Pinnated grouse or prairie chicken, <i>Cupidonia cupido</i> .	Tattlet, <i>Totanus melanoleucus</i> .
Ruffed grouse or pheasant, <i>Bonasa umbellus</i> .	Yellow-shanks, <i>Totanus flavipes</i> .
Quail or partridge, <i>Ortyx virginianus</i> .	

"Bay-birds" generally, including various species of plover, sand-pipers, snipe, curlews, oyster-catchers, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

Correspondents and subscribers will oblige us and serve the cause by sending four-line reports of the shooting in their respective localities.

Plover on Prince Edward's Island are very plenty just now and giving the gunners fine sport. A few woodcock are being picked up now near Kentville, N. S., but they are both scarce and small. A heavy rain may, however, bring them on to their old haunts. In New Brunswick the ruffed grouse are numerous, and large bags of them are being made every day; a few ducks, but no geese as yet.

Any person desiring complete guide books to all shooting grounds on the line of the Grand Rapids and Indiana Railway can have them furnished gratuitously by application at this office. Northern Michigan is one of the best shooting grounds in America.

Mr. W. L. Guilledeu of the Old Dominion Steamship line Company's office, has just returned from a visit to Chincoteague, off the coast of Virginia. He reports birds "not very abundant," but he and a friend contrived to knock over some 350 willets and plover in the course of three days' exercise over the beach. By taking one of the steamers of this line to Lewes, Del., and rail from that point, one is carried comfortably within walking distance of the ground.

The San Francisco *Pacific Life* says that in the vicinity of Bakersfield, Kern county, quail are so abundant that thousands can be seen in any direction out of town.

MAINE—Hallowell, Sept. 10th.—Season opened well; woodcock not so plenty as last year. Partridge plenty. I append my number of birds each day up to date: Sept. 1st, 1 woodcock 2 partridge; 2d, 6 woodcock 3 partridge; 4th, 6 woodcock 1 partridge; 5th, 3 woodcock 6 partridge; 6th, 7 woodcock 3 partridge; 8th, rain; 9th, 4 woodcock 5 partridge.

NEW HAMPSHIRE—Rye, Sept. 18th.—Woodcock are more plenty, and the fall season bids fair to be a good one. Partridges are also becoming more numerous. Fair bags of teal, black ducks, and yellow legs, have been made, and one gentleman shot three golden plover on Thursday last. The southward flight of coots and sea fowl has commenced, and with the first northeast storm good sport is anticipated. Snipe and grass birds are scarce, the season being still early.

Quails and partridges are plenty in Rhode Island. The game law restrictions ended September 1st for partridges, but for quail will continue in force till October 15th.

Cohasset, Sept. 18th.—There has been a little flight of black breasts the past week. I succeeded in bagging eight one morning and a pair of mallards the first of the season. Teal very scarce. Have not seen one this week. Yesterday was a great day for sea ducks, and hundreds were shot on the coast.

Salem, Sept. 18th.—Shooting news quiet generally, though there have been some plover shot, some partridges, rabbits and winter yellow legs, and some English snipe and quail, but good bags are scarce just now. Saw several loons out by the islands last Monday, also one flock and two single coots. Gulls getting common again. Also saw five loons flying over the city yesterday. An easterly storm prevails at present and we hope, if it comes around right, will give us a little more sport on the shore birds, of which we may yet expect some winters and grass birds.

PENNSYLVANIA.—Mr. J. E. Soule, the well known amateur sportsman, of this city, informs us that he never knew bay-birds to be so scarce and wild as they were last month. He generally shoots in the vicinity of Tom's river, not many miles from Barnegat, and he believes that their scarcity and wildness was owing to the fresh-water ponds, their favorite resorts, being completely exhausted of water. He saw the gray-back snipes quench their thirst with salt water—an occurrence they never resort to if fresh water can be found along the coast.—*Germantown Telegraph, Sept. 13th.*

VIRGINIA.—In company with several friends we have been deer hunting. The game was plenty, but the weather was hot and dry, and the dogs were not up to their work, and our success poor. A very fat buck was brought to town on Saturday last. He was killed near Mr. Wilkin Spencer's by a negro.—*Brunswick Advocate 15th.*

VIRGINIA—Norfolk, September 16th.—Sora season at its height on James river. The Richmond steamers bring down hundreds of dozens which are all killed at night by torchlight, with a paddle. The birds killed for the markets are all "paddle birds," as they bear transportation better than those that are shot. An extraordinary flight of birds passed over the city last night. I first noticed them about 8 p. m. At 10:30 p. m. there seemed to be no falling off in their numbers. Having occasion to be up at 2 o'clock I heard more passing. The bulk of the flight seemed to be sora from the notes heard; there were also some ducks and several kinds of shore birds. A great many people in different sections of the city made the same observations. Some parties stated that they heard them until daybreak. One gentleman saw on his wall, early this morning, a sora that had probably become bewildered by the gaslight, and

knocked him off with his cane. Capt. Deer reports seeing a great many flocks of ducks passing over James river to-day during the severe storm now prevailing. **DRAKE.**

Another Norfolk correspondent, "Alfred," confirms this statement in nearly all particulars, save that he failed to detect the sound of ducks, adding that the flight must have contained many millions of birds. It is probable that the cold weather and the equinoctial storm has hurried the birds south. The duck season promises to be unusually early this year.

MICHIGAN.—Marshall, Sept. 11th.—The grouse shooting in this locality is excellent. No woodcock to be had; too late. The wood-duck is plenty this season. No quail this week to my knowledge. Plover plenty. Squirrels never so plenty for years.

—A Michigan correspondent to whom we wrote for information about best ducking grounds out West replies:—

"If I wanted to advise a friend about duck shooting I would tell him to go to Thunder Bay on the eastern shore of this State on Lake Huron. Then there is Wild Fowl Bay in Huron County, this State, not far from Saginaw City. I regard these places good shooting ground. The ducks are not so wild as on St. Clair flats, where with pot-hunters, amateurs and the commercial traffic of the river the poor duck has a slim chance. The accommodations on the flats are as good as in a large city. I have yet to find a place, however, possessing "good accommodations" where the "duck shooting is really good." One wants to get away from "good accommodations" if they want to shoot from 40 to 50 ducks a day. Such at any rate is my experience. To go to Thunder bay, Alphon County, Mich., making Alphon County the objective point; or go to Port Huron, Huron County. From there go to Fowl bay on tug or fish boat and "live o' the fisherman." The places I have named are easily reached from Detroit in from 12 to 24 hours by steamer and cars. The towns, I mean the grounds, all distant from Fair Haven about eight miles. Good duck shooting can be had all along Saginaw bay in October and November.

INDIANA.—Valparaiso, Sept. 13th.—Our shooting has been fair notwithstanding the scarcity of pinnated grouse. Woodcock are very abundant for this section, and I am taking in the sport with great relish. Quail will be very plenty, more than for ten years. **W. H. HOLABIRD.**

Knox, Sept. 11th.—The game in this section is quite plenty this fall, with the exception of squirrels and wild pigeons. The Kankakee hunters have commenced their fusillade on the ducks, but as yet they have not got up Yellow river as far as this place. I think the Legislature of this State should curtail the shooting of prairie chickens one month, making the law read 15th of September instead of 15th of August. The chickens that were shot here in August were so small that they were hardly worth shooting, and then most of them spoiled on the hands of the sportsmen, the weather being so hot that they could not be preserved only for a short time. If something is not done soon the pinnated grouse will soon be a thing of the past in this county. **RANGER.**

DACOTAH—Lower Brule Agency, September 17th.—Chickens and quail very plentiful this season about Yankton and Springfield. Large numbers of the former are killed between Yankton and Sioux City. At Randall and Lower Brule ducks have made their appearance in great numbers. Season opened September 1st. **W. E. D.**

BETTER AMMUNITION FOR THE ARMY.

SAVANNAH, Ga., September 6th.

EDITOR FOREST AND STREAM:—

I see in your issue of August 31st a call for better fire-arms, and that Maj. Reno reported to the Chief of Ordnance that six of his guns were rendered useless by failure of the breech block not closing tightly, and leaving a place for the cartridge to play in, causing the base of the cartridge case to blow off and leaving the shell stuck fast in the chamber. This is a great fault and should be rectified; but I cannot agree with Maj. Reno as to the cause of this. It is the fault of the cartridge and not of the breech block. If the cartridge be properly constructed there will be no such difficulty, even admitting the breech block be loose. Of what service would our breech loaders be if a little wear in the breech caused such mishap? Your correspondent "Georgia" has been with me when I have been experimenting with musket cartridges, and knows my assertion to be one of theory but of practice. If the Ordnance Department will correspond with me I will satisfy them on this point.

JOSEPH P. WHITE.

SQUIRREL SHOOTING.

ASHBYSBURG, Ky., September 1.

EDITOR FOREST AND STREAM:—

In last week's number I noticed an article on the above title and I agree with the writer that squirrel hunting is splendid sport, but do not coincide with him as to the gun used. He spoke of using shot guns for the business. For my part I cannot bear to use such a gun as he described. I think a rifle of about 36 inches in length, 7 or 8 pounds weight, and about 200 to the pound just the thing. It takes considerable practice, steady nerve, and quick eye to pick one off a limb running from one tree to another, or back one off a limb without hurting a hair of his body, or shoot one's head off out of a tall hickory. But when once acquired I'll wager you will never take your "Scott or Tolly" after squirrels again.

Shooting squirrels with a rifle and taking their heads every time they are visible brings it down to science. Your correspondent also spoke of not having use for a dog. I suppose not the kind he spoke of. I have found in woods of heavy and thick undergrowth, a small cur well trained to tree, most serviceable. As a good dog will find more game in an hour than a man can in a half a day in such woods and hazle thickets. A dog well trained will put a squirrel up a tree and after giving two or three sharp barks will wait at the foot of the tree until his master comes up and picks bunny off. A squirrel treed by such a dog will run up only a few jumps, and curl himself up on a limb and all you have to do is to approach noiselessly and hit him in the eye. **PADDY O'LEARY.**

BAKER'S THREE-BARREL-GUN.

NEW YORK, September 5th.

EDITOR FOREST AND STREAM:—

I received a few days ago one of Mr. Wm. H. Baker's three-barrel guns. I must say I have always been somewhat prejudiced against any such arrangement or combination of shot and rifle barrels and was surprised to find the gun so light and handy. The rifle barrel occupies the place taken up by a ramrod in the ordinary muzzle-loader. The gun has two shot barrels 12-gauge and one rifle barrel 44 calibre. Central fire, one extractor withdrawing all three shells. Weight of gun 8½ pounds.

I tried the shot barrels with three drachms Carte's & Harvey's powder and one and a quarter ounce No. 8 shot. The average target was 197 pellets, in a 30-inch circle at 40 yards, with left-hand barrel and 236 pellets with the right-hand barrel. Penetration first rate. I then tried the rifle barrel and found it to shoot equally well. I could not try beyond 200 yards, but it was very satisfactory at that distance, and at 100 yards would put the balls inside of the size of a dollar, of course I used a rest as I was trying the rifle and not myself.

As a gun for turkeys and deer, I should imagine it a very deadly weapon. Just the thing for Florida or the North Woods, or any region where large and small game abound.

Rational Pastimes.

CRICKET.

AMERICANS VS. ENGLISH.—The cricket event of the season was the grand match played at Philadelphia September 14th and 15th, between native American and English-born twelves, the former selected from the Philadelphia cricket clubs, and the latter from Philadelphia, New York, Boston, and Detroit. The weather was propitious, and there was a numerous and fashionable gathering of spectators at the Germantown Club grounds on both days. The contest proved to be a one-sided one, as the Americans won easily in one innings with 50-odd runs to spare. On Thursday the Americans went to the bat and ran up the large score of 217 runs, of which Soper Baird scored the handsome total of 80, he carrying his bat out, John Large contributing 41, and Bob Newhall 39. The English then went in, and at the close of their first innings they were minus 114 runs of equalling their opponent's score, Whitham's 42 being the feature of their batting. They had to follow their innings, and in the second innings retired for 55 only, Bance leading the score. The full score is appended:—

Umpires—Mr. Samuel Welsh, Jr., for the Americans, and Mr. Frederick Farrands, of Boston, for the English.

On Friday and Saturday of this week the Americans will play another English team to be selected without professionals.

There is an effort being made to have a game with the American team and the English "clowns." If it can be arranged the match will be about the 29th and 30th inst. The only difference seems now to be that the clowns want a one-day match instead of either two days or a full game. It is greatly to be hoped that the game will come off, and equally to be hoped that by advertisement or otherwise the attendance may be an increase over the audiences that witnessed the matches so far this season.

BASE BALL—THE PROFESSIONAL CAMPAIGN.

The Western nines closed their last tour east for the season on September 16th, and they came out of the fight virtually winners of the honors as between the two sections. The result of the week's play was as follows:—

West.	Won.	Lost.	East.	Won.	Lost.
Chicago.....	7	1	Hartford.....	5	3
St. Louis.....	7	1	Boston.....	5	3
Louisville.....	4	4	Mutual.....	1	7
Cincinnati.....	2	6	Athletic.....	1	7
Total.....	20	12	Total.....	12	20

The games played during the last week of the tour were:

Sept. 10.—Boston vs. Louisville, at Boston.....	8 to 0
Sept. 12.—Boston vs. St. Louis, at Boston.....	5 to 2
Sept. 12.—Hartford vs. Chicago, at Hartford.....	8 to 7
Sept. 12.—Louisville vs. Mutual, at Brooklyn.....	7 to 4
Sept. 12.—Athletic vs. Cincinnati, at Philadelphia.....	12 to 3
Sept. 13.—Boston vs. St. Louis, at Boston.....	9 to 5
Sept. 13.—Chicago vs. Hartford, at Hartford.....	6 to 2
Sept. 13.—Cincinnati vs. Athletic, at Philadelphia.....	15 to 13
Sept. 13.—Chicago vs. Boston, at Boston.....	9 to 3
Sept. 15.—St. Louis vs. Hartford, at Hartford.....	6 to 2
Sept. 15.—Mutual vs. Cincinnati, at Brooklyn.....	2 to 1
Sept. 15.—Louisville vs. Athletic, at Philadelphia.....	3 to 0
Sept. 16.—Chicago vs. Boston, at Boston.....	7 to 2
Sept. 16.—St. Louis vs. Hartford, at Hartford.....	6 to 4
Sept. 16.—Cincinnati vs. Mutual, at Brooklyn.....	9 to 6
Sept. 16.—Louisville vs. Athletic, at Philadelphia.....	7 to 6

The position of the contesting nines up to September 19th were as follows:—

Clubs.	Games Won.	Games Lost.	Games Drawn.	Games Played.
Chicago.....	49	18	0	62
Hartford.....	38	18	1	57
St. Louis.....	42	25	0	60
Boston.....	35	25	0	60
Louisville.....	29	33	3	65
Mutual.....	21	34	1	56
Athletic.....	14	45	1	60
Cincinnati.....	9	51	0	60
Total.....	237	237	6	480

THE ANNUAL CALEDONIAN GAMES.—We have been requested to print the following results at Jones' Woods on the 7th of September and would have done so last week, had not our space been much crowded:—

Throwing the Heavy Hammer, (10 entries).—1. Hugh McKinnon, Hamilton, 102 ft. 2 in.; 2. A. McKay, New Haven, 91 ft. 9 in.; 3. John Anderson, Newark, 86 ft. 6 in.

Throwing the Light Hammer, (11 entries).—1. Hugh McKinnon, 115 ft. 8 in.; 2. A. W. McKay, 109 ft. 7 in.; 3. A. Reunie, New York, 103 ft. 9 in.

Standing Jump, (8 entries).—1. E. W. Johnston, Toronto, 9 ft. 11 in.; 2. A. McKay, 9 ft. 6 in.; 3. John Anderson, 9 ft. 2 in.

Running Jump, (5 entries).—1. A. C. Reid, Hamilton, 18 ft. 5 in.; 2. E. W. Johnston, 17 ft. 9 in.; 3. W. Robertson, N. Y., 17 ft. 6 in.

Putting the Heavy Stone, (9 entries).—1. Hugh McKinnon, 84 ft. 7 in.; 2. A. McKay, 84 ft. 2 in.; 3. E. W. Johnston, 83 ft. 6 in.

Standing High Leap, (5 entries).—1. E. W. Johnston, 4 ft. 8 in.; 2. A. Tasker, New York, 4 ft. 6 in.; 3. Robert Innes, Thomaston, Conn., 4 ft. 3 in.

Broadsword Dance, (6 entries).—1. James Aitchison, N. Y.; 2. John West, N. Y.; 3. L. D. Robertson, N. Y.

Boy's Highland Fling, (1 entry).—1. A. McLaren, Newark.

Short Race, (9 entries).—1. George Irwin, Ottawa; 2. E. W. Johnston, Toronto; 3. A. C. Reid, Hamilton.

Tossing the Caber, (7 entries).—1. Hugh McKinnon, 40 ft. 10 in.; 2. E. W. Johnston, 40 ft. 10 in.; 3. A. McKay, 39 ft. 7 in.

Three-Legged Race, (12 entries).—1. Reid and Carmichael; 2. Robertson and Forsyth; 3. Reunie and Martin.

Boys Race, (3 entries).—1. L. D. Robertson, Jr.; 2. William Williamson; 3. R. Ferguson.

Vaulting with the Pole, (3 entries).—1. W. Robertson, N. Y., 9 ft. 3 in.; 2. F. Duke, N. Y., 9 ft.; 3. John McLaren, Newark, and R. Innes, Thomaston, (tie) 8 ft. 3 in.

Special Two-mile Race, (3 entries).—1. William Hume; 2. Thomas Irving; 3. A. D. Martin, (time 10m. 55s.).

Old Men's Race, (3 entries).—1. D. Anderson; 2. James Eadie; 3. J. L. Smith.

Hitch and Klok, (4 entries).—1. John West, N. Y., 9 ft. 2 in.; 2. A. C. Reid, Hamilton, 9 ft.; 3. W. Forsyth, New Haven, 8 ft. 2 in.

Long Race, (3 entries).—1. George Irwin, Ottawa; 2. A. C. Reid, Hamilton; 3. J. McLaren, Newark, (time 56 1-5s.).

Highland Fling, (6 entries).—1. W. Robertson, N. Y.; 2. L. D. Robertson, N. Y.; 3. John West.

Hop Step and Jump, (10 entries).—1. E. W. Johnston, Toronto, 38 ft. 7 in.; 2. A. C. Reid, Hamilton, 37 ft. 4 in.; 3. W. Robertson, 36 ft. 8 in.

Long Race, (4 entries).—1. George Irwin; 2. Alexander N. Allan, 3. Wm. Forsyth, New Haven, (time 5m. 14s.).

Running High Leap, (5 entries).—1. John West, N. Y., 5 ft. 5 in.; 2. A. C. Reid, 5 ft. 2 in.; 3. W. Robertson, 5 ft. 1 in.

Sack Race over 18-inch Hurdles, (6 entries).—1. D. Fleming, N. Y.; 2. W. Forsyth, New Haven; 3. A. Marshall, Bridgeport.

Boy's Hurdle Race, (4 entries).—1. W. Warnock; 2. Robert Ferguson; 3. L. D. Robertson, Jr.

Hurdle Race, (8 entries).—1. A. C. Reid; 2. G. Irwin; 3. W. Robertson.

Quoits, (4 entries).—1. A. McGregor, N. Y.; 2. Geo. Henderson, N. Y.; 3. W. Kellogg, N. Y.

N. Y. ATHLETIC CLUB.—The seventh annual fall games of the New York Athletic Club will be held on their grounds at Mott Haven, on Saturday, September 30th, commencing promptly at 2:15 o'clock p. m. The following games will be open to all amateurs: 100 yards, 440 yards, one-half mile and one mile running, 120 yards hurdle race, one, three and seven mile walks, running high and running broad jumps, putting the shot and throwing the hammer. The winner in each competition will carry the title of amateur champion of America. Entries will close on Wednesday, September 20th, at 3 o'clock p. m.

THE EUROPEAN LACROSSE TRIP.—The Committee have just submitted to the subscribers a financial statement embracing a detailed exhibit of the expenses of the team. The gate money was divided with the clubs under whose auspices the visitors played, and at most of the matches several hundred persons were admitted free. The matches at Windsor Castle and Eton were merely honorary, the expenses of the team reached £30 per day. The amount received from subscribers to the guarantee fund was \$1,315; from the team the total was \$2,285; from the various matches in Dublin, Belfast, Glasgow, Edinburgh, Newcastle, Sheffield, Oval (London) Richmond, Brighton, Princes' (London), Lords (London), Hurlingham, Bristol, Manchester, Sandown Park, etc., \$7,910.12; matches in Montreal and donations, \$566; total, \$11,976.57. The expenses were for railway traveling, wages of Indians, hotel fare, printing, etc., \$10,790.

It was the original intention to take the amount originally guaranteed by each member of the team from the total, leaving the balance to the citizens who subscribed, but with the unselfish spirit which appears to have characterized their whole proceedings since the plan was first mooted, the team abandoned this intention, and cast in their lot with the subscribers, each to share alike. The result is that each subscriber receives back one-third of the amount paid. Dr. Beers, notwithstanding the heavy work undertaken and accomplished by him, shares in the ratio as the other members of the team, and, in addition, pays all the expenses of the organization of the trip last year. It was thought that enough money would have been realized to form the nucleus of a fund wherewith to purchase a ground for the use of our athletes, but that idea seems to be now out of the question.—*Montreal Star.*

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

DELINQUENTS.—Quantities of questions unanswered this week because only anonymous signatures are given.

A. H. S., Marshall, Tex.—Do you know of any good remedy for tape worm in dogs? Ans. Areca nut is a sure and safe remedy.

Dr. H. S., Gidion's Bridge.—Where can I get good wall tents cheap? Ans. From S. A. Harwood, No. 71 West Broadway, this city.

J. G. W., Poughkeepsie.—Can you inform a subscriber where he can send his setter pup to have a thorough training, and also the probable cost. An answer through your columns will much oblige. Ans. See advertisement of E. S. W., in another column.

A. W., New York.—When does the law permit the killing of ruffed grouse (partridges) in Suffolk Co., this State? Ans. Not until October 1st, although the close season in the rest of the State expires September 1st.

E. L. B., New York.—Could you tell me the best way to get to English Neighborhood Bridge, and if it pays to fish there; also name the kinds of fish to be caught? Ans. Take Northern Railroad of New Jersey from foot of Chambers street, about nine miles. You can catch striped bass at the bridge.

D. M., Brooklyn.—Will you kindly inform me where in Kings or Queens counties, L. I., could I find any squirrel shooting that is in the vicinity of Brooklyn, and when they can be shot? By answering you will oblige. Ans. No protection for squirrels in this State, but you will find very few in the counties named.

G. W. H., Philadelphia.—Please advise me, in Answers to Correspondents, whether a party purchasing a canoe in Canada and using it, (i. e., coming home by water), would be required to pay duty on arriving on United States territory? Ans. He would not. At what age would you recommend to commence training a spaniel pup? Ans. Six months old.

G. A. H., York, Pa.—My setter puppy is afflicted with worms, and as we cannot procure the areca nut here will you oblige me by sending me some, with directions for use? It is the same that has the dew-claws about which I wrote you some time ago. Ans. Have mailed to you the proper doses of areca nut with directions for giving it.

J. A. R., Augusta, Ga.—Please inform me in your next who I can get to make a good pair of barrels to a breech-loading stock, the gun was an English make, Hollis & Son, and with an ordinary load bursted one of the barrels?—Ans. Geo. Hayden, No. 141 Fulton street, this city, can do it, but we should think you could get Koger's or Bowen of your own city to do the job.

C. A. B., Wallingford, Conn.—Please give me the law in this State as applying to woodcock quail and partridge? Ans. Woodcock can be killed September 1st, ruffed grouse October 1st, and quail October 20th. The close season for woodcock expires July 1st, but the month of August is a close month—that is if no new regulation has been made since the May session of the Legislature.

S. B. H., Lagrange.—I have a very nice pointer pup three months old. He is dumpy and runs at one of his eyes, thick and dry, and he has got poor, and goes doubled up at times. Can you tell me what is the matter? Ans. Your pup is in all probability afflicted with worms. Give him some powdered areca nut if you can procure it there. If not, give us your address and we can mail some to you.

G. W. W., Stoughton, Miss.—Is there a machine known that will load a paper or metallic cartridge for breech-loading shot guns, either 10 or twelve-gauge complete? That is, first load the shell with the desired charge of powder, then wad it; then the desired charge of shot, and wad. Ans. The Webb loader, for which Messrs. Remington & Sons are the agents, is such a loader as you describe.

C. S. S., Springfield, Mass.—Please give in your next issue the names of the American team using Remington, and those using Sharp's rifles? Ans. All the gentlemen shooting in the late team used the Remington except Judge Gildersleeve, who used the Sharp. Messrs. Hyde and Jewell of the reserves used the Sharp, and Capt. Bruce shoots sometimes with one and sometimes the other.

G. J. A., Anrova, N. Y.—1. Will you please inform me if the 38 central fire grooved is as accurate as the 40 central fire patched? 2. Is the Whitney Sporting rifle as accurate as any made? 3. What sort of a rifle is the Phoenix? Ans. The patched ball will be the most accurate but the rifle must be kept clean. 2. Yes. 3. We know nothing of the qualities of the Phoenix.

F. L. K., Longwood, Fla.—Your Norfolk, Va., Correspondent, "Georgia," speaks of a letter from Mr. Scherff, and an invention of Capt. J. F. White, for loading shells. I should like to know something of the matter. Can you give me the desired information? Ans. We know nothing more than contained in the letter. If you address Geo. A. Alden, Esq., Savannah, Ga., you may learn something.

G. H. M., Norwich.—1. Will you inform me where the Belmontyle oil can be had? 2. Also what is the trouble with my setter dog? He has a dark ring on the end of his nose, and his eyes discharge a thick, matterly substance, noticed in the morning particularly. Ans. 1. You can get Belmontyle oil from Mr. H. C. Squires, No. 1 Courtlandt street, New York. 2. Your dog is out of condition. Have mailed to you some condition powders, which, if given as directed, will relieve him.

DEER HOUND, New Orleans.—As an enthusiastic admirer and purchaser of every issue of your paper, than which there is none better, let me crave your indulgence to the following inquiry for a friend in whose kennel I lack not interest. He has two hound puppies which indicate unmistakable symptoms of worms. I desire to solicit your prescription of areca nut, or the dose, as I presume I can procure the powdered nut in this city. Ans. Have mailed to you the proper doses of areca nut for the pups, with direction for giving it. If given in time it rarely fails to cure.

L. N. M., Philadelphia.—I have been informed that you have a preventive for hydrophobia. I have a handsome setter which was seen fighting a few days since with a dog afterwards killed as mad. Can you oblige me with your recipe? Ans. We pretend to prescribe for nearly all the diseases that canine flesh is heir to but hydrophobia we give a wide berth—having no knowledge of any remedy as a preventive or cure for it. We have, however, published much on this subject from distinguished sources, and have mailed you the papers containing it.

D. O. C., Mahony Plain.—Can you tell me, from the inclosed paper the number of the bore of my gun. It is a muzzle-loader, and is 32 inches long in the barrel. What quantity of powder should I use when shooting ruffed grouse? Would it not be better if the barrels were shorter? Ans. your gun is a 12-gauge, but without seeing it we cannot advise you as to the propriety of cutting it off. We never use barrels for upland shooting longer than 30 inches, and as you have not given us the weight of the gun we cannot say what the proper load should be.

T. R., New York.—Having a ten-acre place in New Jersey traversed by Green Brook, I have made a large pond 600x325 feet, fed by the brook which is a never-failing stream of pure spring water. There are sunfish, eels, suckers and dace in the pond, but I would like to stock it with black bass. I understand the Fish Commissioners of New Jersey furnish the fish for the purpose. Will you please inform me through your paper how and from whom the fish can be procured? Ans. If you will write to G. A. Anderson, Esq., Trenton, N. J., Fish Commissioner, you can get all information.

J. D., West Chester, Pa.—A and B sit down to play cassino; they have on the table a king and a four. B throws down a king and says nothing. A adds a three to the four and calls it seven. B plays a four. A demands him to take the two kings so that he can sweep. B says no, I did not say hold and you cannot force me to take the kings, and plays another card. Who was right? Ans. B is right. It is optional to take or leave, at any time, subject to the risks attending. A could have taken the two kings if he had had the cards, or B could have taken what A built up if he held the right card.

STURGEON, Laconia, N. H.—I have been told that I couldn't catch trout in New Hampshire after September 1st. I have known of parties fishing in Winnipisogee Lake, and they say that is lawful. What is the latest law on this subject? Ans. After September 1st it is unlawful to take trout or salmon in any waters of your State, except in Sumner, Winnisquam, Squam, Newfound, First and Second Connecticut and Winnipisogee Lakes, Ford's pond in Warren, and all private ponds in which any person has the exclusive right to fish until the 1st of May next. Ten dollars is the penalty, and possession of fish *prima facie* evidence against the possessor.

E. T. C., Willimantic, Conn.—Last spring my setter pup had a slight touch of distemper, and since that time there has been a slight yellowish discharge from his eyes. He eats well, but don't seem to get along very well. For a day or two back he has acted as though he wanted to throw up something but cannot. I fed him light, and give him very little meat. He is now about seven months old. From what I have read in your paper I think he has worms. Ans. Have mailed to you some powdered areca nut, and also some condition powder, with directions for using the medicine. In case your dog is not affected with worms give him other medicine, which you will find effectual.

C. E. J., Templeton, Mass.—1. Are deer plenty in any part of this State? 2. Do they exist in any numbers in the State of Maine, and if so, in what part. 3. Do Kay's concentrators come already loaded, or are they loaded at the pleasure of the sportsman. I have written to Kay & Co., Newark, N. J., but can get no reply? Ans. 1. Good deer shooting in some parts of Cape Cod, and a very few left in Berkshire hills in the northwest portion of the State. 2. Deer still abound in the northern part of Maine. 3. They come loaded with shot of any desired size. Letters addressed to Messrs. Allan Kay & Co., Newark, N. J., should reach them.

F. H. T., Rockville, Conn.—1. Please inform me what I can do for my pointer dog. I think he has worms. About a year ago he passed a large number, and since that time his hair has been rough and bad. His appetite is good, but he keeps very poor. 2. Of late he keeps shaking his head and scratching his ear very carefully. What can I do for him? Ans. 1. Your pointer in all probability has worms; have mailed to you the proper doses of areca nut, with directions for its use, which will cure him if he has, and will put him in condition if he has not. 2. It is canker of the ear which causes him to shake his head. Make a solution of sulphate of copper, eight grains to every ounce of water. Clean the ear with Castile soap and warm water, then pour in the solution twice a day for two or three days. Give him plenty of exercise and feed little or no meat until he recovers.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCUCLATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 20 cents per line; outside page, 30 cents. Special rates for three, six, and twelve months. Notices in editorial columns, 50 cents per line.

NEW YORK, THURSDAY, SEPTEMBER 21, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,

Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, September 21st.—Racing: Louisville, Ky. Trotting: Ambler Park, Pa.; Kansas City, Mo.; Burlington, Iowa. Return Match with Irish Team at Creedmoor. Fall Regatta Brooklyn Yacht Club; Regatta Queens County Yacht Club. Base Ball: Louisville vs. Allegheny at Pittsburgh, Pa.; Cincinnati vs. Erie, at Erie, Pa.; Our Boys vs. Enterprise, at Brooklyn; Theatre Comique vs. Eagle Theatre, at Jersey City; Greenville vs. Orchard, at Greenville, N. J.

FRIDAY, September 22d.—Racing and Trotting as above. Base Ball: Greenville vs. Our Boys, at Greenville; Resolute vs. Mutual (prof.), at Elizabeth; Louisville vs. Standard, at Wheeling, Va.

SATURDAY, September 23d.—Racing: Louisville, Ky. Trotting: Kansas City, Mo.; Ambler Park, Pa. Rifle: *Turf, Field and Farm* Badge, Creedmoor. Base Ball: Louisville vs. Standard, at Wheeling, Va.; Our Boys vs. Witoka, at Brooklyn; Alaska vs. Resolute of Elizabeth, at Jersey City; Cincinnati vs. Springfield, at Springfield, Ohio; Chelsea vs. Staten Island, at Brooklyn; Nameless vs. Osceola, at Brooklyn.

MONDAY, September 25th.—Racing: Louisville, Ky. Base Ball: Stamford vs. Confidence, of New Rochelle, at Stamford, Conn.

TUESDAY, September 26th.—Trotting: Rockland, Me.; Breeders' Centennial Stakes, Suffolk Park, Philadelphia; Dayton, Ohio.

WEDNESDAY, September 27th.—Trotting as above.

The subscription price of FOREST AND STREAM has been reduced to \$4. Twenty-five per cent. off for Clubs of Three or more.

—The railroad route between New York and Philadelphia, composed of sections of the Jersey Central, Bound Brook, and Delaware and Northern Pennsylvania Railroads, and called the "Bound Brook route," has been found of great convenience to visitors to the Centennial Exhibition. The road has been efficiently managed, and is both speedy and pleasant. The trains run into the depot at the Exhibition.

—A correspondent of the *Country Gentleman* asserts that if the law protecting robins and other insectivorous birds is not repealed, or the robin excepted from its provision, the culture of small plants in Central New York will have to be abandoned. He urges that a bounty be offered on robins.

—Parties having shooting privileges to lease with board for a gentleman, will do well to confer with "Advertiser," who presents his wants in the proper column.

ROWING IN GERMANY.—Ems, the celebrated German watering-place, was recently the scene of the second regatta ever held in the empire. Seven crews, representing Frankfurt, Rotterdam and other large cities contested for valuable prizes, the Emperor William being present. Rowing is looking up in Germany.

THE PROTECTION OF WILD PIGEONS.

WE fear that the members of sportsman's clubs, organized ostensibly for the protection of birds generally, are not sufficiently alive to the fact that at the present rate of mortality before the trap the wild pigeon, the bird of the match and the tournament, stands in danger of speedy extermination. A correspondent of a contemporary makes a strong appeal for the wild pigeon, and contrasts their appearance in the coops with the tops of their heads raw and bleeding, their gasping for breath, plumage soiled and filthy, with their wild beauty when at liberty, and asks the magnanimous sportsman when next he steps to the score to pause before he cries "pull" and think of the dirty, shrinking little innocent in the trap before him, torn by the net of the fowler from its nest of squabs, cooped up in a narrow space, and after suffering all the horrors of the Black Hole of Calcutta to die an ignominious death. Putting on one side a sentimental view of the case, but which after all is a strong one, the interests of trap shooting itself demands that more protection should be awarded to the wild pigeon during its nesting period.

The number of these birds netted for this purpose and for the market during the past season is almost incalculable and could only be reckoned by millions. We are not aware that any State organization has taken any steps towards preventing this wholesale slaughter with the exception of the State Sportsman's Association of Michigan, of which Dr. Holmes, of Grand Rapids, is President. A very large proportion of the birds netted during the past season were taken in Northern Michigan, where it seems as though they had made a last stand before fleeing to those far northern wilds across the lakes, where it will be impossible to follow them. The action of the body just mentioned is most commendable, and we will take the opportunity to here mention another move on the part of the Michigan association which is equally worthy of imitation. We allude to the sending of a printed circular to each sportsman in the State with blank spaces to be filled in with his views as to the close seasons, etc., for game of every description. In this way a general verdict can be arrived at and laws framed accordingly.

The wild pigeon is a bird of the wilderness; it shuns civilization, and the progress of settlement will slowly deplete its numbers without the help of the netters. It is a migratory bird, winging its way spring and fall between the Northern States and the Southern, and its habit is to breed in vast colonies in the woods, many nests being placed upon the same tree, and containing only one, or at most two, eggs. It used to breed everywhere through the forests north of central Ohio from the Mississippi to New Hampshire, but long ago was driven west of the Hudson river, and northward into Wisconsin, Michigan and Canada, and now finds a chance to rear its young only among the mountainous districts of those distant regions. When, as sometimes happens (less frequently now than formerly), a "roost" is found nearer at hand, the netters go in from all sides and capture the birds on their nests, taking thousands away, destroying the eggs and collecting the squabs for food. When one colony is thus exhausted, and broken up forever, the telegraph is called into requisition to apprise the netters of other localities where the pigeons are to be found, and, as the writer in the *Field* says (with an astonishingly mixed figure) "on the wings of steam the sharks are at the roost ready for wholesale destruction."

It is replied: "Oh, there are millions of them—they blacken the sky for days together as they fly over, and the sound of their wings in the woods at evening as they settle is like the roaring of a great wind; the taking of a few thousands doesn't matter." Unfortunately it does matter. If their numbers are great now in the restricted area of the country which they visit, how much greater were they, and extended over how much greater a space a century or a half century ago? Who does not remember the description in Cooper's "Pioneers," laid in our own State, of the immense flight of pigeons and the outturning of the colonists with every conceivable weapon for their destruction. A wild pigeon is a very uncommon sight now in Massachusetts, yet in 1750 we are told that their nests touched on the limbs, and connected the trees in the woods along the Vermont border for many miles together. There were unaccountable multitudes, and at the hatching season the settlers would "cut down trees and gather a horse load in a few minutes. Even then they were much diminished by the use of the net, and the result has been almost their extirpation within a century. Vast hordes used to breed in Ohio, where now they are never seen except upon migrations, and the few roosting places lately occupied in the mountains of Eastern New York are mostly broken up. The pigeon is a shy and timid bird. Break up its home and it does not return. The time has come when it should receive the care of the law, and be protected in the same manner as are other birds much sought after. In Europe the wood pigeon, which is entirely different, and is not migratory, does much harm to the farmers' crops and garden; but our wild pigeon is guilty of no such trespass unless it be occasionally on the early rice fields of the Gulf States. He passes through most of the country long before the grain or vegetables have begun to grow, spends his life in the remote woods, and feeds altogether on the wild mast.

If we wish much longer to hear over our heads on bright March mornings the rush of his breezy wings speeding in swift flight above the waking woods, battalion after battalion sweeping on from horizon to horizon almost in a

breath; if we wish our October lunch of his broiled tender flesh, or care for "squabs on toast," even if we wish to pack them in a box, and liberate him only to cut short his sudden joy with our shot "at 21 yards rise," the pigeon, which is not only useful and beautiful, but a delight, must soon be protected by law from wanton capture in what should be for him as well as other birds, a "close season." The taking of squabs from their nests should be as strictly prohibited as the killing of infant quail or chicken partridges, and in time we may have him once more in regions where the presence of his countless legions has long been but a tradition of the past.

A GRAND BLAST.—To-morrow at 11 o'clock the great blast of dynamite, giant powder and nitro-glycerine which is to clear Hell Gate of its obstructions is advertised to be exploded—provided no unforeseen accident occurs. Twelve thousand cartridges containing the explosives have been placed in the holes drilled for the purpose and but a little spark of electricity is all that is wanting to fire off the mass. Opinions differ as to what the results of the explosion will be. Some contend that the windows in New York and Brooklyn will suffer, while others think that there will be but a muffled sound, a rising of the waters and then a rapid subsidence. Our prediction is that there will be more striped bass caught immediately after the event than any one man has taken for a long time. The blast has been postponed until Sunday.

GAME PROTECTION.

—We have made frequent reference to the Sportsman's Club of California, which appears to be as important in its organization, objects, and interests as any protective club in the Union. The lakes which it controls are among the best stocked in California. One of them, Lake Pilarcitos, is described by our correspondent herein, as well as other general matters pertaining to the organization in question.

SAN FRANCISCO, Cal., August 28th.

EDITOR FOREST AND STREAM:—

This is one of the lakes or reservoirs belonging to the Spring Valley Water Company, which has the entire monopoly of supplying our city with water. It is more beautifully situated than either Lake Merced or San Andreas, chiefly owing to the surrounding hills and mountains being well clothed in plentiful and handsome vegetation. And the ride to it from Milbrae, near the bay of San Francisco, or a walk of about three miles from a point towards the head of San Andreas reservoir are very enjoyable, owing to the delightful woodland and characteristically bold ocean mountain scenery which is presented to the delighted vision of the wayfarer. The best fly-fishing is at the head of the reservoir and where the San Mateo creek empties itself with a lively flow in the main water. Here, either early in the morning or rather late in the evening, the brook trout, sometimes of quite large size, may be seen rising in a lively style on the surface, and it is then, by using a darkish winged fly with bright red body, that the fishermen is very apt to show in his creel a goodly record. There are a few clumps of weeds near some of the lakes shores, but there are many openings, and it is there that the angler will of course make some of his casts, which are likely to be rewarded by a splash, a whirl, a snatch and a successful hold. Half-pounders are here quite common to be basketed, unless the tackle becomes fouled in the weeds, which the operator must try most heroically to prevent by a strong use of the butt of his rod, although it will be likely to prove any weak spot (if he should happen to have one), in his gun' leader. On this lake the trout will either take the fly, the spoon, by trolling, or the angle worm. At times persons may be seen using severally all these modes at the same time. The new Sportsman's Club has leased this fine fresh-water reservoir, and San Andreas, as well as Lake Merced or Laguna de la Merced. There are many boats provided at each of these, and, at two of them, sleeping berths and cooking apparatus; while at Lake Pilarcitos the Superintendent of the Water Company and his wife provide excellent accommodations of every kind for ladies as well as gentlemen. All the superintendents of these lakes are fishermen themselves, are the friends of fishermen, and sympathize with the good or ill success of their visitors.

Our Sportsman's Club is now an incorporated body and it is probable that next winter we shall have pleasant and neat club rooms in the city where in social converse we may spend a few hours of an evening, recounting, as some of us can, many a dangerous and exciting contest with a fierce and full-grown grizzly, or a milder interview and adventure with the black, or brown, or small cinnamon bears, which feed on mast, honey, or wild fruits; or telling with that relish which is so natural to a sportsman, how the deer and quail had succumbed to the crack of his rifle or discharge of his breech loader; or how the lordly salmon or agile trout that had rejected many of his flies, and at length been tempted by one suited to his fancy, and had at last been conquered by the skill and perseverance of the narrator.

The number of members of the club is, up to the present time, about 168, and includes many of our most prominent and respected citizens, and new members are being added to it at every meeting. Its condition is quite satisfactory for so short a time that it has been established, there being at the end of last month nearly \$2,000 in the treasury, and no more debts at present to pay. Its chief object is the enforcement of the game laws, and of course the proper preservation of fish and other game animals; but it has greatly, also, in view, for the benefit of its members, the advantages and pleasures arising from its valuable fishing preserves in several lakes and rivers, to all lovers of the royal sports of the field, river, wood and prairie, so well and amply illustrated and related in your unsurpassed if equalled paper, the FOREST AND STREAM.

E. J. HOOPER.

FISH WARDENS IN NEW HAMPSHIRE.—The New Hampshire Fish Commissioners; the *Manchester Mirror* says, "have taken initiatory steps towards appointing fish wardens in all the towns and cities of the State which failed to do so at the March election. This, the law, makes it their duty to do, and they are determined that, with the assistance of the Attorney General and the Solicitors of the counties, the fish laws shall be executed to the letter." We are pleased with the energy which Col. Samuel Webber and his coadjutors, Messrs. Powers and Hayes, are displaying in this matter, as we believe that the most direct step toward the preservation of our game and fish is to secure officers to enforce the law therefor.

—In San Francisco, August 24th, A. Ritori, and Joseph Cartania, who were detected in the act of smuggling 1,000 pounds of fresh salmon into the city against the law governing the close season, were fined \$20 each. The fish seized were divided among the charitable institutions of the city. The Fish Commissioners are determined to prose-

cute every violation of the law that comes within their observation, and will maintain a vigilant watch throughout the closed season. In California the close season for salmon extends from 1st August to 1st November; for trout 15th of October to 1st April except in Siskiyou county.

—Last week the Onondaga Sportsman's Club of Syracuse did a commendable business in capturing five immense seines, weighing in the aggregate over a ton, and valued at \$800. They were taken from Oneida Lake, and the spirit of the great and good Leatherstocking rejoiced thereat.

OPENING OF THE COLLEGE YEAR.—The end of September will find nearly all of the American colleges once more in session, the oldest being one of the very latest to reopen its doors. Harvard's new year begins September 28th, with a probable freshman class of 240, of whom 190 are already admitted. Of the 216 applicants at the first examination in June, 36 were rejected, as were four of the six at the special Cincinnati examination; but there were six admitted at the second course trial, and four of those who passed last year will also enter with the class of '80. Yale opened September 14th, with a prospect of smaller classes than in 1875. The applicants at the June examination numbered 210, including 60 for the scientific course, while last year there were 80 applicants for the latter and 260 in all. At the special Chicago examination 15 candidates presented themselves. The Dartmouth year began on the last day of August, with a freshman class of about 70 and some addition to the upper classes, the entrance examination being conducted in writing, instead of orally as in years before. Williams opened September 7th, with a new class of about 50, and at the Amherst opening, the same day, the prospect was said to be good for a class of about 80, though only 46 appeared at the June examination, as against 73 in 1875. Middlebury expects a class of 30, and Vermont University a similar number, including four young women. Of the 48 applicants at Rutgers last June, two-thirds of whom were fitted at the preparatory school connected with the college, 7 were rejected outright, and only 16 of the others were admitted without condition. The Maine and Massachusetts Agricultural Colleges both opened last week, with freshman classes of about 20. Wesleyan and Trinity opened September 14th, and Michigan University, September 27th. New York University opens September 20th, and Columbia October 2d.

AN IRISHMAN'S LUCK.—We beg to congratulate Mr. J. K. Milner of the Irish team. Mr. Milner, we think, has every reason for satisfaction. His was the best score made in the late match, or, at least, he tied Mr. Rathbone, and by the Creedmoor mode of counting, beat him. His score of 75 points at 1000 yards in fifteen shots is unparalleled. But we do not mean to ascribe his magnificent shooting to "luck." His luck consists in the possession of that beautiful red Irish setter Eileen, with which he was so fortunate as to win the tea service presented by this paper at the recent bench show at Philadelphia. How much more satisfaction will Mr. Milner take over his dish of tea in the ownership of our trophy than in a mere fractional part of that other one, which after all will spend half its time in some dark corner, and if won would have had to be surrendered again.

Another Irish gentleman is to be congratulated. Mr. Edmund Johnson also made a straight string of 15 bulls-eyes at 800 yards, and made a total score within six points of the best.

CAPT. PARKER GILMORE NOT KILLED.—The British *Mail* of August 31st reprints from the *Graaf-Reinet Advertiser*, the assurance that Capt. Gilmore has not been killed by a lion in Africa, although he had a narrow escape from death. The brute gave him a severe mauling, and his cowardly Bushmen who ran away at the first onset, reported that he had been killed. A correspondent to whom this contradiction will prove gratifying intelligence, has sent us the following reminiscences, which will prove scarcely less interesting, notwithstanding:—

HORNELLVILLE, N. Y., September 10th.

EDITOR FOREST AND STREAM:—

It was with much sorrow that I saw the announcement of Capt. Parker Gilmore's death. I knew him as a friend and gentleman, a good shot and angler. During his first visit to this country he made his home at my uncle's in Canada for about four months, and I was his companion in all of his excursions. We fished on Lake Erie and the Niagara river. I was in the boat with him when we caught the big black bass. (I say we as I caught it, and he landed it, for it would surely have got away from me). It weighed 24 pounds. We also fished for brook trout at Goderich and Collingwood, where he astonished the natives by catching 3½ pound trout with a rod that weighed less than three-quarters of a pound. We spent about a month shooting at Long Point, and one afternoon three guns bagged 154 ducks and one swan. I was only about 16 years old at the time and shot an 18 gauge, six pound gun, and I had to do big shooting to keep even with Gilmore's 10 gauge and my father's 8-bore, 14 pounder. When the flocks were moving I did not stand any chance, but I used to paddle around all day and pick up the wounded ones, so at the finish I was a few ahead. During the whole four months that I was with him I don't remember of his saying and unkind word to me, and I must have given him a good many causes.

STUBEN.

THE IRISH-AMERICAN RETURN MATCH.—The return match between the Irish and American teams will be shot to-day at Creedmoor. The Irishmen having option, have elected to shoot the match with teams of six men. At a meeting of the American, Col. Mitchell was chosen Captain and he has selected as the six to compose the team: Major Henry Fulton, L. Weber, Col. W. B. Farwell, Gen. T. S. Dakin, R. Rathbone, Isaac L. Allen; Reserves, L. C. Bruce, G. W. Yale, and C. E. Blydenburg. The conditions will be the same as in the previous matches, 15 shots each at 800, 900 and 1,000 yards.

THE INTERNATIONAL RIFLE TROPHY.

Through the courtesy of our contemporary *The Spirit of the Times*, we are enabled to present to our readers a remarkably handsome cut of the trophy contested for last week by the picked riflemen of Scotland, Ireland, Australia, Canada, and the United States.

The design is a Roman banner, after the style of the battle flag of the Roman Legions, and was suggested by General Martin McMahon, Chairman of the Trophy Committee N. R. A. Messrs. Tiffany & Co., of Union Square, New York City, are the manufacturers, and Mr. J. H. Whitehouse the designer. The trophy is seven feet six inches high by twenty-four inches wide, and is composed of iron, steel, silver, and gold. To commence at the bottom, the staff is of iron, with copper fillets; from this staff hangs the banner, made of solid iron, the front being inlaid with a tracing of gold over which is the inscription, in incrustated silver, and partly raised, the bottom having a deep fringe of gold. Hanging in front, and surrounding this banner, is a series of copper and silver laurel garlands, on which to commemorate the date of the matches and names of the winners. The banner bar is of semi-bright copper, and represents the *fascies* of the Roman lictors, and as the trophy is an emblem of peace and good-will, the axe is dropped. To this bar is attached a smaller bar or plate of solid iron, copper edged, with the Latin motto *Palma* (crown of victory), in raised silver letters, while in front of the plate hangs pendant a large silver wreath. Immediately over this bar or plate stands an eagle of half-bright copper, resting on a Fulmen. On the face of the banner is the following inscription: "In the name of the United States of America, to the Riflemen of the World." The reverse of the banner is inlaid with the \$, or mark of American Federation, after the manner of the *Fleur-de-lis*, on the banners of France.

NOTES ON SALMON FISHING.—*Scribner* for October announces a forthcoming series of papers on Field and Water Sports, by A. G. Wilkinson, Edward Seymour, Charles E. Whitehead, A. R. McDonough, and T. Robinson Warren, all of whom, with one exception, have enriched the columns of *FOREST AND STREAM*, off and on, for the past three years. One of them, Mr. Wilkinson, has an article in our paper this week upon the Tape Worm, which scientific men will regard of great value. The first of the series referred to, a paper on Salmon Fishing, by Mr. Wilkinson, appears in the October *Scribner* and is very justly regarded by the publishers as a valuable contribution to its columns and to this class of literature. That a magazine, ranking as this does, should feel the importance of extending the scope of its attractions so as to include Field and Water Sports, not only shows what a hold these have taken upon the public, but gives merited recognition of the foresight of the Publishers of *FOREST AND STREAM*, who, in 1873, inaugurated its publication upon this basis alone, and baptised its efforts with the words symbolical.

Mr. Wilkinson's article is assuredly a desirable budget of information for those interested in Angling in Canadian waters. We are willing to concede what *Scribner* claims, that "nothing more interesting and valuable of its kind has ever been published in any Magazine." It is abundantly illustrated, and describes the fishing districts, the government management, leases, permits, tackle outfit, routes, capture and play of fish, the mode of manufacturing split bamboo rods, and a thousand other things that fall in incidentally in the course of the narrative, to give it piquancy and provoke the desire for more.

We would gladly give here a review of this article if we had space. We shall take occasion to copy some parts of it for future use in the angling department of our paper. Originally we declined to accept the manuscript, which was proffered to us by the author, on account of its length; and we feel quite sure now, that, in its length and embellishment of twenty-eight beautiful engravings, it occupies a place more befitting its character than our own columns could give it. Nevertheless, we have been printing each week, for several years, from the very best writers, articles of equal value, which perhaps have "bloomed unseen," when they might have blossomed forth with deep intensity in the more pretentious magazine. We claim the privilege of making this statement that we may show how we stepped in long ago where angels now begin to tread.

IMPROVED SHOOTING SUITS.—Those who have worn Holabird's Waterproof Hunting Suits sufficiently to test their qualities cannot say too much in praise of them. In storm they are comparatively dry; in heat they are cool; to briars and thorns impervious, and in appearance always respectable. There are pockets sufficient for convenience, and flaps and lappels enough for a Quaker of the old Penn school. The ordinary garments, we say, always win approval; but when one sees a coat and vest which, in cut and style and general finish, compares as favorably with the everyday sort as one of Happy's swell suits does with the Chatham street slops, then it is time to be surprised. To this extent we had our eyes opened last week when we received a package from Mr. Holabird inclosing garments of the finest linen fabric and most modern cut. These have reached us in ample time for our contemplated gallop into Virginia next month, where, as in Tennessee and North Carolina a year ago, we shall gallivant about in hues of the native "Butternut," and astonish those to the manor born by showing what colors are, when well laid on: "Joseph's coat could never shine with this, old man! not nohow!"

Later.—While we were exhibiting the above to a friend who had never seen them—a veteran clergyman, by the way—in came the Express Messenger with another suit of the same sort from our worthy friend George C. Henning, of 410 Seventh street, Washington, D. C. We were naturally taken aback at such an unexpected overflow of good measure. Our sporting wardrobe has never been extravagant and the luxury of having two shooting coats at once was so overwhelming that we have been tempted to go barefoot ever since. Being naturally selfish, we were contriving how to wear both suits at once, when we made the discovery that they were quite unlike in some respects. The Henning suit was fitted with little cases, like Black's patent cartridge vest sold by Messrs. Schuyler, Hartley & Graham, for carrying loaded shells upside down, or down side up. This feature the Holabird suit does not have; it may, or may not be considered an advantage, according to the notion of the wearer, some preferring to carry their shells otherwise. Both suits have a capacious pocket extending the whole width of the skirt. This pocket will hold two dozen quail, and when we have got it full, we shall try and button the coat. The quality of Henning's material is very fine and the make-up of the coat will do credit to the tailor. *Hut* together, between the two *H*'s, we can hardly make choice. *Hut* we were *Olabird*, we should wish we were *Enning*; and *hif* *Enning*, then *Olabird*. The suits make a pretty double, and if a little coarser would very well become the Corsican Brothers in the play.

MASSACHUSETTS.—The Rod and Gun Club of Springfield have elected the following officers for the ensuing year: President, Hon. E. H. Lathrop; First Vice President, Elisha Gunn; Second Vice President, Robert O. Morris; Secretary and Treasurer, William M. Williams; Executive Committee, Hon. E. H. Lathrop, Elisha Gunn, Robert O. Morris, S. T. Hammond and Daniel J. Marsh. Besides its praiseworthy energy in the cause of game protection, the annual Bench Show of dogs of the Rod and Gun Club is looked forward to as one of the events of the year.

The Kennel.

BENCH SHOWS AND GORDON SETTERS.—At most of the bench shows now held in this country the scale of points used in judging are the same as originally appeared in the *Funcier's Gazette* (English). This standard was used at Springfield, Chicago and Philadelphia, and is to be used at St. Louis next month. In the premium lists of the latter show, as well as in the Philadelphia catalogues, we find this scale printed in full together with the remarks on each class of dogs. Under the head of Gordon setters we find this sentence: "At the present day they are not fashionable, not having the go-ahead qualities now required." This scale of points and this standard was intended to apply to England several years ago. Why it should now be placed in the hands of judges in this country we are at a loss to understand. Perhaps it was after perusing it that the judges in the champion and brace classes at Springfield refused even to admit Mr. Copeland's Norah and Shot to competition because they were Gordons. We claim that the promoters of bench shows have no right to place such printed instructions in the hands of their judges. As to the go-ahead qualities of the Gordons, in this country at least, we have never heard that they were lacking, and we are sure that Dr. Strachan, Mr. Copeland, Mr. Munn, Dr. S. Fleet Speir, and many others will corroborate us. In fact we are prepared to name a pair that as go ahead, all day workers will be matched against any other brace of any strain in America.

—In addition to the fact that there were nearly one hundred dogs not in it at all, the catalogue of the Philadelphia Bench Show was full of errors. Among others Dr. S. Fleet Speir's dog, Gypsum, was printed as a bitch, and his Dick, an English setter, was in as a Gordon. This is more unfortunate as catalogues are generally kept for future reference.

—Mr. Charles Lincoln, Superintendent of the late Bench Show at Philadelphia, has received the following letter from Mr. Landreth. Mr. Lincoln will also superintend the St. Louis show:—

PHILADELPHIA, September 14th.

Mr. Chas. Lincoln, Special Superintendent of International Bench Show:—
SIR—I have pleasure in bearing testimony to the efficiency with which you have performed your duties in connection with the administration of the affairs of the dog exhibition, and trust you may be successful with all others you may undertake. Respectfully,

[Copy.]

BURNET LANDRETH, Chief of Bureau.

LAW AGAINST NOISY DOGS.—Alexander Strauss, proprietor of a jewelry manufactory at 255 East 80th street, was last week accused of keeping two noisy dogs who make night hideous, and sleep exceedingly difficult in the neighborhood. Justice Murray held him to answer in \$300 bail, telling him the offense by a late enactment was a violation of the Health laws, punishable by a fine, imprisonment, besides liability in a civil court.

"DICK."—We have recently had the pleasure of a visit from Mr. Wm. Jarvis, of Claremont, N. H. We also had the pleasure of presenting Mr. Jarvis, as a souvenir of his visit, with an excellent crayon drawing of his fine old red Irish setter dog Dick, enlarged from the original cut printed in our paper, by Mr. Frank Fennimore, No. 538 Liberty st., Camden, N. J. Mr. Fennimore is an artist of merit, and his crayon drawings of dogs are most capitally executed.

—Mr. E. A. Herzeberg advertises in another column some fine puppies from his prize gyp Jessie, by Pride of the Border. Mr. H. only sells these puppies on account of his early departure for Europe.

—The Australian wild dog or *dingo*, described in our Centennial Letter No. 6 (vol. vi, page 375), forms the subject of a long article in *Land and Water* for August 19th.

ST. LOUIS BENCH SHOW.—A bench show of dogs will be held at St. Louis on Tuesday, October 3d, and continuing until the 6th under the auspices of the St. Louis Fair Association. The list of premiums is divided into sixteen classes, as follows:—

CLASS 1.—Imported English setters or their progeny that have never taken first prize at any bench show. (Native setters of pure English blood, with an authenticated pedigree tracing back to imported sire and dam, may compete in this class.)
CLASS 2.—Imported red or red and white Irish setters or their progeny that have never taken first prize at any bench show. (Same clause as above.)
CLASS 3.—Black and tan, or black, white and tan Gordon setters that have never taken first prize at any bench show. (Same as class 1.)
CLASS 4.—Native English setters, with or without pedigree, that have never taken first prize at any bench show.
CLASS 5.—Native red, or red and white setters, either Irish or cross bred, that have never taken first prize at any bench show. (Judges in this class will be governed by the standard for Irish setters.)

This is an excellent class, and one that should be adopted at all bench shows.

CLASS 6.—Pointers of fifty pounds weight or over that have never taken first prize at any bench show.

CLASS 7.—Pointers under fifty pounds weight that have never taken first prize at any bench show.

CLASS 8.—For the best pointer dog and bitch puppies over six and under twelve months old.

The prizes in the above classes are as follows:—

For the best dog, \$25; for the second best dog, \$15; for the best bitch, \$25; for the second best bitch, \$15; for the best dog puppy over six and under twelve months of age, \$10; for the best bitch puppy over six and under twelve months of age, \$10.

There are five champion classes, as follows, the premium in each case being \$25, and including any dog or bitch that has taken first prize at any previous bench show:—

For the best English setter, dog or bitch, either imported or native.

For the best Irish setter, dog or bitch, either imported or native.

For the best Gordon setter, dog or bitch, either imported or native.

For the best pointer, dog or bitch, of fifty pounds weight or over, either imported or native.

For the best pointer, dog or bitch, of less than fifty pounds weight, either imported or native.

In the special classes the St. Louis Kennel Club offer premiums of \$25 each for the best imported Irish setter dog for stud purposes, to be shown with not less than three of his pups; for the best Irish setter bitch, to be shown with not less than two of her pups; and for the best imported English setter dog for stud purposes, to be shown with not less than three of his pups.

The St. Louis Gun Club has donated the following prizes of \$25 each: Best imported setter, dog or bitch, either English, Irish or Gordon; best native setter, dog or bitch, either English, Irish or Gordon; best pointer dog and bitch, either over or under fifty pounds weight.

Mr. P. H. Bryson, of Memphis, and others, have contributed valuable silver cups to be competed for, and the manner of their disposition will be advertised hereafter. The entrance fee of \$2 includes the food and care of dogs.

Mr. John Davidson, of Monroe, Mich., has been appointed the awarding prize. Catalogues can be had of us or by application to C. H. Turner, 706 Pine street, St. Louis. Quite a number of Eastern dogs are already entered, and it is hoped and believed the show will be one of the best in the country. We advise our friends to exhibit their dogs if possible. Mr. Lincoln has charge of the dogs.

FATAL MALADY AMONG ENGLISH HOUNDS.—The London *News* says: "A heavy loss has befallen the Essex hunt in the enforced and total destruction of the bitch pack. Two or three months ago a few cases of that dread malady known as 'dumb madness' occurred, and as soon as the symptoms manifested themselves each hound was taken from the kennels and destroyed. Up to within this last fortnight no further outbreak took place, but during that period the disease spread to such a degree that it was thought best by the master, Mr. Loftus W. Arkwright, after hearing the opinion of Mr. Harris, his veterinary surgeon, and that of his experienced huntsman, Mr. S. Dobson, to destroy the remainder of the pack. Accordingly on Tuesday, these, numbering eighteen and a half couples, were shot by the head keeper, D. Hurrell, and were afterwards buried in line. The whole of the bitch pack—which was considered to be one of the finest bred and best hunting packs in the kingdom—has thus had to be sacrificed, and it is at present difficult to realize what the effect may be. It has cast a gloom over the whole district, as it must necessarily seriously affect the prospects of the approaching hunting season in the neighborhood. There is some satisfaction in the knowledge that not a single hound of the males has yet suffered, and it is hoped they may escape so contagious and dangerous a disease. The kennels are situated on the edge of a breezy common at Harlow, Essex, and are perfect models of hygiene, the hounds having every care as regards food, exercise, etc. The origin of the attack cannot be traced. It seems to have been at first simply sporadic, but in the second outbreak an epidemic seemed to have been threatened, and hence Mr. Arkwright reluctantly had them destroyed. A somewhat similar outbreak occurred a few years ago among the Durham County hounds, with a like result—the total destruction of the pack."

—The readers of Mr. Stanley's letters will have noticed a statement that certain tribes in Central Africa have large dogs which are trained to fight in battle. As Mr. Stanley's English assistant Pocock expresses it, "they train large dogs to fight like tigers for them." Some interest will be felt as to what this new kind of "African bulldogs" may be, and especially to see what light this new breed, so thoroughly free as it must be from all admixture for centuries at least, may throw upon the original type of mastiff.

—The dog Nero, weighing 165 pounds, at the London Dog Exhibition of 1871, was said to be the largest dog in Europe. At the dog exhibition held last month in Cologne, Germany, one of the animals weighed 187 pounds.

Mr. J. H. J. Duane writes from New Bedford that his bitch Chloe gave on the 6th inst., birth to ten pups, six dogs and three gyps, very handsome, everyone of them black and tan, not a white hair on any of them. Tom, the extra fine, staunch, well-broken Gordon setter, procured from Mr. Horace Smith, our field and Kennel Editor, is the sire of these pups.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Sciaenops ocellatus</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Archosargus probatocephalus</i> .
Salmon Trout, <i>Salmo confinis</i> .	Striped Bass, <i>Roccus lineatus</i> .
Land-locked Salmon, <i>Salmo Gloveri</i> .	White Perch, <i>Morone americana</i> .
Grayling, <i>Thymallus tricolor</i> .	Weakfish, <i>Cynoscion regalis</i> .
Black Bass, <i>Micropterus salmoides</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
<i>M. nigricans</i> .	Spanish Mackerel, <i>Cybium maculatum</i> .
Masacaron, <i>Esoc nobilior</i> .	Cero, <i>Cybinum regale</i> .
Pike or Pickerel, <i>Esoc lucius</i> .	Bonito, <i>Sarda pelamys</i> .
Yellow Perch, <i>Perca flavescens</i> .	Kingfish, <i>Menticirrhus nebulosus</i> .

For list of seasonable trout flies for September see our issue of July 27th.

FISH IN MARKET.—The earlier prospects of an abundance of fish throughout the season have not been carried out. The unexampled drought and hot weather appears to have driven the fish off shore into deep water, and most descriptions are very scarce. We quote:—Striped bass 25 cents per pound; smelts, (green) 35 cents; bluefish, 10 cents; salmon, (frozen), 50 cents; mackerel, 25 cents each; weakfish, 15 cents per pound; white perch, 15 cents; Spanish mackerel, 25 to 40 cents; green turtle, 15 cents; halibut, 18 cents; haddock, 8 cents; kingfish, 25 cents; codfish, 10 cents; blackfish, 15 cents; flounders 15 cents; porgies, 12½ cents; sea bass, 20 cents; eels, 18 cents; lobsters, 8 cents; sheepshead, 20 cents; scollops, \$1.50 per gallon; soft clams, 40 to 60 cents per hundred; whitefish, 18 cents per pound; pickerel, 18 cents; salmon trout, 18 cents; hard-shell crabs, \$3 per 100; soft do., \$1 per dozen.

—A Salem, Mass., correspondent reports, September 18th, some smelts caught, but the season not fairly opened. Pleasant Beach near, Kimball's Hotel, in the vicinity of Cohasset, is a favorite locality for smelts.

—Landlocked salmon are beginning to appear in Grand Lake stream, Maine. The laws in relative to close time are to be strictly enforced by the authorities this year. G. W. Atkins, Esq., will soon commence operations for securing spawn.

—Dr. John P. Ordway, President of the Massachusetts Angler's Association, and a party of friends have been having excellent success on the Rangeley waters.

—A large quantity of very fine sea bass were taken at Monterey, California, last month. This fish is very rare in that locality and this is the second visitation known since 1844.

✓ **AN EXCELLENT WAY TO CARRY LIVE MINNOWS.**—We commend to our readers the method alluded to by our correspondent in the subjoined note. It is evident that the straw accomplishes several good purposes. Being hollow the tubes, or different straws, aerate the water as it slops about in the pail; they prevent the water from freezing, and also the fish from being thrown violently against each other or the sides of the pail:—

NEW YORK, 1876.

EDITOR FOREST AND STREAM:—

Noicing in a late issue of your paper an article relating to the transportation of live bait, I will simply suggest a plan that I tried many years ago with perfect success. During several winters I fished in Maine for trout and pickerel with set lines through the ice. Often I drove from 15 to 20 miles to the fishing ground. I learned by experience that I could keep 200 or 300 minnows (or shiners, as we called them,) from early morning till my return in the evening by putting them in a three-gallon pail with close cover, filling the pail two-thirds full of water and the other third with handfuls of clean rye or wheat straw. The fish seemed to lie in the straw with perfect comfort, and were as fresh at night when returned to the tank as though they had not been shaken up for 40 miles drive. Perhaps a perforated cover might be an improvement.

MAINE FISHERMAN.

MASSACHUSETTS—New Bedford, Sept. 16th.—Market well supplied with fish this week. Bass fishing at the Islands has proved very successful. Mr. W. R. Rennick, of the Cuttyhunk Club, still wears the Diamond Club badge as "high hook," his largest bass so far weighing 54 pounds.

CONCHA.

18th.—Bass fishing the past week has been good. The Cuttyhunkers have caught plenty, so have the rest of the clubs at the Vineyard and all the other Islands. I have been and caught as many as I wanted. I send you a sample, (don't put it in the paper).

Thanks for ye noble fysshe. We will not put it in the paper.—Ed.]

FISHING MOVEMENTS.—The arrivals this week have been 83, against 100 of last week, as follows:—25 from Georges, 44 from mackereling and 14 from the Banks. The receipts of Georges codfish have been 425,000 pounds, Bank codfish 1,120,000 pounds, showing a decrease in the aggregate over last week, of only 67,000 pounds. Receipts of mackerel, 7,280 barrels against 9,740 of last week. Georges halibut, 34,000 pounds. The market still continues buoyant, there being no excess of stock and the prices quoted in our fish market are fully sustained. The call for best quality mackerel is far greater than the supply, and it is hoped that the fleet now absent may succeed in getting some of the bloaters, which will bring a good price. A good catch the coming fortnight would do much to help wind up the season favorably.—*Cape Ann Advertiser, September 15th.*

DEAD FISH.—Large shoals of lake trout, which are now coming down the streams toward Tulare lake have been dying in great numbers since the hot weather commenced. Tons of them line the banks of Tule river, fouling the water and filling the air with an almost unbearable odor. The large fish vary in weight from ten to 15 pounds. The waters are full of fish of all sizes, from a minnow to a flounder. The *Visalia Weekly Delta* says that as the lands along the streams need no artificial means to enhance their productiveness, there seems to be no way of utilizing the dead fish as a fertilizer. With such feed as abounds in the mountain streams and shoals of the lake, it is no wonder that ducks, geese, and other winged game move in such vast flocks as to cloud the sky when they rise from the water. Buzzards and crows in great numbers feast on the dead fish, and gorge themselves to an extent that they seem careless of the shooting around them.—*Pacific Life, Aug. 26th.*

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER. FOR THE WEEK.

Sep. 27.....	6 36	3 22	2 36

—The yachts of the Manhattan and Columbia Yacht Clubs sailed a race on Thursday last on the Harlem river. The course was from a stake-boat off the Manhattan Club House, foot of Eighty-ninth street, to and around a stake-boat off 110th street and return, a distance of two miles, to be sailed over five times. The entries were as follows:—

FIRST CLASS.

Name.	Owner.	Length.	Club.
Geo. B. Dean.....	Chas. Schwank.....	22 04	Columbia
Sophia Emma.....	J. Varian, Jr.....	21 10	Manhat'n

SECOND CLASS.

Ella.....	W. Johnson.....	17 04	Columbia
Skip Jack.....	J. D. Brasington.....	17 06	Manhat'n

The winners were the Sophia Emma, which sailed the course in 1h. 46m. 50s., and the Skip Jack, 2h. 13m. 35s.

—The autumn regatta of the Central Hudson Yacht Club will take place September 30th.

SEAWANHAKA YACHT CLUB REGATTA.—The fifth annual regatta of this club was sailed on Saturday from Oyster Bay, L. I. The course for schooners and first-class cabin sloops was from Hog Island to and around Eaton's Neck Buoy, thence to and around Shippen Buoy, thence to and around Matinecock Buoy, and thence back to the starting point, which made a course about thirty-five miles long. Owing to the roughness of the Sound, the course for first and second-class open sloops was so modified as to keep them entirely inside of Oyster Bay. The entries in the first class comprised the schooners Idler and Ariel, and sloops Madcap, Pirate, Vindex and Coming. They were started at 12:17:30, the Madcap being first to cross the line. The Idler walked right away from the rest of the fleet, and the Vindex showed herself the best of the sloops. But little of the race was seen, however, save by those in the yachts, as the judges' steamer did not accompany them around the course. The time of starting and return was as follows:—

Name.	Started.	Arrived.
	H. M. S.	H. M. S.
Idler.....	12 23 06	4 36 00
Vindex.....	12 22 32	4 54 55
Madcap.....	12 20 42	5 13 48
Coming.....	12 23 58	5 18 08
Ariel.....	12 23 10	5 30 30
Pirate.....	12 21 35	5 38 33

While the yachts were buffeting the heavy seas outside in the Sound, the smaller yachts were having a fine race inside the bay. Six in all started, making the course as follows:—

Name.	Started.	Arrived.
	H. M. S.	H. M. S.
Mirth.....	11 31 25	3 22 37
W. T. Lee.....	11 31 30	3 25 26
Meteor.....	11 32 30	3 34 49
Mignon.....	11 31 35	3 51 05
Waif.....	11 30 00	4 19 19
Jeau.....	11 32 15	4 54 05

Thus the Idler won the schooner prize, beating the Ariel on corrected time 44m. 10s. The Vindex won the prize in the first-class cabin sloops, beating the Coming 25m. 25s. on corrected time. The Madcap won in the second-class cabin sloops on corrected time, beating the Pirate 27m. 58s. The Wm. T. Lee won in the first-class open sloops, on time allowance, and the Meteor in the second-class open sloops.

YACHTING ON THE HUDSON.—The following yachts owned in Yonkers contested over a 20 mile course on Saturday: First class, sloop-rigged—The Scud, D. Corning; Vesper, George White; Winona, A. J. Prime; Irene, A. Gould; and Unknown, B. Griswold. Second class, cat-rigged—Wild Cat, D. Corning; McVicar, W. B. McVicar; Black Bird, Wm. Allison; Foam, B. Reeves; and Vivian, H. Vont. The prizes were: For the first boat crossing the home line, a handsome pennant; for the winning boat in the first class on time allowance, \$25; in second class, \$15. The race was won by the Scud, 3m. 46s. ahead of the Vesper, which was second, and the Winona was third. The Winona's owner claimed that in rounding the stake-boat off the glue factory near Alpine, his boat was forced to foul the stake-boat by the Vesper. A new match between the Vesper and Winona was immediately arranged. The course was about six miles long, and the race was won easily by the Winona.

BROOKLYN YACHT CLUB.—The fall regatta of this club occurs to-day off the course in the lower bay, the yachts rendezvousing off the Gravesend Club house. A large entry list is anticipated.

COLLEGE POINT REGATTA.—In the regatta held off this place on Wednesday of last week the L. B. Prince won the purse and pennant presented by Mr. Donnelly, and the Quits saved her entrance.

NEW JERSEY.—The Raritan Boat Club of New Brunswick, and the Carteret Boat Club of Perth Amboy, rowed three miles on the 13th opposite New Brunswick for the championship of the Raritan river. The course was from a stake-boat near the Albany street bridge, a mile and a half up the river and return. The Raritans not being pushed, rowed leisurely, and reached the winning point in 21:45. The Raritan crew were J. T. B. Hillhouse, stroke; J. L. Janeway, bow; S. N. Warren and T. T. Swift. The Carteret's were N. B. Neilson, stroke; A. B. Marsh, bow; N. Merrit and Joseph Marsh.

On the same day the Triton Boat Club, of Newark, held its second annual regatta on the Passaic river. There were five rowing matches and a canoe race. The first race, senior sculls, was won by F. E. Townley in 9½ minutes. J. W. Van Ness was winner of the junior scull race in 10m. 50s. Two men contested in the canoe race, which was won by J. F. West in 14m. 10s. The fourth contest, between two pair-oared gigs, was exceedingly close, the boats being bow and bow over the mile and a half course. S. A. Smith and H. Truax were decided the winners by 18 inches. The last race was between the four-oared shells Bachelor and Old Maid, and was won by the latter, whose crew were: W. A. Brunizinghoffer, Jr., H. Truax, F. H. Shipman and G. Clark. Time, 8m. 45s.

BOSTON YACHT CLUB.—The ninth annual regatta of this club was sailed last week, but owing to a lack of wind was not altogether a success. The course lay first from the line off the club house, out Broad Sound, leaving Ram Head buoy on the starboard, Faun Bar on the port, rounding the Bell buoy off the northeast ledge of the Graves, leaving it on the starboard; thence to the Bell boat on the Hardings, leaving it on the starboard, up Lighthouse Channel, through the Narrows, leaving Fort Warren, Gallup's Island, Nix's mate buoy and Spectacle Island on the port, to the point of starting. The sloop Maynard, belonging to David Seers won the first prize in the first class, and the schooner Fearless the second. In the second class the sloops Shadow and Eva won first and second prize respectively. In the third class the Posey came in first, but was objected to by the Wanderer on the ground of a foul, so the prize was not awarded.

On the same day the Lynn Yacht Club opened a series of three regattas, for prizes of silver medals, to be awarded in the first, second and third classes, respectively. There were no entries in the first class, owing to the fact that all had gone to participate in the Boston Yacht Club regatta. In the second class five yachts started, and in the third class nine. The weather was unpropitious, and the atmosphere damp and chilly, while the wind blew freshly from the southwest. In the second class the Louie won in 1h. 11m. 3s., and in the third class the Avis won in 1h. 30m. 30s.

THE DORY "CENTENNIAL."—It seems but the other day since we noticed the sailing from Gloucester of this little twenty foot dory on her perilous voyage across the Atlantic, and now hear of her safe arrival in Liverpool, and have the narrative of her sole occupant on his lonely voyage. Capt. Johnsen says that the weather was fine until June 22d, when he put into Shake Harbor, his compass being affected by his iron ballast. He started again on the 25th, and had a fine passage and fair winds until the 7th of July, when in latitude 41.50 north, longitude 54 west, a heavy gale from the southwest sprang up, during which the boat shipped a heavy sea, which started the combing of the hatchway, and the water got in and spoiled some of the provisions. At this time he spoke a bark bound from Mexico to Liverpool, and the captain invited Johnsen to go on board, saying he would drop him off Cape Clear, and not mention anything about it; but Johnsen declined. The gale passed away, and he had fine weather until the 16th of July, when a strong breeze came from the southwest, and he made a good run until the 2d of August, on which day, being then about 300 miles from Cape Clear, he spoke the brig Maggie Gander, from New York to Swansea. After running for a couple of hours with the brig, which shortened sail to keep company, Johnsen gave his boat to in order to ride out the gale, which had greatly increased. He unshipped the mast for this purpose. About half an hour after being hove to, the boat got broadside on to a heavy sea and capsized, but Johnsen got on the bottom and remained there about twenty minutes, when another sea struck her, and he succeeded in righting her. This was about 3 o'clock in the afternoon. Just after getting into the boat again he saw a shark alongside, and its fins struck against the bottom of the boat. He fastened a knife to an oar and cut at the shark, which then went away. The boat was half full of water, but he pumped it out and weathered the gale, which lasted till next day. Everything was wetted, and he lost his kerosene stove and his square sail by the upset. The weather continued rainy and foggy for four days, during which time he could not dry anything.

On Monday, August 7, about 100 miles off Cape Clear, he spoke the brig Aliredon, from Liverpool for Baltimore, and got some bread and water, his own bread having been damaged by the salt water. Next day he got soundings to the south of Cape Clear, but it was foggy and he could not see land. On the 9th he spoke the ship Prince Lombardo, which gave him the bearing of Wexford Head as fifty-three miles east by north. On the 10th he sighted Milford, but the wind became contrary, and he put into Abercastle. He sailed again on the 12th, and reached Holyhead last Friday, and Liverpool yesterday morning. Johnsen estimates that his average run during the voyage was seventy miles a day. He was provided with medicines before starting. When asked if he would care to repeat the voyage, Johnsen replied that he "thought he had had about enough of it."

—The Canadian yachts Oriole, Cuthbert, and Brunette, sailed a race last week from Toronto to Niagara, for a cup of the value of \$100. The Oriole won by 38 minutes, the Brunette second.

THE GREENWOOD LAKE REGATTA COURSE.—A proposed regatta course at Greenwood Lake for the use of the rowing associations of this city and vicinity was examined on Saturday by representatives of several clubs, upon the invitation of the Greenwood Lake Sportsman's Club. Nine associations were represented: The Neptune by Capt. H. P. Delafield, J. H. Riley, R. Penn Smith, W. K. Suitor, and A. C. Sharp; the Argonauta by Edward Smith and E. A. S. Mann; the Athletic by Henry Meeker; the Nautilus by William Walsh and L. C. Thomas; the Atalanta by Dr. Withers; the Viking, of Bayonne, by Major W. E. Hoy; the Nassau by M. C. Watson; the Triton by S. A. Smith; the Passaic, of Newark, by F. H. Hamilton; the Harlem Rowing Club by T. R. Keator. These gentlemen, with Remington Varnum, Managing Director of the Montclair and Greenwood Lake Railroad, and Jacob F. Randolph, President of the Morris Canal Company, were met at the Pennsylvania Railroad Depot by W. O. McDowell and Albert H. Varnum, chairmen of the Executive and Regatta Committees of the club. A special train took the party over the Montclair and Greenwood Lake road to the lake in one hour and twenty minutes. A small steamer carried the guests over the proposed course. The lake, at its upper end, affords a straight, unobstructed stretch of three miles on either side; the water, even in the strong wind of Saturday, was little ruffled. The lawn of the Brandon House, at the starting point, would give a good view of the beginning of a race, while cleared, rising ground faces the finish. The rowing men spoke very favorably of the course, and several of them stated that their clubs would probably take part in the first annual regatta of the Sportsman's Club on October 6th and 7th. After viewing the course, the visitors partook of a dinner at the Brandon House, which for its choice menu and the gastronomic appreciation of the guests reflected great credit, upon all who had a finger in the pie. We have little doubt that the Greenwood Lake regatta course will become one of the most popular rowing courses in the country.

NEW YORK.—In the outrigger race on the 15th for the championship of Albany, Frank J. Davy beat Henry Sager. Distance, two miles; time, 19m. 3ts.

ARLINGTON BOAT CLUB.—The annual regatta of this club was held on Newtown creek on Saturday. The course for all races was one mile and return, except for the last, which was one mile. The senior single-scutt race was won by R. V. Young in 14m. 27s. The junior single-scutt race was won by Frank Pidgeon, the time of the final heat being 13m. 59½s. The pair-oared race was not finished. The last race was between three four oared crews. Moore's crew, comprising besides himself as stroke A. J. Valentine, No. 3; Frank Logan, No. 2, and J. W. Valentine, bow, won. No time.

LOUISIANA.—The annual regatta of the Louisiana State Amateur Rowing Association came off at New Orleans on the 13th. The four-oared shell race for the championship, three miles straight, was won by the Hope crew, Riverside second, New Orleans third, South fourth. Time—16m. 25s. The four oared barge race, three miles straight, was also won by the Hope, Aspinwall second, Magnolia third, Perseverance fourth. Time—17m. 47s. The single scull shell race, two miles down the stream, was also won by the Hope, Perseverance second. Time—12m. 58s. The single-scutt working-boat race was won easily by the Howard, the Hope second. Time—13m. 42s.

The Kennel.

St. Louis Bench Show.

The St. Louis Bench Show for Painters and Setters will be held at St. Louis, Mo., October 4th, 5th and 6th, at the time of the great Agricultural and Mechanical Fair, and on the grounds of the St. Louis Fair Association. TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMP'Y

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROT-ING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars run over the smooth steel tracks enable STOCK TO BETRANS-PORTED without failure or injury.

The lines of The Pennsylvania Railroad Company also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOVA, BRD-FORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for Trout Fishing, Wing shooting, and Still Hunting.

Also, to TUCKERTON, BEECH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for WALT WATER SPORT AFTER FIN AND FEATHER.

D. M. BOYD, Jr., Gen'l Pass. Agent.
FRANK THOMPSON, Gen'l Manager. feb17 1f

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road, radiating from Chicago. Like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Nagaunee and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Wisconsin, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameoka, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and, via the Illinois Central, reaches Warren, Galena and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction, to Council Bluffs and Omaha. This last named is the "GREAT TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento, San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEESE, AND BRANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by any in the West.

MARVIN HUGHITT, W. H. STENNETT,
Gen. Supt., Chicago. Gen. Pass. Agt., Chicago. apl6

ADIRONDACK GUIDE.

NEW EDITION, WITH MAPS.

BY E. R. WALLACE.

Gives all possible information relative to Routes, Hotels, Resorts, Outfits, Guides, Distances, &c., with amended railway schedules, &c.

The only Complete Guide to the North Woods.

The instructions embrace everything that can be desired. Taking it all in all it is the most complete book that has been published on the Adirondacks, not excepting even my own—Hon. J. T. Headley.

I regard your "Descriptive Guide" and the "Appendix" as a most useful—nay, indispensable, manual for tourists to that wonderful Wilderness. A tour in that region is eminently a practical matter, and for that reason I regard your "Guide" as an important, useful, and timely publication.—Benson J. Lossing.

It is the only thing of the kind that has yet been published—the very thing that has been so long wanted and waited for.—Alfred B. Street, Author of "Woods and Waters."

McBride Flies,

The Standard Flies for American Waters.

These flies are imitations of American insects, or combination of colors, that an experience of forty years has proved most successful. Parties supplied with casting lines and artificial flies for Pennsylvania trout streams, Adirondacks, the Maine Woods, Lake Superior, Thousand Islands, Canadian, and other waters. Anglers not acquainted with the nomenclature of these flies, by mentioning the locality where they intend fishing, will have the varieties best suited to those waters sent to them. Flies copied from any natural insect or pattern desired. SARA J. McBRIDE, (Successor to John McBride) Mumford, Monroe county, N. Y.

THE

"Boston Shooting Suit."

(NAME COPYRIGHTED).

MANUFACTURED ONLY BY

G. W. SIMMONS & SON,
Boston, Mass.

SOLD everywhere in the U. S. by all first-class dealers in

SPORTSMEN'S GOODS.

EACH GARMENT DISTINCTLY MARKED

"BOSTON SHOOTING SUIT,"
made by
G. W. Simmons & Son.

This new design of WATERPROOF SHOOTING SUIT, made from extra quality duck, has acquired quick celebrity. Advertised for the first time in April last in the FOREST AND STREAM, in five months it has attained such popularity as to be called for from all parts of the country, and even from England

"Shipping clothing to England strikes us very much like sending 'Coals to Newcastle,' but the merits of the 'BOSTON SHOOTING SUITS' have been heard of in the Old Country, and that land of sportsmen has sent an order to Messrs. Simmons & Son, which will doubtless be followed by many others. Our Editor-in-Chief, who knows something about a sportsman's requirements, is using this same equipment in the Adirondacks."—Boston Paper.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at \$13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloon.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the Golden Rule (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skillfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, water-proof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Breast Measure, Waist Measure, Inside Seam Coat Sleeve, Inside Seam Pantaloon; Mention Height and Weight.

G. W. SIMMONS & SON,

"OAK HALL," BOSTON, MASS.

The Hazard Powder Co., MANUFACTURERS OF Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 8 (coarse). In 1 lb. canisters and ½ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short gun.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFFG, FFG, and "Sea Shooting" FG, in kegs of 25 lbs., and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office

For sale in all parts of the country. Represented by

F. L. Kneeland,

Feb 10-1y 70 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6½ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.G., F.F.G., the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6½ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less resistance than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER CO.,

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired. The powder is also well adapted for shot guns.

Inquire for the "Dittmar Powder" of your dealer or address the

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the
 extreme SIMPLICITY, STRENGTH and DURABIL-
 ITY of their New Patent "SIMPLEX" Breech loader
 and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,)
 its mechanical soundness so thorough, and the
 strength and simplicity of the action so great, that
 W. & P. feel sure it will supercede all the complicated
 and manifold grips now in use, its one powerful grip
 being far stronger than any double, treble or quadruple
 grip now used. In this new action LEVER and GRIP
 ARE ONE SOLID PIECE OF STEEL and the AN-
 GLE of the BODY islet in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on ap-
 plication, and orders may be forwarded through any
 of the best houses in the States for execution in the
 Spring.

Guns guaranteed to make patterns of from 160 to
 230 with No. 6 SHOT AT 40 YARDS, as desired.

W. W. GREENER'S
DOUBLE CLOSE-SHOOTING
GUNS. Winner of the Silver Cup,
 value 40 guineas, at the Great Lon-
 don Field Trial 1875, beating 23 com-
 petitors with 68 guns, also winning
 in all the other classes for the Im-
 proved System of Boring. These
 guns will kill from 80 to 100 yards
 loaded with large shot, and will
 shoot well with small shot with
 less powder charge than guns bore
 upon the old system. For report of
 the Gun Trial apply to Messrs. Mc-
 Laran, Williams & Co., Agents, St
 Louis, U. S. A. Address

W. W. GREENER,
 St. Mary's Works, Birmingham, England.

COLT'S NEW MODEL 7-SHOT REVOLVER.

Weight 7 ounces,
 shoots 22 long or
 short cartridges,
 and warranted. Price \$5
 Also, a 7-shot revolver,
 full nickel plated, \$3.50. Either of
 the above will be sent by mail on re-
 ceipt of price, or C. O. D. Send 10
 cents for 80-page illustrated catalogue of guns, pis-
 tols, fishing tackle, base ball and sporting goods.

FIRST DUCK OF THE SEASON.

In this world momentous events are constantly occurring that pass unnoticed, even when the shadow of their coming is cast before. The advent of the first duck of the season is not one of them.

For Forest and Stream.
THE MATERIALIST.

JESSIE and Kate in mamma's room,
Were whisking about a bran new broom.

Spic and span, and painted red,
Was its handle, round and topped with lead.

Over the boards, thro' every chink,
Her chubby hands grew deeply pink.

Jessie looked serious over a knot:
Turning to Kate, she said, "See what I got!"

Along the floor she carefully swept
A filmy web, and from it crept

A pert young spider that wondered why
In its snug net it could not lie.

It had bright scales across its tail,
It sped away but did not fail

To touch the heart of saucy Jess,
Who was staggered somewhat I must confess.

"I'm sorry spider, sad," she said,
"To spoil your home and leave your head"

"Uncovered in this great big world,"
But still the busy broom she twirled.

When the dirt she'd got in a goodly pile,
She rested, surveying her work a while.

Then dividing it in three small heaps,
Asked Kate where God the angel keeps

Who could set this dust into a whirl,
And make it come down a new little girl?

SARAH GOODYEAR.

For Forest and Stream.
Sea Bass Fishing--Baits Natural and Artificial.

DURING the eighteen months for which I have been a steady student of FOREST AND STREAM I have been again and again struck with the great variety of field sports which are treated of—sometimes in an able and lengthy article, and sometimes in the shortest of paragraphs—in its pages. And indeed it would be strange if this were not the case. When it is remembered that the hunting grounds of the northern portion of the American continent cover—roughly speaking about 5,000,000 of square miles—that they stretch from the frozen shores of the Arctic Ocean to the burning sands of the Mexican gulf; that within this vast area there exists the most diverse conditions of climate and soil, and consequently the most varied flora and fauna; that many of the "fish, flesh and fowl" indigenous to the continent are still only partially known, or else wholly undescribed—it is but necessary and natural that the favorite periodical and exponent of American sportsmen should treat of branches of sport which for an English reader have not only the intense charm attaching to all that savors of "venison and veal," but also that which always clings to the novel and the unknown. I do not remember, however, having seen in its columns an article (as distinguished from a paragraph) respecting a branch of angling to which of late years much attention has been paid in the British Islands. I allude to rod fishing from the shore for sea fish, and more especially to bass fishing, a sport which, within the last ten years, has re-

ceived a vast accession of enthusiastic devotees. There can be no doubt, however, that along the immense Atlantic coast line rod fishing from the shore must be practiced by many American sportsmen, and as some of these brothers of the rod may like to know how this kind of sport is followed across the water, I will with your permission describe the *modus operandi*.

Until within the last few years fishing for sea fish with the rod was but little practiced by English sportsmen. Very few indeed, even of those born and bred within sight of the sea, were aware that excellent sport, but little inferior to salmon fishing, was to be had in this way. But the large circulation of recent works upon sea fishing, the great increase in the number of sportsmen during the last decade, and the rapidly increasing difficulty of obtaining anything like good shooting or fishing, except at great cost, have together conspired to direct attention to sea fishing of all kinds, and particularly to fishing for bass with artificial baits.

The fish which in the British Islands are most generally killed from the shore are pollock, bass and mackerel, although sea trout, garfish and grasse are occasionally caught. I have had mackerel afford me great sport in this way, the bait being either a large white fly, or the spinner, known as "Brook's silver laurel." But the bass is *par excellence*, the object of the sea fisherman's hopes and desires. And this for several reasons. He is in the first place the gamest of all sea fish, always fighting hard for his life, leaping out of the water and sheering right and left like the salmon, and testing the angler's strength and skill to the uttermost. He is in the second place well nigh the warriest of marine game, disdaining to be deceived and entrapped by the cunningly devised lures to which other fish fall easy.

For Forest and Stream.

ON THE WILDERNESS T-RAIL.

victims. And last, though not least, he is good to look at and good to eat.

The most effective mode of fishing for bass has but gradually developed itself, and even now leaves a great deal to be desired. So many and acute are the bass that no reliable method of taking them *en masse* by net has yet been discovered, although many plans for catching them in this way have been tried, and as millions of these fish annually visit the British shores, an effectual means of netting them still remains a grand desideratum. Trolling for them in the open sea with the living sand eel was, until very recently, considered the only method which could be depended upon to catch them in any number; but of late great improvements have been made in the artificial baits used, and in the *Field* of July 15th, there is an article by a well known and authoritative writer—"Sarcelle"—descriptive of fishing for shoaling bass with a new bait, which induces me to believe that the inventive genius of man has at length devised an artificial lure which has triumphed over the caution and cunning of the bass.

Many baits, living and dead, natural and artificial, have been tried for bass with varying success. Of natural baits the living sand eel is undoubtedly the most seductive, but it is often difficult to obtain, even when most abundant. The best way of putting it on the hook is to insert the latter at one corner of one eye and bring it out at the corner of the other. This, if carefully done, will not hurt the eye or interfere with the liveliness of the fish. Another mode is to enter the hook at the mouth and bring it out through the throat. If living sand eels cannot be procured but dead ones be obtainable, the latter may be rendered a very good substitute for the former by inserting a thin, sharp penknife under the skin, and cutting the backbone through in three places. Thus treated a dead sand eel will move in the water, if skillfully manipulated, just like a living one. A dead bait is also used as a spinning lure by entering the hook at the mouth and bringing it out about an inch above the tail, the mouth being fastened tight by a piece of thread. I am not naturalist enough to say whether sand eels identical with or similar to those which frequent European seas are to be found in American waters; but if so, I have no doubt that they would be found most effective baits, if used in the way I have endeavored to describe. Soft and peeled crabs, the viscera of newly caught pilchards, fresh squid (cuttle-fish), mud worms, mussels, shrimps, and "lasks" cut out of mackerel are also used as baits for bass.

Artificial baits of various kinds are used for bass fishing, and a few of them are as deadly in skillful hands as the most approved natural ones. A peculiar and at times a very useful bait is made out of the skin of the bass itself. "Bass skin baits" are made by cutting a long, wedge-shaped piece of skin off the stomach of the bass with a sharp pair of scissors. Properly played this bait has a capital motion in the water, and will often kill very well. Baits of similar shape are cut out of sole-skin, parchment, gurnard skin, pork skin, and ray-skin. Of these the pork and ray-skin baits are the best. The pork baits are cut from their salted pork in wedge-shaped strips about four inches long. They are kept from six to ten days in salt, and subsequently about four days in fresh water, and are thus made to assume a clear white hue. Ray-skin baits are simply wedge shaped pieces of the skin of the ray dried upon a board. Before immersion a ray skin bait is a dull, dirty white in color; but after being a short time in the water it becomes of a beautiful pearly white, and whether for use with the rod, or for trolling on the surface at the end of a hand line, is a very useful lure. The most cleanly, convenient and deadly baits, however, I have ever used in sea fishing are Brooks's "silver lance" and Capt. Tom's "spinning sand eel." The silver lance was introduced about four years ago by Messrs. C. & R. Brooks, (whom I have found, I may say, as reliable in fishing tackle as Messrs. Tolley are in guns) of Stonehouse, Plymouth, Eng. It is a long, narrow, bright spinner, running upon the gut trail immediately above a triangle of hooks. It is light and spins very freely, and is thus well adapted for use with the rod. I have used it with success, both from the shore and from a boat, for pollock, sea trout, mackerel and bass. For whipping for mackerel from a sailing boat it is particularly deadly, far more so, indeed, than any other spinner I have ever tried. But my favorite bait—the bait *par excellence* for bass—is Capt. Tom's spinning sand eel. This eel is an India rubber bait, and was invented by an officer belonging to Her Majesty's Royal Marine Light Infantry. Born and brought up in one of the finest bass districts to be found on the southern coast of England, Capt. Tom early became acquainted with the wary habits of the bass and with the baits, almost exclusively natural, then used in its capture. India rubber baits were suggested years ago by different sportsmen, and were introduced to the public by various tackle manufacturers, but they were all failures, more or less. Capt. Tom, however, took these crude devices in hand, and by dint of perseverance and experiment, eventually perfected the artificial bait now known by his name. It is in my opinion by far the best yet invented. Its spin in the water is most life-like, and when skillfully cast with the rod it is, in the words of its inventor, "simply irresistible." I have had splendid sport with it on the English coast, and although I have had no opportunity of trying it with the rod on this side of the Atlantic, I have found it during the present and preceding seasons to be just as deadly with the hand line in American waters as it is in English seas. Tommy cod, cod, pollock, mackerel, and even haddock run eagerly at it, and I can hardly doubt its being found equally destructive with other kinds of fish frequenting the coasts of Canada and the United States.

I had intended to have added to this list of baits a description of my first day's bass fishing at the Rame Head. But the miserable demands of space require that a limit should be put to this article, and I have, therefore, but to conclude with the hope that the information given may turn out to be both interesting and useful to some of your readers.

FOREST AISLE.

*A noted resort of bass on the Cornish coast.

—Some bright tin pans set up on edge to dry in the sun, at Bridgehampton, reflected the heat with such intensity as to set fire to the roof of a building upon which the reflected rays were focussed.

—The prairie sections of Southern Minnesota are fast being covered with a forest growth since the stoppage of prairie fires. Willows, wild apple, hazel, oak and aspen trees spring up spontaneously.

THE number of business men and office clerks in this city who persist in resting their brains and invigorating their bodies by camping out for a few days or weeks every summer in the magnificent wilderness of from three to five thousand square miles within the borders of their own State is yearly increasing. A constantly increasing proportion of these are novices. It is not unusual to meet in the woods a party of four or more, not one of whom has ever before enjoyed this sensible sort of healthful recreation. For the benefit of such let me describe, with considerable detail not interesting, perhaps, to the general reader, an excursion recently made by Mr. R. B. Cable, of the Erie Railway Company, Augustus Rockwell, artist, of Buffalo, and your correspondent. The whole trip was carefully planned, and was so smoothly successful in every particular that some minuteness in recital, for the information of beginners, may be excused by old stagers. Making a pleasant, easy start by taking the St. John, at 6 p. m. for Albany, we breakfasted next morning at the Delavan in time for the 9 a. m. train west, which connected us with the noon train north on the Utica and Black River Railroad. We alighted (3:05 p. m.) at Lowville, Lewis county, and in 13 minutes were off, bag and baggage, for No. 4, 18 miles woodward, in the best wagon for rough travel I ever saw, and which Fenton, of aforesaid numeral, had sent out for us, in charge of one, Dan, a knowing driver, who reels off his miles to an eighth of a minute, and cannot be bullied, coaxed, or bribed to vary his time table. His schedule made us due at No. 4 at 9 o'clock, and precisely 17 seconds to 9 he pulled up in front of the Fenton House and let out three men hungry enough to "eat a horse and chase the rider." This hotel is pleasantly situated six miles within the wilderness, in a large clearing, overlooks a pretty lake, commands an extended mountain view, is well kept, and is patronized a good deal by Syracuse folk. Its proprietor furnishes supplies except blankets and clothing, for camping parties at fair prices, and is not unreasonable in his charges for transportation.

Next morning our mile-measuring prince of Jehus drove us eleven miles further to the Stillwater (Beaver river), over a road whose horrible condition three years ago sets my bones aching to think of, but which now, by reason of the hot, dry weather of this season, is in unusually good order. Here Henry Burke provides meals and lodgings in the log house formerly occupied by Wardwell, and here we met our guides—Jack McGrath and Charley Carter—with their boats in readiness for an immediate start up Beaver river. We had sent Jack in a week previously to select camping ground and build shanties. He informed us that he had never seen the water so low, and that we had before us a very hard road to travel, but that unless we faltered he should get us through in time to a place that would please all concerned. So we rowed that afternoon up the river about 10 miles to Burnt Lake Camp, which we expected to find unoccupied, but which we found in possession of a party of young gentlemen from Syracuse, on their way out from Smith's lake. They kindly allowed us the use of their fire and table, and of a spare tent cloth for roof to our bedroom on the outside of their fireplace. The toils and delays of the difficult navigation prevented our getting further than the head of Albany lake the next day. We passed the night in a snug little bark shanty close to and facing the water, and within sight of the old Partridge camp, occupied by three men with their wives from Jefferson county.

Next morning we crossed the "carry" and pushed up into Smith's lake, a large, beautiful sheet of water 1,775 feet above tide, and guarded by a mountain 2,273 feet high, and displaying one of Colvin's automatic self-reflecting signals. Lunching at Syracuse camp we crossed the lake, worked up the inlet five or six miles, and called a halt where the stream flows at the base of a high bank, crowded with evergreens. The roots of a big tamarack formed a convenient landing-place. We cleared off a spot on top of the bank, stretched our rubber and oil cloths over a ridge pole laid on crotches, boughed the ends, built a fire in front, made up our balsam and hemlock bed, and slept the sleep of the tired and happy. And that tabernacle shall be known as Tamarack camp, for so we named it.

The next day up the stream, through ponds and small lakes, and over a "carry" or two, to a lake and a camp and a sunset that compensated for all our fatigues, and made us feel at home in Paradise. The artist saw certain atmospheric effects over the lake and on the mountain side opposite, in the last rays of the setting sun, that he will never forget. Cable was beside himself with delight over the location, beauty, and picturesque surroundings of "Camp Centennial," and the subscriber's cup of pleasure was full. Salmon lake is about three miles long and over half a mile in average width, and so framed in by wooded hills and mountains as to make a charming picture. Our camp was at the bottom of a little sheltered bay indenting the western shore, had a densely wooded hill towering up behind it, and a pleasant outlook over the lake. No words at my command satisfy me in depicting such scenery, or in expressing our enjoyment in this forest home. Every day seemed happier than its predecessor, every meal "the best one yet," and we left it, when compelled to do so, with extreme reluctance. The unusual lowness and warmth of the waters had forced the speckled trout into the hidden spring holes, but we had no trouble in procuring what we needed for our table, including a few whoppers for the delectation and study of Rockwell, who had commissions for trout pictures from Treasurer Shearman, of the Erie Railway Company, and from Mr. W. W. Snow, of Ramapo. He is painting for Mr. Cable, from an oil sketch on the spot, a picture of our camp that, in its general composition, main features, and minor accessories, pleases me more than anything of the kind I have ever seen, and I hope it may be placed in your office on exhibition when finished. He also made a fine study of a couple of lake trout, which, as they are taken from the cool depths, are almost as handsome as the speckled. We caught only three, although we baited and fished almost every morning and evening at a buoy we found anchored in fifty feet of water. It is the only method of taking them late in the season, and is generally successful in these lakes, which, the truth is, are being rapidly depleted of trout by the greedy and graceless scamps who illegally gridiron them with set lines in the spring. We killed only one deer, for that furnished all the venison we wanted. I saw six others, three at one time.

I will not speak of our slow and sad leave-taking of

Camp Centennial. It was not a cheerful performance, and is not, in remembrance, a sweet morsel to be rolled under the tongue. Our journey back to the Stillwater was made with more ease and in less time. Tramping and camping had braced us up so that we could double a "carry" under a heavy load and call it sport. We noticed a great many fresh bear tracks on the banks of the Beaver river. It may be that Bruin had been routed out of his haunts by dogs, for the poor deer are being driven to death daily, in season and out of season by baying hounds, in direct violation of law. For instance, Bridge camp, Albany lake, was occupied, when we passed up, by six men from South Adams, Mass., three guides, and three hounds. A deer swam across Salmon lake when I was fishing one morning before breakfast, at the buoy, and soon the hounds on his track were heard in the distance, and not long after two men and two dogs were seen skirting the shore opposite our camp in search of the trail. We had to sleep at Burnt Lake Camp, on our way out, next door to a party, arriving after we did of four men and two dogs from Evan's mills, Jefferson county. I saw dogs at Burke's, and walking thence to No. 4 met on the road two men and a hound, and further on a hound and two men. Thus the deer and trout of this great natural park are abandoned to the hounds and set lines while the State Sportsman's Association, next to perfection in trap shooting, seems most intent upon enforcing the game laws in the New York refrigerators rather than in the haunts of the living game, and the National Association gives symptoms of "ceasing to exist or of being reduced to the mere skeleton of an organization without vigor or usefulness."

I will close by giving a copy of our supply list for five men for twelve days, for the guidance of parties new to the woods:—12 pounds ham, 12 pounds bacon, 12 pounds pork, 8 pounds butter, 10 pounds flour, 8 pounds corn meal, half pound green tea, half pound black tea, 10 pounds granulated sugar, 10 pounds maple sugar, 5 pounds Java coffee, 4 cans milk, 1 paper saleratus, 1 paper cream tartar, 10 pounds mixed crackers and pilot bread, 8 dozen eggs, 1 bushel potatoes, 2 quarts Ashton salt, 1 tin box pepper, 1 bar soap, 1 bottle mixed pickles, 1 dozen lemons, 1 dozen short adamantine candles, matches, etc. There are other things good to have in camp, as oatmeal, rice, split peas, beans, dried fruit, jellies, etc., but to keep down bulk and weight I should leave them out. Every time I go into the woods I find myself inclined to take less than I carried on the previous trip, both in the provision line and in personal outfit. For the latter, all that is essential in summer or early fall—besides the rough corduroy, duck or cassimere suit and thick boots or shoes for daily wear—is an old heavy overcoat, one pair thick pants, woolen socks and flannel body clothes, one pair large, coarse, silver grey blankets, rubber cloth or coat, a pair of wading shoes or water-proof top boots, and a pair of old shoes or leather slippers.

For Forest and Stream.

CHENAUX ISLANDS AND MACKINAC.

THE situation of the Chenaux from the historic island of Mackinac is between 15 and 20 miles northeast. The Carp and Pine rivers are directly North, and empty into "St. Martins Bay," about the same distance from Mackinac.

There perhaps is not on this continent a locality embraced in the same number of square miles, that possesses so much of interest, historically, piscatorially and in point of scenery, as that which I have endeavored to describe. The old battle grounds, the old American Fort, the landing ground of the British and a thousand and one objects, all of which are, or ought to be objects of interest to every true hearted American. These are all located on what is known as Mackinac Islands in the strait of the same name. The Chenaux group of islands are so beautiful one feels while sailing among them that he is in a fairy land almost. The channels are in places between the islands barely wide enough to admit a small tug, but deep enough for a Cunarder, and such bass fishing! I believe I counted in the clear cold water over 125. They take the hook (trolling hook) with great vim, and are all "fighters from the score," as gentlemen of the turf say.

These Carp and Pine rivers are full of trout. A gentleman friend of mine caught in one afternoon's fishing 200 and odd, and the weather is so cool and bracing, fishing instead of being a labor becomes as it ought a delightful pastime. These places now for the first time are becoming easy of access, and I would advise your readers who desire to keep cool and "go fishing," to visit some of these places. As for partridge, I am told they are extraordinarily plentiful and that gentlemen have bagged as many as 90 in a day's shooting. Fancy shooting 90 partridge, I can hardly believe it, but a gentleman from St. Louis told me he was only waiting for a friend to meet him and he would take me to Bois Blanc, and convince me. I could not wait as my business was such as to take me home before they started.

About a month since Mr. Geo. H., of the firm of H. & W., asked me to join in an excursion to Mackinac. I told him he could count Mrs. C. and I in for it, and though we did not get as large an excursion as we at first anticipated, yet in point of fun and true enjoyment, I think it was the biggest excursion that has been taken this summer. The following are the names of the party: Mr. and Mrs. Geo. H., Capt. William N. H., aged six years, Mrs. C. and your humble servant. We started from Detroit in one of the "Anchor line" of steamers, the Japan, which is sailed and provisioned in "ship shape and Bristol fashion." The steamers of this line are built of iron, and of about 1,000 tons burden. Our trip up the Detroit and River St. Clair, through the new canal over the St. Clair flats, (once the great duck ground of the State,) thence up Lake Huron to Mackinac Island, was very charming indeed.

Mr. H. enjoys the reputation among our community of being at once a gentleman, a lover of a dog, gun, and reel, and I can say with all candor, that in qualities that go to make a man agreeable, he certainly excels—up in all manly sports, full of vim, and withal a thorough business man. This is the gentleman whom I accompanied to Mackinac, and if I were to detail all the hair-breadth escapes, and all the fun we had, you'd have to have more capital subscribed to the dear old FOREST AND STREAM, that it could be enlarged to contain the description. George informed me *en route* up, that he knew nothing about canoeing. Many years since I visited Mackinac, and at that time there were very many canoes on the beach, and I fancied there would be on our arrival. When he told me he knew nothing about navigating a canoe, I had an inward feeling of satisfaction,

for in those "happy days gone by" of boyhood, I was very much at home in a canoe, and inasmuch as George had beaten me pretty badly at cards, which nettled me somewhat, I determined to challenge him to a canoe race. I knew his pluck and pride would not permit him to decline a challenge from me, and I fancied I could get the laugh on him by his capsizing. When we arrived at Mackinac there was not a canoe in sight, but in a day or so I discovered one and posting the ladies so they might see me in my new role, I took advantage of George's absence and started to practice; well, I got along quite nicely and was of course applauded by the ladies and Indians, who said I did well. George had beaten me at everything I suggested. My own games all the way up, and on shore beat me at quoits, billiards, ten pins, and cards and about all the games I knew. But "I had him"—everyone said, "no white man can ride in that canoe as you can." I said to myself, "old Cardie, you'll git im now, you bet," and then I laughed, when I fancied him in the water. About an hour after my exploit, George came up. He had probably beaten some one at ten pins, and felt pretty good, so I said "George I have found a canoe and I want you to go out in it." "Where is she? You bet I'll go. Where are the ladies, I want them to see the fun," said he. Oh! didn't I laugh. Just what I wanted to have the ladies see him floundering around the cold water for a few moments. My revenge was near at hand. We had the canoes brought, ladies posted in a good position and away went my friend, struggling to keep the canoe under him, getting red in the face and looking back to us, (who were laughing) with a face expressive of a large amount of determination. "He was still captain of that canoe," and was getting along so well that I commenced to feel a little bit skeptical as regards his not being able to continue captain, very much to my mortification and disgust. (George, I did want you to relinquish your command of that canoe, and swim ashore so bad, I fear I was provoked with you for a moment). Well he at last became firmly seated in his new employment, and the way he spun that canoe around the strait of Mackinac with an audience on the hills of at least 500 people, including the guests of the hotels, the soldiers of the garrison, the Indians, Mr. H., Mrs. C., Captain Willie, and Mc—, was a wonder. To cap the climax on arriving near shore, he gave to the frail boat a tremendous amount of momentum, threw his paddle on the bottom of it, placed one hand on each side, and stood on his head. I never saw people laugh so in my life. I laughed, but I was so mad, so disappointed that it almost maued me ill. Of course George was a hero. I had played my last card and was beaten at my own game. We are going to try it again next summer. "BUENAVENTURA."

Plint, Aug. 24th, 1876.

For Forest and Stream.

AN ENCOUNTER WITH A WOUNDED FOX.

WHEN a youngster, yet old enough to have a hankering after the girls, I was returning homeward on foot, one morning about 3 o'clock, across the lonesome wooded ridges that base the mountain regions of Western Pennsylvania. It was in December, and those snow-clad hills looked majestic, grand, and illimitable. Surmounting the heights of one, hundreds of others stretched far beyond me in all directions—vast, solemn, and enduring sentinels of time and eternity. The soft, feathery, melting snow lay a foot deep on the ground; the branches of the trees were bending beneath their load of pure flakey crystals, their trunks resembling stern old men, their locks grown white with age, bending towards Mother Earth. Fences, rocks, and other objects, presenting their dark, uncovered sides to view in the surrounding whiteness, seemed to conceal lurking fairies, evil spirits, and hobgoblins. The stars were shining, but a death-like stillness pervaded woodland, thicket, and field as I climbed fences and wended my way over the hills by blind paths and short cuts, hoping to accomplish the six miles between me and my home, and get some rest before daybreak.

I had been to a country singing school. The roads being bad, I had gone there on foot across the hills, a distance of some three miles. All the pretty country lasses were to be found at the "Singing," and particularly one, a pretty little lassie who was at that time a very great attraction to me. She had come with her brother, on horseback, from three miles farther, beyond the hills to attend the singing school, and possibly to see me; and whenever we two came together it was dreadfully hard for us to separate. The good brother made himself scarce to attend to his own social affairs, and the horse that carried his sister there carried me back into the country three miles further, on behind, in a sort of a double capacity; that is to say, I was combining the pleasure of going with the labor of getting home again. The ride was varied with chatting, singing and laughing, and, on my part, with occasionally sticking my heels into the old mare's flanks to make her kick up and prance, affording me a fair excuse for holding my companion from falling off, etc. Arrived at the house, little persuasion was needed to induce me to go in and partake of some refreshment. Apples and pie, with milk *ad libitum ad saturandum*, was the standard lunch in those days for country lovers. After considerable love making of a primitive style, and the musing of numberless apples, not to speak of some determined efforts on my part upon some rather leather-crusted pies forced down with good milk, a tender farewell was taken, and with a light heart and thoughtful mind I started homeward.

I was in love—a sort of gosling love that made me happy—and the distance of six miles over rugged hills, through dark and lonesome forests, across purling icy brooks and snowy fields, did not seem a long tramp. I thought or mused of my sweetheart, and no imaginary hobgoblin haunted me, peering from behind rock or stately oak as I trudged noiselessly along through the soft snow. I passed the old school house where the singing was held, and a long, steep ascent of cleared hillside was before me. A deep wooded ravine, capped with craggy rocks, lay in a direct course on my right along the ledge, and the path lay to the top of the hill two miles distant, when a steep descent of one mile through thicket and clearing on the other side would bring me to my home on the bank of the river, where it was my custom to slip in quietly on such occasions as this, beguiling Maje, the watch dog, into silence, or kicking him into it, as seemed most effective at the moment. But before I reached home that night there was an event in my life—an impromptu fox chase—that made a powerful impression on me. It was brief, but

vigorous and exciting. Ascending the hill through a cleared field, after passing the school house, I espied a large wild animal ambling through the snow—at least the animal looked large then, and even now, as I recollect it. It was certainly a fox, and a big one, but evidently wounded, as he made poor headway, and stopped often, as if to rest. I could see him distinctly not a hundred yards away. He had come from the rocks, and was making his way across the field to the timber beyond. I could see him limp as he ambled over the soft snow, and being badly wounded he was just the sort of a fox I wanted to attack, as I could despatch him in a quick onslaught by a series of kicks, and wear his brush in my hat. He was making off up the hill quartering. I did not stop long to consider, for he might see me, quicken his pace, reach the timber, and give me the slip. I had on heavy high-top boots, with my trousers stuffed into the legs. My very soul was now on fire with excitement; I was eager for the attack. At one jump he looked the size of a fox, the next time he jumped he looked as big as a calf, but I would now bounce him if he was twice as big, and with my heavy boots kick and stamp him to death before he could discover what hurt him; I would carry or drag him home in triumph to exhibit to my brother and brother-in-law, both of whom considered themselves sportsmen, and at the same time entertained a mean opinion of my prowess in field sports, because I was the younger, and addicted to making considerable noise when out squirrel shooting with them, sometimes insisting—they said always—upon eating the noon lunch before the morning was half spent. These unfortunate tendencies had placed me in "bad odor" with them as a sportsman, but now I was to accomplish a feat by killing a fine big fox (apparently a little worsted by lameness, but that fact should be kept *sub rosa*), and so redeem myself, improve the odor, so to speak, and henceforth look on them with contempt.

Crouching down I pulled my boots well up, and my hat well on, and drew on my mits, as the scoundrel might bite or scratch me in the fight. Like a tiger drawing on his prey I stealthily and swiftly bent my eager steps forward until fifteen, then ten yards, only intervened between me and my unsuspecting prey (?) Now!!! Charge!!!! Run in on him and give it to him from behind—*coup sur coup!* A fierce yell that reverberated through those ever memorable hills, in the stillness of the night went forth, and I was upon him; yes, forsooth, and, by the powers! I was not only upon him, but I was right in among him, as it were. A treacherous stone, log or some obstacle under the snow tripped me in my hasty and excited efforts to give him a terrific kick from behind, and down I went upon him in the snow. But presto! quicker than the evolution of these thoughts the air was thick with a pungent, penetrating fog around about me, every atom of which seemed to be armed with the heated point of a cambric needle. The air grew dark—I was blinded, stifled; I gasped for breath. The erect hair upon my head seemed effervescing with a sort of champagne-like busting of spherical globules of infinitesimal size and myriads in number—each globule surcharged with a combination of smells that sulphurated hydrogen, petroleum, coal tar, carbolic acid, chlorine gas, sewer gas, illuminating gas, combined, mechanically mixed, concentrated and redissolved, were like the dew that falls from roses in comparison with what I now received into my gasping lungs. Although I never before had any intimate acquaintance with this sort of ambling, "wounded" fox, I now felt thoroughly introduced, and the reader will doubtless have anticipated what was now *flushed* upon me, that this lame fox was no fox at all, and made no pretensions to be one; but gloried in being a regular old *Mephitis mephitis*—an old he polecat, a skunk of the worst type.

Well, I was now in for it. He had done me all the harm he could in embracing him by accident in my fall upon him in the snow, and I was mad—yes, insane—with rage, mortification, and the smells before mentioned. I would now have his life at all odds. At him I rushed madly, and overtaking him again jumped on him, and did some promiscuous kicking that would have made an army mule hang his head in diminished confidence. He bit me in the spur piece of my heavy boot and tore a piece out of the leg, but happily did not injure me. I kicked and stamped him until the snow on that hillside looked as though a large drove of cattle had been driven over it, and finally I kicked him over the ledge of rocks for which he was so anxiously making. Then I jumped over after him, and continued the fight among the blackberry briars in the ravine until I left him a mere pulp of *mephitis* destruction, myself scratched and torn with briars, as though I had been in a hand-to-hand encounter with Bengal ugers instead of an animal whose greatest size was his smell.

I then innocently thought I would run to the top of the hill and get out of the smell, but alas! this accompanied me. I took off my hat to cool my fevered brain, and rubbing my hand over my hair it crept like the hair of a cat in a frosty night, and evolved more odor. I let the hair alone, and leaned over a worm fence, feeling much as I did when quite a little boy I smoked my first half-Spanish cigar, purchased with the penny given me by an over-confident parent to put in the missionary box. I was sick! that leather-crusted pie given me by my sweetheart was endeavoring to be restored to the external atmosphere; I kindly assisted it, and felt lighter, though still heavy in perfumery. I staggered down the hill through the bushes, the snow falling from their branches upon my bare head and face, refreshing me. At the end of the garden I disrobed and threw the clothing in a pile by the fence, to be buried when the ground thawed. After rubbing myself down with snow as an experimental antidote (I can't recommend it), I cautiously approached the house by the front garden gate, where I was rudely confronted by Maje, the faithful mastiff; who, though I had not been absent as long as Ulysses, nor changed as much in face and form excepting being decidedly *au naturel*, his hair all stood up on his back and turned the wrong way; he didn't bark, he fairly roared as he made for me just as I placed my hand upon the kitchen door latch. I beat him to the gate, and fortunately got that structure between us. Then the neighboring dogs took up the refrain. I was beginning to get chilled, but so far as the smell was concerned didn't now mind it much. I was apprehensive lest a neighboring dog, a crony of Maje's, might come and attack me in the rear. I thanked God there was a good locust tree within a few feet of the gate—a little thorny, but preferable to take to rather than be wrestled by two big dogs with uncertain consequences. I scolded, coaxed, and cajoled Maje, called him a "good dog" and a "scoundrel," and said "now dare you," and sometimes thought I was convincing him of my

identity, but the moment he got sight of my naked, shivering form around the corner of the house his hair went up again, and he redoubled his efforts to get at me through the paling.

At this juncture my brother-in-law, always on the alert for robbers, and who had often expressed a bloodthirsty determination concerning the treatment of such characters, threw up the side window, and in an excited voice demanded to know who was there, and emphatically declared, with an oath, that he would shoot me. The latter amusement I knew he was passionately fond of, and my voice left me from sheer fright and cold, for the wind was now blowing from the river fresh and sharp. Encouraged by his master, Maje became more furious and determined than ever, and his noise was terrible. I latched the gate and crouched in under the front doorway to prevent being hit with the shot, until my sister recognized my voice when it returned to me. I invited them to call off the infernal dog and give me a clear entrance and no questions threatening vengeance on them, dog and all, with my returning courage. No questions were needed since they smelt, not a rat, but something which explained in a great measure its character.

Notwithstanding my entreaties to my brother and brother-in-law, who were fond of jokes at other people's expense, never to let the (pole) cat out of the bag, they slyly indulged in innuendoes in the presence of others, much to my chagrin and mortification; and when I suddenly told them I had mistaken the thing for a wounded fox they nearly exploded with laughter. In conclusion, I will just say that I have done a great deal of fox hunting since, but I never have any desire to take an advantage of a wounded one, and, if I am spared, I never will under any circumstances, especially in the region of

"South Fork."

Fish Culture.

ENEMIES OF TROUT.

THE diseases to which adult trout are subject are very little understood. At least the cause of the diseases and their remedies. Sometimes a trout will be observed to have a white fungus growing upon it in spots. This will spread over the fish until it dies. Sometimes the fish will turn to a black color. This always seems to be an indication of blindness, as we have never observed this peculiar color unless the fish was partially or totally blind. The fungus which grows upon the fish is probably not a disease, but is caused by, or is the indication of a disease. Nothing is known about remedies. If only a few trout are affected, take them out, as they will be sure to die; those covered with spots very soon, and those blind, in a few months, of starvation. If the trout begin to die in numbers, change them to another pond, if possible, or give them more water. This is all we can do for them. The dead trout should be taken out of the pond as fast as they are discovered. They will rise to the surface only in very rare cases, but generally sink to the bottom, and if there is much moss in the pond they are lost to sight, and decaying on the bottom, foul the pond. If there is much sickness among the trout, we generally consider it a sign of insufficient water.

There are but few enemies of trout in artificial ponds. If the ponds are near the house, and people constantly about them, there will be no trouble with the birds which usually prey upon fish—such as the kingfisher, fish hawk and crane. Even if the ponds are some distance from the house, the water will probably be too deep for the fish hawk and kingfisher to do much mischief, as it is only in shallow water that they can be certain of their prey. Cranes will wade into the water and take all that comes within reach of their long bills—whether frogs, snakes or fish. But they are very few in number, and the trout are wary. If any of these birds appear, shoot them; and as there are very few of them, at any rate, you will not be troubled much. Muskrats sometimes get into the ponds. They are vegetable eaters and do not eat the fish. Still, it is bad to have them around, as they make holes in the banks of the ponds and let the water off. A few traps will soon dispose of them. It may be worth while to mention here the manner of catching them. Find out the places where the muskrats go into the ponds. They will make a little bare path, or run on the edge of the bank, by always going in and out at the same place. Then set a trap (a common game trap, such as is sold in all country stores) in the water, so that the plate of the trap will come in the middle of the run and about a half inch under water, taking care to place the jaws of the trap in such a direction that when shut they will be in a line with the run. Then stake the chain into deep water. No bait is necessary. If any bait is used, a sweet apple or parsnip is good. The muskrat comes through his run, steps on the pan of the trap and springs it. He tries to take it with him to the shore. If he succeeds in doing this, he will likely get out in some way; for instance, if he is caught by the leg, he will sit down and gnaw it off, in order to get free. But as the trap is staked out in the water, he cannot get to shore, and will be drowned by his struggles and by the weight of the trap, for he cannot survive under water very long without rising to the surface for a supply of air.

Water snakes cannot do any damage to the large trout, and even the small trout are too much for them, unless they are very thick, or are in a very small pond. We have seen the large trout in our ponds dart and apparently attempt to bite a snake, which was passing through. They exhibited no fear of the snake; but the snake certainly did appear to be afraid of them. Undoubtedly they will eat the small fish if they can catch them. We have often opened snakes, caught about our ponds and creek, but never found any trout in them; so the danger from snakes can not be very great, except to the very young fish. Frogs have a very bad name; but, we think, do not eat the fish very much, although they will certainly eat all the little ones they can get hold of. Even if they do no injury, they are not of any advantage, and may as well be disposed of. Crabs, or crayfish, as they are more properly called, very seldom eat the young fish. They will lie on the bottom of the pond, hidden in the mud, with the joint of the claw wide open and ready; then if any unfortunate troutling passes within reach, his doom is sealed. Crayfish do much more mischief by their burrowing propensities. They will make holes out of the pond, or from one pond to another, through which the water escapes, and very often the young fish also. The crayfish is the scavenger of the water, and it

Natural History.

GAME BIRDS OF CONNECTICUT.

Ectopistes migratorius. Wild pigeon. Common in spring and fall; breeds, but neither regularly nor in large numbers.

Zenaidura carolinensis. Dove or mourning dove. A very common summer resident; breeds.

Bonasa umbellus. Ruffed grouse or partridge. Common and abundant in thinly settled districts; breeds.

Ortyx virginianus. Quail. Abundant; breeds.

Although the smaller shore-birds are shot by gunners they can scarcely be called game birds, and I will omit them. The comparative abundance of the birds below refers to them only in the migrating seasons, except in two or three cases where the birds remain and breed with us.

Charadrius plumialis. Golden plover. Common, but stopping only a short time in the fall.

Egialitis vociferus. Kill-deer. Not very common; breeds.

Squatarola helvetica. Black-bellied plover. Common.

Haematopus palliatus. Oyster-catcher. Occurs rarely in summer.

Streptopelia interpres. Turnstone. A rare summer visitor.

Phalaropus minor. Woodcock. Common and breeds.

Gallinago Wilsoni. Wilson's snipe; English snipe. Not at all regular; usually abundant in spring and autumn, but sometime scarce.

Macrorhamphus griseus. Gray snipe. Rather common.

Tringa canutus. Robin snipe. Not common; breeds.

T. maritima. Rather common.

T. alpina. Red-backed sandpiper. Very common.

T. maculata. Pectoral sandpiper. Common.

Totanus semipalmatus. Willet. Rather common.

T. melanoleucus. Greater yellow-legs. Not very common.

T. flavipes. Lesser yellow-legs. Abundant.

Actitis Bartramius. Field Plover. Not common, but breeds.

Tryngites rufescens. Buff-breasted sandpiper. Not common.

Limosa fedoa. Marbled godwit. Not common.

L. hudsonica. Hudsonian godwit. Rare.

Numenius borealis. Esquimaux curlew. Rare.

Rallus virginianus. Virginia rail. Very common; breeds.

Ortygometra carolina. Sora or Carolina rail. Exceedingly abundant. Breeds in large numbers in both salt and fresh marshes. Very few sportsmen know that the rails breed here, on account of the nature of the breeding grounds, and I have frequently had excellent sport while the other gunners were "waiting for them to come."

Fulica americana. Coot. Mud hen. Not uncommon; breeds.

Oxygnus americanus. The swan. Is occasionally seen here but only as a straggler. A flock of seven remained on the sound in the vicinity of New Haven for nearly a week last winter.

Bernicla canadensis. Canada goose. Rather common during the spring and fall migrations; especially the former. Most of the flocks do not tarry with us, but pass by high overhead.

B. brenta. Brant. Very seldom seen.

Anas boschas. Mallard. An occasional visitant.

A. obscura. Dusky duck. Very common during a greater part of the year. A few remain in summer and breed.

Dafila acuta. Very rare. In a number of years of shooting, both on coast and inland, I have seen not more than three or four. The bird is not known to our gunners, although it is common in the States around us.

Nettion carolinensis. Green-winged teal. Common.

Querquedula discors. Blue-winged teal. More common than the other.

Spatula clypeata. Shoveller. Not at all common.

Chaulelasmus streperus. Gadwall or gray duck. Not common.

Mareca americana. American widgeon. Not as common as the shoveller.

Aix sponsa. Wood duck. Very common; breeds with us more abundantly than any other duck.

Fulix marila. Scaup, or big blue-bill. Abundant in the winter, and in spring nearly as abundant as the next.

F. affinis. Scaup, or little blue-bill, exceedingly abundant.

Aythya americana. Red-head. Rather common.

A. valisneria. Canvas-back. Rather common, but seldom killed, being very shy. The canvas-backs here eat nothing but small clams, and their flesh is no better than that of any other sea duck.

Bucephala americana. Golden eye; whistler. Very common.

B. albeola. Buffle-head. Very common.

Fuligula glacialis. Southsoutherly, or old squan. Exceedingly abundant.

F. fusca. White-winged duck. Exceedingly abundant.

F. perspicillata. Surf duck. Exceedingly abundant.

F. mollissima. Eider. Not at all common.

F. rubida. Ruddy duck. Not uncommon.

Mergus serrator. Red-breasted merganser. Abundant.

M. americanus. Buff-breasted merganser. Common.

M. cucullatus. Hooded merganser. An occasional visitant only.

ROBT. T. MORRIS.

New Haven, Sept. 1st.

SKIP-JACK IN THE NORTH RIVER.—The North river, for some weeks, has been the resort of numerous skip-jacks, known to scientists as belonging to the genus *Caranx*, and probably of the species *chrysos*, the last appellation being an allusion to its golden color. It affords much sport to anglers, as it is very voracious and lively. The young blue-fish, *Pomatomus saltatrix*, as barbarously named by the bookmen, is all-abundant, and are better morsels for the table than our new but tough visitors.

Brooklyn, N. Y.

J. CARSON BREVOORT.

—After lecturing in this city September 18th, 20th, and 22d, on the direct evidences of Evolution, Prof. Huxley left for England last Saturday.

THE FAUNA OF TEXAS.

FORT CLARK, TEXAS, Sept. 12th.

EDITOR FOREST AND STREAM:—

Quail have been abundant here, and have bred during the summer. The young have recently attained shooting size, and the sport of hunting them has just begun. The large blue quail are quite plentiful, especially in the more mountainous regions. The killdeer plovers have for more than a month been regaling us with their not very interesting notes; little attention is given to them. A few nights ago black plover were distinctly heard on the parade. Hunting parties have failed thus far to find them. On the 10th instant, after a slight norther, I saw a large flock of teal duck on Devil's river, 40 miles from here. Wild turkeys abound from this time onward. A few have already been obtained. A very few bears have been observed which have descended from their mountain summer retreats. The red deer is a frequent sight to the hunter or traveler. Scouting parties generally capture enough for practical purposes when time is not pressing.

Black bass fishing affords ample opportunities for the enthusiast of the rod and reel. All the running streams abound with them. The bass in this climate is not, however, the gamey fish which the same variety in northern waters is. Their movement is more sluggish. Fly fishing is not a successful mode; minnows and frogs form the prevalent bait. The catfish inhabits every pool and stream, and is very easily hooked by sinking a heavy bait. When taken from lively water the catfish forms an excellent dish, yet many decline to accept the so-called scavenger on account of its habits, and the warm water in which it lives. The sunfish, the buffalo, and the gar, frequent the waters of this State. They are rarely caught except by wholesale pot fishing—a practice customary even in this country, so well stocked with the finny tribe.

W. C.

AMERICAN PTERODACTYLS.—Prof. O. C. Marsh contributed a paper on this subject at the Buffalo meeting of the American Association, from his own western experiences. The pterodactyl was a flying lizard, and the finding of its remains at the West is among the most interesting of all the long series of discoveries of fossils in those little explored regions. The pterodactyl lived in Mesozoic times, and is only found in the rocks of that era. In Europe most of the pterodactyls found were in the Jurassic rocks. The most striking difference between these reptiles as found in the two hemispheres is in point of size. Many of the pterodactyls of Europe were not larger than pigeons; the spread of their wings rarely exceeds two or three feet; the spread of the American pterodactyls was from 10 to 25 feet, and these flying lizards could doubtless have taken up and carried an object of prey as large as a man. The means of flight were membranes stretched at the side. The fourth finger is greatly elongated and supported the membrane when spread for flight. There are six separate carpal bones besides the pteroid bone which supports the wing membrane. The pteroid is not a true carpal, but is probably homologous with the small bone in the foot of a bat, which supports its membrane. Another point of difference from the European pterodactyls is that they have the scapula and coracoid bone ossified. The end of the scapula or shoulder-blade in the European specimens is flat; in one genus of American pterodactyls this bone has an articulated face. Now if these shoulder-blades had been firmly fixed together the animal would have found difficulty in breathing. But Prof. Marsh has found a small bone placed between the shoulder-blades. It is probably the neural spine of one of the dorsal vertebra. The American specimens give a clear idea of the hind feet of the animal. The lower end of the tibia has a pulley-like articulation similar to the bones of a bird. There are also at least two separate tarsal bones. There is also this remarkable circumstance. In the geological horizon where the pterodactyls are found in this country, all the birds discovered have teeth, and hence are unlike all other birds, while pterodactyls are found having no teeth, and hence unlike all other pterodactyls.

THE TAPE WORM --CORRECTIONS.

WASHINGTON, D. C., September 26th.

EDITOR FOREST AND STREAM:—

I am told that I write rather indistinctly, and presume such must be the fact, as your compositors evidently found trouble with it. Please insert in next issue as errata to page 99 of last issue, Tape Worm article, in Natural History Department, as follows. In second line, second clause, for "P. Tania" read The Tania; sixth line, second clause, for "now familiar" read not familiar; twenty-third line, second clause, for "cellulose" read cellulose; in last clause but one, second line from its end, for "means" read mucus; in last clause near middle, for "more hasty" read most hasty; also before last line of the article insert: "Also in what way the salmon takes into its stomach the eggs which develop into the worm." (The investigation of this last point may lead us to a better knowledge of the food of the salmon). This last omission was the fault of the writer, who omitted to copy the line in his MSS.

A. G. WILKINSON.

WILD PIGEONS IN MASSACHUSETTS.

Boston, Mass., Sept. 22d.

EDITOR FOREST AND STREAM:—

In your article entitled "The Protection of Wild Pigeons," in your issue of Sept. 21st, it would seem that the writer was unaware that plenty of these beautiful birds are yet found in our State. I have just returned from a short trip to my native town, Ashburnham, (situated in what is called Worcester county, North), where four of us shot from traps some 100 wild birds netted there. Several thousands are annually eaten. They do not, however, breed there, but seem to make these heights a stopping place, and finding plenty of berries and other food remain several days, and sometimes weeks, before proceeding southward. Last year vast numbers were noticed circling over Naumkeag Lake and around Watatic Mountain for an hour or more, apparently to get their course, and finally departed in a southerly direction. I am also told they are netted at other places in the State; however, I regret to say, not in such quantities as in former years.

J. W. ADAMS.

ARRIVALS AT CENTRAL PARK MENAGERIE SEPT. 2 TO 23.—One yellow bird (*Chrysomitris tristis*) received in exchange; one claud (*Oreos carna*); one red thrush (*Harporhynchus rufus*), presented by Mr. Geo. Burns, New York city; one spider monkey (*Ateles belzebuth*), from Carthagen, Columbia, presented by Master Arthur E. Dornin; one yellow-bellied cuckoo (*Coccyzus americanus*), presented by Mr. Thos. Mehan New York city; two young boas (*Boa constrictor*) from Panama, presented by L. M. Barlow, New York city.

W. A. CONKLIN, Director.

may be a question whether a few of them will not do as much good, by disposing of decaying animal matter, as they do harm, by destroying a few fish. The greatest fear of all fish-raisers is that their fish will be stolen at night. Well, there is the same danger here that there is any other property, and no more. In fact, not so much. The risk of the State Prison is too much for any one to incur for the sake of a few fish; and there is only one way in which the fish can be obtained. They cannot be taken out of the ponds with a scoop (or scap) net. If any one will try this a few times, even in broad daylight, he will be soon convinced of the fact. A few old logs, stones and branches of trees, strewn on the bottom of the pond, will make it impossible to drag the pond with a seine. Catching them by hook and line is the only means; and if the fish are well fed daily, it will take more time to catch a mess than thieves can usually spare. Trout also find enemies in their own kind. The only way to stop them from feeding on each other is to give them plenty of other food. It may be as well, perhaps, not to feed them on small fish, unless they are chopped up fine, for this reason: Trout soon accustom themselves to certain kinds of food, and will refuse anything strange. If they get into the habit of feeding on small fish, they will not be likely to make a distinction between trout and any other fish. Certain old trout also become unusually destructive to their brethren. Like the "rogue elephants," and the "man-eaters," among the lions, they become morose and sullen, live apart from the rest, and make war upon everything around. When you find one of this kind, spear him at once, as there is no cure, and he will invariably destroy more than he is worth. It may be worth while to mention here how one trout eats another: An old trout will catch another, in some cases one-half of its own size, by the middle, and with its strong jaws hold it fast and swim around with it, while the prisoner worries and struggles to get free. This performance lasts until the victim gets loose or is exhausted. I have seen one carry another round in its mouth, for half a day. If the little fellow gets free, it is usually only to die a lingering death; for the breaking of the skin is fatal. When it is exhausted, the old rogue, dropping his victim, which until this time he has held by the middle, seizes it again by the head, and slowly swallows it whole; the operation sometimes taking several hours, and while in progress making the fish look as if it had no head, but only a tail at each end.

In some localities mink are very destructive. These animals are particularly to be dreaded because they do not only take what fish they want to eat and then leave, but will take out fifty or one hundred before they stop, and having found a well-stocked pond, they will resort to it again and again. The best way to trap them is as follows: Make a box eighteen inches long by six inches broad and deep, leaving one end open, set a common game trap (such as used for catching muskrats) in the open end of the box in such a position that when the jaws are closed they will be in a line with the length of the trap. If it is set crossways it will be apt to throw the mink out instead of catching it. Put the bait in the further end of the box—a piece of meat or a dead fish will answer for bait—set the trap and cover it over with a large leaf. Now, there is only one way for the mink to get at the bait, which is by walking over the trap. Some trout-breeders also try to raise mink for profit as their skins are valuable; but their habits of eating fish and their custom of getting out of almost any box or yard in which they are confined do not make them agreeable neighbors for the trout.

The fish farmer can always tell by looking at his trout in the morning whether they have been disturbed during the night. If they have been molested, whether by birds, mink or men, they will appear excited and frightened. The water will be discolored by the mud which they stir up as they dart back and forth near the bottom, and the trout will be nearly all hidden under stones, in the moss, etc.

There is one kind of trout which we do not possess in ponds, of which we would very much like a specimen. We mean the trout which comes to dinner at the sound of a bell, or at the call or whistle of his feeder. Many writers about fish tell us to avoid all noises around the ponds lest they frighten the fish, and to be particularly careful never to fire a gun on the grounds lest the delicate ear of the trout should be too much affected. Now, having made somewhat careful experiments with the view of writing this, we would only remark that trout cannot hear the sound of a bell, nor the voice of their feeder, nor even his whistle, neither will they stir one fraction of an inch at the sound of a gun fired one foot above their heads; but the sight of a trout is very keen, his eyes are magnifying glasses, and make everything look larger, and at the same time indistinct. His enemies are to be avoided by the aid of his eyes, and the trout starts and runs at every sudden motion, whether it is the shadow of the angler, or the falling of a leaf upon the water. But this is not exactly trout breeding; let us return to the subject.

SETH GREEN.

CALIFORNIA SALMON OPERATIONS.—The following is a complete catalogue of the salmon eggs taken at the United States Fishery, McCloud river, California this season:—

Date.	No. of Eggs.	Date.	No. of Eggs.
August 22d.	36,000	September 2.	541,500
August 23.	118,500	September 3.	256,500
August 24.	186,750	September 4.	938,750
August 25.	153,750	September 5.	670,750
August 26.	213,000	September 6.	321,000
August 27.	160,500	September 7.	200,000
August 28.	232,500	September 8.	704,000
August 29.	246,750	September 16.	273,000
August 30.	337,750	September 17.	300,000
August 31.	419,000		
September 1.	657,000	Total.	6,665,000

The applications for eggs this year are as follows:—

A. P. Rockwood, Utah.	100,000
E. M. Lees, Westport, Conn.	500,000
J. B. Thompson, New Hope, Bucks Co., Pa.	50,000
James Duffy, Marietta, Ga.	400,000
E. A. Brackett, Winchester, Conn.	200,000
Pack Thomas, Louisville, Ky.	200,000
State Hatching House, Madison, Wis.	100,000
Lewis C. Strudel, Belleville, Ill.	100,000
Dr. W. A. Pratt, Elgin, Ill.	100,000
New York Aquarium, 35th street and Broadway.	50,000
Boston Aquarium, 15 West street.	10,000
T. N. Clark, Northville, Michigan.	500,000
T. B. Ferguson, Baltimore, Md.	1,000,000
Provinces of Canterbury and Auckland, New Zealand.	250,000
Province of Napier, New Zealand.	50,000
Sandwich Islands.	20,000
Sportsman's Club, San Francisco.	250,000
California Fish Commission.	1,500,000
Centennial Exposition.	10,000

Total. 5,390,000

Most of the eggs, going East, will be shipped from Sacramento on September 25th. They are at present in fine condition.

LIVIGSTON STONE.

The Kennel.

FEEDING AND HANDLING.

We are in receipt of a letter from one of our correspondents, from which we make the following extract:—

"I will trouble you further by asking you to give me a good diet for my dog Rapp, the extraordinarily fine setter I obtained from Horace Smith, your Field and Kennel Editor. During the shooting season he seems to dislike corn bread almost to starvation; and besides, I have hunted him with a rather wild dog; that is, one perfectly staunch until a bird falls, when he will 'break in' and retrieve it, and Rapp has unfortunately copied this bad fault. Could you, from your stores of experience, give me an idea how to break him of this lapse into wildness? I am generally very careful of my dogs, and, though Rapp is still a brag dog, I want him to be the *ne plus ultra*, or the very best in the field."

In preparing food for a dog in shooting season, while working him, a considerable proportion of meat should be mixed with corn bread, and a dog that will not eat such food we would consider out of health, and a good dose of purgative medicine would most likely bring him around all right. A change of food is well enough with dogs, as it is with other animals. Oat meal, cooked with scraps of meat, liver, tripe, etc., makes excellent and nutritious food. Sprat's biscuit is also a very convenient and good food for dogs while working. When we have been working our dogs day after day, and fed them on meat alone, we have found no ill effects from it; but very little food should be given them before they are taken to the field; they should be fed all they will eat at night, and very little, or nothing, in the morning.

In regard to the bad habit of dogs "breaking shot," let us say that no dog, except a very timid one—it matters not how well broken he may be—can well be restrained from breaking in if he be hunted with those who set him this bad example. It is no pleasure to us whatever to shoot over dogs which break in to the fallen bird; consequently we never allow our dogs to do it, nor do we ever shoot in company with such shooters as those who suffer their dogs to do it. It has always been a source of astonishment to us that so many shooters neglect their dogs on this important matter. Our experience is, that not more than one shooter out of twenty we have shot with prevents his dog from breaking in for the fallen bird as soon as it drops. And then, again, it is not at all unusual to see the shooter himself make a rush forward with his dog to secure a killed bird. Such shooters never can have a first-class dog, and are not skillful sportsmen, but bunglers.

In order to break a dog of this bad habit carry with you a three-foot raw hide, and when the dog comes to a point stand directly over him with the whip drawn. Let some one else put up the bird and shoot, and the instant the dog starts give him the full length of the whip with all your force, using the word "charge," or "down," before the blow. This course, pursued an hour among birds by a skillful, energetic shooter, will be found entirely successful. We mean with a dog which has once been properly broken. Another excellent plan is to shoot a dozen or two of pigeons from a trap, making the dog charge at every shot, and after the excitement produced by seeing the birds fall is over let him retrieve them when ordered. But it should be understood that no matter how well a dog may be broken in this respect he will soon fall into the bad habit of breaking shot unless constant vigilance is used to prevent it. We never under any circumstances fire a gun, if only to get rid of the load, but that we see to it that our dog does not move forward.

Some persons require their dogs to drop to shot. We do not because in some places it is a useless cruelty. All we ask of our dogs in this respect is that they shall not "break shot," but remain quietly standing, or come "to heel," until the gun is reloaded, and they are ordered to "fetch dead." This we invariably insist upon and carry out, and we have very little difficulty in carrying it out. A dog which has been allowed to break shot from his youth up becomes so fully confirmed in the bad habit that it would be cruelly to break him of it, except the dog is a timid one and does not require punishment to control him.

CLUMBER SPANIELS.—We had the pleasure of inspecting, on Tuesday, a trio—two gyms and a dog—of pure bred Clumber spaniels, a breed now most rare and difficult to obtain in purity. These fine dogs, which resemble diminutive setters, but are very compactly built, are lemon and white in color, with long, fine coats. They were imported per steamer City of Richmond by Mr. Jonathan Thorne, Jr., of Dutchess county, the dog being bred by Sir Talbot Constable, and the gyms at Clumber the estate of the Duke of Newcastle. Mr. Thorne is to be congratulated upon this very valuable addition to his kennel.

NAME CLAIMED.—Mr. Henry H. Munday, of Newark, N. J., claims the name of "Brier" for his eight months' old pure black and-tan setter pup, bred from Horace Smith's bitch Vic, by Mr. Samuel Stockton's imported black-and-tan Gordon. Mr. Munday has his fine young dog well advanced in his education, and considers him wonderfully promising.

THE ST. LOUIS SHOW.—Mr. P. H. Bryson's cup at the St. Louis Bench Show will be awarded to the best pointer dog with two of his get.

THE KENNEL REGISTER.—Recognizing the want of such a book, and with a full appreciation of its value to breeders and sportsmen, if carefully compiled, we last spring opened at this office a Kennel Register for the purpose of recording and afterwards publishing in book form, such pedigrees as might be sent to us. Shortly afterwards Mr. Arnold Burges's book containing a number of pedigrees appeared, and it was intimated in the columns of the Chicago *Field* that we had stolen Mr. Burges's powder and that in spite of our book his work as a Kennel Register would be continued, and that pedigrees would be received at the office of the *Field*, of which paper Mr. Burges was Kennel Editor. As we had not stolen Mr. Burges's powder, and as the idea of establishing a Kennel Register which should be a permanent record was entirely our own, we have at the expense of much time and labor, kept it up. At the time of the Chicago Bench Show a number of gentlemen interested in breeding, without any previous general call to the sportsmen of the country, organized a kennel club, which subsequently was given the name of the National American Kennel Club, (a name to which we think they were not entitled) with the editor of the *Field* as President; and announced that they would establish a Kennel Register. Now this makes three Registers open, whereas the interests of sportsmen and breeders demands that there should be but one. We make this explanation because it has been repeatedly requested and to show our position in the matter. We recognize the importance of there being but one Register and also that that one would be much better in the hands of some corporate body in which the country at large had confidence, than in the office of a newspaper, and shall be ready at any time to surrender our work to such. We do not know when Mr. Burges, if ever, proposes to publish a second volume of his work, and if he does not, we claim that the proper place for the Register, if it is to be kept in a newspaper office, is in our own.

As some misunderstanding appears to exist as to the fee of one dollar which is charged for registering a pedigree, we would say that it was not considered in the light of a fee for any services rendered by ourselves, but in the nature of a subscription to the published book, and each amount when received was credited to the party paying it, to be deducted from the cost of his copy of the book. Hereafter no charge will be made for registering pedigrees, and gentlemen who have registered more than one dog, can, if they do not desire more than an equal number of copies, have their money refunded. It is our intention to include in the Register not only pedigrees, but the most valuable matter pertaining to the kennel which has been published in our paper, or which can be obtained from the recognized authorities of the day. We desire to make the book as complete as possible, and to this end we would request our readers who may desire to have the pedigrees of their dogs recorded, to send them to us without delay, *unaccompanied by any fee*. We will forward blanks for pedigrees when required, and will return printed certificates. The labor connected with this matter is great but we undertake it with the same willingness and interest which we have always shown in supporting Field Trials (originated in this country through our efforts), Bench Shows, and everything pertaining to the advancement of gentlemanly sport through the medium of the dog.

—Mr. Olcott, of Albany, has won an elegant premium for his setter Guy Mannering at the late bench show—one of Messrs. W. & C. Scott & Son's finest premier quality breech-loaders, valued at \$350. This was presented by Messrs. Scott & Son to Messrs. Wm. Read & Sons, of Boston, who have charge of their case at the Exhibition, and in whose care the prize gun will remain on exhibition. It is worthy an inspection, and is a handsome gift from our English friends. Let our friends go and see it.

ARECA NUT FOR PUPPIES.

WEST MERIDEN, Conn., Sept. 25th.

EDITOR FOREST AND STREAM:—

Mr. J. Glahn, the well-known artist, is a resident of this city between the mountains, and has in his kennel a highly bred Gordon bitch which, some seven weeks ago, whelped twelve puppies by Mr. Jarvis's Dick. Last week he lost seven of these puppies, the cause being worms. As these puppies died Mr. Glahn opened them, and to use his forcible and expressive words, found "millions in them," varying from three to five inches in length, sharp at both ends, and invariably balled up. He says the puppies died in great agony. Mr. Glahn informed me that he used the areca nut as prescribed, and followed the directions explicitly without any visible evidence of relief. On the contrary he firmly believes the areca nut caused the death of the puppies, as one of them died almost immediately after giving the areca nut powder. As a panacea for worms in puppies he considers it a failure, and predicts that its use will be discontinued. No doubt, Mr. Editor, this broad position of Mr. Glahn will be questioned, inasmuch as many testimonials from very eminent and observing breeders and sportsmen have been and will be given to its virtue as a worm destroyer. Still, here is the positive evidence of Mr. Glahn, a gentleman known to you and a host of other friends of FOREST AND STREAM. This conflicting testimony makes debatable ground, and opens the question: Has this areca nut the merit or virtue to destroy worms without injuring puppies? I hope to see this question fully discussed through your journal. It may be that doses sufficiently large to remove worms would kill puppies of that age, which could be given to older dogs with impunity. However, I will leave that point to others of greater experience, while I tell you what I did with one of the remaining six pups. The one I had selected died with Mr. Glahn, who notified me of the loss. He gave me the selection, except one chosen for Mr. Jarvis. I selected, Mr. Glahn volunteering this consoling remark—take it, but I have no faith that it will live. I immediately procured a bottle of Dr. E. G. Gould's pin-worm syrup, knowing of the happy effect this syrup had on worms in children. I put my puppy in the charge of M. E. Goodrich, a thorough sportsman, and a gentleman well read up on diseases and care of dogs, with the request to use this syrup if he thought best. Mr. Goodrich gave it a teaspoonful morning and night for three consecutive days. On the second day a large number of worms passed off; so on the third and fourth days. They are of the tape kind, averaging about three to four inches in length, of a light straw

color. The last lot, about mid-way of the worm, was of a light brown color, while either end was of the pale yellow, and such a number as astonished not only Mr. Goodrich, but a number of other gentlemen who happened to be present. Mr. Goodrich says he never in his experience remembers ever seeing anything like it for number. He then gave the puppy a dose of epsom salts, and now proposes to give the pup a rest of three days, when he will continue dosing as before, and satisfy himself that no more worms are left. Mr. Glahn has adopted this treatment, and assures me his three puppies are doing well. He promises to write you what success he has. In the meantime I will await with patience.

DALE HIGHLAND.

[We have supplied more than 300 persons with areca nut for worms in dogs and pups of all ages. In sending it with directions for its use we have asked to be informed of its effects, and from a large number of persons we have answers to show that it is an almost certain cure. In one letter recently received the writer states that more worms came from his dog than he thought any dog could hold; and in but a single case, besides those of Mr. Glahn's, have we heard of any deleterious effects from its use. This gentleman wrote us that soon after giving some very young pups the medicine, they died. In our own kennel we have used it with pups from four weeks old, and found it to act like a charm. The probability is that in the two cases mentioned it had been administered either in too large doses, or at a time when death was certain in any event.—ED.]

FOR BITES.—Dr. Napheys, in his book entitled "The Body and its Ailments," recommends the following remedies for bites of mad dogs, rattlesnakes, vipers, moccasins, tarantulas, spiders, and other poisonous serpents and reptiles. Often the poison so exhausts and depresses the patient that stimulants are required. Spirits may be given, or, what is better, spirits of ammonia, twenty or thirty drops in water every quarter of an hour, as required:—

1. Tie a string tightly between the part bitten and the body. This can always be done when it is a leg or an arm which is bitten, as is usually the case. It is to prevent the poison from being absorbed into the system.
2. Wash the wound thoroughly, pouring abundance of water on it from a height, or hold it under a full stream from a pump or hydrant.
3. Rinse the mouth and suck the wound as hard as possible, and for fifteen or twenty minutes, spitting out the blood, etc., which flows.
4. The wound should finally be cauterized or burned. Carbolic acid, and nitrate of silver, or lunar caustic, are the best for this purpose. But nitric or sulphuric acid will answer, or a red-hot poker, or live coals. It is no time to be timid about the means.

When these are done, put a light poultice on the wound, keep quiet until the slough comes off and dismiss the matter from your mind, for all danger is past.

—The report of the district veterinary surgeons in Wurttemberg makes us acquainted with a novel device for discovering dogs which have been worrying sheep. In February a dog attacked a flock during the night and killed eleven. The shepherd reported the circumstance to Veterinary Surgeon Osterstag, who soon after discovered a dog which, from its general appearance and muddy condition, he suspected of being the culprit. He accordingly resolved to test his suspicions by giving it an emetic, the effect of which was to bring up some flesh and an ear, corresponding to that of one of the sheep, which had been partially devoured. Another dog was suspected, and to this the same test was applied, but the creature only vomited potato food. In the law court, to which the case was taken, the owner of the first dog had to pay for the whole of the worried sheep.—*London Live Stock Journal*.

KENNEL PRODUCE.—Von Culin's pointer bitch Jule, now at Mr. R. H. Gillespie's kennels, Stamford, Conn., dropped nine pups on September 20. Mr. Wm. L. Brooks' imported Bingo, is the sire. The pups are all marked after the sire, liver and white, and no doubt will make good dogs.

At Indianapolis on the 9th inst. Mr. Geo. Tonsey Jr.'s setter bitch Tip, whelped eight puppies by his Neptune. Tip is a Gilderleeve, sired by Brooks's Bismarck. The puppies, of which there are five dogs and three gyms, are lemon and white with the exception of one, which is liver and white.

Mr. Wm. M. Tileston's imported Gordon setter bitch Lou (1st prize at Springfield and Genesee) whelped on the 20th September, six puppies, all dogs, by Squire Horace Smith's Monarch. Monarch, who was also a prize winner at Springfield, is by a dog of the Belmont strain out of a bitch by Mr. Howe's (of Princeton) Fritz. The puppies are all black and tan without any white.

Mr. G. A. Strong's pointer bitch Mab, whelped at West Meriden, Conn., on the 18th inst., a litter of eight puppies by the champion, Pete, three dogs and five gyms, of which four are black, three black and white and one liver and white.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Sciaenops ocellatus</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Archosargus probatocephalus</i> .
Salmon Trout, <i>Salmo confluentis</i> .	Striped Bass, <i>Morone americana</i> .
Land-locked Salmon, <i>Salmo G. G. G.</i>	White Perch, <i>Morone americana</i> .
Grayling, <i>Thymallus tricolor</i> .	Weakfish, <i>Cynoscion regalis</i> .
Black Bass, <i>Micropterus salmoides</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
M. nigricans.	Spanish Mackerel, <i>Cybbium maculatum</i> .
Masacaronge, <i>Esox nobilior</i> .	Cero, <i>Cybbium regale</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Bonito, <i>Sarda pelamys</i> .
Yellow Perch, <i>Perca flavescens</i> .	Kingfish, <i>Menticirrhus nebulosus</i> .

For list of seasonable trout flies for September see our issue of July 27th.

FISH IN MARKET.—The heavy storms which have prevailed of late have interfered with the operations of fishermen, and made all varieties very scarce. The consequence is an advance in prices as shown by the following quotations:—Striped bass 25 cents per pound; smelts, 35 cents; bluefish, 12½ to 15 cents; salmon, (frozen), 40 cents; mackerel, 15 to 25 cents each; weakfish, 18 cents per pound; white perch, 15 cents; Spanish mackerel, 50 cents; green turtle, 15 cents; terrapin, \$12 per dozen; halibut, 18 cents per pound; haddock, 8 cents; kingfish, 25 cents; codfish, 12 cents; blackfish, 15 cents; flounders 15 cents; sea bass, 20

cents; eels, 18 cents; lobsters, 10 cents; sheephead, 25 cents; turbot, 25 cents; scollops, \$1.50 per gallon; soft clams, 30 to 60 cents per hundred; whitefish, 20 cents per pound; salmon trout, 20 cents; pompano, 50 cents; frog legs, 50 cents; hard-shell crabs, \$4 per 100; soft do., \$1.50 per dozen.

—A correspondent residing at Harwood, Rice Lake, Canada, complains that the tax of \$1 per day for fishing privileges has driven off nearly every American from the lake the past summer, a fact that may be regarded in the light of fun for the bass, but death to the hotel keepers and boatmen.

—A correspondent who has been fishing in the Saco river at the base of Mt. Crawford, New Hampshire, writes:—

"The Saco below Bemis, will soon get used up, for up Sawyer's river, that empties into the Saco, they have established a saw mill, and made a town in the wilderness for lumbering, called Livermore, and will run the sawdust down stream by the tons. I got a dose on the stream, so I know, and give it up as a gone trout stream, though other interests may be commercial in this new settlement."

FISHING MOVEMENTS.—Many of the Cape Cod mackerel fleet have made a harbor here, and they report a slim catch of late. The arrivals during the week have been 58, as follows:—19 from mackereling, including 3 from the Bay of St. Lawrence, 26 from Georges, and 13 from the Banks. The receipts have been 390,000 pounds of Georges codfish, 715,000 pounds of Bank codfish, 214,000 pounds of halibut, and 2,800 barrels of mackerel. There are 27 vessels engaged in the Bay of St. Lawrence mackerel fishery, from this port. Of this number but three have as yet arrived home, packing out 440 barrels in the aggregate. The schr. Mary Odell, Capt. Geo. McLain, arrived Wednesday from mackereling, having made a good haul off Matineus on Saturday, securing 100 barrels of nice mackerel which were sold fresh in Boston for the snug sum of \$1,500. The Mary Odell has landed this year 2,200 barrels of fresh mackerel, making a stock of \$11,000 net. The crew have shared \$436 96 each. This is the largest stock that we know of up to this time, of the mackerel fleet.—*Cape Ann Advertiser, September, 23d*

—Naturalists of the Meteorological Society of Scotland, noticed last year that herrings in fresh water rose to the surface only when the temperature had fallen below twelve degrees Reaumur. Fishermen now, when they do not find the fish near the surface, drop their thermometers until they fall to the required point, and lower their nets in accordance, with great success.

FISHING AND GUNNING AT NANTUCKET.

BROOKLYN, September 24.

EDITOR FOREST AND STREAM:—

Never having heard Nantucket spoken of through the columns of your paper, I take the liberty of writing a few lines about it. Situated within four or five hour's journey of Boston, it presents unusual attractions for the tourist and sportsman, not to be equalled on the whole Atlantic coast. The fishing is very fine for scup and bluefish. The former is the same that we call the porgie, although the fishermen say not, but it bears such a strong resemblance to the porgie that it must be the same fish. They are caught in great numbers, sometimes a party catching as many as a hundred in three or four hours fishing. And bluefish! what better pleasure is there than trolling for bluefish? In my estimation it is far ahead of salmon fishing. For those that prefer still fishing, there are several ponds teeming with perch, a person in a day's fishing frequently catching over ten dozen. For the sportsman, the island offers a great many attractions, black ducks, four varieties of plover, viz upland, green heads, red-breast, and chicken plover, curlew, and almost every variety of shore birds.

The bathing is magnificent (either the surf or still water). And the clam bakes! Ah, that magic word that will make an epicure's mouth water—the pile of clams adorned with lobsters, chickens, and green corn, lying in their clam covering of sea weed, steaming and hissing. I think the far-famed Rhode Island clam bake falls far behind the Nantucket bake.

C. H. C.

ROTTEN MACKEREL BY MOONLIGHT.

The following correspondence upon an old and much vexed theme will be found interesting:—

PHILADELPHIA, Pa., Sept. 25th.

EDITOR FOREST AND STREAM:—

For the first time, last week, did I hear a doubt expressed about the effect of moonlight upon fish. Without giving any reason why it was not true that fish were spoiled by being exposed to it, the statement was made that such a theory was simply nonsense. I have never met a fisherman of any experience who does not believe in the theory from actual experience, and while I can give no scientific explanation of the cause, I quote the old saying, "he shines and stinks, and stinks and shines like a rotten mackerel by moonlight." Can you throw any light upon the subject which will serve to enlighten the ignorant or convince the skeptical?

B.

EDITOR FOREST AND STREAM:—

Your correspondent who asks for information as to the effect of moonlight upon fish is respectfully referred to Prof. Tyndall. Many of the notions of fishermen are groundless superstitions, and others that appear so at first thought will, upon a thorough investigation, be found based upon fact. Strong light upon dead animal tissues containing as much phosphorus as fish may possibly hasten their decomposition. In the case of sunlight the heat accompanying it would accomplish this object in advance of the light; but if the moon does affect a fish in this manner, it is of course by light alone.

I am glad to see this question raised, and will try the effect on the roof of the aquarium with three fish of the same kind and size killed at the same time, one exposed to moonlight, one covered from it, but in the same currents of air, and the other protected from both light and air, and report the result.

My friend E. B. Paxton, of Detroit, Mich., who owns the fishery on Fighting Island in the Detroit river, and who freezes tons of whitefish each winter, informs me that his father formerly salted whitefish for market, and in October, 1834, upon one occasion, had a large lot of fresh ones lay all night in the moonlight, and in the morning they appeared fresh and good, and were cleaned and salted. The barrels—some 30 in number—were marked and kept until the first of March the following year in the usual manner, when they were inspected and found spoiled. Some of the men employed in cleaning the fish expressed doubts as to their condition from their appearance, but their judgment was overruled and the fish were salted.

FRED MATHER, New York Aquarium.

—"Wild Bill," who was lately killed in a Western saloon, is said to have caused the violent death of at least 200 human beings.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

NEW YORK YACHT CLUB REGATTA.—The autumn regatta of the New York Yacht Club was sailed on the 19th inst., but the report reached us too late for our last issue. The day was all that could be desired for a race, but unfortunately the entries were so few that the regatta was a farce when we consider the immense fleet of yachts comprising the club. When Mr. Bennett took an active interest in yachting such was never the case, and the fall regatta was apt to be the most interesting of the season. The course was the usual one, from the club house, to and around Sandy Hook Light Ship, and return to buoy No. 15. The entries were of schooners, in the first class, the Rambler and Idler, and in the second, the Meta and Peerless; of sloops there were only the Gracie and Madcap in their respective classes, so each had a walk over for the \$200 cup. The racing was, therefore, really between the schooners, and reduced to a match between those of each class. The yachts were started as follows:—Idler, 11:21:28; Peerless, 11:23:12; Madcap, 11:23:54; Meta, 11:24:27; Rambler, 11:24:40; Gracie, 11:25:44. The Idler went off at a tremendous pace, and kept her lead throughout the race. The yachts rounded Sandy Hook Light Ship as follows:—Idler, 1:09:18; Rambler, 1:16:30; Peerless, 1:19:22; Meta, 1:24:30; Gracie, 1:36:05. Back to the Spit was a beat to windward, and the sloops laying up closer recovered some of their lost ground. The Idler continued her lead however, and the winning buoy was passed in the following order:—Idler, 4:09:35; Rambler, 4:28:45; Peerless, 4:34:38; Meta, 4:42:18; Gracie, 4:39:46; Madcap, 4:56:48. The Idler had an allowance of four minutes, eight seconds from the Rambler; she won by more than sixteen minutes without it. The Peerless won from the Meta, to which she was giving time, and the Gracie and Madcap, of the sloops, gained their prizes without contention.

BROOKLYN YACHT CLUB.—The annual fall regatta of this Club was sailed on Thursday last, the course being from off the Club-house in Gravesend Bay, to and around the southwest spit buoy, a distance of fifteen miles. The yachts were divided in four classes, the prizes being a pennant for the successful boat in each class. The entries were as follows:—

Name.	Start.	Home.	Actual Time.	Corrected Time.
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Comet.....	12 48 00	2 51 00	2 03 00	2 03 00
Playful.....	12 41 00	3 13 00	2 32 00	2 32 00
Niantic.....	12 41 45	2 49 45	2 08 00	2 08 00
Kate.....	12 43 45	3 05 45	2 22 00	2 18 16
Lizzie L.....	12 41 10	3 04 15	2 23 00	2 23 05
Selene.....	12 44 00	3 12 25	2 28 25	2 26 44
America.....	12 42 15	—	—	—
W. T. Lee.....	12 37 30	3 07 40	2 30 10	2 27 25
Cynthia.....	12 39 00	3 06 20	2 27 30	2 27 20

The Comet after sailing around the course withdrew, giving the schooner prize to the Playful. The Niantic took the prize for first class sloops, and the Lizzie L. was in the second class. The Cynthia, after a very closely contested race, beat the W. T. Lee in the open boat class.

SEAWANHAKA YACHT CLUB.—This Club will hold a "Corinthian" race, open to second class schooner yachts of all duly organized yacht clubs, on Saturday, the 30th instant. By second class yachts are meant all those of ninety feet mean length and under, and there will be time allowance based upon mean length and greatest breadth. Yachts must be manned by amateurs exclusively. The course will be the usual one, from off Fort Wadsworth, to and around Sandy Hook Light-ship and return. Entries to be addressed to Mr. M. Roosevelt Schuyler, No. 52 William street; close to-day at 4 o'clock p. m.

QUEENS COUNTY YACHT CLUB.—The fourth annual regatta of this Club was sailed from Little Bay Side, on Thursday last. The course was from a stake-boat off the Club-house at Little Bay Side to and around the Stepping Stones buoy, thence to and around a stake-boat off McClelland's dock, City Island, thence to and around the buoy off Throgg's Neck and back to starting point, all marks to be left on the port hand. This course to be gone over twice, making a distance of about sixteen miles. A fair breeze favored the yachts throughout the race. The sensation of the day was the sailing of the Greenpoint of the second class yachts. The following total gives the entries and the result:—

FIRST CLASS.					
Name.	Start.	Finish.	Elapsed Time.	Corrected Time.	
	H. M. S.	H. M. S.	H. M. S.	H. M. S.	
Gracie.....	1 25 03	4 09 00	2 43 57	2 43 57	
Jacob Lang.....	1 25 00	—	—	—	withdrawn.
SECOND CLASS.					
Greenpoint.....	1 27 00	3 44 20	2 17 20	2 17 20	
Rosa.....	1 26 50	4 17 50	2 51 00	2 43 04	
FOURTH CLASS.					
Quits.....	1 26 40	4 10 30	2 43 50	2 43 05	
Frank Pigeon.....	1 24 30	4 21 45	2 57 15	2 57 15	
Lizzie.....	1 26 01	4 30 20	3 04 19	3 02 59	
Ella.....	1 28 20	4 37 45	3 09 25	3 04 15	

Thus the Gracie wins the money in her class, while the Greenpoint carries off not only the prize in money in the second class, but the handsome cup for the best time, as she beat the Quits (next on the list), 27m. 40s. The Quits wins the silk pennant for the best time of the Queens County yachts, beating the Gracie 20m. 7s. The Rosa and Frank Pigeon save their entrance.

ATLANTIC YACHT CLUB.—The fall regatta of this Club was sailed on Saturday last, over the usual course from Bay Ridge to and around the South-west Spit buoy and return, a distance of twenty-two miles. The entries included the schooners Triton, Agnes and Peerless, sloops Dolphin, Orion, Madcap, Niantic and Sadie in the first class, and Myra and Nimbus in the second. The yachts were restricted to working sails and carried their boats. A flying start was effected at 2:27, the schooner Triton leading the fleet.

The wind was from the East and the tide running ebb, enabling the yachts to make a straight course for the Spit with sheets started. Outside Fort Lafayette, however, it headed more to the southward, and by the time the Hospital Islands were reached was blowing half a gale, sending lee rails under and causing a reduction of canvass to lower working sails. The Peerless was unfortunate in parting the tacks of her jib and flying jib, and carrying away her cat-head. The Triton was the first to round the buoy, at 3:53:30, followed by the Peerless at 3:56:30, the Agnes at 3:58:50, the Niantic at 4:01:15, and the Orion at 4:03:50; the rest were not timed. It was when hauling on the wind that the Peerless parted her flying jib tack, and while repairing damages was passed by the Agnes. The yachts were enabled to lay a course for the Narrows, but once inside several tacks were necessary to reach the stake-boat. The Peerless passed the Agnes, and the Niantic passed everything but the Triton. The following was the result:—

SCHOONERS.					
Name.	Start.	Finish.	Elapsed Time.	Corrected Time.	
	H. M. S.	H. M. S.	H. M. S.	H. M. S.	
Triton.....	2 27 35	5 51 05	3 23 30	3 20 47	
Agnes.....	2 30 00	6 05 45	3 35 45	3 28 27	
Peerless.....	2 37 40	6 02 40	3 32 00	3 32 00	
FIRST CLASS SLOOPS.					
	H. M. S.	H. M. S.	H. M. S.	H. M. S.	
Niantic.....	2 32 25	6 03 05	3 30 40	3 30 40	
Orion.....	2 28 10	6 10 15	3 42 02	3 31 50	
Sadie.....	2 34 34	6 23 30	3 48 56	3 38 16	
Madcap.....	2 31 40	6 25 24	3 53 40	3 39 55	
Dolphin.....	2 27 30	6 40 20	4 12 50	—	

SECOND CLASS SLOOPS.					
	H. M. S.				
Nimbus.....	2 32 00	Not timed.			
Myra.....	2 31 40	Not timed.			

The Triton wins the prize in the schooner class, beating the Agnes 7m. 40s., which beats the Peerless, on time allowance, 3m. 28s. The Niantic wins the prize for first-class sloops, beating the Orion 1m. 19s.; and the Nimbus the prize for second class sloops.

—In the return match between the yachts Sophia Emma and George B. Dean, sailed on Monday off Throgg's Neck, the Dean won by nearly 15 minutes. Each yacht having won one race, a deciding match for the championship will shortly be sailed.

—In the regatta for open boats sailed off Guttenberg, N. R., on Monday, the Clara S. won first and second prizes, but the third was not awarded.

A CORRECTION.—We were in error in our report of the race between the Raritan and Carteret Boat Clubs at New Brunswick on the 13th inst., in stating that Messrs. N. Merrit and J. Marsh were in the latter crew. The crew consisted of Messrs. Meeker, bow; A. B. Marsh, R. H. Marsh and Neilson, stroke. Mr. A. B. M.'s seat slipped from under him on the first half mile. The time of the winning crew should have been given as 20:43, instead of 21:45.

GREENWOOD LAKE REGATTA.—The first grand amateur regatta under the auspices of the Greenwood Lake Sportsmen's Club will be held on that beautiful sheet of water on Friday and Saturday, October 6th and 7th. The races comprise on the first day, junior single sculls, pair-oared shells, and six-oared gigs with coxswain; on the second, senior single sculls, double-scull shells, and four-oared shells. All races will be two miles straightaway, and entrance free. Amateurs only will be allowed to row. Good board at the lake for contestants at the rate of \$1 per day. The prizes are handsome banners and gold lockets. Arrangements have been effected with the Montclair and Greenwood Lake Railway Co., for the free transmission of boats and crews from Jersey City, Greenwood Lake and return. All letters of inquiry should be addressed to Wm. O. McDowell, Greenwood, P. O. Orange, Co., N. Y.

—A double-scull race for the \$500, three miles with a turn, was rowed on the Charles river, Boston, on the 22d inst., between J. A. Landers, of Salem, and Michel Davis, of Portland, on one side, and T. C. Butler and Frenchy Johnson, of the West End Boat Club, on the other. The visiting crew won easily in 20m. 33½s.

—Price, a member of the Paris (N. B.) Boat Crew, is accused by Fulton, another member, of selling the race at Philadelphia. Price declares that Fulton sold the race. Both have been expelled from the crew.

HALIFAX ON SCHUYLKILL.

HALIFAX, N. S., Sept. 20.

EDITOR FOREST AND STREAM:—

Halifax has been greatly exercised lately over the recent four-oared race on the Schuylkill. The "Fishermen crew" returned last Friday and were received with much enthusiasm. An "ode of welcome," (consisting chiefly of abuse at the referee), was written in their honor, and a torchlight procession escorted them through the principal streets of the town, most of the houses past which they marched being illuminated. The unfortunate referee was again a prominent feature, and he was hung in effigy. It is to be regretted that a foul (the bane of rowing matches) should have occurred, and the race terminate unsatisfactorily, but it seems to be the opinion of outside observers that the referee's judgment was correct, when he decided that the Halifax crew were out of their water when the foul occurred. It is to be presumed that he told the crews to row on, on the chance that Thames would come in ahead, and so save him the disagreeable duty of having to decide who was to blame. However, the Halifaxians have a grand opportunity of winning both honor and dollars. Let them be magnanimous and accept the challenge of the Thames crew to row a straightaway five-mile race on the Thames, and let coxswains of equal weight be carried. This would make no difference in their rowing, though the time might not be so good, while it would reduce the chance of fouling to a minimum. A capital race would be the result, and if the Halifax crew should win, as they have every chance of doing, they would have the honor, I believe, of being the first crew to defeat Englishmen on their own waters, and would win any amount of money for their backers. C. M. DOUGLAS.

—If rats enter the cellar, a little powdered potash thrown into their holes or mixed with meal, and scattered in their runways, never fails to drive them away.

—In New Hampshire this is a great apple year. The yield will be almost unprecedented in some parts of that State.

Rational Pastimes.

HANDICAP ATHLETIC MEETING.—Mr. James Watson will give a series of handicaps on the grounds of the New York Athletic Club on Monday, October 9th. The programme will comprise races at 100 yards, 275 yards, 600 yards, 1,000 yards, and a two-miles walk for those who up to the time of starting have never won a prize in any walking race, except in a match or competition open to club members only. Full particulars can be obtained by addressing James Watson, P. O. box 678, New York.

BASE BALL—THE PROFESSIONAL CAMPAIGN.

The contest for the honors in the League championship has recently been narrowed down to a struggle for second place, by means of a reduction in the number of games to be counted brought about by the withdrawal of the Athletic and Mutual clubs from further play in the arena, these clubs having found their treasury too low to admit of their incurring the expenses of going West again this season. By the new deal in the game the record up to Sept. 24th inclusive, leaves the five leading clubs occupying the following relative positions:—

Clubs.	Games Won.	Games Lost.
Chicago.....	36	12
St. Louis.....	28	17
Hartford.....	25	17
Boston.....	23	28
Louisville.....	19	23

The full record, counting the Athletic and Mutual club games, is as follows:—

Club.	Games Won.	Games Lost.
Chicago.....	50	14
St. Louis.....	42	18
Hartford.....	38	18
Boston.....	36	24
Louisville.....	29	33
Mutual.....	21	34
Athletic.....	14	45
Cincinnati.....	9	51
Totals.....	239	289

—The following is the record of games marked by one run in the professional arena during the season up to date:—

BY LEAGUE NINES.

May 5.—St. Louis vs. Chicago, at St. Louis.....	1 to 0
June 10.—Mutual vs. Cincinnati, at Brooklyn, (10 ins.).....	1 to 0
June 17.—Hartford vs. Louisville, at Hartford.....	1 to 0

OUTSIDE NINES.

June 20.—Rhode Island vs. Taunton, at Providence.....	1 to 1
July 14.—St. Louis Reds vs. Capital City, at Indianapolis.....	1 to 0
July 21.—Buckeye vs. New Haven, at Columbus.....	1 to 0
July 26.—Live Oak vs. Rhode Island, at Providence.....	1 to 0
July 28.—St. Louis Reds vs. Memphis Blues, at Memphis.....	1 to 0
Aug. 3.—Ithaca vs. Cricket, at Binghamton.....	1 to 0
Sept. 5.—Star vs. St. Louis Reds, at Syracuse.....	1 to 0
Sept. 22.—Star vs. Hartford, at Syracuse.....	1 to 0
Sept. 23.—New Haven vs. Yale, at New Haven.....	1 to 0

CHESS.

The new chess tourney in this city commenced on Sept. 20th promises to result in a series of the best contests at chess seen here for years past. The record up to the 24th shows the following contestants in the van:—

Players.	Games Won.	Games Lost.
Enson.....	4	0
Bird.....	4	2
Lissner.....	3	1
Ko-er.....	3	1
Warwick.....	3	3
Delmar.....	2	0
Limbeck.....	2	0
Clarke.....	2	0
Mason.....	2	1
McCutcheon.....	1	0
Dell.....	1	1
Fowler.....	1	1

All the other of the 21 contestants have lost more than they have won. The prizes are \$175 in money, and a silver cup, presented by Mr. Luders. Mr. Queen, of the *Clipper*, giving the money prizes.

—The game played between the Red Stockings of Canisteo, and the Hornells of this place, on the grounds of the latter, last Thursday, was the best game played this season in Hornellsville. The following is the score:—

Hornells.....	1	2	0	0	1	0	0	1—5
Red Stockings.....	0	0	0	0	0	0	0	3—3

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

A. B., Jr., New York.—Please let me know if there is any shooting allowed on Staten Island. Ans. Yes, in the proper season.

Raccoon, Pittsburgh, Pa.—Please give me a recipe for browning a laminated steel shot gun? Ans. It is a trade secret; you will have to take your gun to a maker.

C. E. P., Phila.—Can you tell me anything about a book on dogs, second edition, price \$2, published by the late Francis Butler? Ans. Francis Butler is dead, and his book out of print.

W. C., Ft. Clark, Texas.—What is the cotton-tailed rabbit, frequently seen and very wild here? Ans. *Lepus sylvaticus*, the common hare commonly called rabbit of this country.

SECRETARY, Fond du Lac, Wis.—Please name a responsible firm to ship venison to. Ans. Messrs. E. & A. Robbins, Fulton Market, or Messrs. Whitley & Morris, Washington Market, this city.

W. H. W., Lakeville, Conn.—The bat you send is the hoary bat (*Lasiurus cinereus*, Allen) which is more or less common all over the country. What other species of bats are found in your district?

D. G. S., Brooklyn, who asked for information regarding Texas and Southern California, in our issue of 14th inst., can hear of a colony leaving Massachusetts to settle in Southwestern Texas by addressing F. W. Ellis, Woburn, Mass.

M. W.—How can I find out the results of the late Philadelphia Bench Show as to prizes awarded? Ans. We get it up. Our own efforts have been, so far, unavailing, but we presume that the total list of Centennial awards will soon be published.

M. B. W., Albany.—Where can I get a copy of Mr. Greener's work on "Modern Breech-Loaders?" Ans. Mr. H. C. Squires, No. 1 Courtlandt street, this city, has a few copies of the original work, which can be bought for 75 cents each; first cost, \$2.

An anonymous correspondent who signs himself "A. H. B.," asks certain questions which will be replied to when he has, we might say the decency, to comply with a standing request at the head of this column, and which is peculiarly applicable to the present instance.

C. W., New York.—Please inform me as to what kind of shooting can now be had around (within a couple of miles of) South Amboy, N. J., particularly the kind of snipe, and if they are very plenty. Ans. You will find very little shooting within two miles of South Amboy. A few English snipe in the proper season.

KENTUCK, So. Farnsworth, N. H.—I see you recommend "Belmont Oil." As there is no gun dealer near here will you please let me

know where I can get some, and the expense of a small bottle. Ans. Write to H. C. Squires, No. 1 Courtlandt street, this city; price per bottle 25 cents, with postage, probably 30 cents.

C. M. Lexington, Ky.—Has Greener's new work on choke bores been published in this country yet? If not, when do you expect it to be ready? Ans. Although advised of the preparation of such a work we have not yet seen a copy. Your best plan would be to write direct to Mr. W. W. Greener, St. Mary's Works, Birmingham, England.

H. F., Philadelphia.—In your paper of the 14th there is a letter from Monroe marshes. Can you tell me if all that is said about the shooting there is true, and how is the best way to get there? What hotel accommodations and the expenses? Ans. The information is correct. Monroe is reached by Lake Shore and Michigan Southern Railroad from Toledo. Good hotel accommodations at about \$2 per day.

H. S., Columbia, S. C.—1. I have a very fine laminated steel gun marked Moore & Harris. It came from a firm advertising in your paper. Are Moore & Harris good makers? 2. What size shot would you advise me to use in duck shooting? Ans. 1. Moore & Harris made good, reliable guns; very few better makers of their day. 2. For shooting over decoys No. 4 shot; for point shooting with heavy guns larger shot is best.

J. J. P., Bellefontaine, Ohio.—In your correspondence with "F. L. G.," of Boston, you say you have a gun of the same dimensions of his, viz.: 12 gauge, length of barrel 20 inches. Is not this a typographical error? Did you not mean 30 inches instead of 20 inches, or does Scott make a good shooting gun 12 gauge, 20 inches long? Ans. Of course it was a typographical error; the length should have been 30 inches.

F. S. S., Pittsburgh, Pa.—I have recently bought a very good-looking dog, but I cannot tell what kind of a dog he is. He is rather long in the body, very short legs, tail short and bushy, like a setter's when not well feathered, head same as setter's, ears long, color black and white. Please give me your opinion of the dog. Ans. From your description, your dog is probably a setter, but without seeing him we can give no reliable opinion in regard to him.

J. K. B., East New Market.—What is the best plan to adopt in breaking a pair of pointer pups—take them together in the field or single, or whether they should be taken with an old dog or not? Ans. Full instructions on breaking have been given in former issues of our paper. Your best plan is to purchase a copy of "Dinks, Hutchinson, and Mayhew," one of the best works on dogs, and follow the rules for breaking you will find therein. Can send to you a copy, price \$3.

T. S. G., Madison.—Will you kindly inform me in your next the proper way to reach Milford, Pike county, Pa., and how long it takes to get there, and also some farmer or family who will board a party of ladies and gentlemen for about a week? Is the hunting and fishing good there? Ans. By Erie Railroad to Port Jervis, thence stage eight miles; time, about six hours. Several hotels, but we do not know names of farmers who will take boarders. Good ruffed grouse and woodcock shooting, and some black bass.

J. S. N., London, Ont.—1. Can you give me a recipe for making mocking-bird food which will keep for some time? 2. Can you give me the price per dozen tins of prepared food in New York? 3. What is best to be done with lice on birds? Ans. 1. The mockingbird food is a trade preparation which you could not compose yourself. 2 and 3. The food is worth \$4 per dozen tins, and Messrs. Charles Reiche & Bro., No. 55 Chatham street, this city, have a powder which is a sure cure for lice, at 25 cents per box.

J. H. W., New Haven.—What kind of a gun and what is the price of Wm. Moore & Co.'s fine twist breech-loader? I saw a gun the other day marked "Ward"; it had laminated steel barrels. Have you ever heard of such a make, and if so how does it rank and what is it worth? Ans. The firm you mention were good, reliable gun makers, but they have ceased doing business. We know nothing of "Ward" as a gunmaker. Dealers in guns frequently have their names engraved on guns. We can form no idea of the value of a gun without seeing it.

H. B. S., Newton.—Please answer these queries in your next issue: 1. What are the dimensions of the patent folding camp baker spoken of in FOREST AND STREAM some time ago, also the price of same? 2. What is considered the best open back sight for a breech-loading rifle? 3. At what age does a setter pup shed his teeth? 4. How many hundred yards will a Maynard rifle prove accurate? Ans. 1. About two feet square; we do not know the price. Write to Eaton, Holberton & Co., 102 Nassau street, for it. 2. We prefer the sporting leaf sight, graduated for different ranges. 3. At about five months. 4. The old style Maynard at 300 or 400 yards; but they are now being made for long-range shooting, say 1,000 yards.

WANNOLANGET, Lowell.—1. Do you send covers for binding FOREST AND STREAM, and if so what is the price of each? 2. I have a valuable mare 20 years of age whose good qualities I would much like in a successor. Having never had a colt, is she too old now to take the risk of losing her by sending to some first class stallion? 3. Will her progeny be likely to take "scratches" from her, she having had them now in both fore feet for eight or nine years? Ans. 1. We have no covers for binding, but if you will send us your papers will have them bound for you; cost \$1.50. 2. Your mare is not too old to breed, although repeated service may be necessary. 3. They will not.

C. R. G., Connorsville, Ind.—1. My setter dog has been sick for the last two weeks. He has not shed last winter's coat yet, and he looks terribly rough, the hair on his back and sides are all turned the wrong way, and he has a very dry nose. 2. I have a J. Hollis & Son's breech-loading shot gun. How do they stand as makers. It is a very good gun, but scatters too much. What had better be done with it? Ans. 1. Have mailed to you some condition powders for your dog, which, if given as directed, will, we think, cure him. 2. Hollis & Sons are good reliable gunmakers. Any skillful gunsmith can re-bore your gun and make it shoot right.

ROCKY M. VAG, Philadelphia.—In your last issue but one you give an extract from an army report, mentioning the trouble Custer's men had with their rifles—in extracting the empty shells. Now, you do not mention what rifles they were, and as I have seen Remington's, Springfield's, and Sharp's in the hands of our troops on the plains I (and no doubt others) are in the dark as to the species referred to. Ans. We presume the rifle was the regular army carbine issued from the Government arsenals. What the pattern was we do not know. Our point is that the cavalry should be as well armed as the infantry, with weapons of equal quality and range, particularly as they are so frequently used dismounted and as infantry.

A. M., Wilkesbarre, Pa.—In your issue of September 14th I see communication signed "A.," dated office of Blooming Grove Park Association, 37 Park Row, September 8th, 1876, in which he says grouse shooting is "now" in order. Will you be kind enough to inform him that grouse shooting does not commence before October 1st in Pennsylvania, where Blooming Grove Park happens to be located. I think a statement as above, coming from a sporting association, ought to be corrected through your paper. Ans. Section 12 of the Charter of the Blooming Grove Park Association reads as follows:—"The Corporation may make its own game laws through its Board of Directors. * * Such game laws shall be applicable only to the land actually owned or leased by said Corporation."

W. H. S., Springfield.—1. I live four miles from the river, and I want a boat that I can put in my spring wagon and take to the river and use and then bring it home. I have come to the conclusion that a canvas one is the one I want. The spring wagon bed is six feet long. Wouldn't the boat described by Mr. Treat, made of steel, do, or the one made by Colvin? Please publish about the one that you think would suit me best. 2. Some time last summer E. H. Crane, of Grand Rapids, Mich., said in your paper that he would shortly publish a book on embalming birds and animals. Do you know where I could get it and what the price would be? It was in July 8th number. Ans. 1. The Fenner boat, made by Charles A. Fenner, Mystic, Conn., would suit you best

as to length. Write to him, or to J. H. Rushton, Canton, N. Y. 2. The book is not yet issued to our knowledge.

N. L., Boston.—1. I have a setter bitch which I think is troubled with worms. 2. What is Dr. Goldsmith's address, and is his dog Rap imported? 3. Could you inform me where I can procure some live partridges and quail and some jackass rabbits? 4. Please inform me the proper way of cooking peafowl so as to take that fishy or strong taste off them. Ans. Your pups, no doubt, affected with worms; have mailed to you the proper doses of areca nut with directions for its use. It rarely fails to cure. 2. Address Dr. Goldsmith, Rutland, Vt. Rap was imported. 3. Quail can be procured in season of Messrs. Whitney & Morris, Washington Market, this city. We doubt if you can get ruffed grouse or jackass rabbits. 4. Your peafowl should have no strong taste. Old birds must be first parboiled.

ALEX., Illinois.—1. Will you please give me a recipe for browning gun barrels? 2. In giving powder charges for guns do you mean a drachm apothecaries' or avoirdupois weight—that is, 27½ grains or 60 grains? 3. What is the proper charge for 7½-lb. gun, 12-gauge, 28-in. barrel, of Oriental FFG powder? 4. In fishing for black bass with a minnow should the bait be near the bottom or top, also with grasshoppers? 5. Is a 12-gauge breech-loader as good for this region as a 10-gauge. Ans. 1. I is a trade secret. 2. We mean a drachm measure, as gauged on flasks or Dixon's loaders, which corresponds nearly with the apothecaries' drachm, but is an arbitrary measure. 3. Three and a half to four drachms, depending on the game. 4. In still water or ponds fish near the surface with a float and light sinker. In quick water you need no sinker. The current will play your bait for you. 5. We prefer the 12-gauge for general field shooting, but for ducks alone the 10-gauge is better.

POKOMOKE.—A friend of mine having recently disfigured his face by blowing gunpowder into it. I apply to ask if there is any other method of removing the grains, except by the tedious process of picking them out with a needle. I have taken your paper almost from the beginning, and if I remember right you once printed the recipe I want in one of your earlier numbers. I cannot aid you further, but you will confer a very great favor by finding it and sending it to me. Ans. We forward to you by mail at once, but will print here for the use of other readers who may require it. You will find the recipe in Vol. I, page 76, Sept. 11th, 1873: Excite a smart eczematous inflammation by means of a solution of five grains of corrosive sublimate to eight grains of water. This will detach the granules, which can be wiped out with a towel. We do not know that this means is applicable to old burns. It is to those of recent date.

J. E. B., New York.—I would be very thankful to you for some information concerning brook trout. I am about to start a trout pond, and would like to know what is the best thing to feed them on. Also what food has been tried and failed, for I don't want to try anything that has already failed. How large quantities can be disposed of in New York markets at one time, and the best time of year for so disposing of them? And whether large fish are more valuable than small. Also the wholesale price that is paid for the same? Ans. Opinions differ as to the best food, some preferring a vegetable, and some an animal diet, which they claim to be the natural feed of the trout. Liver, maggots, sweet corn bread and curds are much in use. Some of the finest trout, in size and flavor, that we ever saw were raised on curds, and we are, from our own observations, decidedly inclined toward its use. Very large quantities of trout aggregating tons, both live and dead fish, are brought in the New York markets, in the latter half of March and during April and May, at about 50 cents for Long Island and 15 cents for Canadian. The medium-sized fish are preferred.

DUNWOODY, Kingston.—I have sent you by mail a bug used by our fishermen in this locality for catching bass. It is called dobson, skipper, clipper, crab, and many other names. It is found under the stones in the Walkill and Rondout creeks. Can you tell me its scientific name and what it lives on, and also if you have heard of its having been used before as bait for black bass? Ans. The dobson, so called at the North and known as the Helgramite at the South, is a very common bait, both for bass and trout. They are the full grown larvae and pupae of several aquatic species in the family Sialina. Their feeding ground is chiefly in sluggish rivers. They are rare in mountain streams or head springs. They are both herbivorous and carnivorous. Ephemeridae, small-sized beetles, and water-fleas, *entomostraca*, are their principal food, but they have been reared to maturity in aquaria on an almost exclusive vegetable diet. The wings of the perfect insect are twice the length of the body, closely reticulated with veins, semi-transparent, and of a yellow ashen color. An imitation made of newly tanned leather was used with wonderful success in the trout streams of Western Virginia fifty years ago.

F., Boston.—As your decision is very important in regard to stolen dogs, given in your answer to "Fleish," Sept. 7th, permit me to differ from you and state in my opinion that the non-payment of the tax is a question simply between the owner and the city authorities, and in no ways affects his property in the dog as against any individuals, provided there is no clause in the local law decreeing the forfeiture of the dog in case of non-payment of the tax. Whether the tax be paid or not, I contend the owner can reclaim his dog wherever he finds him. Please reconsider your decision for the benefit of many readers? Ans. The answer to which you allude was intended to apply to a particular case, and in giving it the writer had in mind a case which occurred in this city recently, when a gentleman had a well known dog dealer arrested for stealing his dog. The Justice acquitted him on the ground that dogs were not property. We have had a similar experience in Philadelphia, where there is a license fee for dogs, which, if not paid, leaves the dog or his owner without protection. In point of fact, however, dogs in this State are property, and by statute subject to taxation as much as a horse or a cow. The increasing value of dogs renders some decisive legislation on this point necessary.

RUFFED GROUSE, Pittsburg.—A sporting friend of mine has a dog which whips his flanks on quail, and sometimes on ruffed grouse. I have been out with his owner giving him some practice. The first day he flushed three birds and pointed 15. Some of the birds were about 100 feet from the dog; his average point is about 35 feet from a bird. Second day he made 23 stands and two flushes. He was worked the second day with a dog that made 16 stands, eight flushes and two backs, and had we been shooting, or flushed the birds as soon as pointed, the latter dog (my own) would have had no chance at all. Some call him a blinker because he wags his tail when standing. His nose is always hot, and I don't know whether it hurts him or not. What do you think of my friend's dog. Ans. A dog that will point 15 out of 18 ruffed grouse is better than we have seen or known a dog to do—23 points out of 25 chances is wonderful, and this, too, with a hot nose. This convinces us that "there is nothing new under the sun." Your "sports" are not well posted as to what constitutes a "blinker." A "blinker" is a dog that backs off his point and comes "to heel," or ranges away to find other birds. A dog that wags his tail while on a point indicates bad breeding or bad breaking.

W. W. W., Murray, Iowa.—1. I have a pup whose tail needs docking. How should I go about it? 2. I intend visiting New York and Philadelphia during October, and would like very much to see some good setters and pointers. Who should I call upon for that purpose? 3. What kind of a setter would you advise me to buy for prairie chicken and duck shooting? I want one dog to do all my work. I don't hunt very much. My duck shooting is down along the Missouri River. Ans. 1. When a pointer pup tail promises to be out of proportion in length it should be docked by the time he is four or five weeks old, so as not to show the alteration when he grows up. In docking a pup's tail place it on a block, and with a chisel or sharp knife cut it off. It may bleed some, but will soon stop of its own accord. The proper place to cut it we could not tell without seeing the pup; but a pretty safe criterion to go by is to cut off all that reaches below the second joint of hind leg. 2. Call upon us when you come to this city and we will show you some fine specimens of high-bred setters and pointers. 3. A compact, well formed thoroughbred setter of any strain will do well on prairie grouse and a duck retriever, if skillfully handled.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY,
FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS,
AND THE INDOCTRINATION IN MEN AND WOMEN OF A HEALTHY INTEREST
IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 20 cents per line; outside page, 30 cents.
Special rates for three, six, and twelve months. Notices in editorial
columns, 50 cents per line.

NEW YORK, THURSDAY, SEPTEMBER 28, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary
correspondence, must be addressed to THE FOREST AND STREAM PUB-
LISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with
real name, as a guaranty of good faith. Names will not be published if
objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.
We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief
notes of their movements and transactions, as it is the aim of this paper
to become a medium of useful and reliable information between gentle-
men sportsmen from one end of the country to the other; and they will
find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the
patronage and countenance of that portion of the community whose re-
fined intelligence enables them to properly appreciate and enjoy all that
is beautiful in Nature. It will pander to no depraved tastes, nor pervert
the legitimate sports of land and water to those base uses which always
tend to make them unpopular with the virtuous and good. No advertise-
ment or business notice of an immoral character will be received on any
terms; and nothing will be admitted to any department of the paper that
may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if
money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,

Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COM-
ING WEEK.

THURSDAY, September 28th.—Trotting: Rockland, Me.; Suffolk Park,
Philadelphia; Dayton, O.; Parker City, Pa.; Cuba, N. Y. Match be-
tween Foreign and American rifle teams, Washington, D. C. Queens
County Agricultural Fair, Mineola, L. I. Base Ball: Cincinnati vs. Bos-
ton, at Cincinnati; Our Boys vs. Contest, at Brooklyn; Mutual (prof.)
vs. Resolute, at Elizabeth, N. J.; Greenville vs. Elizabeth, at Jersey
City; Chelsea vs. Alaska, at Brooklyn.

FRIDAY, September 29th.—Trotting: Suffolk Park, Philadelphia;
Dayton, O.; Parker City, Pa.; Cuba, N. Y. Base Ball: Enterprise vs.
Orange, at Jersey City; Greenville vs. Knickerbocker, at Harlem, N. Y.;
Chelsea vs. Alaska, at Brooklyn; Madison vs. Monticello, at Newark;
Our Boys, vs. Crystal, at Brooklyn.

SATURDAY, September 30th.—Racing: Jerome Park, N. Y. Fall games
N. Y. Athletic Club, Mott Haven. Seawanhaka Yacht Club.
Corinthian Schooner Regatta, N. Y. Harb. Regatta Cen-
tral Hudson Yacht Club, New Hamburg, N. Y. Match
between Foreign and American teams at Washington, D. C.
Base Ball: Louisville vs. Boston, at Louisville; Our Boys vs. Chelsea,
at Brooklyn; Oceola vs. Staten Island, at Brooklyn; Orange vs. Reso-
lute, at Orange, N. J.

MONDAY, October 2d.—Quail shooting begins in this State. Trot-
ting at Maryville, Mo. Base Ball: Louisville vs. Boston, at Louisville.

TUESDAY, October 3d.—Racing: Jerome Park. Trotting: Maryville,
Mo.; Piqua, O.; Cincinnati, O.; Galesburg, Ill. Minnesota State Fair,
St. Paul. Bench Shows of Dogs, St. Louis, Mo. Base Ball: Louisville
vs. Boston, at Indianapolis.

WEDNESDAY, October 4th.—Trotting as above and at Jamestown, N.
Y., and Pottstown, Pa. Bench Show of Dogs, St. Louis, Mo. Base
Ball: Louisville vs. Hartford, at Louisville; Our Boys vs. Enterprise, at
Jersey City.

PUCK'S DEBUT.—We have been greatly amused by the
pictures in the first number of the German humorous paper
called *Puck*, published by Keppler & Schwarzman at No.
13 north William street. It attempts the same career of
satire upon the passing life as has made the fortune of
Punch, *Kikeriki*, *Figaro*, and other rib-cracking period-
icals. We are sorry we cannot read the jokes, as we are
behind in *der Deutsche sprache*. A noticeable feature of the
journal is its use of comic illustrations to ornament adver-
tisements.

MORE TESTIMONY.—We take the liberty to print the fol-
lowing extract from a letter received by us this week:—

PEERLESS TOBACCO WORKS,
ROCHESTER, SEPT. 23.

EDITOR FOREST AND STREAM:—

We desire to say that we recognize as one of the most important sources
of our successful introduction of "Vanity Fair" to the sportsmen of the
United States, the valuable columns of FOREST AND STREAM, and ad-
vertisers who wish to bring their goods to the attention of the sports-
men of this country, would certainly be amply paid by patronizing your
columns.

Your truly,

WM. KIMBALL.

YACHTING.

NOTWITHSTANDING the Centennial regattas and
also the fact that the "America" cup has been sailed
for and again won by an American yacht, the yachting
season which closes on Saturday with the Corinthian
schooner regatta of the spirited Seawanhaka Club cannot
be said to have been a success, or in any way superior to
those of the last two or three years. There has been an
absence of *elan*, a want of vim, as evinced by the paucity
of entries in all the large regattas, and for the fall races
particularly it has been found impossible to enlist a suffi-
cient number of contestants to make even a match in each
class. And yet in point of weather never has a season
been more propitious. Even the June regattas, which
generally develop into mere drifting matches, were this
year exceptionally favored, and yet as the season pro-
gressed the interest waned. It would be difficult to define
the causes which have led to this almost indifference to
yacht racing. The fleets are increasing, new yachts have
been built in large numbers, and we meet with them cru-
ising everywhere, and yet but few owners seem to care for
racing. The probability is that it is owing to the want of
a master spirit, some one who will take hold as Mr. Ben-
nett formerly did, and stir up by example and encourage-
ment the weak and wavering into following his lead. We
are not sufficiently well posted as to the wheel within a
wheel by which the affairs of the leading yachting club
of this country are governed, but it seems as though fog-
gism or ultra-conservatism was at work to hinder its pro-
gress and retard the growth of yachting generally. For it
is only through trials of speed, as represented by regattas,
that we can look for the emulation which results in im-
proved models. There is one club, the Seawanhaka,
which is entitled to great credit for its efforts in behalf of
yachting. Its regattas, with prizes on the most liberal
scale, have been thrown open to yachts of all clubs, and its
"Corinthian" races, in which the yachts must be sailed by
the owner assisted by his non-professional friends, would,
if properly appreciated and more generally participated
in, do much to revive the old yachting spirit.

The events of the season may be said to be the races for
the "America" cup, in which the Madeleine so handsomely
defeated the Countess of Dufferin, and in which the
old America herself reappeared with such credit; and the
unfortunate accident to the Mohawk—a yacht which,
from the laying of her keel until that unhappy day when
the recklessness of an incompetent sailing master put the
town in mourning, has been the subject of more contro-
versy and sensation than any ever launched in this coun-
try. Eastern yachtsmen have also had rather a depressing
season. The many clubs which rendezvous in various
parts of Boston Bay have, as a rule, had a lack of wind on
